W. M. C. C., Altoona, Pa.—The 1914 financial statement of the company you mention has not yet come to my attention. I have looked up the record of the company, its organizers and present managers and am favorably impressed with their sincerity and ability. Outside of the preliminary term feature of the policy contracts, which I believe will be abandoned in time, there is but one thing open to serious criticism, and that is an authorized capital of \$1,000,000. So large an amount is unnecessary and is a clog on the interests of policyholders if in the future it issues participating policies.

H. H. C., Buffalo, N. Y.—No, the fact that a company is of New York origin and subject to the laws of that state is not a guarantee of its safety. It is, however, a factor of comparatively great value. The organization you mention operates on the assessment plan—a system I cannot endorse, because it is unscientific, insecure and transitory. No life insurance scheme can be permanent which fails to provide for the accumulation of a reserve against advancing age, thus reducing the insurer's liability each year while keeping the premiums level.

Commencing business about a year ago the Hartford Accident and Indemnity Company shows by its first published balance sheet (of date December 31, 1914), total assets of \$2,057,508; total reserves of \$673,262; total liabilities, including capital stock, of \$1,423,261; and net surplus of \$634,246.

RED CROSS CONTRIBUTIONS

The total amount contributed to the Red Cross Relief Fund thus far thru The Independent is \$5902.32.

The following list covers the contributions hitherto unreported:

John T. Davis, M. D., Zanesville, Ohio, \$2; Rev. Alfred J. Hulton, Rochester, N. Y., \$2; Mrs. Flora Paine Hopf, Hartford, Conn., \$2; L. Curtis Hughes, Jamestown, Pa., \$3; Mrs. Inman, Rogers Park, Chicago, Ill., \$2; Federated Church Sunday School, Sterling, Mass., \$15.60; Miss Helena F. Lamson, Boston, Mass., \$5; Edith R. Merriman, Madrid, N. Y., \$2; Henry M. Seely, Middlebury, Vt., \$2; Mrs. W. P. Turner, Ruskin, Tenn., \$2; Shelbyville Woman's Club, Shelbyville Chautauqua Dept. of Club, S. H. G. Dept. of Club, History Dept. of Club, Mrs. Addie Dearing, Mrs. Flora Tackett, Mrs. Mary Belle Dove, Pauline P. Craig, Shelbyville, Ill., \$22; Miss M. A. Goodell, Whitinsville, Mass., \$5; Nicholas Copershenski, Ivanhoe, Minn., \$2; Helen E. Hewes, Cleveland, Ohio, \$10; Friends, per S. C. Nichols, Fort Atkinson, Wis., \$6; Ada A. Rountree, Wilberforce, Ohio, \$2; Hiram College, Hiram, Ohio, \$11.10; Charles Burton Briggs, Johnstown, N. Y., \$2; F. W. Decker, Salt Lake City, Utah, \$2; C. S. Clark, M. D., Canton, Ohio, \$2; W. S. Douds, Meadville, Pa., \$6; Mrs. William Fitz, Providence, R. I., \$2; Miss Anna M. Reed, Pennsylvania, \$6; Miss D. M. C. Webbe, London, Canada, \$2; R. B. Grover, West Newbury, Mass., \$2; Rev. Thomas Hodge, Torrington, Wyo., \$2; Mary H. Phillips, Pittsburgh, Pa., \$25; John H. B. Phillips, Pittsburgh, Pa., \$25; Carrie B. Pond, Hot Springs, N. C., \$4; John F. Ross, Portsmouth, Ohio, \$5; R. S. Williams, Augusta, Ga., \$2.

January 1, 1915.  
Atlantic Mutual Insurance Co.  
Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Pay-able in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expira-tion of two years.

During its existence the com-pany has insured property to the value of.....\$27,964,578,109.00

Received premiums thereon to the extent of.....	287,324,890.99
Paid losses during that period .....	143,820,874.99
Issued certificates of profits to dealers.....	90,801,110.00
Of which there have been re-deemed .....	83,811,450.00
Leaving outstanding at pres-ent time.....	6,989,660.00
Interest paid on certificates amounts to.....	23,020,223.85

On December 31, 1914, the as-sets of the company amount-ed to.....14,101,674.46

The profits of the company revert to the as-sured and are divided annually upon the pre-miums terminated during the year, thereby re-ducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

## EFFICIENCY QUESTION BOX

CONDUCTED BY EDWARD EARLE PURINTON,  
DIRECTOR OF THE INDEPENDENT EFFICIENCY  
SERVICE

Questions on health, work, business, home and everyday life will be answered by Mr. Purinton, in so far as may be possible, thru the Question Box or by personal letter. Please confine questions to one sheet. When books, institutions, manufactures, and other aids to efficiency are mentioned, they are not necessarily endorsed. The Service, being a clearing-house of information, assumes no responsibility for others.

32. A Chicago Business Man. "Has any corporation or educational institution collected data or reports covering the Welfare work and Efficiency program of great factories and stores thruout the United States? If so, where may such data be obtained?"

You would find a large amount of such material in the two volumes of Convention Proceedings issued by the National Association of Corporation Schools. This organization is the only one, to my knowledge, that has made, in a form available to the public, a thoro study of the welfare and efficiency methods employed by large corporations of America. Write Mr. F. C. Henderschott, executive secretary of the association, for particulars. Address: Irving place and Fifteenth street, New York.

A most interesting feature of the U. S. Steel Corporation is a permanent exhibit of "Safety First" appliances and coöperative aids for employees. Visitors properly certified may inspect the exhibit. Ask for details. The "Safety First" manager is at No. 71 Broadway, New York.

33. Mr. W. F., New York City. "Would you advise a young man of moderate means to take a course in personal efficiency, or one of the ordinary business forms? Which would give best results? I am thoroly interested."

Trustworthy advice can never be given without full knowledge of actual conditions. In general, a course in personal efficiency bears the same relation to a mere technical training that a grammar school education does to an apprenticeship of shop work. An ordinary "business course," while valuable, is definitely restricted and tends to narrowness. It would naturally follow, hardly ever precede, the broader, more vital, more inspiring and empowering course in personal efficiency. Learn to handle your brain and body as a human machine—then you will master a mechanical machine twice as well.

34. Mr. J. A. U., Missouri. "Could you give me information in regard to the Efficiency Society, eligibility as to membership, etc.?"

The Efficiency Society is located at No. 41 Park Row, New York. Write the secretary for privileges and conditions of membership.

35. Mr. G., New York City. "How can you suggest overcoming a good man's inability to get good work from a shop of men who will not work fast?"

Is the "good man" himself a fast worker? Most men follow the lead of their supervisor or employer, doing as he does and not as he says. What are this foreman's qualifications for leadership? Is he magnetic, enthusiastic, tactful, strong in mind and body? He should be examined by an expert character analyst, to find whether he belongs in a place of execution, responsibility and mastery of men.

The adoption of a bonus or other system of reward, possibly of a method of profit-sharing, would change the complexion of your business. The New York Public Library, Forty-second street and Fifth avenue, contains books on this subject. Write the secretary of the Business Bourse, No.

261 Broadway, New York, for particulars of the service offered by the Bourse.

36. Miss G. E. S., Iowa. "Are public speakers on efficiency procurable? Who are they, what do they charge, and where could they be reached? Can a young teacher fresh from college talk to high school pupils on efficiency with more beneficial results than a teacher who has been out of college for a long time?"

Public speakers on the subject are few and far between. Most of the efficiency experts who know their work have already been retained by the large corporations. Living as you do in a small town, you could probably secure a reliable speaker only by coöperating with some large factory or store in a nearby city; by arranging for a talk, or series of talks, or other efficiency service, in connection with the industrial organization, you might obtain a single lecture on a reduced charge, as a "stop-over" engagement. We have had a number of requests similar to yours, and will arrange a lecture tour when the demand seems to warrant the undertaking.

The young teacher, in lecturing on efficiency, would have more enthusiasm, the older teacher more experience. Both qualities are needed. If the young teacher has dignity, common sense, caution, practicality, popularity, the young teacher would be our choice; and if an older teacher can be found who has hope, elasticity, humor, sympathy and comradeship, the older teacher might be our choice.

37. A New York Reader. "How can I make a good business pay when competition by small men cuts price of work below cost to me?"

There is probably a leak somewhere in your buying, selling, accounting or financing. Why should a small competitor underbid you on costs? Your larger plant should buy wholesale, and reduce your costs below his. You probably need an efficiency engineer, or at least a certified auditor or accountant, to find where your waste comes in. However, you may discover this for yourself, on reading the right books. Ask for description of the "Business Men's Encyclopedia" and other business guides published by *System* magazine, Wabash and Madison, Chicago. If you had stated the exact nature and conditions of your work, we could have answered more to the point.

38. Prof. A. G., Minnesota. "I am contemplating a change of occupation, but do not know where my greatest power lies. I believe that a carefully prepared list or outline of the various human powers would be a valuable help in solving this problem. Is there such a list available?"

Ask Professor Benjamin Gruenberg, of the Julia Richman High School, New York, for details of the work of the Vocational Guidance Association. Write to Fowler and Wells, 18 East Twenty-second street, New York, regarding list of mental faculties, and of books by Professor Fowler, Nelson Sizer, and others. Refer to Answer No. 2 in Efficiency Question Box, issue of The Independent for December 21, 1914. I am now preparing a table or list of mental qualities and powers, with key for their location and comparison. This will be published in article or book form, and notification sent you.

It would not be wise to leave your present work on the mere chance of locating and developing your supreme talent in a new field. Whatever money and time you can spare may well be devoted to self-study and to preparation for a larger sphere. But don't forget the practical, in reaching for the ideal. We all have infinite possibilities—and the grocer and landlord to pay.

39. Mr. F. B., Chicago. "Will you kindly let me know in what numbers of The Independent your articles on Efficiency have appeared? I do not want to miss any."

The article, "What Is Efficiency?" was the first, appearing November 30, 1914. The article on Work, that on Play, and that on Home, appeared respectively in the last issues of December, January and February. The Efficiency Question Box has been published in the first and third numbers each month. Back numbers containing efficiency articles and Question Box may be had, at ten cents each, on application to the publishers.

### PEBBLES

What has become of the old-fashioned girl that wore one-color shoes?—*Columbia Jester*.

Is there a gentleman in this country who has not a plan for ending the present war?—*E. W. Howe's Monthly*.

"You know we have fine apartments now. It is so quiet. We are right over a bowling alley and you can hear a pin drop."—*Penn. State Froth*.

"So you don't like living in the country? What do you miss most since moving out of town?"

"Trains."—*Philadelphia Ledger*.

With the pardoning power no longer vested in Mr. Blease, greater care should be exercised about getting into prison in South Carolina.—*Ohio State Journal*.

Recent dispatches from Mexico City remind us that Mexico has the largest per capita of Provisional Presidents of any country in the world.—*Chicago Herald*.

Ambassadors of foreign nations are hereby warned that they must avoid noisy discussions in the vicinity of the White House. They might wake the baby.—*Chicago News*.

Bix—What caused the fire in the match factory?

Dix—There was some friction, I believe, among the heads of the departments.—*Boston Transcript*.

A hen sat on a putting green,  
Then ambled slowly by me;  
And when I tried to make my put—  
I found she'd laid a stymie.

—*Yale Record*.

"Excuse me. This car is reserved for a member of Congress going South."

"I don't mind that. When traveling one is not proud. I shall travel with him."—*L'Illustration*.

Lady—I want to buy a dog. I don't exactly know what you call them, but they look something like a greyhound, with long hair, and a head like a bulldog. Do you keep dogs like that here?

"No, ma'am. We drown 'em."—*Life*.

Many Old Foggy notions are excellent compared with some of the New Foggy notions.—*E. W. Howe's Monthly*.

The Man (during the second act)—This play was taken from the French.

His Wife—Apparently the Allies have abolished their censorship.—*Puck*.

She—Isn't it strange that the length of a man's arm is equal to the circumference of a girl's waist?

He—Let's get a string and see.—*Jester*.

One '18—Where have you been?

'Nother '18—To the cemetery.

"Any one dead?"

"Sure; every one of them."—*Punch Bowl*.

The Fallen One—Officer, did you see me fall?

Officer—Yes.

The F. O.—Had you ever seen me before?

Officer—No.

The F. O.—Then how did you know it was me?—*Harvard Lampoon*.

## THE WAR TIME COUPON

This is a first-of-March warning to all  
our subscribers that the War Time  
Coupons which were sent to them at the  
beginning of February are available  
only until the first of April. There has  
been an extended use of these coupons  
on the part of our readers and their  
friends, and there is ample opportunity  
in the March days remaining for any  
present subscriber to secure and use an  
additional supply, which will be prompt-  
ly sent on request. It is a pleasant fact  
that the new subscriptions received on  
the twenty-third of February were  
Nine Hundred and Forty-three in num-  
ber.

## A MENTAL INVENTORY

A few years ago we happened to see  
a list of questions prepared by the  
Friends School of Germantown, Penn-  
sylvania, to test the range of knowl-  
edge possess by the pupils. We were so  
struck by the ingenuity and scope of  
the test that we published it in The  
Independent and we were glad we did,  
for many of our readers got amusement  
and profit in "trying it out" on their  
pupils, their friends and even, in rare  
cases, themselves. So we publish here-  
with for the fourth time the questions  
used in the annual quiz. They are de-  
signed for boys and girls of grammar  
and high school grade ranging from  
eleven to eighteen years of age. But  
there are few adults, as we have found,  
who can score a hundred, altho it can-  
not be said that the questions demand a  
greater "apperceptive basis" than is  
necessary for the intelligent reading of  
magazines and newspapers.

Last year we agreed to correct and  
grade all the answers sent in to us.  
This year we make no such promise,  
the reason being that the plan was too  
successful. But we will publish next  
month the answers to these questions  
so our readers may grade themselves.

### GENERAL INFORMATION TEST

#### GERMANTOWN FRIENDS SCHOOL

First Month 4, 1915

Name: 1. The presiding officer of the U.  
S. Senate. 2. The English Minister for For-  
eign Affairs. 3. The Chancellor of the Ger-  
man Empire. 4. The living ex-Presidents of  
the United States. 5. The capital city of  
Russia. 6. The French or German national  
anthem. 7. A prominent Scotch-American  
worker for peace. 8. The two great nations  
that have been at peace for 100 years.

9. Where is the Golden Gate? 10. What  
is the Monroe Doctrine? 11. Where is the  
Panama-Pacific Exposition to be held? 12.  
What is the official language of Brazil? 13.  
What is the official language of Australia?

14. What is the official language of Bel-  
gium? 15. What disease has recently at-  
tacked thousands of cattle in this country?  
16. Name the two largest neutral countries  
of Asia. 17. What foreign city was recently  
evacuated by American troops? 18. Which  
party has a majority in the U. S. Senate?  
19. What attitude regarding increase in the  
U. S. standing army did President Wilson  
take in his last message to Congress?

Name the author of: 20. "Alice in Won-  
derland." 21. "The Blue Bird." 22. "The  
Inside of the Cup." 23. "The Prince and  
the Pauper." 24. "The Acts of the Apos-  
tles." 25. "The New Freedom." 26. "Hugh  
Wynne." 27. "The Lay of the Last Min-  
strel."

Name the painter of: 28. "The Descent  
from the Cross" (Antwerp). 29. "Christ  
Among the Doctors" (Dresden). 30. "The  
Fighting Téméraire" (London, Tate). 31.  
"Charles I" (Paris, Louvre). 32. "Madon-  
na della Sedia" (Florence).

Name: 33. The Bay State. 34. The Em-  
pire State. 35. The Lone Star State. 36.  
The Blue Grass State. 37. The Hoosier  
State. 38. The Buckeye State. 39. The Old  
Dominion. Show the meaning of the follow-  
ing by using in an English sentence: 40.  
Esprit de corps. 41. Cum grano salis. 42.  
Bête noir. 43. Carte blanche. 44. Pro bono  
publico. 45. In medias res. 46. Sine qua  
non.

Identify by naming some achievement of,  
or position held by, the following: 47. Mar-  
garet Deland. 48. Victor Herbert. 49. Sam-  
uel Gompers. 50. Charles P. Steinmetz. 51.  
John Masfield. 52. von Hindenburg. 53.  
Lord Kitchener. 54. Billy Sunday. 55. Bar-  
oness von Suttner. 56. H. G. Wells. 57. Ed-  
ward A. MacDowell. 58. Pasteur. 59. Car-  
ranza.

Locate by country: 60. Land's End. 61.  
Liège. 62. Chihuahua. 63. Ulster. 64. Ver-  
dun. 65. Heligoland. 66. Alsace. 67. War-  
saw. 68. Rheims. 69. Louvain. 70. Belgrade.  
71. Kiao-chau.

What do the following mean? 72. The  
white plague. 73. Watchful waiting. 74. The  
White Book. 75. The Yale Bowl. 76. Local  
option. 77. A. B. C. Conference. 78. S. O. S.  
79. Incognito; pseudonym. 80. Mobiliza-  
tion; mobility. 81. Periscope; perimeter.

82. What temperature Fahrenheit corre-  
sponds to 0° Centigrade? 83. Give two rea-  
sons why the ocean freezes less easily than  
the lakes. 84. Who invented the ordinary  
incandescent lamp? 85. Why are icebergs  
frequently surrounded with fog? 86. Why  
does a balloon rise? 87. Could a bell in a  
bottle from which the air has been ex-  
hausted be heard? 88. What solid has the  
smallest possible surface compared with its  
volume? 89. Which is the larger, a 3-inch  
cube or 9 cubic inches? 90. Would a bullet  
fired horizontally from a fort 500 feet high,  
continue around the earth at a distance of  
500 feet from it, if it encountered no ob-  
stacle and no friction from the air?

Correct the following, or show the ab-  
surdity: 91. Jane Addams was a great suc-  
cess in "Peter Pan." 92. The quality of  
mercy was not stained. 93. At Rugby we  
visited the scene of Tom Jones's school  
days. 94. Goodness and mercy shall follow  
us all the years of our lives. 95. Secretary  
Bryan, formally a candidate for President,  
also leader of his party, is now serving as  
Mr. Wilson's private secretary. 96. Sieg-  
fried's mother dipped her only son in the  
River Styx, whereupon he became intoler-  
able for life, except in the heel.

Restore the following altered quotations  
to their right form; change only the order  
of words; begin each line of poetry with a  
capital letter: 97. It is a sin, I know, for  
me to sit here and grin at him, but so queer  
are the hat, old and three-cornered, and the  
breeches, and all that! 98. On castle walls  
and snowy summits, old in story, falls the  
splendor; across the lakes shakes the long  
light, and in glory leaps the cataract wild.  
99. The world is too much with us! We lay  
waste our powers, spending and getting,  
late and soon; we see little that is ours in  
nature; our hearts, a sordid boon, we have  
given away! 100. The rude forefathers of  
the hamlet, each laid forever in his narrow  
cell, sleep beneath those rugged elms, that  
yew-tree's shade, where the turf heaves in  
many a mould'ring heap.

NUMBER 3457

## SOCIAL RESPONSIBILITY FOR UNEMPLOYMENT

**A**RE the misery and demoralization that follow in the wake of unemployment to be regarded as penalties for misconduct, or as natural consequences of incapacity or of negligence, or, in legal parlance, as "acts of God"? Or are they rather results of collective negligence, of a failure of social responsibility?

The question is not new. It probably was asked in Memphis and in Babylon. It certainly was asked generation after generation in Rome. It has been asked repeatedly in the history of France, and the English Poor Law from Henry VII to George V is the formulated record of centuries-long discussion of it.

Confession of collective negligence and acknowledgment of social responsibility have been spasmodic. Experimental attempts to establish in law a public or governmental responsibility have been feeble, usually unintelligent and ineffective. The "right to work" has been proclaimed by proletarians in all countries, but it has nowhere been recognized in positive law.

Private and public opinion have in all centuries and in all countries been overwhelmingly against the view that the community in any of its embodiments, as municipality, state or nation, is responsible for the remunerative occupation of its individual members. An individualistic philosophy has held that except in times of overwhelming calamity, such as earthquake or famine, the forecasting, industrious and prudent individual without public help will find, one year with another, enough work at adequate wages to provide for himself and his family thru periods of unemployment as well as thru normal times of busy occupation. The destitute have generally been held blameworthy for their own miserable condition.

**T**HAT a great and significant change of opinion upon this matter has occurred thruout the whole western world within a generation, no well-informed person, we assume, will deny. Three important influences have cooperated with minor factors in bringing sober-minded men and women to a new way of thinking.

The worldwide human impulse which got up momentum toward the middle of the nineteenth century created a new sentiment, and sentiment in the long run attacks the intellectual processes and modifies conclusions. The socialistic philosophy has undermined the dogmatism of Tory and Whig to an extent that both conservatives and radicals probably underestimate. In the recesses of individual minds unconscious of socialism, socialistic ideas in a thousand innocent disguises are harbored. But perhaps more effective than humanitarianism or socialism in bringing the world to a partial admission

of social responsibility has been the social efficiency program of the German Imperial Government, and its imitation, halting and imperfect but actual, by other European nations and by American commonwealths. That this program as conceived by Bismarck and carried out by his successors and their imitators was primarily for militaristic rather than for humane ends is possibly true, but the important thing is that it was the beginning of a trial and error experimentation which already has yielded results that command attention.

The public mind is prepared, therefore, to examine sincerely the difficult problem of unemployment as it presents itself in this season of exceptional idleness and distress. A spirit of earnestness and willingness to learn promises more satisfactory and more enduring results than have followed hitherto upon industrial depression and the overtaxing of inadequate relief agencies. It is a good time to push the analysis of our social system and its functioning back to ultimate principles.

**I**N such an inquiry three or four crucial questions compel attention. It is said that whether or not the unemployed have brought their miseries upon themselves by negligence, vice or other fault of their own, a large proportion of them are unemployable.

There is something wrong with the assertion, and no study of the problem is adequate which does not get at the truth on this point, because, so long as the conservatively-minded cling to the belief that the unemployed are relatively worthless, social responsibility for unemployment, even if acknowledged, will be ineffective.

Certain easily verified facts are important here. When industry is active where are the thousands of the "unemployable"? Some of them are on the road, as wayfarers and hoboes, but the number of such is then comparatively small. All of the "unemployable" that are willing to be employed are then in actual fact employed. Their work is doubtless of relatively little value, but such as it is the mills and shops, the mines, the lumber camps and the farms absorb it and are glad to get it. A concrete incident that we recall is enlightening. A few years ago the charity organization society of one of the large eastern cities thruout a whole year had so few demands for relief of cases other than those incident to sickness and old age that it closed up its wood-yard.

Strictly speaking then the "unemployable" turn out to be non-existent as a residue after the habitual wanderers and the defective have been eliminated from the situation. The unemployable therefore are those men and women whose work is of some value but is not up

to standard, and who consequently are not worth keeping on the payroll when times begin to be bad.

Must we not then frankly acknowledge that society has a plain duty to this element? To a large extent inefficiency results from inadequate or bad education. The child is not started right. Vocational guidance and industrial discipline have been denied him. The primary duty of the public, if the principle of social responsibility be acknowledged, is to see to it that children start in life with good health, so far as attention in school years can insure it, with industrial training, and with some preparation for choosing the vocations to which they are adapted. Our whole educational system should be brought up to a new efficiency in these matters, and, happily, a strong and resolute movement in that direction is under way.

But this is only a beginning. The evidence is unimpeachable that this winter thousands of men and women who possess skill, who in normal times are of standard efficiency, who have strong bodies and willing minds, whose pride is hurt when they are forced to seek any kind of assistance, are idle and suffering thru no fault of their own. Does any obligation rest upon society to provide employment for these? New York City and other communities, east and west, are making affirmative answer to the question. The obligation is admitted; a serious attempt to discharge it is being made. When men like Judge Gary consent to serve upon committees of inquiry and relief, and, after looking into the problem declare and insist that the public not only thru its voluntary agencies, but also thru its organized municipal and state governments, must provide employment and relief, it is plain that it is no longer necessary to argue the question of social responsibility to prevent unemployment.

**T**HIS is a good start. How far shall we go? The answer of common sense would seem to be obvious. There is no reason to expect that either thru social revolution or thru social evolution the institution of private property will be abandoned. There are excellent reasons for belief that public property and industrial capital collectively owned will increase in amount, and that they will play a part of increasing magnitude in productive industry. It is practically certain, also, that social control over private property will increasingly be exercised thru governmental agencies. All this means that conditions of employment in the future, as at present, will for the most part be beyond the control of wage-earners as such. Whatever control they may be able to share in, they will enjoy thru organization, collective property-owning, coöperation, and political activity. Therefore, whatever may have been true in the past, power over employment and its conditions is now a social power and increasingly a public power. Power and responsibility are not separable. Society in its collective and organized capacity must assume the obligation to insure employment.

How this shall be done is a problem calling for the highest intelligence, sound judgment and moral disinterestedness. That the people of a nation like the United States should be unable to devise a workable and satisfactory plan is unthinkable. When the business and professional men of America make up their minds that a thing ought to be done and must be done, they always

find out how to do it. They are making up their minds that the problem of unemployment must have a practical solution.

Privileges of every kind are on trial today. Society cannot afford to have discontent grow into revolutionary attempts. The attempts would fail, but the disorder, the loss and the distress that would attend the attempt are unpleasant to contemplate. The energetic work that was put into the reform of an antiquated and impossible system of banking and currency must now be put into the reform of an antiquated and impossible relation of the wage-earning man to his work.

## THE NEW "MARSHAL FORWARD" OF GERMANY

**A** GAIN the streets of German cities are hung with bunting. Again the schools have holiday and the press is filled with praise for General von Hindenburg. What tho the German people are reduced to *Kriegsbrot* and the sandwich has lost its upper slice—they can still feast in honor of him who has for the second time freed their country from the invading Slav. Hindenburg's name appears on everything from streets to cigarets and the Government has been obliged to issue notices that the General does not want any more poetry, fruit, flowers or other tributes of affection sent to him at the front. His portrait in paint, plaster or photograph is to be seen on all sides; the bulldog face of the born fighter, the firm jaw and square forehead, the bristling hair and level-looking eyes; a head which might have been chopped from granite by a cubist sculptor. His striking resemblance to Marshal Blücher as well as the similarity of his tactics has given him the same nickname and German journalists delight to call him the Marschall Vorwärts of 1914.

The world has not yet got beyond the stage of hero-worship and perhaps it never will. The instinctive disposition to attach loyalty and admiration to a particular individual, to regard any great achievement as the work of some one man is as strong as ever and certainly there is more excuse for it in the case of war than elsewhere. The success of the German armies is doubtless due more to the unity and efficiency of the people as a whole than to any particular general, and if we must pick out the man who has done most for Germany in this crisis it might turn out to be some unknown railroad manager who has been working out a timetable to keep the trains running or some less considered chemist who has been spending his nights in the laboratory making new nitro derivatives of phenol.

But neither unity of purpose nor scientific preparation would have insured victory if the true leader of men had not come to the front at the right moment. It took Lincoln many long months to sift out Grant and Sherman and Sheridan from the officers of equal training and greater reputation. In France Joffre is retiring generals by the score in preparation for the spring campaign. In Germany the Kaiser has found that his presence on the firing line may inspire his men to greater sacrifices, but does not insure success. It was the failure of the Crown Prince to keep up his end of the line that compelled the German army to turn aside when Paris was almost within reach. For the Chancellor and the diplomats the German people have little respect and they scarcely know who is chief of staff since Moltke

was retired on the ground of ill health. Consequently, all their enthusiasm goes out to Hindenburg, who has suffered more terrible defeats than any other general, but has also achieved more striking victories.

General Field Marshal Paul von Beneckendorff und Hindenburg is now in his sixty-eighth year. He retired from active service in 1911, but when the war broke out he reported for duty and was assigned the command that most of all he would have wanted, the defense of the eastern frontier against the Russians, who were already threatening his native city of Posen. He had been trained for this task, for his father was a major and he had been put into the cadet corps as a boy. As a lieutenant he took part in the war against Austria in 1866 and was in the foremost line at the battle of Königgrätz. A second crushing defeat of Germany's enemies he witnessed, for he was at Sedan and earned by his gallantry on the field the Iron Cross and the Red Eagle.

As an officer General von Hindenburg is beloved of his men in spite of his willingness to sacrifice them by the thousand in vain charges at the Russian lines and his propensity for forced marches thru snow and slush. It restores confidence among the rank and file whenever they catch a glimpse of him standing, with his indispensable cigaret in his hand, among a group of officers and nodding eager assent to their suggestions or hearty approval of their work. As a peace general Hindenburg was not popular with the soldiers because in time of maneuvers he would keep them digging ditches in the Mazurian swamps instead of giving them parades and thrilling cavalry charges. Now, however, they understand that he knew what war was to be and so they have confidence in him. Not until the war is over and the operations studied will it be possible to decide with certainty who are the great strategists of the Great War. But the public verdict does not wait for that and in this case it seems likely to be confirmed by the slower evaluations of the historians.

#### FORWARD-TO-THE-LAND

EVER since Mr. Roosevelt discovered the need there has been a "Back-to-the-Farm," a "Return-to-the-Soil" movement in the United States.

But the results have hardly been revolutionary.

City populations continue to grow and food prices are as high as ever.

To the reinforcement of this highly important movement now comes the "Forward-to-the-Land League." Even the psychology of the title is significant. Not "back" or "return" with their suggestion of retrogression, but the "forward" of hope, of expectancy, of a future unrevealed.

The new league begins by attacking the problem at the bottom. It seeks to remedy conditions that have rendered farm life unattractive and unprofitable.

First, the league recognizes the difficulty of purchase to many of the land-hungry poor. And in the absence of land-banks such as they have abroad, it proposes a holding syndicate of public-spirited citizens or, as they do in Germany and England, of the municipality, to help the man of small means. By the service of skillful agricultural engineers and the introduction of improved machinery this syndicate would instruct and assist the

would-be farmer to establish himself, taking small crop-interests as its return.

The isolation and lack of social and educational opportunities of rural life it would end by skillful planning of lands to form community groups, and it would aid in securing for such groups agricultural directors, social organizers, and religious leaders.

Even to the unemployed the league would hold out a hand in finding places in the country where labor was needed.

Such practical and commonsense plans serve well the spirit of true philanthropy and of far-sighted public service.

#### WHAT EUROPE OWES US

FOR some time past the exchange value of the English pound sterling has been very low in New York. The normal value in our currency is \$4.86 $\frac{5}{8}$ . At the end of last week the exchange value was only \$4.80, and to this point it had risen from \$4.79 (on the 16th), the lowest figures known for many years. There has been a greater decline in the exchange values here of several other countries on the other side of the Atlantic.

This is due primarily to the great purchases of war supplies in this country, and the resulting excess of our exports over our imports. This excess has grown from \$16,000,000 in September and \$56,000,000 in October, to \$79,000,000 in November, \$131,000,000 in December and \$145,000,000 in January. It will be seen that the figures for January point to an excess of more than \$1,700,000,000 for twelve months. There is an enormous debt to this country which must be paid. We have an official record of this international trade, but there are other "invisible" transactions (such as the payment of dividends on American securities owned abroad) which reduce the balance against Europe. Nevertheless, the debt is a great one and is growing.

While we must look to the war supply purchases and the excess of exports as the first cause of the fall of exchange value, this decline is directly due to conditions affecting payments. The number of drafts, or international bills, drawn on English debtors by the creditors here, and given to brokers or other financial agents in New York for collection, has been so great that the price has fallen by the operation of the law of supply and demand. In normal times the international trade differences which cannot be adjusted by payment in goods or an exchange of obligations are settled by shipments of gold. At the present time neither England nor any other debtor country is willing to reduce its stock of gold by such shipments to New York, altho about \$5,000,000 has recently come from England by way of Canada. This failure to use gold tends to put the debtor at a disadvantage and to compel him to submit to a discount on the value of his country's currency.

War orders exceeding \$300,000,000 in value have been placed here. Every week there are additions. If the debtor governments cannot pay in goods and are unwilling to use gold, and if their investors desire to keep their American securities, how is the obligation to be satisfied? By credit granted here in some form, possibly in connection with issues of Government securities, altho this method probably will be avoided. We are willing to give credit, and we do not need gold. There are re-

ports about negotiations for a credit of \$100,000,000 here in the interest of Great Britain. The demand for credit is our opportunity. If we satisfy the demand, the end of the war will find the United States holding a position of greatly increased strength and power with respect to international finance and trade. A step for the promotion of credit expansion has been taken in the new regulations permitting the reserve banks to buy or discount exchange acceptances or bills based on exports or imports.

It is only a few months since we in this country were greatly concerned over our debts to Europe and the question how we should pay them. Now the pendulum is swinging to the other end of the arc. The problem now becomes Europe's. It is for the allied countries to consider how they will be able to pay their debts to us.

### GOING WEST

FROM the publication of letters from the British soldiers at the front it appears that they are using the expression "going west" as a euphemism for dying. This has started a discussion of its origin which spread in characteristic fashion thru the *Times* and other papers and brought out many curious theories. For instance, a subaltern claimed that it originated in his battalion at maneuvers when "a staff officer, complete with eyeglass, galloped past and in a very high-pitched and fruity voice, shouted to the commanding officer, 'Tell the general that I have gone west.'" This, says this subaltern, so amused the soldiers, tho even he cannot see why, that it came to be camp slang for "passing away." Another youthful soldier said that it came from a bivouac song, "Drake Goes West."

But when the letters from the local antiquarians came in it was shown that the phrase was used in East London, West Cork and the Midlands and dated from the fourteenth century, at least, as the old rime says

Women and mony wilsome wight  
As wynd and wattir ar gane west.

Then the classicists and archeologists took it up and traced it back to the Odyssey, Egypt, Babylonia, Australia and Fiji. Altho Longfellow is classed among the "British poets" and is as much read oversea as in this country, nobody seems to have quoted the closing lines of *Hiawatha*:

Westward, westward Hiawatha  
Sailed into the fiery sunset,  
Sailed into the purple vapors,  
Sailed into the dusk of evening.  
Thus departed Hiawatha,  
In the glory of the sunset,  
In the purple mists of evening,  
To the regions of the home-wind,  
To the Islands of the Blessed,  
To the kingdom of Ponemah  
To the land of the Hereafter.

Whether this indicates a Finnish or an Amerind origin we will not venture to say lest we get between the firing lines in the controversy on the source of Longfellow's ideas. But the conception is so natural and poetic that it may well have a polyphyletic origin. The Russian soldiers are more specific and say that a comrade has "gone to America" when he is dead. In this case the phrase has probably arisen recently from the great emigration to this country. As we know from

*Water Babies* the Fairy Isle of St. Brandon was in the west; so was the lost Atlantis and of course the Hesperides. "Unto Hesperian isles, unto Ansonian shores" says Longfellow in his "Elegiac." Possibly the expression is in colloquial use in some parts of the United States, but we do not recall ever having heard it. Its present vogue in the British trenches may have come from the fact that those wounded at the front are taken west by the hospital corps in the rear.

### DIMINISHING RETURNS

IF the Germans are to wipe out British shipping with their submarines and mines they will have to be lively about it. The number of British vessels in 1912 was 39,345. Consequently, the Germans would have to sink them at the average rate of one hundred for every workday and a hundred and fifty on Sundays and legal holidays in order to complete the job within a year. What's more, the United Kingdom is accustomed to build more ships than all the rest of the world together and in some years twice as many, so that there's no knowing how many they are turning out in the present emergency. It must look discouraging to the Germans. Hadn't they better give it up as a bad job?

Newspaper readers who have been distressed to hear that the Germans are reduced to putting potatoes in their bread will be relieved to learn that good housewives in this country do the same. It may be recalled that a few years ago the free traders of England brought forward as an unanswerable argument that in protectionist Germany the workingman was obliged to eat "black bread." The argument lost in effect when the "tariff reformers" showed that *Schwarzbrot* was better than white and was served to the King of England, who is not compelled to economize on his victuals.

The New York Telephone Company, in response to public demand, announces big reductions in rates within the city. But the Consumers' League acutely suggests that before rates are lowered, the too low wages of the telephone operators should be increased. The point is well taken. Lower telephone rates are important, but adequate wages for the girls who, for a few brief years, carry on the high pressure, nerve-trying work at the central switch-boards, is more important still.

Forty-three votes were cast in the House of Representatives against the national child labor bill. Four of them were cast by congressmen who had made, a few days before, eloquent speeches against the woman suffrage resolution. Evidently Mr. Webb of North Carolina, Mr. Dies of Texas, Mr. Parker of New Jersey, and Mr. Mulkey of Alabama, believe that woman's place is in the home—and the children's place is in the factory.

The good ship "Dacia" has been captured by a French cruiser. Thus appears the advantage of having allies. France obligingly assumes the rôle of the wicked partner; for French prize law has always been more stringent than that of Great Britain on the subject of enemy ships transferred to neutral flags after war has begun.

# THE STORY OF THE WEEK

## THE GREAT WAR

*February 21*—Anglo-French fleet throws 2000 shells into Dardanelles forts. British steamship "Cambank" torpedoed near Liverpool.

*February 22*—German advance reaches Niemen. Narew and Bobr rivers. American cotton ship "Evelyn" sunk by mine off Borkum Island.

*February 23*—Russians regain ground on Rawka River, before Warsaw. Mutiny of Bengalese troops at Singapore February 15 reported.

*February 24*—Germans take Przasnysz, Poland, and 10,000 prisoners. American cotton ship "Carib" sunk in German waters.

*February 25*—Germans bombarding Polish fortress of Osowiec. Turks repulsed in Caucasus and withdraw entirely from Sinai peninsula.

*February 26*—Forts at entrance to Dardanelles demolished. Russians re-enter Bukowina.

*February 27*—French cruiser captures American "Dacia" with cotton for Rotterdam. French carry German trenches in Champagne.

*February 28*—Russians retake Przasnysz, Poland. Russians take 4000 Austrians in Galician battle.

The attack on Constantinople, which the Allies have undertaken this week, seems likely to mark a new era in the world's history as well as change the current of the war. Its first effect, even before any tangible results are achieved, is to bring down the price of wheat in England and incidentally in the rest of the world, and so to relieve Great Britain of the danger of being starved out and the United States of any need for an embargo on the exportation of wheat. For Russia is the grain field of Western Europe and the food supplies accumulated at Odessa can find no outlet so long as the Turk holds the entrance to the Mediterranean at Constantinople.

Another effect is to check the peace movement in Russia and to prevent that country coming to a separate agreement with Germany. The heavy losses of the Russian armies and their failure to make any net territorial gain after seven months of war has given rise to a peace party in Russia which is said to have been gaining considerable influence of late. But with the chance of realizing the dream of Peter the Great by attaining Constantinople there will be no more talk of peace by Russians, high or low.

The only obstacle to the realization of Russia's great ambition during the past century has been England, who held the maintenance of Turkey

necessary to the safety of her empire, but in 1907 an agreement was concluded between Russia and England in regard to their future expansion in Asia. This was supposed at the time to involve some sort of an arrangement by which Russia was to secure a southern port.

That Great Britain has withdrawn her opposition and reversed her historic policy was made public by the announcement of the Secretary for Foreign Affairs in the House of Commons on February 25, when the question was asked if the Government approved of the statement recently made to the Duma by the Russian Foreign Minister that "Russia intends to occupy Constantinople permanently." In reply Sir Edward Grey said:

The statement I have seen was that M. Sazonoff had said that the events on the Russo-Turkish frontier would bring Russia near a realization of the politico-economic problem bound up with Russia's access to the sea. With these aspirations England is in sympathy. What form their realization will take will no doubt be settled in the terms of peace.

This adroitly worded declaration leaves the question open as to whether Russia is to get Constantinople or receive compensation elsewhere at the expense of Turkey or Persia.

Besides its political effect the effort of the Allies to force the Dardanelles turns a new leaf in the history of warfare, for it is the first time that the modern battleship has undertaken the reduction of fortifications. The Allied fleet, which is under the command of Vice-Admiral Carden, includes the super-dreadnought "Queen Elizabeth," completed since the war began and the most powerful fighting machine afloat. She has a displacement of 27,500 tons and is armed with eight 15-inch guns. The new American super-dreadnoughts "Oklahoma" and "Nevada" are as large, but carry only 14-inch guns and have a speed of only twenty-one knots instead of twenty-five, which the "Queen Elizabeth" is presumed to attain.

Besides the "Queen Elizabeth" the Allied fleet comprises the British battleships "Agamemnon," "Irresistible," "Vengeance," "Cornwallis," "Triumph," "Albion" and "Majestic," and the French battleships "Gaulois," "Suffren" and "Charlemagne," as well as minor vessels, bringing the total up to forty. Aeroplanes hovering over the Turkish forts directed the fire of the fleet and then returned for rest to their parent ship "Ark Royal."

The strait of the Dardanelles or

THE ATTACK ON CONSTANTINOPLE

The attempt of the Anglo-French fleet to pass the Dardanelles is one of the most striking operations of the war, for Constantinople is so protected by nature as to be regarded as impregnable to attack by the sea. The only passages of approach are the Bosphorus on the north and the Dardanelles on the south and both these straits are defended by forts on either side and mines in the channel. But the super-dreadnought, "Queen Elizabeth," standing out at sea beyond the reach of the shore guns, battered to pieces the entrance forts, Seddul-Bahr and Kum Kaleh, within an hour and a half. Then after the mines had been swept out three British warships boldly advanced into the Dardanelles sixteen miles and bombarded Kephez and the forts at the narrows beyond.

THE CHANGED MAP OF THE EASTERN FRONTIER

The effect of Field Marshal von Hindenburg's sudden movement to the north can be seen at a glance. The left edge of the light shading shows the western limit of the Russian lines at the beginning of February and the heavy shading the area held by them at the end. The German left wing swept forward as far as the Niemen River, while the right advanced to the Narew. At the same time the Russians in Poland, north of the Vistula, were driven back as far as Przasnysz, which was captured by the Germans and lost again later. If the Germans can break thru the chain of Russian fortresses (indicated by stars) at any point they may break the railroad which runs behind the Narew and the Niemen, thus cutting off Warsaw from the capital.

Hellespont has played an important part in many wars from the time of Xerxes and Alexander to the present because of its remarkable configuration. It is a tortuous passage of forty-two miles in length, varying in width from one to four miles. Both banks are lined with forts and the channel is blocked with mines laid under the direction of German engineers. The southern entrance is protected by four forts, of which the chief are Seddul-Bahr on the European and Kum Kaleh on the Asiatic

side. These two forts carried respectively six and four guns of 10.2-inch caliber.

But these were outranged by the guns of the battleships, and the only vessel struck was the "Agamemnon," on which a shell exploded, killing three men and wounding five. The entrance forts and batteries were shelled on February 19-21, then the attack suspended because of bad weather until the 25th. At ten o'clock in the morning the "Queen Elizabeth," "Agamemnon," "Irresistible"

and "Gaulois" began the bombardment at a range of 11,000 to 12,000 yards, each concentrating her fire on one of the forts. In less than an hour and a half the land fire was sufficiently reduced so that the smaller vessels could run in and complete the work at 2000 yards or less. By 5.15 p. m. all four forts were reduced.

After the mines at the entrance had been swept out for a distance of four miles the "Albion," "Majestic" and "Vengeance" advanced into the cleared channel, and shelled the fort at Kephez, near the ruins of the ancient Greek city of Dardanus, from which the strait takes its name. All the forts on the European side for twenty-five miles up have been silenced. The Allies have also attacked the forts in the rear from the Gulf of Saros (Xeros).

The Campaign in Austria As to what is going on in Galicia the reports are, as usual, confused and conflicting. It appears, however, that the Austro-German force which crossed the Carpathians with the apparent intention of relieving the siege of Przemyśl and recapturing Lemberg has made no progress toward these ends. According to their official statement from Petrograd the Russians in the Carpathians during the month ending February 20 captured 691 officers, 47,640 men, 17 cannon and 118 machine guns.

There is no cessation in the struggle for Dukla and Uzsok passes, which lead from Galicia thru the Carpathians into Hungary, and the melting snow reveals the bodies of thousands of men who have fallen here in the past two months. The Russians, who were recently expelled from Bukowina, have rallied their

Janet M. Cummings

A DETACHMENT OF THE WOMEN'S VOLUNTEER RESERVE MARCHING IN LONDON

forces, recrossed the Pruth, and are again close to Czernowitz, the capital of the crownland. The advancing Russians attacked an Austrian force in a dense forest of East Galicia and overcame them with rifle butts and bayonets, taking 4000 prisoners.

**Hindenburg's Trap** In laying his plans for the capture of the Tenth Russian army Marshal von Hindenburg calculated to a nicety every element in the problem except the incalculable, that is, the weather. If the frost had continued two days longer his divided army, coming together like the jaws of a gigantic trap around the Mazurian Lakes, would have practically surrounded the Russian forces in East Prussia. But a sudden thaw broke up the ice of the marshland and converted the roads into mud. Consequently the northern column, constituting the upper jaw of the trap, having farther to go, failed to connect at the proper time with the southern, and thru this gap about a third of General Baron Siever's army managed to escape to the shelter of the Grodno fortress. Two regiments of the Twenty-ninth Corps, which had been completely surrounded in the forest of Augustowo, succeeded in cutting their way out of the German ring with the bayonet, since their ammunition was exhausted. The Germans claim to have captured eleven generals and 100,000 other officers and men. The Russians assert that this is an exaggerated statement and that the bulk of the army effected an orderly retreat. At any rate, the Russians found time enough during their retreat to destroy every German village and farmhouse on their way to the frontier.

Paul Thompson

#### PROTECTIVE COLORATION IN THE TRENCHES

This cap of white wool makes the wearer's head a difficult mark against a snow background. Soldiers have for the same purpose covered their cloaks with white.

The momentum of the Germans sufficed to carry them thru the forest region lying about Augustowo, where, in the first days of October, they were defeated with the loss of some 10,000 men. This brings them for the first time within reach of the chain of fortresses along the Niemen, Bobr and Narew Rivers. If

they should break thru this line of defense at any point they would be able to cut the railroad which runs behind them, connecting Warsaw with Petrograd. Which one of these fortresses the Germans propose to attack cannot be told until their movement develops. They have made demonstrations before Kovno, Grod-

WILLIAM J. HARRIS, OF GEORGIA

no, Osowiec and Lomza, but of course no serious attempt can be made on any of them until their heavy artillery is brought, which, considering the absence of railroads and the half-thawed lowlands, must take some time.

North of the Vistula the Russians have been driven back almost to the Narew River. The Germans took Przasnysz by storm, capturing 10,000 prisoners, over twenty cannon and a large amount of ammunition and supplies. This town was once before in the possession of the Germans, but was recaptured soon after by the Russians and had been strongly fortified since. The Russians made a brisk counter attack on the following days and captured 2800 men, seven cannon and the motor vans assembled there for transporting the German army to the front. This put the Russians again in possession of Przasnysz, and they have pushed beyond it toward the East Prussian frontier.

**The War on Commerce** Since February 18, when the German proclamation declared the waters about England and Ireland unsafe to neutral as well as belligerent shipping, there have been sunk in this zone twelve vessels, of which nine were British, two Norwegian and one French.

These disasters occurred mostly in the English Channel and the Irish Sea. All of the vessels destroyed were comparatively small and in most cases none of the crew was lost. Both mines and torpedoes seem to have been the instruments of destruction, but which has been used in any particular instance is not always determinable.

Two American vessels, the "Evelyn" and the "Carib," were also sunk by running into mines, but not within the danger zone declared by Germany about the British Isles. Both ships were making for German ports loaded with cotton and had apparently strayed from the safe lanes designated by the German admiralty and so got into the mine fields protecting the German coast. The "Evelyn," which sailed from New York for Bremen on January 29, struck a mine off Borkum on February 19. The "Carib" was sunk off Helgoland on February 22. The crew escaped in the boats and were picked up by German steamers. She had sailed from Charleston, South Carolina, January 27, with 4600 bales of cotton for Bremen. The two vessels were insured to the total amount of \$659,103 in the Government Bureau of War Risk.

President Wilson is said to have

transmitted to the British Government in an informal note the German proposal that both parties stop their interference with neutral commerce in foodstuffs and other non-contraband on the high seas. It is understood that Great Britain is not at all inclined to consent to any such plan, but on the contrary is more likely to declare a blockade of all German ports with intent to starve the country into submission. The action of the German Government in seizing the food supplies of the country is, in the opinion of the British, sufficient justification for declaring all food contraband of war.

**French Gains in Champagne** No decisive operations have taken place for several weeks in the western theater. The French announce minor successes at various points along the line between Rheims and Verdun as well as in the Vosges mountains, but the Germans claim that their attacks have been repulsed. The fighting here continues to be of the most desperate character on both sides. According to the French official statement one trench was carried only after every German soldier in it had been killed. In another engagement two German regiments lost by death some 3000 men, or more than half their number. The French report the capture of more than a thousand prisoners in the last ten days.

The Germans have introduced a new weapon into warfare. They spray the trenches with blazing oil, which compels the enemy to evacuate or be burned to death. The bombardment of Rheims has been resumed with the aid of some Austrian howitzers of 12-inch caliber. On February 22, 1500 shells were dropt into various quarters of the city and the cathedral suffered severely. In the western edge of the Vosges the Germans gained nearly four miles on a twelve-mile front.

It is rumored that Field Marshal von Hindenburg is about to be transferred to France in the hope of speeding up the campaign in that region as he has done in Poland.

**Federal Trade Commission** The five men appointed by the President to be members of the new Federal Trade Commission are as follows: Joseph E. Davies, of Wisconsin, now Commissioner of Corporations, whose bureau will be absorbed by the commission, to serve seven years; Edward N. Hurley, of Illinois, president of the Illinois Manufacturers' Association, six years; William J. Harris, of Georgia, now Director of the Census, five

years; William H. Parry, of Washington, treasurer of the Seattle Chamber of Commerce, four years; George Rublee, of New Hampshire, a lawyer, three years. Mr. Davies, secretary of the Democratic National Committee, has been a practising lawyer and a prosecuting attorney. Mr. Hurley originated and developed the manufacture of pneumatic tools. Mr. Parry, at one time the editor of a newspaper in Seattle, was afterward the manager of a shipbuilding plant and chairman of the finance committee of the Alaska-Yukon Exposition. Mr. Rublee has been associated with Louis D. Brandeis in promoting trust legislation.

It is required by the law that not more than three shall be members of the same political party. The first three are Democrats and the remaining two supported Mr. Roosevelt in 1912. Republicans complained because no member of their party had been appointed. They accused Mr. Hurley of lobbying in support of the Ship Purchase bill, and Mr. Rublee of similar action against amendments proposed to modify the Clayton Trust bill. It was also asserted that he might be excluded by the requirements of the law because he had acted as campaign manager for the Democrat who was a candidate in opposition to Senator Gallinger when the latter sought reelection. At first it was said that the nominations would not be confirmed at the present session, but in the committee, at the end of last week, favorable reports upon all except Mr. Rublee were ordered. He had already defended himself before the committee, but it was decided that more testimony should be taken.

#### No Action Upon Treaties

It was known at the end of last week that no action upon the treaties with Colombia and Nicaragua would be taken in the Senate at the present session. Mr. Bryan has persistently urged the Senate committee to make favorable reports. The committee's chairman, Mr. Stone, sought such reports, but the opposition, in the case of the Colombia agreement, was too formidable. There has been objection to this treaty because of its expression of "sincere regret" for what took place at the time of the secession of Panama. Some have held that this—which was regarded in Colombia as an apology—was an attack upon President Roosevelt and his Administration. Mr. Stone proposed that the expression of regret should be cut out and that the sum to be paid to Colombia, \$25,000,000, should be reduced. But nothing was gained in

the committee by these concessions. A letter from Mr. Roosevelt was read. "The purpose of the treaty," said he, "is blackmail, pure and simple." There was also a petition from seventy-six American importing houses engaged in trade with South America, asking for ratification in order that "the antipathy and distrust which have unfortunately grown out of the secession of Panama may be removed" and "the century-old friendship" between the two countries be restored.

The treaty with Nicaragua, which has been reported from committee, gives us exclusive control of the Nicaraguan canal route, with three small islands and a naval station. Our Government is to pay \$3,000,000. Objections having been raised by Costa Rica and Salvador, it is expected that treaties with those countries will be negotiated.

#### Alien Labor Excluded

A law of New York, seventeen years old but not hitherto enforced, forbids the employment of aliens on public works, and provides that the contracts of those who disobey this prohibition shall be forfeited. Complaint against certain contractors doing work on the new subway in New York City was made a few months ago by labor union officers. The question went to the courts in two cases, and the law was pronounced unconstitutional. But there was an appeal, and now the Court of Appeals, the State's highest court, has decided that the law is not at variance with the Constitution.

Subway contracts amounting to \$147,000,000 had been awarded, and the street railway companies had planned work on which \$15,000,000 was to be expended. Of the common laborers employed in subway work ninety per cent were aliens. Nearly all of these were Italians or Austrians. The contractors said they had exceptional qualifications for the work, and that an offer of much higher wages would not attract a sufficient number of competent American citizens. Notice was given that at least 10,000 men must be discharged at once and be added to the ranks of the unemployed, many of whom are found every day in the bread lines. Moreover, the work would be interrupted and delayed. The law required forfeiture of contracts. Work on the barge canal, in the interior of the State, was affected. It was decided that there should be an appeal to the national Supreme Court. In the Legislature at Albany there is a movement for repeal of the law. It has the support of the new Governor, Mr. Whitman.

#### THE LAST MINUTES OF THE "BLUECHER"

The wrecked cruiser just heeling over before capsizing completely. Taken from the deck of the "Arethusa," the British cruiser which finished the work of destruction. To the right black smoke is rising where the "Arethusa's" last torpedo struck; the ship is afire in a score of places from earlier shots. The crew is slipping and clambering down the ship's bottom; one man has worked down to the bilge keel, from which water is pouring. The officers stand astern, close together. A few men have already plunged into the water. The "Bluecher" turned bottom up soon after this picture was taken and floated so for some ten minutes before finally going down

#### Hayti's New President

Hayti has a new Government. It will be recalled that Zamor, as the leader of a successful revolution, was made President, and that he was forced to abdicate in November last, owing to a revolt under the direction of Davilmar Theodore. Immediately after taking office, the latter was opposed by a new revolution. The leader of the rebel forces was Gen. Vilbrun Guillaume Sam. On the 20th he captured St. Marc. President Theodore's Minister of the Interior, Gen. Aurele Montplaisir, was drowned by the capsizing of a boat in which he was attempting to escape. Three days later, President Theodore abdicated and found refuge on a Dutch steamship bound for Curacao. Sam entered the capital on the 26th and was recognized as President.

Successive revolutions have made Hayti bankrupt. For some time our Government has sought the consent of the ruling authority for the establishment of such a fiscal protectorate as exists in Santo Domingo. It was proposed that after the customs revenue had been placed in the hands of men appointed at Washington, with due provision for gradual payment of the foreign debt, Hayti should be assisted in obtaining a loan. Zamor would not yield. Theodore was considering the proposition when his Government was overthrown. It is now to be laid before President Sam by a commission composed of ex-Governor Fort, of New Jersey; Minister Bailly-Blanchard, and Charles C. Smith, Mr. Bryan's private secretary.

ported from the ranch without payment of the export tax of \$20 per head; that Cantu insisted upon payment, and that for this reason Chandler set out to raise a little army for the restoration of Avilez. Men were enlisted in Los Angeles and elsewhere. Money was freely used. Great tracts of land were promised to the commanders.

Cantu had spies at work north of the boundary and he gained a knowledge of Chandler's plans. There were preparations for defense, Trenches were made and dynamite bombs planted. Then the story was told to the American authorities and the indictments followed. It is said that there will be additional arrests, and that proof of a widespread conspiracy will be shown.

#### THE ROCK OF GERMANY

Von Hindenburg is the one figure of commanding individual importance in the German armies

#### Filibusters Indicted

Harry Chandler, one of the owners of the Los Angeles Times, a son-in-law of Gen. Harrison Gray Otis, has been indicted at Los Angeles by a Federal grand jury for conspiring to foment an insurrection in Mexico by recruiting troops on American soil. With him were indicted General Viljoen, the Boer leader and soldier of fortune; General Avilez, formerly Governor of Lower California; G. E. Sandoval, and W. K. Bowker, the manager of a very large and valuable ranch owned by Chandler and situated just south of the California boundary. Chandler and his associates are accused of plotting for the overthrow of Carranza's Governor of the province, General Cantu, who succeeded Avilez. It is alleged that, while the latter was in office, Chandler's cattle could be ex-

## THE "ALABAMA" ARBITRATION

THE FOURTH OF A SERIES OF EIGHT ARTICLES

BY PRESTON WILLIAM SLOSSON

ON THE HUNDRED YEARS OF PEACE AMONG ENGLISH-SPEAKING PEOPLES

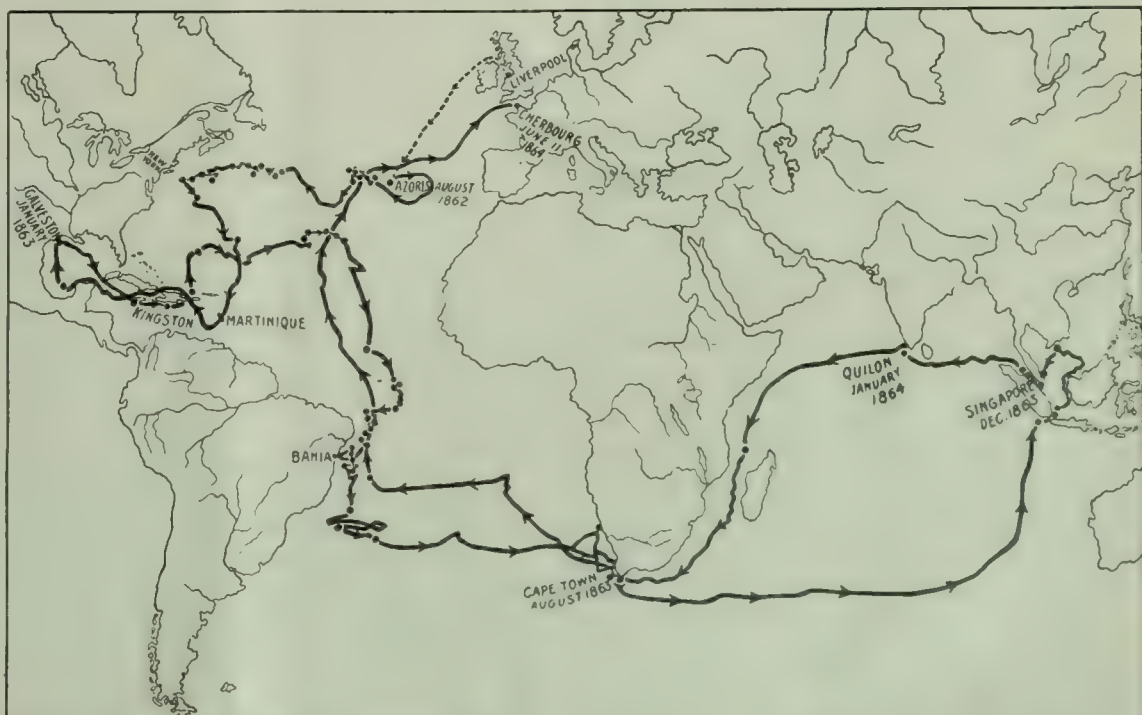

IT is often said that our greatest tie with England is the possession of a common language. This is very probably true, for while people sum up our friendly relations with England in the saying, "Blood is thicker than water," yet our population, even before the Revolutionary War, was drawn from many countries, and today it is doubtful if half the people in this country have any considerable amount of "Anglo-Saxon" blood. But since the English and the Americans speak the same language and read the same books, they take a special interest in each other's affairs, and this community of interest is a firmer bond between us than a common descent could create. Sometimes, however, the English language has been anything but a cause of friendship. Many difficulties which were not hard to settle in themselves have become embittered almost to the verge of war by the fact that the mass of the American people could read the British papers and were hurt by the criticisms of America that they contained.

During our Civil War the European governments, with the exception of Russia, were indifferent or hostile to the cause of the Union. The positions of these governments were naturally reflected in the majority of the European newspapers, periodicals and books and in the speeches of prominent men. In England it appeared as tho public opinion were unanimously in favor of the South. This was not really the case, for besides some politicians like W. E. Forster and John Bright, and literary men like John Stuart Mill and Goldwin Smith, the mass of the English workingmen favored the North, as it seemed to them to stand for free labor and the preservation of a democratic republic. But the British workingmen at that time did not have the ballot. Those classes which controlled the Government by their votes and owned most of the newspapers and magazines were by a large majority in sympathy with the Confederates. They were for the most part opposed to slavery, but they did not regard slavery as the issue in the earlier part of the war. It seemed to them that the North was less interested in freeing the

slaves than in keeping the states together by force against the will of several of them. They disliked the protective tariff which the Republicans favored, and were frightened because the blockade of the southern coasts meant that cotton could no longer be brought to England to keep the textile factories running. Finally, there was a sentimental sympathy between the British aristocracy and the class of wealthy and highly cultured whites who controlled the destinies of the South. It is scarcely surprizing, then, that the British Government listened to that part of public opinion which most readily made itself heard, and promptly recognized the Confederates as "belligerents" and came very near to recognizing the Confederacy as an independent nation.

Had the British Government taken this step there can be little doubt that the United States would have declared war, for the Americans of the North were not only exasperated by the attitude of the British Ministry and the anti-American tone of the British press, but were absurdly overconfident as to their ability to crush a rebellion and at the same time to triumph in a foreign war. But Lincoln saw the situation clearly and opposed every attempt to drag the Union into a struggle with Eng-

land or with any other power. In spite of his efforts, war was averted by the narrowest of margins on at least two occasions. In November, 1861, Captain Wilkes, of the American navy, stopped the British steamer "Trent" and took two Confederate commissioners, Mason and Slidell, prisoner. Great Britain angrily demanded that the prisoners be given up at once on the ground that we had no right to stop and search a neutral ship; indeed, it was just because the British, when they were fighting Napoleon, had taken men from our neutral ships that we declared war in 1812. But the British Government forgot its own previous position and threatened war because we had acted on its own doctrine of the "right of search," and equally the Americans forgot that they had always denied the principle upon which Captain Wilkes had acted. Both nations appeared ready for war and said things about each other which made it harder every day to preserve peace. Fortunately the Queen of England and her husband, Prince Albert, were friendly to the Americans, and Lincoln held from the first that the seizure of Confederates from a neutral ship could not be justified. Finally, the President was able to win over to his point of view a considerable body of public

## THE CRUISE OF THE "ALABAMA"

Each dot represents the capture of an enemy ship. Sixty-six were thus taken, of which 52 were burned. The "Kearsarge" defeated the "Alabama" off Cherbourg on June 11, 1864

"PUNCH" ON THE ALABAMA ARBITRATION opinion, so that he could return the prisoners without endangering the stability of his government.

The "Trent" affair was serious enough, but it was settled within a few weeks and had no permanent effect except in exasperating the people of England and of the North and so making it harder for future disputes to be settled. Another cause of dispute had far more lasting effects. This was the building of Confederate ships in British ports. Our Minister in Great Britain, Charles Francis Adams, warned the British in 1862 that a ship which was being built at Liverpool was really intended as a Confederate privateer. In spite of this notification, the British Government waited more than a month before they took any action to stop the building of the vessel. In the meantime this ship, known later as the "Alabama," escaped from Liverpool and began to capture and destroy American merchant ships. Other ships were fitted out in British ports or found refuge in them when pursued by the enemy or lacking supplies. Adams offered to submit these violations of neutrality to arbitration, but the British Government refused to do so on the ground that whether Great Britain observed its pledge to remain neutral was a question of national honor and not subject to arbitration. After the escape of the "Alabama" and other ships early in the war the British were more careful to observe neutrality, but the mischief was done, for the Confederate privateers were able to inflict immense damage upon American shipping. The United States has never yet recovered the position it held before the Civil War as a carrier of a large part of the world's international commerce.

The close of the Civil War found the American people very hostile toward Great Britain. The South was disappointed because it had not been recognized as a separate government; the North was angry because of the recognition of the Confederates as belligerents, the loss to American commerce due to British built ships, and the generally unfriendly attitude of the British Government and of public opinion in that country. On the other hand, the attitude of the British had been completely changed as a result of the war. The victory of the Union, which was quite unexpected in Europe, the emancipation of the slaves, and the fact that cotton could now be imported for the English factories, destroyed the basis for the previous attitude of the upper classes in Great Britain. The Johnson-Clarendon treaty was arranged by which claims for private damages suffered by citizens of the United States or Great Britain were to be submitted to arbitration. This was rejected by the Senate because it contained no provision for determining the question of whether or not Great Britain had violated its obligations as a neutral. But by diplomatic agreement a joint high commission of British and American diplomats met at Washington in 1871 to arrange for the settlement of all disputes between the two countries. This commission drew up a list of rules for neutrality in time of war, arranged for arbitration of the "Alabama" claims at Geneva, and for the British claims for losses suffered during the Civil War at Newport, arranged for the settlement of the disputes about fishery rights and the determination of some disputed questions as to the Canadian boundary and the right of both nations to navigate certain rivers in Maine and Canada. The British Government also expressed in the most generous and friendly spirit its regret at the escape of the "Alabama" and other ships from British ports. This satisfactory conclusion of the Treaty of Washington was largely due to the efforts of President Grant and Prime Minister Gladstone, who had been favorable to the Confederates during the war.

The Geneva arbitrators were Count Sclopis, of Italy, the president of the court; M. Staempfli, of Switzerland; Baron d'Itajuba, appointed by the Emperor of Brazil; Charles Francis Adams, the statesman who had represented American interests in Great Britain during the Civil War, and Sir Alexander Cockburn, of England. The court of arbitration found its greatest difficulty in the question of "indirect claims" for

damages. It was admitted that Great Britain had to pay for property actually destroyed by the "Alabama" and other ships, but Senator Sumner and other public men had demanded that the United States be also paid for expenses in capturing these ships, for the permanent injury to our merchant marine, for the increase in insurance rates, and for the prolongation of the war. He even proposed that Canada be ceded to the United States in payment! These proposals created a demand in Great Britain that arbitration be dropped forthwith and only by the unanimous agreement of the arbitrators not to consider the "indirect claims" at all was it possible to reach a decision on the amount of direct damages to be awarded. By September 14, 1872, the decision of the court was made that Great Britain was responsible for the damage done by the "Alabama," the "Florida," the "Shenandoah," and no other ships, and that damages be paid amounting to fifteen and a half million dollars. Sir Alexander Cockburn alone protested against the decision of the majority.

The arbitration at Geneva is the great turning point in Anglo-American relations. Previous to that time Great Britain and America had been able to compose their differences only in the face of a settled dislike and hostility on the part of the two nations to each other. A large number of persons in both countries were convinced that the aim of the other nation was to cheat and bully them out of their just rights. Since 1872 the wisdom of British and American statesmen has been backed by the friendship of the great mass of the people, and today it would be as difficult to force the two great English-speaking peoples into war as it has sometimes been to keep them at peace. The influence of the Geneva decision has not been confined to the nations concerned. By referring such vital matters to the decision of a court the use of methods of arbitration has become familiar to every nation in the world.

#### REFERENCES

J. Foster's *A Century of American Diplomacy* contains an admirable account of Anglo-American relations during the Civil War, pages 357-400, and of the Alabama settlement, pages 421-428. H. C. Lodge's *One Hundred Years of Peace*, pages 88-121, is good in most respects but too one-sided. Perhaps a more adequate account of this critical period is W. A. Dunning's *The British Empire and the United States*, pages 203-261. Of the many special studies of the Alabama Claims, one of the best is contained in J. B. Moore's *International Arbitration*, pages 495-702. Any general American history gives the events treated in this article; we may mention J. F. Rhodes' *History of the United States*, Vol. VI, pages 335-376, and W. A. Dunning's *Reconstruction* (Hart's American Nation series), pages 159-171.

## "THE METRO"

A trench-tunnel named for the Paris "Métropolitaine" subway, and carefully labelled

THE twentieth century will be distinguished in history as the time when war invaded the third dimension. Man in his eagerness to slay his fellow man has taken as his model the eagle and the shark and strikes his enemy on the sea from the sky above or the water beneath. On the land he imitates the mole, tho it does an injustice to that harmless animal to compare him to the vast machine which scars the country with its burrows and throws destruction for miles roundabout.

In modern warfare a battlefield can be distinguished from any other stretch of ground by there being no soldiers visible on it. Movements of troops near the front have to be made mostly at night and in the daytime the scene of conflict looks like the interior of the crater of Mauna Loa, a torn and barren plain with here and there a volcanic eruption.

Of course mining and entrenchment are no new thing, but with the development of the long-range rifle and smokeless powder the practise became so extensive and essential as to transform military science. It was our boys in blue and gray who discovered that a dirt ridge and a ditch made the best kind of life insurance and every war since then has shown an increased dependence upon subterranean operations. In the seventeenth century the school of Vauban had worked out a mathematical system of angular advance with trenches and mines by which it could be calculated beforehand just what

BURROWING  
TO BERLINTHE WAR OF  
SPADES AND PICKS

day a besieged fortress was due to fall—provided of course that the defenders also followed the rules of the game. But nowadays we have to deal not with a besieged city but with a besieged country and the problem is correspondingly complicated. The double entrenched line in France and Flanders extends from Switzerland to the North Sea, and it measures 420 miles in length not counting its minor twists and turns and parallels. For nearly six months both parties have been pounding away at one point and another along this line and yet it has scarcely budged enough to make a noticeable change upon our maps. A professor of mathematics in the Paris Sorbonne is said to have figured out that according to the average rate of progress since General

## THE PERISCOPE ON LAND

This device, as in the submarine, makes observation possible at a point below the danger level

Joffre ordered the advance all along the line the French will reach Berlin in 1943, and the Russians will reach there—but it is more difficult to calculate their date of arrival since they are now further away from Berlin by half than when they started out the first of August. Such calculations, however, cannot be relied upon since at any moment a break may be made in one line or the other thru a shortage of some one of the essentials of war, say courage or copper. Lord Sydenham reminds his impatient countrymen that when Lee took to the trenches in June, 1864, it was nine months before Grant with double his force was able to dislodge him. It may be that the 42-centimeter Krupp would make as short work of the fortresses of Verdun or Warsaw as it did of those of Liège and Namur, but after six months of effort the Germans have not yet succeeded in getting near enough to try it. A barbed wire fence and ditch have stood between.

It is evident that the soldier would have been much better trained for warfare under modern conditions if he had been set to digging irrigation ditches than in doing "Fours right!" and "Present arms!" on the parade ground. The London Times prints a private letter from a British cavalry officer who frankly confesses his helpless feeling at being left in charge of a front trench the first night:

Being entirely innocent of the correct procedure under strange circum-

stances, I squatted in my trench, wondering whether it was expected of the officer in charge to sit down and keep awake, or to lie down and go to sleep as all the men, excepting those I had put on guard, appeared to be doing, or to get up at the risk of his life and make periodical inspections of the men in their trenches. . . . Nothing that I had ever been taught in all the courses I had been thru bore in the slightest upon what we were doing.

Practise in the throwing of hand grenades was dropt from the drill of the British army about thirty years ago and even the "grenadiers" have lost their ancient cunning now when it is most needed. The modern grenade is provided with a short stick handle by which it is thrown after the fuse is lighted. The favorite form of the Germans looks like a school globe except that it is made of cast iron instead of *papier maché* and that the lines of latitude and longitude are grooves deep-cut so that when the bomb explodes it flies into small, sharp fragments. It is about four inches in diameter and weighs a pound and a half when loaded.

But this is too small and short ranged, so the Germans have constructed a trench howitzer which fires a bomb bigger than itself. The steel shell is fifteen inches in diameter and weighs 185 pounds, nearly as much as the gun including its wheeled base. The shell is not loaded into the barrel, but rests upon a rod projecting from the muzzle as the gun points upward at an angle of forty-three degrees. The firing of the gun shoots the rod out of the bore and sends the shell on its way three or four hundred yards in front, while the rod drops to the ground. These aerial torpedoes are filled with high explosive and burst with a terrific noise and fatal effect in the trenches.

Altho this is a long-range, machine-made campaign, it is not altogether devoid of the romance and chivalry which has attached to warfare thru all the ages. No broadsword champion, no knight encased in steel, has ever shown more personal gallantry in deeds of derring-do than have the bird-men and the fish-men in the Great War. The cruise of the "Emden" reads like a tale of the Spanish Main. Near Verdun a party of 125 Frenchmen

dug their way to within twenty feet of a German block house and then rising from the earth took it by assault. But that night the garrison of the pocket fortress had to stand a siege. Suddenly the darkness was lightened by magnesium stars shot into the air and suspended from parachutes, while two battalions of the enemy advanced singing a hymn. But the little garrison beat them off and the day brought reinforcements.

According to the extreme pacifist, Lowell for instance every soldier is *ipso facto* a murderer and should be treated like a murderer. But as a matter of fact he does not. It is impossible for two rows of brave fellows, whose bravery each has tried, to stand opposite for weeks without gaining a certain respect for one another. The difficulty is to keep them enemies so that the war can go on long enough to satisfy the hate and contempt of the poor journalists and professors who remain at home. What have we read anything finer in the literature of the world's wars than this letter from an officer in the Yorkshire Light Infantry:

One wonders, when one sees a German face to face this really one of those devils who wrought such devastation—for devastation they have surely wrought. You can hardly believe it, for he seems much the same as other soldiers. I can assure you that there is none of that insensate hatred that one hears about, out here. We are out to kill, and we do, at any and every opportunity. But, when all is done the battle is over, the splendid universal "soldier spirit" comes over all the men, and we cannot help thinking that Kipling must have been in the firing line when he wrote "East is East and West is West" thing. Just to give some idea of what I mean, the other night four German snipers were shot on our wire. The next night our men went out and brought one in who was near and get-at-able buried him. They did it with just the same reverence and sadness as they do to our own dear fellows. I went to at the grave the next morning, and one of the most uncomely looking men in my company had placed a cross at the head of the grave, and had written on it:

"Here lies a German  
We don't know his name,  
He died bravely fighting  
For his Fatherland."

By special arrangement with the London Sphere. © N. Y. H.

BURROWING UP TO THE ENEMY'S TRENCHES—SO CLOSE THAT THIS SAP, OR TUNNEL, IS DUG OUT FROM THE GERMAN TRENCHES (FAR OFF TO THE LEFT) TO WITHIN FOUR YARDS OF THE BRITISH TRENCHES

and under that, "got mitt uns" (*sic*), that being the highest effort of all the men at German. Not bad for a bloodthirsty Briton, eh? Really that shows the spirit.

I don't believe there is a man living who, when first interviewing an 11-in. howitzer shell, is not pink with funk. After the first ten, one gets quite used to them, but really, they are terrible! They hit a house. You can see the great shell—a black streak—just before it strikes, then, before you hear the explosion, the whole house simply lifts up into the air, apparently quite silently; then you hear the roar, and the whole earth shakes. In the place where the house was there is a huge fountain-spout of what looks like pink fluff. It is the pulverized bricks. Then a monstrous shoot of black smoke towering up a hundred feet or more, and, finally, there is a curious willow-like formation, and then—you duck, as huge pieces of shell, and house, and earth, and haystack tumble over your head. And yet, do you know, it is really remarkable how little damage they do against earth trenches. With a whole morning's shelling, not a single man of my company was killed, altho not a single shell missed what it had aimed at by more than fifty yards. That makes all the difference, not fifty yards. If you only keep your head down, you are as safe as houses: exactly, you will remark, "as safe as houses."

Fraternizing between the trenches cannot be altogether prevented even by officers who like the writer of the following letter views the practise with grave disfavor and suspicion:

When I got back to our trenches after dark on Christmas Eve I found the Bosches' trenches looking like the Thames on Henley Regatta night! They had got little Christmas trees burning all along the parapet of their trench. No truce had been proclaimed, and I was all for not allowing the blighters to enjoy themselves, especially as they had killed one of our men that afternoon. But my captain (who hadn't seen our wounded going mad and slowly dying outside the German trenches on the Aisne) wouldn't let me shoot; however, I soon had an excuse, as one of the Germans fired at us, so I quickly lined up my platoon and had those Christmas trees blown down and out. Meanwhile, unknown to us, two officers on our right, without saying a word to anybody, got out of their trench and walked halfway to the German trench, and were met by two German officers and talked away quite civilly and actually shook hands! It was an awfully stupid thing to do, as it might easily have had different results; but our captains are new and, not having seen the Germans in their true

light yet, apparently won't believe the stories of their treachery and brutality.

The Germans came out, and as soon as we saw they were Saxons I knew it was all right, because they're good fellows on the whole and play the game as far as they know it. The officer came out; we gravely saluted each other, and I then pointed to nine dead Germans lying in midfield and suggested burying them, which both sides proceeded to do. We gave them some wooden crosses for them, which completely won them over, and soon the men were on the best of terms and laughing. Several of the Saxons spoke very fair English, and some hailed from London, much to our cockneys' delight, and talk became general about "Peecadeely," etc. One of them played a mouth-organ, and the others did sort of weird dances, or series of hops, in the turnip field where we were!

I think it did our men good to have a close inspection of their foes; three-quarters of them seemed to be very young youth; I wouldn't mind taking most of them on myself with a bayonet. They said we were very good shots, so I hope by that we've done some damage. They said to the men, "Send us the tip when you're relieved and we will fire over your heads till then." I don't think! Anyhow, we've got orders not to fire till they do, and if they get the same orders this truce will continue indefinitely. It's really an extraordinary state of affairs. We had an inter-platoon game of football in the afternoon, a cap comforter stuffed with straw did for the ball, much to the Saxons' amusement. In the evening we said "Good night," and our men lit large fires in the trenches and sang songs, tho I took good care to double my sentries, as I trust these fellows devil an inch. This morning war has broken out again, but not in front of us. It is a rum show; I believe politicians will be wrong now, and that the war will come to an end because every one will get fed up and refuse to go on shooting! But it's stupid to take risks.

When ice-cold slush filled the bottoms of the trenches it was found impossible to prevent the men, when their officers were not watching them, from arranging informal truces with their enemies so they could sit up on the edge of the trenches and get their feet out of the freezing mixture. Sometimes by mutual consent the soldiers on both sides come out to mend their breastworks, working openly between the lines a couple of hundred yards apart and then getting under cover to resume firing on one another.

In certain places the opposing trenches have come so

**GRENADES CAN BE THROWN FROM SAP-HEAD TO TRENCH**  
HT. OF COURSE THE SAP IS OPEN ONLY AT THE END OR "SAP-HEAD." THE ROOF IS CUT AWAY IN THE ILLUSTRATION TO SHOW THE STRUCTURE

close together that the enemies are within range of the camera and may photograph one another. After the preliminary negotiations the photographer gives a signal and the Germans and French in turn stick their heads up in a row above the breastworks and are snap-shotted.

Decoys are in frequent use. The log cannon, which may, like the wooden nutmeg, be claimed as an American invention, has held many a position. The Russians before Warsaw chuckled in their sleeves to see the Germans waste a day's time and five thousand shells (count them) on a fake barricade consisting of a plowed furrow with a few overcoats scattered along it.

Really, war would not be so bad if it were not for the danger of getting killed—and the duty of killing. From all sides we hear reports that the men are "gaining weight" and "never felt so well in their lives" as in the trenches. Making due allowance for the effort of the soldiers to write home as cheerfully as possible we cannot question that some of these young men are living in more healthful and wholesome conditions than when they were in Tipperary or Seven Dials. The funk-hole is not so picturesque as the canvas tent, but it is preferable in cold weather. In the pioneer days of Kansas and Nebraska many a good Christian family has been raised in a 'dug-out or a 'dobe not half so well furnished or provisioned as one of these trench dwellings. They are often well drained, warmed and ventilated and free from disease, and the rations supplied regularly are pure and calculated by expert dieticians to the proper nutritive ratio.

The irrepressible humor of the soldier finds an outlet in the naming of these troglodyte villas. Some of the

German caves bear signboards which may be translated "Under the Greenwood Tree," "Rheumatism Hall," "The jolly cave-dwellers," "Here lives the primeval man" and "The Shooting Gallery, 3 shots for 10 cents." Neat pyramids of green lyddite shells are piled on each side of the entrance of a subterranean dining hall with the placard "Green gages supplied by the English for every meal." In Belgium "Venice" and "The Grand Canal" are favorite trench names for obvious reasons. Londoners naturally name their trenches after the stations on the tuppenny tube and so have no difficulty in remembering their order, "Waterloo" and "Charing Cross" come before you get to "Leicester Square." The Parisians name theirs from the Metropolitaine subway: "Alma," "Etoile," and so on, ending up with "Père Lachaise," the most deadly post of all.

Kipling in his "Song of the Banjo" extols the merit of that instrument at the front, but the mouth-organ seems now to be more in demand. A Territorial sergeant who received a batch of them from home tells how he distributed them and gave an impromptu concert:

We had all sorts of instruments in the band; the big drum was an empty packing-case and the drum-stick an entrenching tool handle with a piece of sacking tied round the end; empty biscuit tins were side drums; tin whistles, squeakers, and combs and paper came in as well. Candles and electric lamps gave the illumination, and it was really very funny to see this band of about thirty marching around the building, headed by the self-appointed drum-major and conductor in a goatskin, twirling a big stick which I use in feeling my way to and from the trenches.

In the more luxurious of these subterranean lodges a phonograph may be found and since the trenches are connected by telephones one record

may be heard by the whole line. The London *Times'* letters, from which we are mostly quoting, tells of other amusements, such as the following:

The men are truly wonderful; some of the — were playing football yesterday afternoon, three shells pitched among them, killing one man wounding nine. Within a quarter of an hour they were playing football again. Of course, it was unaimed fire, but it gives you an idea of the callous value of life. We went to see a performance of "The Follies" yesterday afternoon; the troupe was got up by the — Division, with the addition of two local ladies. It was awfully good; some of the talent above the ordinary, especially a corporal from the Army Service Corps. They have two performances a day, at four and seven, and the men come in batches when in reserve, and pay ½f. entrance; with the profits they run a cinematograph, an excellent thing, as it takes the strain quite completely off the men's minds for an hour or two.

The following extract from the letter of a young Australian in Belgium shows callousness of another kind:

There are seven dead Germans in front of the trenches this morning, and I hope to get them in at dusk, to see if they have any papers on them. — "dropped" one, and is now full of enthusiasm at the thought of looting something off him, as a souvenir for his girl at home. I want them moved, because in a few days they become almost as objectionable dead as alive. . . . We lost Major —. We want at least 500 dead Germans to wipe that out, and if they continue attacking this position we will bag the number before many days.

But strangely mixt as human nature is, the experiences which will arouse the sporting or the murderous instinct in one man will in another revive a religion which in the tamer times of peace had been half forgotten. Said a wounded Tommy to the chaplain, "Yes, you know, sir, God seems jolly near you in the trenches."

HOW THE TRENCHES ARE GRADUALLY CARRIED FORWARD TOWARD THE ENEMY'S LINES

THE COLONNADE ABOUT THE PALACE OF FINE ARTS

## EAST AND WEST THRU SAN FRANCISCO

BY HERMAN WHITAKER

AUTHOR OF "THE PLANTER," "THE SETTLER," "CROSS-TRAILS"

"SURELY you are not going to see the Exposition to-day?" The friend I met on the ferryboat added, "It's storming. You won't be able to see anything for the rain."

As the boat was plunging like a wounded whale under our feet and we could see the bar breaking in mountainous surf outside the Golden Gate, the information was really superfluous. When I gave the storm as my reason for going, the sudden cynical cock of my companion's eyebrows affirmed at once his doubts of my sanity and contempt for my taste. Nevertheless, it was true. Already I had seen the Exposition bathed in golden sunlight, a fair city of the sun, a walled town of the Orient laved by blue seas, glowing like a rich topaz in its setting of street-crowned hills; and because I had a shrewd suspicion that its beauty

was waterproof, not to be washed off like rouge from the face, I wished to see it in the grip of a storm.

And surely I did. My first glimpse from the Fillmore-street hill showed its miles of buildings swept by a fifty-mile gale, towers and domes sheeted in gray rain, flag halliards wildly flapping against swaying poles, the thousands of palms along the avenues and esplanades tossing with the roar and rattle of a tropical jungle in the grip of a typhoon. So strong was the wind that the forty-pound iron tassels, which hold down the great heraldic standards, swung and flapped like their silken prototypes; and it sent me spinning, a reluctant projectile, down the Avenue of Progress past the giant porticos of Machinery Hall to the "Marina," where huge combers broke and threw fine spray clean

over the top of "Morro Castle" lighthouse into "Exposition Harbor." Far out on the yeast of waters a wave would rear its green head, take a look at the Exposition, then come rolling in, only to smash on the sea-wall and spend itself in a last desperate leap at the rear façade of California Hall; and always its booming was spaced by the brazen complaint of a bell buoy and wild skirling of wheeling gulls.

It was glorious! The rain that blackened the statuary and stained the long travertine façades with the green hues of time, had brought all to perfect tone and carried it back five thousand years. It was now coeval with the pyramids. Like them, it stood square on its solid bases, defying and affording shelter from the storm. For in all San Francisco, that day, there was no snugger,

warmer place than the cloisters and colonnades of the interior courts. Blow high, blow low, let the rain fall or the mists float in thru the Golden Gate, there one always may be warm.

When I entered the lovely Court of the Seasons its sculptured arches and noble colonnades, beautiful statues and bas-reliefs were reflected by the wet bitumen pavement clearly as in some black lake; and as I stood there, admiring the soft tones of the reflection, a gray sheet of rain blew aside from the heroic group of the western nations that crowns a great lateral arch in the "Court of the Universe." With a thrill, I was carried back twenty years to the day that I rode out of a rain-soaked wood upon just such a settler wagon and pioneer group navigating a western prairie.

It was alive. As the sheeting rain alternately veiled and unveiled it, the great tilted wagon seemed to rock and lurch on its heavy wheels. Seen from the other side the appearance of motion was equally deceptive. With the familiar heavy roll that ripped my own "breaker plow" thru a hundred acres of Manitoba prairie, the oxen forged thru the rain mists with the mounted Indian and trapper on their quick-stepping beasts. Water streamed from the beard of the settler driver and I half expected to see him give it a twist and a shake before plunging into the news of the trail.

The illusion was equally perfect with the groups of the eastern nations above the opposite arch. Under its canopied howdah the huge elephant moved forward with the relentless swing of doom. I found myself listen-

ing for the splash as the great war steed of the Mongolian warrior brought its poised hoof down in the mud. Under their baskets of gifts, the stalwart slaves seemed to shiver from the chill of the rain. Yet was there no pause. From opposite sides of the court, each from its ancient house in the east or west, the Occident and the Orient moved on to the meeting forecast in the verse of Whitman hewn on the face of the pioneer arch:

Facing west from California's shores,  
Inquiring, tireless seeking what is yet  
unknown,

I, a child very old, over waves toward  
the

House of Maternity, the Land of Mi-  
grations,

Look afar. Look off the shores of my  
western sea,

The circle almost circled.

Since that verse was written the "circle" has been "circled," and one of the most remarkable, among the thousands of remarkable things about the Exposition, is the way in which the statuary, mural paintings, bas reliefs, sculptural effects of all kinds lead up thru one great historic story that had its beginnings what time Leif Ericson planted the colony of Vinland on the coast of Maine, which follows Columbus and the Spanish conquest, the reign of the padres, our own progression west-

ward, the great commercial movement that finds its culmination in the Canal, finally the greater motif set forth by these heroic groups—the world conquered, from west to east, from pole to pole.

Than this there could be nothing in the history of man of greater import, more significance. Flowing across the Pacific, the civilization of the Occident has inundated the Orient, and now comes the backwash in streaming tides of commerce. In the words of the Chinese Commissioner to the Exposition: "The Westward-Ho of the Occident has now encountered the Eastward-Ho of an awakened Orient; their edges overlap. Progress, geographically, has reached its limits. There are no more worlds to be explored. Even the frozen poles are conquered." With great wisdom, he adds: "There is left but one direction for advancement—upward! The world is becoming so crowded with the heaped-up products of man's ingenuity and labor that in order to escape being crushed under their mass he will have to dominate them. This Exposition registers the impact of these mighty commercial forces, and it will be its office to direct the expansion of civilization upward to planes of peaceful aspiration."

This is vital philosophy and the proof of it lies in the round dozen of huge palaces wherein are bestowed over eighty thousand individual exhibits, the most wonderful aggregation of human products ever gathered together, yet which—we have to admit it—have not, so far, been made to contribute anything like their uttermost to the happiness of their producers. A second and greater proof,

© Panama-Pacific International Exposition

THE NATIONS OF THE WEST

because it holds out hope for the subversion of the existing relation, the placing of man on top of his things, is the four hundred conventions and congresses that will meet in San Francisco during the coming year. The friction of these hundreds of thousands of highly trained minds, the exchange of ideas that cover in scope every department of science and knowledge, is bound to result in good to the race. Lastly, the proof of it is to be seen any time one strolls thru the courts and grounds, in the great black "tramp steamers" and ocean liners that heave in and out thru the Golden Gate. Tying the Exposition to the event it celebrates, the opening of the Canal, they move in and out in stately procession.

Without the Canal, the development of the Orient would have done great things for the Pacific coast; but their combination has produced an immediate and wonderful stimulus in trade and industry; increases that are the more remarkable because of the war. When we remember what a large factor in the world's commerce is German trade, and realize how completely it was swept off the ocean in less than thirty days; also take into consideration the partial paralysis of other trade; we are then in position to estimate correctly the full meaning of the figures. They are really astonishing. In three months after the Canal opened, over a million and a quarter tons of cargo passed thru it, paying in tolls one million, one hundred and thirty-five thousand dollars; and tho it would be natural to suppose that the bulk of

this tonnage has been contributed by the transcontinental railways, such is not the case. Their reports show that there has been no actual falling off in freight. Only the normal yearly increase was diverted to the Canal.

The increase was, of course, accompanied by a corresponding addition in shipping, for no less than eighteen new lines have been established with regular sailings between the Pacific and Atlantic seabords and Europe. Yet in spite of this and the additional fact that new lines spring up every few days, the cargoes offered constantly exceed the accommodations.

This wonderful increase is principally due to the two factors of accessibility and distance. Between San Francisco and Liverpool the Canal has cut the distance from 13,517 miles to 7830, fifty-eight per cent. Between San Francisco and New York from 13,107 to 5272 miles, full sixty per cent, and similar reductions in distance hold between Europe and the Far East. Consequently, a steamer can now make two trips in the time previously consumed by one; a complete halving of the cost of transportation. Nor is this all. Two men who live ten miles apart can naturally effect more exchanges than another couple who have to haul their

products twenty. A dollar will actually buy more for the first couple than it will for the second. So the Canal has actually increased the buying power of all the states it serves. In three months the trade of San Francisco with Great Britain alone increased one hundred per cent; her trade with Atlantic ports rose two hundred and fifty per cent; and the general commerce of other Pacific coast ports similarly advanced by leaps and bounds. Two years before the opening of the Canal over twenty European steamship lines had made inquiries for wharfage space in San Francisco, and there can be no doubt that but for the war the majority would now be in operation, delivering, along with their freights, millions of thrifty emigrants to people the wide empty spaces of the western states.

Looking down the vistas of time one sees a brilliant prospect. One of the most remarkable of historical phenomena is the slow progression of the economic power westward. From its ancient source among the Asian peoples, it passed in turn to the principal nations of Europe, lingering a century with England before it crost the Atlantic to us. Even with us there has been a constant shifting of the center of trade and population westward. Crossing the Pacific, our civilization awoke the sleeping Orient, and now the returning tides will swell trade and commerce to unprecedented heights. From the old centers of population a steady stream of immigrants will soon be pouring into the deep woods of Oregon, Washington, British Columbia, the mines

THE NATIONS OF THE EAST

and forests of Alaska, the fertile interior valleys of California. Mexico and South America will quicken under the stimulus of new blood, ambitions, brains. Every accession of population will react on trade. New lines of steamers will connect the Pacific coast di-

rectly with the Islands, the Orient, Oceania, Australia. Summing it imperfectly, one may say that on a grander, more colossal scale, one that calls for the use of millions and tens of millions in the computation of men and values, the opening of the Canal has in-

itiated a hegira similar to the "Gold Rush" of '49. Nor will its effects be local. Like the ripples from a stone thrown into a pool, the reactions of a marvelous prosperity will flow across America and all over the world.

## BELGIUM'S POET

As the superman does not explain his actions, so the superpoet does not write prefaces. The little man sends out his little verses with a "foreword" whose vigor is so out of proportion to his product as to suggest that he has taken such a long run he has no breath left for the jump; the Futurists produce nothing so brilliant as the manifestoes that tell what they are going to do. But Emile Verhaeren, Belgium's poet, writes thru a lifetime nor once says what he intends to write or why, neither what he has written or wherefore; there is nothing in his flashing volumes but his poems.

Others must write the prefaces if they are to be written, and others have: Tancred de Visan for France, Georg Brandes for Denmark, Albert Mockel for his own country, but of them all none has so entered into the spirit of the poet himself—which means to pass thru it into the spirit of modernity—as Stefan Zweig the Austrian, whose monumental work (in Germany it accompanies what is practically a complete translation of Verhaeren's poems) appears now in an adequate English translation.

By an ironic coincidence it appears just when our interest in all things Belgian is making an unexpected run upon those shelves of the public libraries where Verhaeren's poems have been resting undisturbed all too long. Ironic, for it is an Austrian who gives such glowing praise to Belgium as sounds in the second chapter; ironic, too, in such sentences as "Health, strength and fecundity is to this very day the mark of the Belgian people in town and country. Poverty itself is not hollow-cheeked and starved here. Chubby, red-cheeked children play in the streets; the peasants working in the fields are straight and sturdy. . . . Nowhere in Europe is life so intensely, so merrily enjoyed as in Flanders."

Few of Verhaeren's poems ever appeared in English, and these, published in 1899, are now hard to come by. The translator of this work wisely left the quotations with which it is rich, in the original French, and it may well be that they will be the first lines of Verhaeren's work that many of those who read this book will have seen. Coming thus as an introduction to the poetry of one who more than any other speaks for the Europe of his day, as Whitman spoke for his America, this swift-moving, deep-breathing study of Verhaeren's meanings and methods is a sort of spring-board from which to leap into the poet's profound.

Here is the record of a life whose

## Imported Dress Cottons and Dress Linens at McCutcheon's

Recent advices from our Paris representatives state that there are little or no piece goods being manufactured at the present time.

We anticipated our wants months ago and secured in large quantities the fabrics which are most sought for to-day, such as *French Piques, French Dress Linens, French Golfine, French Voiles, French Crepes, Handkerchief Linens, "Gabardines," Plumetis, Embroidered Batiste, Embroidered Voile and Crepes, Printed Fabrics, Novelty Borders and Sheer White Fabrics of every description.*

**Note**—The above stock should prove particularly interesting to manufacturers of Waists and Dresses, Ladies' Tailors and Dressmakers.

*Samples of any of these lines except bordered materials, mailed upon request.*

**Fifth Ave., 34th and 33d Streets, N. Y.**

## PUBLIC SPEAKING

"One who teaches Public Speaking in Secondary Schools has before him two main problems; namely, the manner and matter of speech. The Independent furnished us considerable material from which effective speeches can be made. I can best illustrate my method by taking for example an exercise based on the issue of February 9, 1914. My assignment record for the Senior class reads as follows: 'From The Independent, February 9, be able to speak on any one of the following subjects':

- (1) Government Ownership in Alaska.
- (2) The Goal of Economic Endeavor of Mr. Edwin Ginn.
- (3) Briefly summarize Mr. Taft's article and state all the main points. Also state whether you disagree and why. Suggest a solution for the problem.
- (4) In the same manner treat President Wilson's Message to Congress.
- (5) New York's Police Problem and Its Solution.

"Every student in the class is responsible for all the above topics. He must be able to speak before the class briefly, directly and concisely. This is a weekly exercise in Clear Thinking, Extemporaneous Speaking and Close Reading.

"We are trying to revive the almost lost art of Oral Reading. Occasionally you print an article suitable for this purpose. Such an article was Batcheler's 'Books That Hit the Mark.' Now and then you publish a brief extract such as President Wilson's speech on the conclusion of the Tariff Legislation and on the passage of the Currency Bill. I find these admirable for declamation purposes.

"When all of our subscriptions are in you will be sending us over one hundred copies weekly. We have used The Independent for over a year with undiminished success."

## Creating a New Art

At the Centennial Exhibition at Philadelphia, the exhibit of the Bell System consisted of two telephones capable of talking from one part of the room to another.

Faint as the transmission of speech then was, it became at once the marvel of all the world, causing scientists, as well as laymen, to exclaim with wonder.

Starting with only these feeble instruments, the Bell Company, by persistent study, incessant experimentation and the expenditure of immense sums of money, has created a new art, inventing, developing and perfecting; making improvements great and small in telephones, transmitter, lines, cables, switchboards and every other piece of apparatus and plant required for the transmission of speech.

#### CURRENT HISTORY

Burnsville, W. Va., Jan. 18, 1915.

"We are still doing good work with The Independent and I find it the best paper with which to interest the students that I have used so far this year. In fact, after having your publication in competition for three months with two other like papers, we have found that the greatest interest in Current History lies with those students who use The Independent. And, I bespeak for it, even this early in the scholastic year, a more successful use in 1915-16."

(Signed) LEO J. HART,  
Principal of Schools.

Send for School Literature.

THE INDEPENDENT - - New York

As the culmination of all this, the Bell exhibit at the Panama-Pacific Exposition marks the completion of a Trans-continental Telephone line three thousand four hundred miles long, joining the Atlantic and the Pacific and carrying the human voice instantly and distinctly between New York and San Francisco.

This telephone line is part of the Bell System of twenty-one million miles of wire connecting nine million telephone stations located everywhere throughout the United States.

Composing this System, are the American Telephone and Telegraph Company and Associated Companies, and connecting companies, giving to one hundred million people Universal Service unparalleled among the nations of the earth.

course, for some part of its way at least, is that of many lives of his time: from exuberant health and youthful vigor, down the anguished decline of nervous disease to what seem ultimate depths of bodily and spiritual pain, until the ghastly hour when he seems to see the corpse of his reason—dead from too much thinking, from too much searching out the cause—drifting down the slimy flood of Thames. Then there is the coming out of his soul, sick with egotism and intellect, from under the suffocating weight of his own personality, to look about first at the life of his fellows in countryside or "tentacled town," and gradually to lose itself, to find itself magnified, aggrandized, in the soul of cities, of crowds, in the tumult of trains and factories, in the tumultuous forces of life and the multiple splendor of the universe. "To admire all is to exalt one's self," he cries. "Life is in flight," his Pegasus has the whole world for an arena, beauty beams from factory windows, iron monsters beat the rhythms of life, and he has a friend in every star.

*Verhaeren*, by Stefan Zweig. New York: Houghton Mifflin Co. \$2.

#### BEFORE THE DAWN OF SCIENCE

"There clusters about the sun a rich mine of folk-lore," every vein of which William Tyler Olcott has tapped for his *Sun Lore of All Ages*, a parallel of *Star Lore of All Ages*. Old friends of Greek mythology in new guise, poetical legends of the American Indian and solar myths gathered from the four corners of the world have lost little of their quaint phraseology and imagery in the retelling, and the rare illustrations add much to the charm of the whole.

Putnam. \$2.50.

#### COMRADES OF CAPTAIN SCOTT

When Captain Scott set out with his four companions from the Terra Nova for the goal from which he was never to return, he left behind him the Northern Party, to carry on scientific investigations along the Barrier, Cape Evans, on Cape Adare and Duke of York Island. One of this party of six men, Raymond E. Priestly, tells in *Antarctic Adventure* of its achievements and daily life, and of the wonders and rigors of the southern land. The book is profusely illustrated by photographs.

Dutton. \$5.

#### FOR THE AMATEUR ENTERTAINER

If the clever and amusing *Monologues and Duologues* by May Isabel Fisk were to be taken as a true representation of conditions we should have a "Rights for Man" movement more terrifying than all the feminist movements combined. The Eternal Feminine with all her weaknesses, charming and otherwise, stands triumphant over abused and long-suffering man. Despite a tendency to absurd exaggeration and monotonous uniformity in characterization, the sketches are entertaining.

New York: Samuel French. \$1.

#### THE METHOD OF SOCIAL EVOLUTION

In his *Social Heredity and Social Evolution*, Professor Conn of Wesleyan University writes interestingly of the factors that affect the evolution of human society, as distinguished from the other forms of life on this earth. Dr. Conn expects the human race in the future to control its environment even more consciously and more systematically than it has done in the past, and to bring about as a result a race of superior beings.

The Abingdon Press. \$1.50.

#### SHAKESPEARE CLUBS

In the two little volumes of *Shakespeare Study Programs, Comedies and Tragedies*, by Charlotte Porter and Helen A. Clarke,

# Constipation

## How to Fight It

Constipation is man's deadliest enemy. It kills more people than war, pestilence and famine combined. It begins subtly and causes Colitis, Appendicitis, Bright's Disease, Cancer and other dread diseases. Yet—Constipation can be remedied by steady attention to daily habits, diet and exercise. This is explained in a book by Dr. John Harvey Kellogg who thus gives you results of his treatment of thousands of cases of Constipation during the nearly forty years he has been Superintendent of the great Battle Creek Sanitarium.

Dr. Kellogg is the world leader in "Preventive Medicine." He teaches you how to avoid sickness and stay well continuously. Dr. Kellogg's books are not dry and technical, because—he has the happy faculty of making his writings intensely interesting and so clear and concise they can be understood by anyone. In his book on Constipation, Dr. Kellogg tells you how to rid yourself of this affliction and stay rid of it. The book is not large—only a little over 125 pages—but its contents are worth many times the price. In board covers, the price is \$1.50 but, to give the work widespread distribution, Dr. Kellogg has permitted a limited edition bound in library paper covers and, while these last, we shall sell them for only \$1.00 post-age prepaid.

Order at once, if you wish to take advantage of this offer. You take no risk sending money because, if you are not entirely satisfied, you may return the book for prompt refund. Order today and get relief from Constipation. Address—

## WANTED

A Prominent business man who has been devoting a large part of his time to constructive public work (economic and social), local, national and international, wants a partner in that work, as it now requires more of his time than he has to give.

Preference will be given to an ambitious man who has done successfully work involving the ability to organize and to work effectively with other men, and who can write well and speak well to popular audiences.

A good salary will be paid, and other conditions will be made satisfactory to the right man.

The reply should give the fullest particulars as to work done, languages spoken, etc. All information given will be regarded as confidential. Address

Box 5109, Post Office, Boston, Mass.

Autograph of Celebrities Bought and Sold. Send for price lists. Walter R. Benjamin, 225 5th Av., N.Y. ESTABLISHED 1887. Pub. "THE COLLECTOR," \$1 a year.

120 Acre FARM for sale. North Stonington, Conn. Old apple orchard. 40 acres cultivated. Modern 13-room house. Good Water. 1½ miles from trolley. Address ALLYN L. BROWN, Admr.

SMALL FARM FOR SALE 5 acres of land, 7 room bungalow, barn, chicken house, on trolley. 3 miles from Bridgeton. \$2250 00. ALBERT R. McALLISTER BRIDGETON, N. J.

ELEGANT SUBURBAN FARM—230 acres, 12 miles from center of Denver, modern improvements, best of soil and water rights, big crops, best climate in America, hourly electric service to city of 250,000. Address JOHN GRATTAN, Broomfield, Colo.

the comedies are each prefaced by a bit of introduction, but when the student is ready for stern tragedy, he is plunged without preamble into topics for paper or discussion, with specific "hints" as to their treatment, suggestive, though occasionally over-detailed, but of unquestionable value in the study and interpretation of the dramas.

Badger. \$1 each.

### THE PSYCHOLOGY OF A CAD

James, by W. Dane Bank, immediately challenges comparison with *The Financier* by Dreiser and *The New Machiavelli* by Wells, as it is the story of a freebooter of finance, his successes and failures, his selfish love, and ruthless ambition. James is a more vivid and vital personality than the heroes of the other novels; we are quite persuaded of his reality as well as of his rascality.

Doran. \$1.25.

### DIRE PLOTTINGS

Mr. Grex of Monte Carlo, E. Phillips Oppenheim's latest offering upon the altar of entertainment, fairly bristles with political intrigue and the machinations of cunning diplomatists, who have turned the map of Europe into a mammoth chessboard. Of course that indispensable adjunct, the absurdly romantic love story, replete with excitement, binds the whole together. And who does not enjoy the spice of improbability now and then?

Little, Brown \$1.35.

### THE GOD FROM THE FLYING MACHINE

*The Lone Wolf*, by Louis Joseph Vance, is an adventure story, with a detective cleverly concealed until the last chapter. The writer of romances has a new property, the aeroplane, which is used to great advantage as a means of escape from the Apaches of Paris.

Little, Brown. \$1.30.

### THE DAWN OF HISTORY

America is now pouring out Babylonian texts more rapidly than Europe. This last quarto, *Legal and Administrative Documents from Nippur*, by Edward Chiera, Ph.D., is the No. 1 of Volume VIII of the Babylonian Section of the Publications of the University of Pennsylvania. It has fifty autographed plates of 102 tablets, and eleven photograph plates, with transliterations, translation and notes. The tablets are from the treasures excavated from Nippur by the University and now in its museum.

University of Pennsylvania.

### MAKING THE HOME A SCHOOL

The mental, moral and physical development of the child from the cradle to the first day in school is the theme of *Child Training*, by V. M. Hillyer. Based generally on the theories of famous educators and psychologists, its system of training is nevertheless decidedly practical in its application; it emphasizes not only the instruction of backward children, but is efficiently applicable to the normal, healthy boy or girl.

Century. \$1.60.

### HOW TO GROW PLANTS

The author of *The Fundamentals of Plant Breeding*, John M. Coulter, is head of the department of Botany in Chicago University, and is the author of other useful volumes in his field. Here he gives not so much a manual of directions, nor a textbook, but an elucidation of the principles and the theories that govern present investigation in the production of new strains of plants useful for cultivation.

Appleton. \$1.50.

### DRAMAS OF EVERYDAY LIFE

By sacrificing many of the essentials for "acting plays," George Middleton has given to *Possession*, his third volume of one-act dramas, much of the true dramatic quality of life. One feels, despite the commonplace or ordinary speech, the play of great repressed emotional forces. In the presentation of such essentially intimate studies, Mr. Middleton succeeds with a remarkable economy of means, and *Possession* well keeps up the standard set by *Embers* and *Tradition*.

Holt. \$1.35.

## You Can Weigh Exactly What You Should

You can—I know you can, because I have *reduced* 32,000 women and have

built up that many more—scientifically, naturally, without drugs, in the privacy of their own rooms.

### You Can Be So Well!

—If you only knew *how* well! I build up your vitality—at the same time I strengthen your heart action—teach you how to breathe, to stand, walk and relieve such ailments as

Nervousness, Torpid Liver, Constipation, Indigestion, Etc.

One *patient* writes: "I weigh 83 pounds less, and I have gained wonderfully in strength."

Another says: "Last May I weighed 160 pounds, this May I weigh 126 and oh! I feel SO WELL."

Won't you sit down and write now for my interesting booklet? You are welcome to it. It is FREE. Don't wait, you may forget it. I have had a wonderful experience and I should like to tell you about it.

The HON. EDWARD W. GRAY  
Member of Congress from New Jersey

## A Big Thought from Subscriber No. 1

The Hon. Edward W. Gray—a real estate operator—now Member of Congress from New Jersey, was the first subscriber to the Modern Business Course and Service of Alexander Hamilton Institute.

In a splendid letter to the Institute, Congressman Gray says: "When the majority of our business men understood the fundamental principles of business many of the serious troubles from which the country is suffering will disappear."

This means that the country is looking for its leaders to the modern type of business man. The open-minded man. The man who is bigger than the four walls of his own work. The forge-ahead type of man who thinks of business not in terms of "cogs, levers and wheels" but as one vast, smoothly working Business Machine. Such a man realizes that to be in the front rank of Today's leaders of men and affairs he must understand not only his own business intimately but also he must have a general knowledge of Organization, Accounting, Costs, Credits, Finance, Advertising, Selling, Commercial Law and Economics.

The Great Profession of tomorrow is Business. The professionally trained business man can look forward to a wonderful future. He will replace the rule-of-thumb man in the management of business; he will replace the theorist, the ill-informed dreamer, the incompetent poseur in the conduct of national affairs.

### The Modern Business Course and Service of the Alexander Hamilton Institute

is a reading course covering the whole range of business knowledge. From the massed experience of thousands of business men there have been distilled the basic principles and laws governing business.

As one subscriber said, "To read your Course is like mounting a watch tower to survey a field of battle—the whole plan of operations lies before your eyes, making everything clear and easily understood."

The Alexander Hamilton Institute is planned and conducted by recognized authorities under the supervision of an Advisory Council composed of the following educators and business leaders:

JOSEPH FRENCH JOHNSON, D.C.S., Dean of New York University School of Commerce, Accounts and Finance.

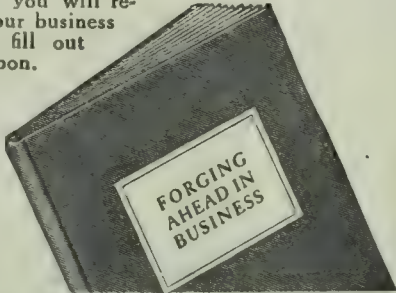

FRANK A. VANDERLIP, LL.D., President of the National City Bank of New York.

ELIJAH W. SELLS, M.A., C.P.A., Senior Member Haskins & Sells, Certified Public Accountants.

JEREMIAH W. JENKS, LL.D., Professor of Government, New York University.

ELBERT H. GARY, LL.D., Chairman of the Board, U. S. Steel Corporation.

Its subscribers include men in every rank of business life: presidents and officers of big corporations; proprietors of progressive smaller concerns; department heads and assistants; accountants, chief clerks and the younger men who are looking forward to bigger responsibilities. To all these it gives knowledge that could be otherwise obtained only by years of bitter experience—if at all. Find out today what it offers you.

## GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

J., at 11 o'clock, a. m., on Monday, March 8, 1915.

E. H. THURSTON, Secretary  
St. Louis, Mo., February 24, 1915.

# THE MARKET PLACE

## RAILWAY TRAIN EMPLOYEES

There are indications that the railroad full-crew laws recently enacted in several states will soon be repealed. We spoke last week of the open campaign of the railroad companies against these statutes in Pennsylvania and New Jersey, and of the refusal of West Virginia's Legislature to pass a full-crew bill. The latest movement against such laws is in the Legislature of New York. In the Senate, members of the Republican majority have, in conference, voted unanimously to support a pending bill for the repeal of the full-crew law, which was enacted while Mr. Sulzer was Governor. It is expected that similar action will be taken by the Republican majority of the Assembly, or House. The repeal bill provides that the Public Service Commission shall have power to regulate the size of train crews. In the New Jersey Legislature a resolution has been introduced for an investigation of the whole matter by a special commission.

In their public campaign, the presidents of the leading companies whose roads are in New Jersey and Pennsylvania say that they are not making war upon the superfluous men whom the laws require them to employ. They would prefer to retain, "but in useful service, the men for whom these laws make jobs." And they promise that, if the laws shall be repealed, they will put on the "extra lists" the names of all loyal and efficient men laid off because of the repeal, and give them work at the first opportunity.

The laws should be repealed, with the condition that at the same time the State Public Service Commission shall be empowered to require the use of a sufficient number of men on every train. This is a condition proposed by the railroad companies themselves.

## A COSTLY UNDERTAKING

For continuing the work of making a valuation of all the railroad property in this country Congress was asked to appropriate at the present session \$3,000,000. This would be for the coming fiscal year's work. Last year's appropriation was \$2,000,000. The Senate committee decided last week to give only \$1,900,000.

Charles A. Prouty, formerly a member of the Interstate Commerce Commission, is the officer in charge of the work, and upon his reports to the committee an estimate of the entire cost may be based. When this valuation was proposed, there were some who said the cost of it would not exceed \$3,000,000 or \$4,000,000. It now appears that the total will, in all probability, not fall below \$60,000,000, about two-thirds of which will be paid by the railroad companies. There are now forty parties of

engineers in the field. They have been able to examine the lines at the rate of from 20,000 to 25,000 miles a year. Mr. Prouty would like to increase this rate to 50,000 miles, in order that the field work may be completed about four years hence, or on July 1, 1919. But there can be no increase, if the appropriation is to be less than \$2,000,000. And, with no increase, the field work must continue for nine or ten years. The cost of this work thus far shows that the entire cost of it, to the Government, will be in the neighborhood of \$20,000,000.

The cost to the railroads is another matter. Mr. Prouty spoke of one company whose work had cost \$100 a mile. At this rate the railroads will have to pay about \$25,000,000 for field work. But Mr. Prouty said the cost to the Government would be about half the cost which the roads must pay. This would raise the companies' expenditure to \$40,000,000, and make a total of \$60,000,000. The company of which Mr. Prouty spoke, however, probably paid something above the average, because it was not properly supplied with maps and records. We understand that the figures used relate only to field work. But the valuation law requires much other work, mainly clerical, to be done by the companies, and they have said that this must be quite expensive, owing to the employment of additional men, and for other reasons. It is also admitted by those in charge of the work for the Government that there are some questions as to scope and methods which are yet to be settled, and that the settlement of them in a certain way would not only increase the cost but also prolong the time required. It may be that the work, when completed, will be worth the \$50,000,000, or \$60,000,000, or more, that will then have been paid for it, but we are inclined to think that it would not have been ordered by Congress if the cost had been foreseen.

## THE GOVERNMENT'S OIL

Among last week's decisions of the Supreme Court was one that may very perceptibly affect the petroleum industry. It upholds the withdrawal of oil and mineral lands from entry in 1909 by President Taft. These lands were in California and Wyoming. The decision annuls the entry claims of individuals and corporations valued at hundreds of millions of dollars. These are entries made after the withdrawal and before the legislation of 1910 that ratified it. In California the Government thus establishes its title to 2,871,000 acres of oil lands, on which, it is said, \$40,000,000 has been expended for development work. It can recover the value of all oil or minerals which have been taken from the lands withdrawn.

Dispatches from San Francisco say that a supply of oil for the navy has thus been assured. We suppose it is not generally expected that the Government will go into the oil business. Still, it is true that it now controls a large supply of oil. Probably it will not surrender this control, but will provide for development of the oil lands by leases and royalties. It will have power to limit prices, to reserve supplies for the navy, and to do other things that will be interesting to private producers. The decision will suggest new legislation.

### LIVE STOCK GAINS

There was abundant evidence before we began, not long ago, to import beef and mutton from Argentina and Australia, that our own supply of meat animals was decreasing. The reduction was most noticeable in the number of beef cattle. Prices were rising, as everybody knows, and the cargoes brought from South America and across the Pacific were not enough to affect them perceptibly. We still take beef from Argentina, but the war has checked the imports from Australia. In that country there is an embargo, or the equivalent of it, and in New Zealand the local Government has decided to hold and reserve all the surplus beef and mutton for the needs of the Government of the empire.

It now appears that in our own country there has been a turn for the better. This was unexpected. Official reports at Washington show an increase of the number of beef cattle, cows, sheep, and swine in the year 1914. For five years the figures had been going the other way. The additions were as follows: beef cattle,  $3\frac{1}{2}$  per cent; cows,  $2\frac{1}{2}$ ; swine,  $9\frac{1}{2}$ . Even in the number of horses and mules there were gains, altho so many have been sold to the belligerents and carried to Europe. In the reports comparison is made between the number of animals counted on January 1, 1915, and those enumerated one year earlier.

In the Northwest James J. Hill, the well-known railroad leader and capitalist, has undertaken to promote the production of live stock by an educational campaign. The work will be directed by Howard R. Smith, professor of animal husbandry in the University of Minnesota, who has resigned his chair and is to begin the campaign on March 1. He will be assisted by other college professors. This movement will add something to the supply.

The Federal Reserve Board has approved the applications of three state banks in the South for permission to enter the Federal Reserve system. There have been ninety-eight such applications on file, but ninety-two of the institutions recently gave notice that they preferred to retain their state charters until after the publication of the regulations governing admission to the Federal system.

The following dividends are announced: Electric Storage Battery Company, 1 per cent. on both common and preferred, payable April 1. Manila Electric Railroad and Lighting Corporation, quarterly,  $1\frac{1}{2}$  per cent, payable April 1.

## TRAVELLER'S COMPANION

A FIVE-POUND PRIVATE SECRETARY

BUILT OF ALUMINUM AND STEEL

High Grade Low Price

There is no substitute for the "BLICK" in preparing your manuscript, reports or correspondence. For Library and Home use it cannot be excelled. Carbon copies can be kept for future reference without extra labor.

### THE NEW NO. 6 ALUMINUM BLICKENSDERFER

Weights only 5 pounds, is so strong and durable it can be easily carried anywhere. It has Roller Bearings, Automatic Pointer, Paper Release, Adjustable Margin, Tabulator and Interchangeable Type, and is in every way a HIGH CLASS MACHINE.

Either Blickensderfer Scientific or Universal Keyboard.

Write for Catalog A-114.

## INSURANCE

CONDUCTED BY W. E. UNDERWOOD

## ON LIFE INSURANCE RESERVES

An esteemed reader in Michigan, himself a careful student of the science of life insurance, in a letter commenting on a recent article in this department, expresses the opinion that our references to reserves and their relations to the net amount at risk are incomplete, and thinks the matter should be treated more fully. He says that our comparison "causes the reader to come away with the impression that by insuring under the Ordinary Life plan a man may get at low cost what he would have to pay very high for under the other plan," by the latter, meaning the assessment plan. Discussing the feature of advancing age and its effects, he continues: "The old line companies provide for this increasing liability by *decreasing the amount at risk*, a fact upon which your writer might have been more explicit. This decrease of risk is effected by fixing the premium high enough at the start to allow the accumulation upon each policy of a fund called the reserve, which is applied by the company to the payment of the policy whenever it becomes a claim." Going to his conclusion, he says: "As the policy grows older, the reserve by growing larger causes a corresponding decrease in the amount of risk which the company has to carry *and the policyholder to pay for*. So an aged policyholder when he pays the high mortality rate assessment is but paying the company an equitable price for carrying a large risk, and when he pays the old line company a small premium he is paying them for carrying only a small risk."

Perhaps we have too much assumed that, knowing their policies carried a reserve, increasing in amount each year, policyholders understood its office and the effects it produces on the insurer's outstanding claim liability. If we have presumed on this assumption of knowledge, it is well for us to specifically state that the net amount at risk by a company under a policy maturing by death is the difference between its face amount and the amount of that policy's reserve at the time. By way of illustrating this we will use freely in our own way some demonstrations formulated by Mr. J. A. Jackson of the Literary Department of the Mutual Life Insurance Company, who carries out his instructions thru the instrumentality of a hypothetical company. Let us say first that the American Experience Table, the one used on this occasion, begins with 100,000 lives, age 10 years, and runs out at age 95, with 3 lives surviving. Mr. Jackson supposes a company composed of 63,364 persons aged 56 (the number shown by the Table surviving at that age), each insured for \$1000, payable at death, at a net premium of \$47.76+. The net pre-

mium income, first year would be \$3,026,321.35 (63,364×47.76+), which, plus interest at 3 per cent, would make a total net income of \$3,117,110.99. Under the Table the number of expected deaths, first year, is 1260, calling for the payment of death claims aggregating \$1,260,000. The remainder (the reserve) is \$1,857,110.99. As 1260 members have died, the survivors who enter the second policy year number 62,104. By dividing \$1,857,110.99 by 62,104 we get \$29.90, the amount of the terminal reserve under each policy in force. The company's liability then, under each policy, the members being now 57 years old, is reduced by the sum of the reserve, \$29.90, that is to say to \$970.10 each. Each member again pays the same net premium, \$47.76+, on a net insurance liability to the company in the event of death that year of \$970.10 instead of \$1000.

And so the system proceeds every year to age 96, when all the insured persons are presumed to be dead. At age 95 three persons are supposed to be alive. They had to the credit of their policies one year earlier a total terminal reserve of \$2,769.34, or \$923.11 each. Their three net premiums at age 95 (@\$47.76+ each) amount to \$143.23, which, added to the total reserve of \$2,769.34 equals \$2,912.62. Add the interest, \$87.38, and we have \$3000, just enough to pay the claim of each, all of whom are presumed to die that year. It will be observed that the net claim liability of the insurer in the 95th year of age on each member is the difference between the accumulated reserve \$923.11 and \$1000, or \$76.89.

Assessment insurance generally has preached the doctrine, very much more in the past than now, "Keep your reserve in your pocket." While it is not here asserted that a man 95 years of age could physically qualify for an insurance, we say that if he could, the cold facts of experience prove that the insurer could not safely accept him for a premium under \$923.11, the terminal reserve at age 94. Going back to age 56, then, the insurer must have from the man of that age a premium large enough to leave at the end of the year a reserve of \$29.90.

S. B. M., Warrensburg, Mo.—See reply to J. L., February 22, 1915.

The surety companies have found a new source of premium income by furnishing bonds on contracts for supplies to the European countries engaged in war. One company recently issued a bond the premium on which was \$17,000.

The accumulated funds in the treasury of the War Risk Bureau of the United States Government now aggregate about \$500,000. The losses incurred in the destruction of the steamers "Evelyn" and "Carib" are estimated at \$400,000. Unless a substantial salvage can be made on these losses the fund will be hard hit. Former rates were doubled on February 24.

## PEBBLES

Maud—Haven't you and Jack been engaged long enough to get married?

Marie—Too long. He hasn't got a cent left.—*Boston Transcript.*

A hotel for the unemployed is contemplated in New York. Don't most New York hotels cater to that class already?—*Cleveland Plain Dealer.*

General Joffre says he has not read a newspaper since the war started. Think of what a lot of first-class strategy he has missed.—*Indianapolis Star.*

The Mexicans seem to observe the Sabbath by abstaining from war long enough to elect the Provisional President for the ensuing week.—*Louisville Courier-Journal.*

"What is your position on this question?" asked the constituent. The Congressman thought a minute and then replied. "Very uncomfortable."—*Washington Star.*

The Man—Of course, you understand, dear, that our engagement must be kept secret?

The Woman—Oh, yes, dear! I tell everybody that.—*New York American.*

Father (trying to give the concealed dose)—Well, well, you are a funny boy. May I ask why this sudden extraordinary dislike for jam?

Chip—Cos' I b'leeve it's mined.—*London Sketch.*

With but three minutes to catch his train, the traveling salesman inquired of the street-car conductor. "Can't you go faster than this?"

"Yes," the bell-ringer replied, "but I have to stay with my car."—*Harper's.*

Judge—It seems to me that I have seen you before.

Prisoner—You have, your Honor; it was I who taught your daughter to play the piano.

Judge—Thirty years!—*Musical America.*

"Yes, sir, I came upon a huge bear track and spent all of three hours trailing the beast to where he was lurking in his den in the rocks."

"And then what?"

"Then I spent five minutes getting home."—*Houston Post.*

Little Bobbie listened with deep interest to the story of the Prodigal Son. At the end of it he burst into tears.

"Why, what's the matter, Bobbie?" exclaimed his mother.

"I'm—I'm so sor-ry for that poor li'l ca-alf," he sobbed. "He didn't do nuffin'!"—*Everybody's.*

We Austrians cannot stand the drizzle  
Of Russian shrapnel at Przemyśl!  
The Russian hordes are in the track of  
Our noble men who flee to Cracow.  
A million Cossacks may debouch,  
At any moment, at Olkusz!  
A million more reported are  
At Kamionkastrumilowa!  
And yet another million have  
Consumed all food at Yaroslaf!  
Ah! ev'rything they cleared—as well as  
The larders of Jaszarokszcellas!  
Then down they poured, like molten lava,  
On rural, innocent Suczawa!  
And now they march, with hungry screech,  
On harmless little Drohobycz!  
Curst be the foreign rascals, greasy,  
Who chased us at Tustanowice!  
Steel motor-cars—ten guns in each car—  
Are rolling on toward Wieliczka!  
How truly awful will it be  
If Cossacks mangle us at Stryj!  
No one may even dare to guess of  
The patriots who fell at Rzeszow.  
Of Czechs, 'tis said, they've buried a  
Battalion at Csikszereda!  
As at the banquet of Belshazzar,  
The finger writes at Njiregyhaza!  
So, ere the sky with dawn grows streaky,  
Let's fly to dear old Zaleszczyki!

—*London Opinion.*

In the City of New York Issues Guaranteed Contracts  
JOHN P. MUNN, M.D., President

FINANCE COMMITTEE

CLARENCE H. KELSEY

Pres. Title Guarantee and Trust Co.

WILLIAM H. PORTER, Banker

EDWARD TOWNSEND

Pres. Importers and Traders Nat. Bank

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

### AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

January 1, 1915

### Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....\$27,964,578,109.00  
Received premiums thereon to the extent of.....287,324,890.99  
Paid losses during that period 143,820,874.99  
Issued certificates of profits to dealers.....90,801,110.00  
Of which there have been redeemed.....83,811,450.00  
Leaving outstanding at present time.....6,989,660.00  
Interest paid on certificates amounts to.....23,020,223.85  
On December 31, 1914, the assets of the company amounted to.....14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

# BOTH SIDES

# A DEBATE

## STATE CONSTABULARIES

*RESOLVED, That state constabularies should be established thruout the United States.*

**S**TATE police forces have been organized in five states, Texas, Massachusetts, Pennsylvania, Connecticut and Nevada. The organizations in Texas and Pennsylvania consist of mounted police, stationed at certain points thru the state, whose principal duties are to coöperate with the local police, to patrol rural districts and to give special assistance in preserving order in any locality when they are called in by the local authorities. The famous Northwest Mounted Police of Canada and the constabularies of foreign countries are similar organizations. The establishment of state constabularies is being discussed in several states, notably in New Jersey and New York, where legislation is now being considered. The plan has met strong opposition and the question is arousing much discussion thruout the country. This debate was prepared by Mary Prescott Parsons.

### BRIEF FOR THE AFFIRMATIVE

- I. State constabularies are necessary.
  - A. Rural crime records in the United States are high.
  - B. Local police are unable to prevent crime.
    1. The small number of men and the lack of funds make efficient organization impossible.
    2. Lawlessness among the large numbers of foreign laborers presents a serious problem.
    3. Vast tracts of unpoliced land increase crime.
      - a. By facilitating the escape of rural criminals.
      - b. By furnishing hiding places for urban criminals.
  - C. State constabularies can deal with the rural problem.
    1. They are carefully chosen and trained.
    2. They do much to prevent crime.
      - a. They are respected because of their skill. "The mere presence of seventeen men [Texas Rangers] prevented an outbreak that might have resulted in a pitched battle between two or three hundred combatants." *Idler*, 20:388, December, 1901.
      - b. Patrolling rural districts ensures security of life and property.
    3. They track and capture criminals.
    4. They will help to meet special problems in different localities.
      - a. Lynching will be prevented in the South.
      - b. Black Hand offenders have been caught in Pennsylvania.
      - c. Vagrancy will be diminished.
      - d. They are needed to preserve order in strike districts.
- (1) Local police are inadequate.

- (2) The militia is inefficient because untrained for such service.
- (3) Special police or detectives employed by the companies are unfair and brutal.
- (4) State police are unprejudiced, free from political influence and efficient.
- II. A state constabulary benefits the entire community.
  - A. It maintains peace and order.
  - B. It performs important services in addition to its police duty.
    1. It enforces order in quarantine districts.
    2. Its members act as forest rangers and as fish and game wardens.
    3. It tends to strengthen our army.
      - a. More men enlist in the militia when they know their regular occupations will not be interrupted for strike duty or for fighting forest fires.
      - b. The constabulary constitutes a trained reserve for the army.

- III. Establishment of state constabularies is wise economically.
  - A. It furnishes forest rangers and game wardens at low cost.
  - B. It prevents losses by fire.
  - C. It secures better rural business conditions.
  - D. It saves the expense of calling out the militia for strike or fire duty.
  - E. It decreases the cost of apprehending and confining criminals.
- IV. Experience has shown the success of state constabularies.

### BRIEF FOR THE NEGATIVE

- I. State constabularies are unnecessary.
  - A. Conditions in Pennsylvania show that the need has been overestimated.
    1. Arrests made by the state police could often have been made by the local police.
    2. In many cases the state police have found nothing to do in the localities to which they have been assigned.
  - B. There are other practical ways of solving the rural police problem.
    1. State aid and state regulation of local police would increase their efficiency.
    2. The plan of maintaining a state detective system has proved satisfactory in Massachusetts.
- II. The advantages of the state constabulary plan are outweighed by its serious disadvantages.
  - A. It is un-American in principle.
    1. State police support the interests of the rich at the expense of the poor.
    2. Arrest without warrant endangers personal liberty.
  - B. It is unfair to workers in time of strike.

1. Injustice is sure to result when a police force is in no way responsible to the community for its acts.

2. In Pennsylvania the state police, instead of preserving order, have caused riots.

3. Brutal violence has been used against strikers by the Pennsylvania constabulary.

C. It places another serious obstacle in the way of industrial conciliation.

III. Establishment of state constabularies is unwise economically.

A. The estimated cost of a constabulary in New York the first year is \$450,000.

B. "It was computed, two years ago, that it cost one hundred and twenty-nine dollars and some cents for each person . . . arrested." *Pennsylvania Legislative Record*, 1909:2849, April 7, 1909.

IV. State constabularies have not proved successful in the United States.

A. The Arizona Rangers were abolished after given a trial.

B. An attempt is now being made to discontinue the Pennsylvania constabulary.

## FORWARD ON THE FARM

Dry farming means raising good crops without rainfall. America reports wheat grown on eight inch rainfall; but South Africa sends word that it grows good wheat without a single drop of rain from seed time to harvest. This is the way they get the Durum wheat which has become so popular for bread making and flesh producing.

Alfalfa is a Moorish name; but the plant was well known to the Romans. Varro tells us carefully how to plant it, and how to make the most of it. Professor Hansen has discovered yellow-flowered alfalfas in northern Asia, many varieties of it, and he promises us an alfalfa adapted to every climate known in the United States, and farther north, up to the Arctic zone. Forty varieties are under test in Florida.

America has lost one-seventh of its meat export during the past thirteen years, but is still sending away annually more than \$150,000,000 worth. Packers tell us that the decline will go on, without a possibility of prevention in the supply, both for home use and for exportation. This cheerless statement is immediately met by an announcement that the supply of meat from our home ranches and from Argentina will soon be more than duplicated by importations from Africa.

The average loss to our crops from flood is figured out to be \$100,000,000 a year, not counting in the soil that is washed away, or the wasted water that ought to be used on every farm as working power. Every farmer should start out understanding that he needs for his own use every pound of soil and every pailful of water that Nature gives him; his first problem is to be prepared to prevent waste, and utilize to the best advantage. It is not long before we shall see all of our farms utilizing brooks, and turning the wash into the brooks.

Of all the recent introductions by the Department of Agriculture we know of nothing to surpass velvet beans, for

their effect on farm life in the South. These have been improved into the Lyon, the Yokohama, and the Chinese. The Chinese bean blooms earlier in the year than the others, and matures its pods early in October. These beans will climb pine trees forty to fifty feet, absolutely loading them with strings of pods two feet long. After careful testing, the velvet bean has been proved to be superior to cottonseed meal for production of milk.

The Department of Agriculture after organizing boys' and girls' clubs, to raise crops, announced that the girls had surpassed the boys in their zeal and executive tact. That is saying a good deal for the girls, for the boys have beaten the old farmers all hollow. One Carolina boy two years ago turned out over two hundred bushels of corn to the acre. A New York boy now exhibits three hundred bushels from a single acre of ground. This is not only vastly ahead of what the average farmer gives us, but we do not know of any experiment station that approaches it.

If there is a corner of the earth not yet ransacked by our Agricultural Department, in the interest of farm life and production, we do not know it. The South is getting more advantage than the North, because more of the new plants come from semi-tropical regions. Japanese cane is one of the most satisfactory of recent introductions. Altho it makes a sugar, it is most notable for its superb qualities for stock feeding. Twenty-seven tons of green matter per acre are reported, where the very best yield of corn would not exceed twenty.

In discussing the filibuster against the shipping bill in our issue of February 8 we referred to the statement published in the Washington correspondence of one of the leading New York papers that Senator Williams had said that the prolongation of the debate was costing the country half a million a day in printing bills and stenography. When the *Congressional Record* came to hand we found that Senator Williams had reference to the commercial losses, not congressional expenses. What Senator Williams did say was this:

We might have had this law five months ago; and if we had had it five months ago we would have saved during that five months up to this good hour \$80,000,000 in freights to the American people—twice all the money that is called for under this bill—and now senators are going on and filibustering against it and delaying it, when it is costing about \$16,000,000 a month to the American people. Every day that you delay it you are costing the American commerce one-thirtieth of that amount—about half a million dollars a day. Is your love of talk worth that? Is there a man in the Senate who does not know how he is going to vote on this bill?

The portrait of General von Hindenburg published in The Independent for March 8 and credited to the *Illustrated London News* appeared originally in the *Illustrierte Zeitung* of Leipzig, to which it should be credited.

NUMBER 3458

## THEY CAN'T HAVE IT BOTH WAYS

**S**IR EDWARD GREY, in commenting upon the German proclamation of a war zone surrounding the British Isles, used an effective phrase: "Germany can't have it both ways."

This is precisely what Germany seems to want. But it is also precisely what Great Britain seems to want.

Germany seems to want to keep her fleet of capital ships safe in harbor and yet reap the advantage of a quasi-blockade of British ports carried on by her sea-going submarines.

Great Britain seems to want to reap the advantage of a quasi-blockade of German ports without complying with the definite conditions laid down by international law for the establishment of blockades.

In considering the merits of the respective positions taken by the two belligerents, it is well to go back to the fundamental principles underlying the practises of nations in maritime warfare.

In time of war, neutral trade has a *prima facie* right to go on unmolested. This right, however, is subject to two limitations. Neutral vessels carry contraband of war to the ports of a belligerent under peril of capture and confiscation, both of cargo and of vessel, by the opposing belligerent. Neutral vessels, whatever the nature of their cargoes, attempt to enter or leave the ports of a belligerent, in violation of an established blockade, under the same peril.

Both limitations have always raised vexed questions. For more than a hundred years the nations of the world, whenever there has been a war, have constantly wanted to "have it both ways." As belligerents, they have striven, to the utmost possible degree, to cut off the trade of neutrals with the enemy. As neutrals, on the other hand, they have, with equal consistency, sought to have their trade with each belligerent go on with as little interference as possible by the other belligerent. In both these purposes they were quite within their rights. It is only when they came to set forth and interpret the rules under which they were to pursue these purposes that inconsistency and conflict ensued.

**I**N the present controversy, the matter of contraband enters only indirectly. Blockade is the main point at issue. Two questions present themselves for the consideration of the neutral world:

Is Germany justified in her scarcely veiled threat to attack British shipping within the war zone, and possibly, by "accident," neutral shipping within the same area, without taking the precautions prescribed by international law and custom for safeguarding the lives of crew and passengers of the vessel attacked? This question has already been discussed in these pages.

The second question is: Is Great Britain justified in threatening to cut off all trade, both incoming and outgoing, with German ports, without declaring and making effective a formal blockade? This question needs some examination.

**I**N the history of modern warfare, the doctrine of blockade has been gradually developed and made precise. The distinction is now clear, as it was not something over a century ago, between the effective blockade, the only kind sanctioned by international law and custom, and the so-called "paper blockade." In 1800, during the Napoleonic wars, John Marshall, American Secretary of State, set forth the objections to the "paper blockade" effectively:

Ports not effectually blockaded by a force capable of completely investing them have yet been declared in a state of blockade. . . . If the effectiveness of the blockade be dispensed with, then every port of the belligerent powers may at all times be declared in that state, and the commerce of neutrals be thereby subjected to universal capture. But if this principle be strictly adhered to, the capacity to blockade will be limited by the naval force of the belligerent, and, in consequence, the mischief to neutral commerce cannot be very extensive. It is, therefore, of the last importance to neutrals that this principle be maintained unimpaired.

In 1803 James Madison wrote to the American Minister in London:

The law of nations requires to constitute a blockade that there should be the presence and position of a force rendering access to the prohibited place manifestly difficult and dangerous.

During the succeeding half century the doctrine became so universally accepted that in 1856 the Declaration of Paris contained the categorical rule that "blockades in order to be binding must be effective." The Declaration of London, drawn up in 1909, reiterated the rule as to effectiveness, adding that the blockade "must be maintained by a force sufficient really to prevent access to the enemy coastline." The Declaration also laid down as essential to a binding blockade that it must be both declared and notified.

The blockade is the result of the collision of two rights—the right of neutral trade to go on unmolested and the right of the belligerent to cut off his opponent's trade and supplies. The blockade is a compromise arrived at by international custom. Neutral shipping may enter and leave a belligerent's ports freely unless and until the other belligerent is prepared to assume the responsibility of keeping *all* shipping from entering and leaving those ports. The belligerent may not secure the advantage of keeping supplies away from the enemy unless he is ready and able to do the thing thoroly. Neutral nations are not to be deprived of the opportunity to trade with a belligerent unless the deprivation is to be

made complete. In exchange for giving up the right to trade without hindrance, each neutral nation demands—and the demand is granted by international custom—that no nation be allowed to continue in the same trade.

This, then, is the international law and custom in the matter of blockade.

If Great Britain proposes to deal with neutral shipping sailing from or destined to German ports as tho a binding blockade were in existence, while she has neither declared a blockade nor made it effective, she will be violating international law and the ethics of civilized warfare. Whether as a matter of fact this is the British purpose is not clear from the somewhat vague statement of Mr. Asquith.

Such action on the part of the British navy and such action as was foreshadowed in the warning proclamation of the German Admiralty would both involve clear invasions of the rights of neutral nations which every such nation would be derelict in not resenting.

But the two cases do not stand on an equal footing. The British threat is aimed only at property; the German warning involves a threat against the lives of peaceful citizens, not only of Germany's enemies, but of neutral nations.

Sir Edward Grey was right. Germany cannot have it both ways. But no more can England. The fact that Germany's both ways threatens a more serious assault upon the rights of neutrals than does England's does not save the British case. As far as the United States is concerned, not only Germany but England, not only England but Germany, must respect the unquestioned rights of American shipping and American citizens or be called sharply to account.

## HOW THE "GEORGE WASHINGTON" RAN THE DARDANELLES

**I**F the Allied fleet succeeds in making its way thru the strait to Constantinople it will be an epoch-making event, but it cannot take away from America the honor of having been the first to get a warship past the guard which the Turk stationed at the gateway in 1453.

The forts now being bombarded by the Anglo-French guns stand on either side of the Dardanelles where it is less than a mile and a half wide. It is a place famous in history and legend. Here Leander the lover swam across to keep tryst with Hero, and Lord Byron repeated the exploit with less incentive. Here Xerxes built his bridge of boats when he attempted to conquer Europe, and here Alexander shipped his army across when he entered upon the conquest of Asia. But Alexander himself, steering the first galley with his own hand, turned the prow to the southward in order that he might land at the same point where the Greeks beached their boats for the attack on Troy, that is, at Kum Kale, which the British captured the other day.

Nearly nineteen hundred years later another ambitious young man of twenty-three, also called "the Great," built upon the headlands that dominate the narrowest passage of the Hellespont two fortresses. Mohammed II, being an energetic young man and impatient to bottle up Byzantium, set two thousand masons at work and within three months the "Castle of Europe" and the "Castle of Asia" were completed. There they stand to-day unless the shells of the superdreadnought "Queen

Elizabeth" have scattered their ancient stones. Thirty feet thick were their walls, and many a pillar and altar piece from Christian churches went into their construction. Upon the tower was mounted the new-fangled invention of a Frankish engineer never before used in warfare, a sort of a deep bowl loaded with gunpowder which threw a five hundred pound stone, altho how far it would go or where it would land was highly uncertain. But, anyway, if it could not hit ships it scared them off, and from the day that the first cannon was mounted the Dardanelles were closed. Now they are being opened with fifteen-inch guns that carry twenty miles, and let us hope that they will stay open.

But in 1800 there passed thru the Dardanelles a frigate bearing a strange flag with stars and stripes and a still stranger cargo, to wit, one hundred Algerians, one hundred negro slaves, women and children, half a million dollars in gold, four lions, four tigers, four parrots and a lot of cattle, horses, antelopes, precious stones and works of art. The captain, a young man by the name of William Bainbridge, was brought before the Sultan to explain where he came from and how he got in. He stated that he was from the United States. The Sultan had not heard of that country or, for that matter, of America. Captain Bainbridge, however, assured him that there was such a continent and that it had been discovered some years before by Columbus.

The Sultan accepted the statement as well as the cargo, and was pleased to see by the stars on the flag that the United States was a Mohammedan country. But he ordered the governor of the castles at the narrows to be put to death for letting a foreign man-o'-war get by him. Captain Bainbridge, however, interposed and begged for his pardon, explaining that the governor was not to blame, for the "George Washington" had slipt past the castles of the two continents by pretending to drop anchor, and then, after saluting, suddenly setting sail and speeding up the Dardanelles. The boldness and frankness of the American captain found him favor in the eyes of the Sultan, and when he sailed away he bore a letter from the Sublime Porte which enabled him when he got back to Algiers to set free the French men, women and children held for ransom by the Dey.

It was the Dey of Algiers who had sent the "George Washington" on its queer errand with its Noah's Ark freight. Captain Bainbridge had called at Algiers to pay the tribute or blackmail which the Dey extorted from all maritime nations as the price of abstaining from preying upon their commerce. The proud young captain felt the humiliation of his errand; he would have preferred, as he confesses, to have paid his piratical majesty in cannon balls rather than coin, and we may imagine his emotion when the Dey commandeered his ship and ordered him to take the Algerian embassy and their retinue and presents to Constantinople. Protests were in vain; resistance was fatal. "You Americans pay me tribute," said the Dey; "you are therefore my slaves and you will obey my orders." To refuse meant not merely that the "George Washington" would be sunk and her crew sold as slaves, but that every merchant vessel in the Mediterranean would suffer the same fate. So Captain Bainbridge sailed for Constantinople bearing the Algerine flag—until out of sight, and then hoisted the Stars and Stripes, with what effect we have seen.

But he got his revenge before long, for this insult to our new navy aroused the United States to action. Altho Algiers joined with England in warring upon our commerce, the American fleet under Decatur brought Tripoli, Tunis and Algiers to terms and put a stop to piracy in the Mediterranean forever. Now the map is changed. France has Tunis and Algiers; Italy has Tripoli; and Constantinople—who will have that? We shall soon see.

### THE COST OF SMOKE

THERE is a curious lack of coördination between the different departments of our Government. The Secretary of the Interior announces with proper pride that Dr. Rittman in the Bureau of Mines has discovered a process by which petroleum can be made to yield a larger quantity of gasoline than is at present obtained and also the compounds which form the basis of the aniline dyes. Mr. Lane adds, "I understand that some benzol and toluol have been obtained from American coal and water-gas tars, but this supply does not begin to satisfy the present demands."

But at the same time with this comes out a report from the Department of Commerce showing that the American coke ovens waste enough benzol and tar "to more than cover the world's consumption in making artificial dyestuffs." Mr. Redfield adds, evidently without consultation with his colleague in the Cabinet, that "If a commercial demand is present, American tar works can quickly provide all of the crudes needed, practically as cheaply as in Europe," and further, "There is no question of the readiness of tar distillers to enlarge their plants for the production of an ample supply of the needed crudes if a continued demand is certain."

The Secretary of Commerce has the right of it. We trust that Dr. Rittman's process will provide another source of such material, but it must be distinctly understood that it is not the lack of tar which has kept our manufacturers of textiles, drugs and explosives dependent upon Germany. Our coke ovens are sending up in smoke volatile distillates worth \$75,000,000 a year which in Germany are saved and sold to us under various fanciful or cumbersome names at a high price per ounce. There are about a thousand of these coal-tar products now in use and over nine hundred of them are free from patent restrictions. We have competent chemists or could train them in our universities if there was any demand for them. It is, then, not the lack of capital, material or inventive genius that has kept us in this humiliating, costly, and—in crises like the present—dangerous state of dependence.

The fundamental cause of our backwardness in this most profitable industry is, as the Secretary of Commerce says, the lack of business organization, and one reason for this, as he does not say, is that the American Government, urged thereto by American public sentiment, is determined to keep business in a state of disorganization. It is the common belief that such restriction is necessary in order to prevent the oppression of the public by trusts. This theory may be correct, but the result in this case, as in others, is to put the public at the mercy of a foreign trust.

That the German chemical companies are able to control ninety-five per cent of the world's dyestuffs and to make a profit of twenty to fifty per cent out of it

every year is largely due to the fact that they work together and handle all the products and by-products in a systematic way to the best advantage. Such results can never be attained where the mining of coal, the making of coke, the distilling of tar, the preparation of the ten crudes and the three hundred intermediate products and the manufacture and marketing of the final products are in the hands of separate companies each concerned solely with making the most profit out of its particular stage of the complete process without regard to the effect on the industry as a whole.

The reason why the Germans have been able to monopolize the chemical industry is the same as for the fact that they are able to fight six nations at a time: that is, unity of purpose and efficient organization. How long would the French armies have been able to stand against them if their Government had compelled each army corps to act independently and prohibited an interlocking directorate of the artillery, infantry, cavalry, aviation and commissary departments?

We must either find some way by which business consolidation may be permitted without injury to the public or we must frankly recognize the impossibility of competing in the foreign markets, and, as Secretary Redfield suggests, put up a tariff wall sufficiently high to prevent the organized industry of other countries from preying upon our anarchic business. If an industry is prevented from growing it must always have the protection necessary for an "infant industry."

### THE DEVIL WAS SICK—

THE Sixty-third Congress, just adjourned after twenty-three months of activity, appropriated two and a quarter billion dollars—a hundred and twenty-five millions more than the last Congress.

Its membership was overwhelmingly Democratic.

The Democratic national platform declared: "We denounce the profligate waste of money . . . thru the lavish appropriations of recent Republican Congresses. . . . We demand a return to that simplicity and economy which befits a democratic government."

Profligate waste? Lavish appropriations? Simplicity and economy?

The ladies of Erzerum have made a pacifist demonstration in a novel and effective manner. They began like the suffragets by stoning the palace of the Vali, but when he sent out his guards to disperse them the women tore off their veils and most of their clothing and boldly faced the guards, who, being good Mohammedans, were obliged to turn their backs and retire from the street. Then the women invaded the palace and compelled the Vali Pasha to send a telegram to the Sultan protesting against the war.

The Germans talk of cutting down their meals by half. This will doubtless be hard on them for a while, but after they get used to it they will find that they can live on three meals as well as six.

The President has been empowered by Congress to prevent by force of arms violations of our neutrality. Aggressive neutrality has all the attractiveness of muscular Christianity.

Drawn especially for *The Independent* by Arthur Elder

The attack on the Turkish capital is one of the most spectacular, as it seems likely to be one of the most momentous operations of the great war. A fleet of over fifty British and Russian warships is assembled to force the Dardanelles, while a Russian fleet is crossing the Black Sea to the Bosphorus. The most powerful battleship afloat, the new super-dreadnaught, "Queen Elizabeth," completed since the war began, is throwing her fifteen-

## CLOSING IN ON CONSTANTINOPLE

inch shells into Kilid Bahr and other forts along the narrows from the Aegean Sea, west of the Gallipoli Peninsula, ten miles or more away. The Homeric siege of Troy took place a few miles up the Scamander (Menderes) River from Kum Kale. The battle of Aegospotamos—when the Spartans under Lysander defeated the Athenian fleet and so put an end to the Peloponnesian War, 405 B. C.—was fought near Galata. At the

narrows, somewhere between Nagura and Kale Sultanie, which now is the chief point of attack, Xerxes crossed from Asia to conquer Greece in B. C. 480 and Alexander crossed from Europe to conquer Asia in B. C. 334. Brusa was the first capital of the Ottoman Empire and hither the present Sultan may retire if he is driven from Constantinople. As the taube flies it is about 160 miles from Kum Kale to Constantinople.

# THE STORY OF THE WEEK

**The Key to Constantinople** If the Allied fleet succeeds in forcing its way thru the Dardanelles it will be counted as one of the most remarkable feats of the Great War, for the strait has been regarded as impregnable ever since the first cannon were placed upon its banks in 1453 by Mohammed II. From that time on no hostile vessel succeeded in passing the Dardanelles until 1807, when Admiral Duckworth with a British fleet ran the gantlet, but even he was not able to reach Constantinople. During the nineteenth century Great Britain backed up Turkey in keeping the Dardanelles closed to warships, altho this policy made an enemy of Russia. In 1840, the Treaty of London, to which Russia was a party, reaffirmed "the ancient rule of the Ottoman Empire by virtue of which it has been at all times prohibited for ships of war of foreign powers to enter the Dardanelles and Bosphorus."

Now, however, there is a Russian fleet crossing the Black Sea to seize the Bosphorus, and on the other side of Constantinople Russia is represented by one cruiser in the Allied fleet forcing the Dardanelles.

On the European side of the Dardanelles arid bluffs are to be seen; on the Asiatic rolling and fertile hills covered with gardens and vineyards. The highlands at the entrance from the Ægean are crowned by two old forts built by Mohammed IV in 1659 as a protection against the Venetian fleet, Sedd el Bahr on the European and Kum Kale on the Asiatic. Both these, or rather the modern fortifications on these points, were reduced within a few hours by the British and French battleships standing out at sea beyond the range of the land guns, altho these were neither few nor small. The entrance forts and batteries contained nineteen guns ranging from 6 to 11 inches and eleven of smaller caliber. After these were silenced a landing force completed the demolition of the batteries in the vicinity. The 400 British marines who occupied Kum Kale, or the "Sand Castle," on the right, must have landed near the mouth of the Scamander River, where 3000 years before Agamemnon and the hosts of Greece had disembarked to undertake the siege of Troy, the site of which is about four miles up the Scamander River.

But Homer's Ilium was not so old a city as Dardanus, from which the Dardanelles is named. The headland

## THE GREAT WAR

*March 1*—Bombardment of Dardanelles forts continued. Premier Asquith declares intention to shut off all commerce with Germany.

*March 2*—Germans bombard Polish fortress of Osowiec. Russians cut off a Turkish force in Armenia and take Khopa, Black Sea port.

*March 3*—British attack Turks in Tigris valley. Germany will agree to American proposals for free neutral commerce if England will permit food shipments to Germany.

*March 4*—Russian fleet sails to Bosphorus. French claim gains in Champagne, Argonne, Vosges and Alsace.

*March 5*—British fleet bombards Smyrna forts. "Queen Elizabeth" shells Dardanelles forts over Gallipoli hills. Allied army of 100,000 land on peninsula.

*March 6*—Greek Premier Venizelos resigns because King will not approve his war policy. Russians regain Czernowitz and Stanislaw.

*March 7*—Germans attack Russians on Pilica River, south of Warsaw. Revolutionary riots in Portugal.

here is occupied by the fort of Kephaz Kalesi, which has been bombarded by the Allied ships advancing up the strait from the Ægean to this point, a distance of about thirteen miles.

### Firing Over Gallipoli

It would be hard to imagine a better position for defense than the long, narrow, deep and crooked channel which separates Europe from Asia and connects the Ægean with the Sea of Marmora. Doubtless many of the fortifications which line both banks are antiquated and useless, but some of them are modern and German engineers have been working for months to make them effective by the importation of such Krupp

guns and ammunition as the Rumanian Government would permit to be shipped thru that country.

The strongest fortifications and the heaviest armament are concentrated at the narrowest part of the Dardanelles, where the shores are only a mile and a quarter apart. Here on the western side near Kilid Bahr there are three forts containing altogether the following big guns: Two 14-inch, three 11-inch, one 10.2-inch, fifteen 9.4-inch, and three 8.2-inch caliber. Yet these three forts were, March 5, bombarded without the possibility of retaliation. They were absolutely helpless because their guns were directed inward toward the narrows, and they were shelled by the British battle-cruisers from behind, that is, from the other side of the Gallipoli peninsula, which forms the western side of the Dardanelles. The peninsula is here about seven miles wide and the new "Queen Elizabeth" in the Ægean Sea, at a safe distance, was able to throw her 15-inch shells over the hills with marvelous precision at her invisible targets. The aeroplanes hovering above and the British warships in the lower part of the Dardanelles reported the result of each shot by wireless. The weather being good the "Queen Elizabeth" fired twenty-nine rounds that day "with satisfactory results," as the dispatch puts it. That is, the magazine of the strongest fort was blown up and the other two damaged. There is no apparent reason why the other forts on the strait may not be demolished with equal ease and safety.

There are few fortifications on the western side of the Gallipoli peninsula. Those in the vicinity of Bulair have been bombarded by four French battleships in the Gulf of Xeros.

The Allied army which has landed on the peninsula of Gallipoli is commanded by a French officer, General d'Amade. He has under him some of the Algerian and French troops with which he effected the conquest of Morocco two years ago. But most of his force is composed of the British troops which had been assembled from all parts of the world in Egypt. The attempt of the Turks to cross the Suez Canal was such a disastrous failure that they are not likely to repeat it soon. It is not known how many British troops have been camping in the shadow of the pyramids of Gizeh, but it is said to be the greatest expeditionary force ever transported overseas at any one time.

## THE CHURCH AND WAR—A MOTOR FIELD ALTAR FOR GERMAN CATHOLIC SOLDIERS

It is also the most composite. The various races of the Indian army are represented in it. Victoria, Queensland and Tasmania have contributed to it, and the New Zealand contingent includes Maoris, the most warlike of the South Sea natives. Part of the Canadian troops have been sent here as well also as Scotch, Irish and English Territorials. It is this strange army, or part of it, which, under the command of a French general, has undertaken the task of expelling the Turk from Europe.

**The Balkan Situation** The bombardment of the Dardanelles and the impending capture of Constantinople by the Allies has brought the Balkan question to a cri-

sis. In Greece the Government has come into conflict with the King over the question of the participation of that country in the war. Premier Eleutherios Venizelos and his colleagues are determined upon an active policy, believing that the interests of Greece would suffer if she had no hand in the final settlement. The King, on the other hand, is determined to maintain peace and neutrality. Accordingly he accepted the resignation of Venizelos and called upon Alexandros Zaimis to form a cabinet. Zaimis has been Prime Minister as well as High Commissioner of Crete, and is now co-governor of the National Bank. There is, however, a strong popular feeling in favor of war, and it is doubtful wheth-

er he can secure support in Parliament, or, if this is dissolved, from the electorate, for a policy of neutrality. The King is inclined to be pro-German in his sympathies, as he was educated in Germany and the Queen of Greece is a sister of the Kaiser. It will be remembered that at the conclusion of the second Balkan war the German Emperor sent an enthusiastic telegram of congratulations to King Constantine.

Altho Greece will enter the war upon the side of the Allies if at all, still her interests are by no means coincident with theirs. If Russia should be in Constantinople it would dissipate the dream of Greek patriots to restore the ancient glories of Byzantium as the capital of a new Greek empire. The Turkish islands at the entrance to the Dardanelles in the possession of Greece are serving practically as a naval base for the operations of the Allied fleet. Italy still holds the Turkish islands to the south of Smyrna, which are also coveted by Greece.

The intervention of Greece would therefore probably bring about the immediate participation of Italy in the war. The Italian army has already practically been mobilized and brought up almost to its war strength. It is a matter of general surprise that Italy has held off so long when she now has an opportunity to seize the Italian provinces of Austria and secure a dominant position on the Adriatic. It is supposed that Count von Bülow, former German Chancellor, was sent to Italy for the purpose of trying to secure a pledge of neutrality by cessions of Austrian territory. But these negotiations seem to have been fruitless, tho whether this is due to the reluctance of Austria to make such cessions or to the Allies having offered a greater price is not known.

The Rumanian Parliament has empowered the Government to declare, at any time when it thinks desirable, a state of siege till the end of the war. Preparations for war have been completed and at any time Rumania may assist the Allies either by attacking Turkey on the Black Sea or by invading Hungary thru the Transylvanian Alps.

Bulgaria is, of course, anxious to regain Adrianople, which she took in the first Balkan war and lost in the second when she was attacked simultaneously on all sides by Serbia, Greece, Rumania and Turkey. In the first Balkan war the Bulgarian armies might perhaps have reached Constantinople if they had not been checked at the Chataldja line more by the intervention of the powers than by the valor of the Turks.

## THE CHURCH AND WAR—MILITARY FUNERAL AT THE REAR OF THE FRENCH LINES

**The Attack on Osowiec** Hindenburg's sudden swing to the northward not only drove the Russians out of East Prussia but enabled the Germans to begin operations on the permanent fortifications which extend along the Niemen, Bobr and Narew Rivers from Kovno to Warsaw, and form Russia's real line of defense. The point chosen for attack seems to be Osowiec (Ossowetz), which is the nearest of these fortresses to the frontier, being only about twenty miles from the southeast corner of East Prussia. Osowiec is presumably one of the weakest of the chain, and in fact was not mapped as a fortress before the war. It commands the railroad leading from the Prussian town of Lyck to the Polish town of Bialystok, and if the Germans should succeed in taking it they would have a chance to cut the railroad between the Russian and the Polish capitals at Bialystok.

For the bombardment of Osowiec the Germans have brought up the Austrian 11-inch field howitzers such as they used chiefly for the reduction of Liège and Namur. Two of its forts are said to have been already demolished. Once before, in the latter part of September, the Germans besieged Osowiec, but were forced to retire on account of the Russian victory at Augustowo, twenty-five miles to the north. This time the Germans seem to be determined to hold their ground in this region, for they are reported to be fortifying on a large scale among the hills along the river.

But the German forces are too few to man the whole line and the Russians are gradually regaining the territory they recently lost. To the north the Germans have withdrawn from the Niemen River as the Russians advanced without offering much opposition, but to the west, in the vicinity of Przasnysz, the Russians inflicted a severe blow on the Germans. A brigade of Russian cavalry broke thru the German line at this point, so their right wing was attacked from front and flank, and before they could recover the Russians had taken many prisoners and the guns and supplies of the foremost depots.

**Czernowitz Recaptured** In eastern Galicia and Bukowina the Russians are regaining the ground they lost in February. The Austrians have been compelled to evacuate Czernowitz and Stanislau. The Russian official report of the operations between February 21 and March 3 claims the capture of 133 officers, 18,522 men, five guns, sixty-

Medem Photograph Service

THE CHURCH AND WAR—OPEN-AIR MASS IN THE ARGONNE FOREST

two machine guns and numerous trains. General Brusiloff's army boasts the capture since the war began of 1900 officers and 186,000 men, which is more than his army numbers.

In regard to the struggle which has been going on all winter for the possession of the Carpathian passes the Russian and the Austrian reports agree in nothing except the fierceness of the fighting and the terrible suffering caused by the snow, which fills the mountain defiles and buries dead and wounded. It is evident that neither side has made any substantial gains during the winter, but both are holding on to their positions with desperate energy in the hope of utilizing them when the

spring weather permits of offensive movements. The chief points of contention are the Dukla, Lupkow and Uzsok passes, which lie south of the besieged fortress of Przemyśl.

**England to Cut Off German Commerce** In the session of March 1 Premier Asquith announced, amid tremendous applause from all parties, the reply of the Government to the German threat to establish a war zone about England and Ireland. His policy amounts virtually to a blockade, but the Premier carefully avoids the use of the word "blockade," which has come to have a strict and well defined meaning in international law. In the statement which he read to

Underwood & Underwood

THE CHURCH AND WAR—CONSECRATING MOTOR AMBULANCES IN LONDON

the House of Commons the following language was used:

The law and customs of nations in regard to attacks on commerce have always presumed that the first duty of the captor of a merchant vessel is bringing it before a prize court, where it may be tried and where regularities of the capture may be challenged, and where neutrals may recover their cargo. The sinking of prizes is, in itself, a questionable act, to be resorted to only in extraordinary circumstances, and after provision has been made for the safety of all crews and passengers. . . .

The German declaration substitutes indiscriminate destruction for regulated captures. Germany has adopted this method against the peaceful trader and the noncombatant, with the avowed object of preventing commodities of all kinds, including food for the civilian population, from reaching or leaving the British Isles or northern France.

Her opponents are, therefore, driven to frame retaliatory measures in order in their turn to prevent commodities of any kind from reaching or leaving Germany. These measures will, however, be enforced by the British and French Governments without risk to neutral ships or neutral or noncombatant lives, and in strict observation of the dictates of humanity. The British and French Governments will, therefore, hold themselves free to detain and take into port ships carrying goods of presumed enemy destination, ownership, or origin. It is not intended to confiscate such vessels or cargoes unless they would otherwise be liable to confiscation.

Following the speech of the Premier the House of Commons voted appropriations amounting to \$1,450,000,000, the largest grant ever made by Parliament. Previous appropriations for the war reach a total of \$1,800,000,000. Mr. Asquith stated that the expenses of the war now amounted to \$7,500,000 a day and next month would be a million more. In the wars against Napoleon, he said, England expended only \$9,155,000,000, and in the Boer war \$1,055,000,000. In addition to the grants of \$4,000,000 to Serbia and \$50,000,000 to Belgium, England would probably advance more funds to these countries.

#### Power to Enforce Neutrality

At one o'clock in the morning on March 4, Congress adopted by unanimous vote a joint resolution empowering the President to prevent use of our ports as bases of supplies for the ships of belligerents in the present war. In its original form the resolution, which had been prepared by Counsellor Lansing, of the State Department, and the Attorney General, was introduced in the House some hours earlier and promptly adopted there. Afterward it was thought that too broad a grant of power had been given, and a conference at the White House preceded action in the Senate. The terms of the resolution adopted

*International News*

#### WILL IT FALL?

Ancient Turkish tradition is said to prophesy that with the fall of this "Burnt Column" in Stambul the Turkish Empire will come to an end. The column is of porphyry and was erected by Constantine

in the House, it was said, would permit an embargo upon exports of such supplies as have been shipped in large quantities from this country to Europe. Power to do this had not been sought, and our Government had no desire to see such an embargo imposed. Therefore a substitute, less than half the length of the original, was prepared. This the Senate adopted, and the House accepted it a few minutes later.

The resolution provides that hereafter and during the existence of a war to which our country is not a party, in order to prevent violation of the neutrality of the United States by the use of its territory, its ports, or its territorial waters as bases of operation for a belligerent—a use at variance with the obligations imposed by the law of nations, our treaties or our statutes—the President is empowered to direct collectors of customs to withhold clearance from any vessel of American or foreign registry, or license, "which he has reasonable cause to believe to be about to carry fuel, arms, ammunition, men or supplies

to any warship or tender or supply ship of a belligerent nation in violation of the obligations of the United States as a neutral nation." And if any such vessel shall depart, or attempt to depart, without clearance, "for any of the purposes," the owner or master or person in charge or command shall be liable to a fine of from \$2000 to \$10,000 or to imprisonment for two years, or to both fine and imprisonment. In addition, the ships are to be forfeited. To enforce the resolution the President is authorized to use the land or naval forces of the United States.

In a letter to Representative Underwood, Counsellor Lansing said that the Government had been "hindered by lack of sufficient legislation to prevent vessels from leaving American ports with coal and supplies for warships at sea." He desired to emphasize "the great urgency and need of the immediate passage" of the resolution.

It is understood that the request for prompt action was due to evidence laid before the Federal grand jury in New York which indicted, on the 1st, the Hamburg-American Steamship Company, its chief representative in this country, and four other persons for procuring the shipment of coal to German warships by means of false manifests and false clearance papers. At least two cargoes of coal were sent out in this way on chartered ships to war vessels lying off New York.

#### Adjournment of Congress

Congress was in an amiable mood in the last hours of the session. In the Senate there were kind remarks about retiring members, and in the House prominent Representatives vied with each other in commending partizan opponents. Speaker Clarke, Leader Underwood and Leader Mann were heartily praised. All but two of the general appropriation bills were passed. An agreement on the Postal bill could not be reached in conference, owing to differences about mail pay to railroads. There was no final action on the Indian bill. By joint resolution the present year's appropriations in each case were continued without change.

One day before adjournment the Ship Purchase bill was laid aside. No action was taken on the Philippine Government bill or the pending conservation measures. The Colombia and Nicaragua treaties were not ratified. For river and harbor improvements a lump sum of \$25,000,000 was granted, in lieu of the pending bill, which carried a much

larger sum. In the navy bill provision was made for two battleships, six destroyers, two large submarines and sixteen coast defense submarines. The Seamen's bill was signed by the President on the day of adjournment, but it does not go into effect until fifteen months hence. A rural credit addition to the Agricultural bill was passed in the House, but eliminated in conference. The subject is now to be considered by a joint committee, of which Representative Glass is chairman. All of those nominated for the new Federal Trade Commission were confirmed, except Mr. Rublee, and the President has given him a recess appointment. Col. Goethals and Surgeon General Gorgas were made major generals, receiving the thanks of Congress. Among the nominations confirmed were the following: Samuel L. Rogers, North Carolina, Director of the Census; Robert W. Woolley, Virginia, Director of the Mint; Houston B. Teehee, Oklahoma, Register of the Treasury.

In a brief statement the President said a great Congress had closed its

sessions, and business had now a time for calm and thoughtful adjustment. But the European war had put the nation to a test of its true character and its self-control. The constant thought of every patriotic man should be now for the country, its peace, its order, its just and tempered judgment in the face of perplexing difficulties. Its dignity and strength would appear not only in the revival of its business but also in its power to think, to purpose and to act with patience, with disinterested fairness and without excitement, in a spirit of friendliness and enlightenment which would firmly establish its influence thruout the world.

#### In Latin-America

There has been discovered in Brazil a conspiracy against the Governor of the State of Rio Janeiro. Among those involved are the sailors on the battleships "Minas Geraes" and "Sao Paulo." Arrests have been made, and the movement is said to be a complete failure. But there is revolt elsewhere as well as in the vicinity of the capital, for the dispatches say that an aviator was killed while making an inspection flight over the "rebel camp in the State of Parana." The news reports are brief. It may be recalled that the memorable revolt in the harbor of Rio Janeiro, in November, 1910, began with the sailors on the same battleships that are named in connection with the present conspiracy.

The recent capture of Colonel Concha, chief of the revolutionists in Ecuador, at Esmeraldas, is regarded by the Government with great satisfaction because it probably will cause a collapse of the revolutionary movement in that country.

Dr. Feliciano Viera, the new President of Uruguay, was inaugurated on March 3. He said in his inaugural address that he was a disciple of his predecessor, Señor Battle, whose policy would be his own. President Battle was recently challenged by Señor Ramirez to fight a duel. He declined, because of his high office. Now, however, he has challenged Ramirez, and the latter says he is not bound to accept. But it is expected that there will be a duel.

In Hayti, Gen. Guillaume Sam, the successful revolutionist, was proclaimed provisional President on the 1st, and formally elected President by the Senate four days later. It is said that he will not regard with favor our Government's proposition for the establishment of a fiscal protectorate such as we now exercise in the case of Santo Domingo.

Mexico's Unfortunate Capital The deplorable condition of Mexico's capital caused much anxiety last week in Washington and elsewhere. General Obregon, representing Carranza, holds the city with a garrison of about 10,000 soldiers. There is a scarcity of food, many thousands are unemployed, and the currency issued by Villa has been made worthless by decree. Obregon demanded \$250,000 from the Catholic clergy. Because the money was not paid to him he put 180 native priests in jail and expelled twenty-two Spanish priests, who have been deported from Vera Cruz. He levied a tax of three-quarters of one per cent. upon the capital of all merchants, banks and individuals, with a general tax amounting to one-third of the customary annual tax. Only seventy-two hours were allowed for the payment of the first tax, the penalties being confiscation and imprisonment. Five hundred delinquents are in jail. Owing to our Government's protests, Carranza ordered that foreigners be excepted. This made Obregon angry, and he

**A STATESMAN WHO LEAVES THE SENATE**  
When Congress adjourned Elihu Root, having refused renomination as senator from New York, retired from national office. He was seventy years old last month. Few men have played so large a part in the international relations of the United States in the last fifteen years, and his clear thought and sound judgment on diplomatic problems can ill be spared from Congress.

Paul Thompson

**THE WATCHDOG OF THE TREASURY**  
Senator Burton, of Ohio, is another distinguished Republican who has left Congress. For thirteen years a member and for ten years chairman of the House Committee on Rivers and Harbors before his election to the Senate in 1909, he has consistently been opposed to pork-barrel legislation and has made traditional his thoro mastery of a matter for which he was responsible.

Janet M. Cummings

## A HOSPITAL CAR ON THE GREAT EASTERN RAILWAY IN ENGLAND

railed against the foreign residents and the rich, asserting that they were hostile to the revolution, exploiters and friends of Porfirio Diaz. The priests, he added, were avaricious.

He published a threat that he would take his troops from the city if there should be a riot, and he advised the hungry poor to "take matters into their own hands." Those who had money, he asserted, would not contribute to help the destitute. This was not true, for there had been large contributions, but when the relief committee of foreign residents asked him to permit the railroads to be used for bringing food, he refused to do this, saying that the people needed no help from foreigners. Frightened merchants had closed their shops, and the hungry mob was looting them. Obregon ordered the merchants to open these stores, the penalty for disobedience being imprisonment. They were directed to accept Carranza's currency in place of Villa's, \$50,000,000 of which, it is said, had been put in circulation. There were bread riots, the peons were dying, and the water supply had been cut off. Two hundred of Obregon's soldiers entered a dry water main, intending to pass through it and thus to surprise a party of Zapata's soldiers in the suburbs. Zapata heard of this project, turned on the water and drowned them all. There are epidemics of smallpox and typhus fever in the capital. The first of these diseases is also causing heavy mortality in Tampico and Vera Cruz.

There were indications that Obregon was preparing to leave the capital and to use the garrison in a movement against Villa. The merchants and foreign residents would then be at the mercy of the mob, or of Zapata's army. Our Government, to whom several European ambassadors made earnest complaints, sent sharp protests to Carranza, but there was no reply. It was said that the

foreign diplomats had decided to leave the Mexican capital in a body. Some thought that it might be necessary for foreign powers to send a protecting force to the capital from Vera Cruz.

## Villa and Other Warriors

Villa had followed the fleeing soldiers of Carranza from Guadalajara in the direction of Manzanillo. In a battle not far from that port he routed them, killing 1500 and taking 400 prisoners. He then began to besiege Manzanillo, but soon, for some reason, discontinued this movement. Returning to Aguascalientes, he stopped there long enough to put to death two generals who had turned from him to Gutierrez and had come north to seek a restoration of his favor. His movement against Tampico was delayed by the attacks of Carranza's forces upon his favorite commander, Angeles, at Monterey. In Carranza's service were two American aviators, who dropped bombs upon houses in the town. After a time, however, a part of the Villa army in or near Monte-

rey moved southward toward Tampico.

Along the northwest coast several independent factions were robbing the people. General Cabral, whom Villa sent north several weeks ago to supersede Maytorena, who escaped from the prison in which Maytorena placed him, and who afterward reached an agreement with Maytorena and returned to his troops, has now resigned and crossed the border again, saying that he can support neither Villa nor Carranza, but will live in the United States. Garza, the convention's latest President, said to have been kidnapped and killed by Zapata, was alive on February 26. On that date he sent a message to Villa, reporting Zapata's attacks upon towns near the capital.

In Yucatan the Carranza forces are divided, and one faction is fighting the other. One of Carranza's gunboats was blown up at Progreso by a bomb brought on board concealed in a barrel of rice. Thirty men were killed. It appears that more than 600 persons lost their lives in a railroad accident several weeks ago. After Carranza had captured Guadalajara, an order was given that the families of the soldiers should be brought to the city. A special train carrying 900 persons ran away down a steep grade and plunged into a ravine. More than 600 were killed and very few escaped injury.

Gutierrez, formerly President, has offered to surrender to Villa or Carranza. At Acapulco, on the west coast, Carranza's forces imprisoned the British and Spanish Vice-Consuls. In response to the demand of the captain of the United States cruiser "Cleveland" they were speedily released. They left the city and sought refuge on his ship.

# THE CHALLENGE OF UNEMPLOYMENT

BY JOHN GRAHAM BROOKS

IT is the very least among reasons for attending to it, but the issue of unemployment cannot longer be shirked because it will become more and more the center of justified social revolt. Socialist and anarchist alike will use it for ends of their own, counting securely upon just enough public sympathy to sustain their propaganda.

Until society deals seriously and constructively with the problem, this agitation will be justified.

I for one even thank the I. W. W. for stinging us and nagging us into some recognition of our duty. I thank them in spite of the childishness of their "solution." To demand in the present situation "\$2 a day or take it when you can find it," is of course a puerility; but this should not divert attention wholly from their service of insisting that we have thus far merely fooled with these issues. On this visit to New York I was not ten minutes from the train before a man on Forty-third street appealed to me for a job. I could not help him to a job; should I give him money, which was what he wanted?

I reasoned about it doubtless as most of you would have done: "This of course is a hobo, and if I give him a quarter, I am simply paying his drink bills and helping to keep him and his kind in the city when they ought to be in the country." This argumentative use of "the country" as a cure-all has saved us too long from reasoning about the problem at all. Every week you may hear, "Oh, if these men and women would go to the country, the demand for farm-hands and servants would end this trouble." A lot of people who look clean and even educated continue to repeat parrot inanities like that in the belief that they are throwing light on this question.

And yet it is here with the bum that our problem begins: namely, that, shuffling about between us and the genuinely unemployed, are vagrant armies of skillless vagrants and unemployables. A goodly part of these we are rather deliberately turning out year by year as social products. We are steadily creating material for jobless men, not by retail but in huge, large-scale production. We are doing it by much of our child labor and by certain gross omissions in our educational policy. Could the devil himself devise a more ingenious scheme to produce continuous reinforcements to the army of work-shy unemployables, than—to give one of many illustrations—to allow thousands of youth to escape from school in those plastic years from fourteen

*The name of John Graham Brooks is a familiar one among students of social reconstruction. He has been lecturer on economic subjects at Harvard, Chicago and California, an expert in the service of the Department of Labor at Washington, and is president of the National Consumers' League. He wrote "The Social Unrest," "As Others See Us," "An American Citizen," "American Syndicalism." This is the substance of an address delivered before the Economic Club of New York.—THE EDITOR.*

to seventeen, to take their chances at shifting and casual jobs?

At that age, two or three years of casual jobs are sure to make casual habits among a large percentage of these. There are two of these manufacturing of work-shy unemployables, common pool rooms, which I pass daily. I never look into them, even in the morning, that I don't see a group puffing at cigarets, playing pool with petty gambling, and occasionally passing a whiskey bottle. Multiply that by a great many thousands and we have a picture of these factories for turning out creatures who will by and by look for a job but hope they won't find it.

Is it not fatuous that we should lack industrial schools to which these youths should be compelled to go *while out of a job*? A proper organization of public labor exchanges of the English type would find the job with far more certainty while the youth was being taught something, and thus preserving him from flabby and vagrant habits.

At present these unemployables are so inextricably mixed up with those who want work and are willing and capable of doing it, that we must create agencies like perfectly fair and adequate work-tests that shall separate the bum and unemployable from those who can and will work. Spasmodically and in spots those tests have been applied to a whole state, to counties, and to hundreds of towns. But when the state alone or the town alone does it, the work-test straightway puts the boil on the next state or the neighboring town. This is one convincing proof that the organization of work-tests, employment bureaus and the like must be worked out *nationally*. It is also proof that farm colonies must also be established. Part of these colonies must be semi-penal for those who can work but won't. They must be educational for those who are unemployable but willing to be taught. The Swiss have begun this so ad-

mirably at Witzwill and Tannenhof that a working model is at hand, just as England (taking her lesson from Germany) has brought the supply and demand of labor into possible touch thru her 1500 employment bureaus and their affiliations, bringing every labor center within five miles of an agency. These bolder plans are no longer wholly in the air.

Again, it is mighty lucky for us that we have, in every variety, the models of something else that sometime we shall have to accept frankly—unemployment insurance. There are nearly twenty years' experience with this. Except in Denmark, nowhere is it applied to miscellaneous workers, and there only to trade unions. We shall begin as England began in 1911, with carefully selected trades, and that experimentally. Cities will begin, as in German and Belgian cities, with subsidies to funds contributed thru common trade organizations.

But I should feel that I was insulting the unemployed as well as my readers if I were to put this big, loose-jointed scheme before you as in any way meeting the gaunt and immediate need for jobs. This sketch of large future construction has, however, to become consciously a part of our plan. Every practical step should henceforth have some relation to that plan. But it is very vital not to excite too much ardor about it, for the reason that the whole bunch of remedies does not touch what is hardest in the problem, namely, to find work for which there is no demand—to make products which nobody cares to buy at market rates.

Affiliated employment agencies, governments and cities have honestly begun to "even out" and adjust work to the slack periods. John Burns as he first began his work in the Board of Trade told me he was astounded to find how thoughtlessly and clumsily the English government distributed its work, with no thought of unemployment periods. Governments and cities are enormous employers of labor and are just now waking up to this duty of organizing work with intelligent reference to unemployment. The first definite suggestions I have ever seen in Boston have just begun. But when governments and cities have done that, and employment agencies have brought the jobless man and the manless job together, there will still be a most formidable unemployment in deprest periods. To recognize that fact is to justify insurance. We can no more keep all the people at work all the time in the vibrations of world indus-

try than we can keep all people well or prevent all accidents. We shall have an enduring percentage of undeserved misfortune in unemployment and we must insure against it like other calamities. As soon as we can practically manage it, insurance must become a part of what we have only bungled so far, really constructive work—road making and reclamation work, afforestation, and the like. We have tried the bum and unemployable on this kind of work and succeeded only in putting dollars into a machine and getting cents back. But the employable have to be paid on the spot, while in road making, reclamation, and tree planting the return is so far off that the politicians in office, and the people behind them, are afraid to face the necessary expenses. Even the eucalyptus, which "grows so fast that you can't hit it twice in the same place with an ax," requires twenty-five years before you can turn it into cash. Meantime you are paying out the taxpayers' money to keep the unemployed alive. Apart from the education of the average voter, there is no conceivable meeting of this difficulty. Irrigation work is beginning to give us returns. European forestry has definitely proved its case.

It has been settled once for all that a crop of trees may pay as well as turnips or wheat; that tree planting may be financed so as to return a profit on investment, and it is this kind of evidence that must be used before electors and legislatures as we enter slowly upon those larger constructive plans.

But I repeat it—it pretty nearly insults one's readers to sketch a large, loose outline of far-off remedies for a need so haunting and so challenging as this which has fastened upon us. There they are mixt up, the cadger, the vagrant, the casual, together with a very large army of jobless folk from no fault of their own—thousands with families, in a welter of misfortune. We want to keep in mind the larger scheme—education, at least in periods of unem-

ployment; work tests; labor exchanges, and insurance, that each humbler, nearer, practical step shall have some relation to the future constructive order. We must integrate as far as possible our present activities with that future organization. Meantime, we must take the penalty of our own social neglect and avoid that meanest proclivity of cynical aloofness, especially among educated and well-fed people, to act as if there was really no problem except to get rid of bums and cadgers.

On the other hand, we have to tolerate the ideologue, who may be right in the next century, but is often a hardy nuisance in the presence of that half-fed, embittered and worried man wanting work.

It may be a single-taxer who bursts out—"What's the use? If you'll take the economic rent, opportunity will blossom like the rose and no man shall fail of a job." It may be the Socialist, who insists upon socializing the means of production, and then, of course, everybody has a job.

I quite agree that we ought to have far more economic rent, and we shall have, whether we want it or not, far more socialistic control; but meantime we have to do business; to see that these people are taken care of, the wheat and tares together. They have to be fed and clothed in the old-fashioned way, in spite of the outcry that "we must have justice and not charity."

I cannot find it in his books, but I once heard this incident of Tolstoi. The same old question of pinching need among the peasants in the country was being discussed by a group of educated and well-to-do folk. There were, it was said, so many "unworthy" that it was very difficult. Feed them, and more will come to Moscow. Only self-help will save them—and all the rest of the liturgy of the man with a full belly trying to be wise and scientific about the man with an empty one. Tolstoi, in the corner, listens. When the first philosopher sits down, Tolstoi speaks these words: "Those peasants have nothing to eat."

Then another of the so-

phisticated begins and ends in the same scientific manner, and from the corner come the words: "They have nothing to eat." And a third winds himself up and runs down with his formulas of caution, and the awful sentence comes again. A fourth man tries to be safe and sane, but the words stick in his throat and instead of finishing as he meant to, he saves Tolstoi the trouble and repeats himself: "But they have nothing to eat." The spell is broken, and they begin to gather food and take it to the starving peasants.

In that spirit, without being stampeded by phrase-makers from any quarter or by great scheme-makers, we have to deal with a situation. But this is our new hope—for the first time in the history of unemployment, we can work *toward* constructive and preventive measures. For the first time we have a body of organized experience in at least five countries to serve as a goal and a model. Enough has been attempted and achieved to give us heart that we may now move on even from bread-lines and soup kitchens and so-called charity in the direction of and in increasing affiliation with organic plans, the principle of which has been as solidly proved as the best of our social legislation.

Even out of the fiery pit of this war Germany and England both have given us amazing hints of what could be done with unemployment if the nations used their real strength at the problem. One of the most brilliant and successful manufacturers in Massachusetts, Mr. McIlwain, set himself the task in a seasonal occupation of steadying the work in his factories evenly thru the year, and accomplished it. Nationally, we shall do no less, if we will begin to pay the honest price of using our collective strength and intelligence upon *proper industrial organization* rather than wasting ourselves merely upon piebald masses of individuals. Really and permanently to help the unemployed, industry has to be organized strictly with reference to life standards. Both in method and result the first steps have been taken. Clearly to recognize this is to accept the challenge of unemployment with some promise of meeting it.

## THE VENEZUELA DISPUTE

THE FIFTH OF A SERIES OF EIGHT ARTICLES

BY PRESTON WILLIAM SLOSSON

ON THE HUNDRED YEARS OF PEACE AMONG ENGLISH-SPEAKING PEOPLES

**S**OUTH AMERICA is today a collection of independent republics, large and small, civilized and half barbarous; all under our protection against conquest by any European power. Only the northern coast, east of the Orinoco River, is colonized by any foreign nation. Here are three colonies, British, Dutch and French Guiana, peopled with negroes and Asiatic coolies who work the plantations, together with a thin sprinkling of European settlers and the wild Indian tribes of the interior. British Guiana is the largest and most important of these three colonies. It looks small on the map of South America, and yet it is larger than the island of Great Britain and the land once in dispute between the colony and the neighboring republic of Venezuela had an area larger than that of England.

Guiana, like all the rest of South America except Brazil, was Spanish for many years. But the constant wars of Spain with other European countries gave an excuse for Dutch and French and British adventurers to raid the Spanish coasts, and even to take advantage of the increasing weakness of the Spanish Government to establish permanent settlements. They were especially attracted to the Guiana region because it was believed that this part of America was rich in gold. Wild stories circulated to the effect that in the interior of this country there lived a king who covered his skin with gold dust, and so was known to the Spanish as *El Dorado* or "the golden one." Sir Walter Raleigh was the most famous of the Englishmen who visited Guiana in search of gold, and his search was rewarded by the discovery of a small quantity of the precious metal. Spain finally recognized the Dutch settlements as independent of Spanish dominion, but much of the region was still unexplored and no exact boundaries were laid down by either Dutch or Spanish. In 1814 the Dutch ceded to the British their settlements near the Essequibo River, but again with no adequate description of the boundary between them and the Spanish country to the west. In the meantime, a general revolution had begun in

Spanish America. After many years of fighting the Spanish were forced to recognize the independence of their colonies in North and South America. The boundaries of the Republic of Venezuela were stated to be the same as those of the old colony of that name, which of course left everything as much in the dark as before. No one knew at what point in the vast wilderness between the Essequibo and the Orinoco to draw the line of division between the new republic and the British colony, and the question which was unimportant in the early days of exploration and settlement became of great importance as the disputed country began to fill up with British and with Venezuelans.

In 1841 the Venezuelan Government protested against the line drawn by Schomburgk, the surveyor, who had drawn a boundary that would have given British Guiana most of the land in question. The British replied that they had only made this survey for convenience and that they did not insist upon it as necessarily the right one. They offered the Venezuelans another frontier which, while retaining most of the territory between the British and the Venezuelan settlements for Guiana, would have given the Venezuelans control of both banks of the Orinoco River. This offer was not accepted, but both parties agreed not to fortify any of the disputed country. It would, perhaps, have been wise of Venezuela to have accepted the British offers, whether strictly just or not, for while Venezuela was weakened by almost continuous revolution and civil war, the British were strengthening their claim by advancing their actual settlements to the west and by making treaties with native Indian tribes. The discovery of gold mines by the British made them the more eager to gain and hold as much of the country as possible and proved that the legends of the country of "*El Dorado*" in the sixteenth century were not without a basis in fact. When the Venezuelans again tried to reach a final settlement they found the British less generous in their terms. Venezuela offered to submit the whole question

to arbitration and appealed to the United States to enforce this demand to arbitrate. The British replied that it was impossible to submit to the decision of a court land which had been settled by their colonists and that they would only consent to arbitrate British claims beyond the Schomburgk line. Venezuela was not strong enough to enforce its wishes nor to resist any British demands, however far-reaching these might be. If the United States had not interfered at this point, Venezuela could only have submitted to superior force. But President Cleveland decided that the time had come to act. In 1895 Congress recommended "friendly arbitration" as the best way to settle the dispute, and in July Mr. Olney, then Secretary of State, sent a message to the British Government insisting that the United States was directly interested in the question and would see to it that justice was done to Venezuela.

The reader may be wondering at this point how it could be that we were ready to quarrel with a powerful empire, with which we were then on good terms, to adjust the frontier of a disorderly little republic a thousand miles or more to the southeast of Florida. The reason was that the United States has undertaken to protect the independence of all the countries in North and South America which do not already belong to some European nation. This policy of ours is known as "the Monroe Doctrine," because it was stated by President Monroe in 1823. It is strange, but the policy to which we appealed in 1896 against Great Britain was at first supported by the British Government and, to some extent, suggested by it. Most of the Spanish colonies had won their independence early in the nineteenth century, but Spain wanted to reconquer them and there were other European nations which would have helped to do this in order to discourage any attempt on the part of their own people to make revolutions against their rulers. The British Government did not agree to take part in this attempt to restore the Spanish colonies, and Canning, who was minister

for foreign affairs, suggested that it would have a good effect if the United States declared against any attempt to reconquer the revolted colonies. Monroe not only agreed to this, but went even further and stated it as the permanent policy of the United States to regard any interference with the American republics by an outside power as "unfriendly" to the United States. Altho the causes which led Monroe to assert his "doctrine" have long passed away, his policy is still accepted by the country and has been carried, perhaps, beyond what was originally intended. Secretary Olney took it to mean that if any European nation gained more American territory by insisting upon a doubtful boundary it was really colonizing country which we had undertaken to protect, for "the United States is practically sovereign on this continent, and its fiat is law upon the subjects to which it confines its interposition," an expansion of the Monroe Doctrine

which made British statesmen gasp. Lord Salisbury replied for the British Government that we had "no apparent practical concern" in the matter, that boundary disputes had nothing to do with the original meaning of the Monroe Doctrine, and that in any case this doctrine was only a policy of the United States and not a recognized part of international law. President Cleveland answered this by laying the whole matter before Congress and asking for money to support an American commission to determine the boundary. On the first of January, 1896, the President appointed on the commission five very able men: Justice Brewer of the Supreme Court; Judge Alvey of the Court of Appeals; Andrew D. White, who had been Minister to Germany and to Russia; F. R. Coudert, who was American counsel in the dispute about sealing rights in the Bering Sea, and D. C. Gilman, who was president of Johns Hopkins University. The British were angry at our interference, but the government headed by Lord Salisbury did not allow the situation to threaten war. Instead of insisting as before that there was "nothing to arbitrate," the British helped the

Boundary Commission by giving it such maps and records as it owned. But the commission never finished its work. Before it had completed marking out the Venezuelan boundary, the British Government accepted arbitration, a court of five jurists was selected to hear the evi-

part of the disputed territory which had been settled or administered by the British for at least fifty years was to belong to British Guiana without further question. The rest of the country between the Essequibo and the Orinoco rivers was divided on a basis of practical compromise

rather than a basis of right, because it was found impossible to settle beyond doubt the question of previous ownership. Venezuela gained control of the mouth of the Orinoco, but most of the inland country went to British Guiana. These terms favored the British more than the Venezuelans, but they were much better than Venezuela could have obtained without our aid.

Another crisis had been safely ended and another victory for arbitration won; but the question of the true meaning of the Monroe Doctrine is still an open one. When first stated it meant only the protection of the American nations from reconquest, but it has come to mean a sort of

protectorate over smaller, weaker and more disorderly republics. We have in the majority of cases used our power only for the protection of these nations, as in the Venezuela case or when we forced the French to withdraw their troops from Mexico after our Civil War. Sometimes, as in Cuba or Santo Domingo, we have entered the country to restore order or to manage the finances of nations unable for the time to do these things themselves. Some of the South American countries have come to feel that they are now able to protect themselves and manage all of their own affairs, including their relations with European powers. The time may come when there will be a friendly alliance of all American peoples to protect their common independence and ensure good government and safety for the lives and property of foreigners everywhere in the new world. One thing is certain, the Monroe Doctrine, whether administered by the United States alone or by the United States in alliance with all the other American republics, has nothing to fear from friendly England, altho that power, of all European peoples, is the greatest landholder in America.

GROVER CLEVELAND

dence and the United States withdrew from the contest. The arbitrators worked for many months to clear up the puzzling details of the boundary situation and finally reached a decision in 1899. A definite frontier, accepted by both Venezuela and Great Britain, ended an uncertainty which had existed for centuries, had been a serious menace to peace for at least sixty years and might never have been settled without war if the British Government had not valued good relations with this country and on our advice accepted arbitration. It was decided before the arbitrators met that any

#### REFERENCES

Nothing better can be read on the subject than *The Venezuelan Boundary Controversy*, by Grover Cleveland. Another good book, with a large map of the disputed region, is *The Colombian and Venezuelan Republics*, by W. L. Scruggs, at one time agent of the Venezuelan Government. Both books favor the American view of the question and allowance should be made for this, but both are written by men who had a first-hand knowledge of the whole matter. D. R. Dewey's *National Problems* (Hart's American Nation series), pages 304-13, is a much briefer account. J. W. Foster's *A Century of American Diplomacy* treats in its final chapter of the relation of the boundary dispute to the Monroe Doctrine. Another good, brief summary is W. A. Dunning's *The British Empire and the United States*, pages 300-18.

# THE CHAUTAUQUA IDEA

"THE MOST AMERICAN THING IN AMERICA"

HE Chautauqua Idea is as big as you make it. Primarily it defines an attitude toward life. It germinated in the mind of a young man who determined to make

up for what he thought he had missed by lack of the college training of his day. His devices for making his own life give him a liberal education revealed a genius at work. A passion for preaching became emphatically a mission of teaching—showing how people beyond school age, out-of-school people of all classes, might make their everyday life a lifelong, interesting and purposeful school of achievement for themselves, their children, their church, their community, state and nation. Here was a vital message to America's experimenters in democracy, both men and women, and the concrete applications of this Chautauqua Idea, with or without the Chautauqua label, have amazing, cumulative, active influence in the American life of today.

The Chautauqua movement to which the Chautauqua Idea gave birth is frankly idealistic. It emphasizes the importance of making a life above merely making a living. Whatsoever tends to enlarge vision, refine taste, and enoble endeavor it seeks to increase appetite for, among "the many, not the few." The Chautauqua movement, by the way, has disclosed an amount of

*Under this heading Frank Chapin Bray, the Chautauqua Editor of The Independent, will once a month present the various aspects and applications of that American conception of popular education for which the name Chautauqua has come preeminently to stand. He will also give information concerning the activities of Chautauqua Institution and of the other manifestations of the Chautauqua Idea thruout the country. The Annual Chautauqua Number of The Independent will be the second issue of June.—THE EDITOR.*

such hunger even in people considered otherwise "well-to-do," of which cynical critics of the materialistic spirit of American life would do well to take notice. Chautauqua says to all classes of people: You can make your life more worth while to yourself and to others if you will make up your mind to do so. The means of doing so are all around you day after day. Some of these opportunities were generally overlooked until Chautauqua called attention to them. There are more of them now available than ever before. Chautauqua has no patent-monopoly of them, but is an experienced expert in the development of many of them. Chautauqua's ideal is to help you to connect yourself with what will best serve your ideal determined purpose of life.

It follows that the Chautauqua Idea is intensely practical. For on the one

hand personal efficiency, we are assured nowadays, comes first of all from the spirit in which we tackle our job. And on the other hand the Chautauqua spirit is not away beyond our reach; it gets right down to where we are, on the job of life-making. It reminds us that by far the largest part of the education any one can have comes from experience in life. Education is, indeed, a lifelong process, not a finished college-factory product. The vast majority of persons between the ages of eighteen and eighty do not have high-school, college or university training. The fortunate few who have these advantageous opportunities of learning about intellectual tools and how to use them, can by no means monopolize them all. Moreover, it is the use made of the intellectual tools, out-of-school, thru years of after-college life, that counts.

Now, to the person who feels handicapped Chautauqua says: You are no child. Experience in practical life has already given you much intellectual discipline and strength, definite knowledge, seriousness and steadfastness of purpose. You have some idea of what you would most like to be. Make your own little life-university. Get the passionate and ambitious enthusiasm of "college spirit" into it. Come into touch with the thousands of like-minded men and women possess of that spirit. Education, like present-day religion, is less a matter of monumental buildings, formulas and creeds than a mode of action, a Way of Life, seven days in every week, fifty-two weeks in every year, enriching personality and giving a larger significance to life by a purposeful succession of achievements. Get busy, on the level of your best moments. You've the will. Chautauqua has proved there's a way.

Note at this time a distinct change of attitude toward what the Chautauqua Idea stands for. When you ask a university professor now to write or speak of his specialty in terms that can be understood by Chautauqua-minded men and women, does he draw himself up to say, "Do I understand that you want me to 'vulgarize' my knowledge?" Hardly. He is much more apt to take the request as a compliment to knowledge which he has sufficiently mastered to be able to interpret to his fellow men. In the demand for a type of book and publication that shall put the knowledge of the professorial specialist at the command of the unprofessorial seeker for knowledge, the influence of the Chautauqua Idea has been immensely important. It has also been a great force in the demand, fairly overwhelming in some parts of the United States, for multifarious kinds of educational service to adult citizens by the endowed faculties and equipment of state universities. Few colleges and universities in these days are not

SPREADING THE CHAUTAUQUA IDEA

subject to some kind of call for "extension" work. Within recent years witness further the growth of citizens' demands for use of the educational equipment of the great public-school system, not alone for the children but for popular education of adults as well.

In the developments just mentioned one discovers a common earnest striving to make investment in educational facilities serve all the people where, physically and mentally, they live. There is today a social sense of the need of such accomplishment if democracy is to be intelligent enough to succeed as a national way of life. Years ago, however, when the Chautauqua Idea came to the handicapped young man, it first of all had to do with an intimate, individual, personal problem. He assumed that he had the right to ask the best authorities, the specialists, to tell him in plain English what they knew, so that he could make use of it himself. He exhorted others to exercise the same right. Groups of such specialists and groups of people who wanted to learn he brought together for addresses, conference, discussion, conversation, in the democratic open-air life of the woods. He insisted on finding out what educators thought ought to be read in order to gain the outlook of the cultivated person, and then he read it. In imagination could he not travel under the expert guidance of photograph and printed page and learn as much as some people do who go abroad?

It became an inspiration to realize that when once awakened to the possibility of a really good education in belated years, the mature powers developed by experience of life were extraordinarily effective and adaptable to the purpose. As a matter of record, that inspiration spread to some of the college-graduated, who had "finished" and atrophied, so to say, but who renewed their enthusiasm for educational achievement by Chautauqua contact. From a new give and take relationship out-of-school grew a conception of common educational interest and ambition between so-called educated and uneducated classes of men and women.

Of all the variations of appeal in the Chautauqua Idea perhaps none proves persistently stronger than this: You intend that your children shall have a better education than you had. Will they be educated beyond and away from you? See that you keep ahead of them, as you can if you will only take the pains so to do.

Along with its repeated demonstration of the fact in thousands of lives that one is never too old to learn, the Chautauqua Idea is unique in its concrete grasp of opportunities at hand which might otherwise be wasted. If I am late in self-discovery, self-discipline, self-improvement, there is no time to be lost. Chautauqua suggests: The use of spare minutes for systematized reading. Thinking over what one has read. Group study of particular subjects when practicable. Association with educated persons whenever possible. Concentrated attention upon such inspiring and instructive lectures or addresses as

are available; "follow up" reading on these subjects. Observation of the relations of the daily task to the world's work. And so on. What but the Chautauqua Idea thus conceived could ever have thought of utilizing waste vacation by making a delightful open-air school out of it—an organized school of living on a higher plane than the ordinary one? Chautauqua seasonal inspiration for the year's round of endeavor is a characteristically American device for combining the ideal and the practical.

If misrepresentation or misapplication could have killed the Chautauqua Idea it would have expired years ago. It vigorously survives because it meets a constant need of individuals and society. Its various manifestations, typical phenomena of American life, may be studied to advantage by readers of these pages.

The alumnae of Irving College, Mechanicsburg, Pennsylvania, are raising money to secure two Chautauqua Summer Schools Scholarships for girls in that college. Last summer one of their students was awarded such a scholarship and her experience at Chautauqua has resulted in the movement to assure others of this opportunity. A full scholarship costs \$50, which covers a six-weeks' course, living expenses in cottage dormitory and commons at Chautauqua included. Chautauqua awards about fifty free full scholarships and a number of half scholarships each year. Independent scholarships provided by individuals or organizations may be awarded by the donors to persons whom they designate.

Out-of-school home training for children in school has taken the form of school credit in Oregon and elsewhere.

In the public schools at Little Rock, Arkansas, one unit of credit is given for each hour's home work performed daily thruout the term. Six hours' work for pay away from home on every Saturday in the term may be accepted in place of the hour's work at home. "The systematic performance of a home task by a child is a training that is of equal, if not of more importance, than any lesson he may learn at school," says the committee that prepared the plan.

Instead of favoring the establishment of a state university, the Massachusetts Board of Education recommended to the Legislature the creation of a University of Massachusetts, as a non-teaching organization authorized to conduct university extension and correspondence courses, to administer a system of state scholarships and to promote the training of school teachers, administrators, and supervisors. The board also recommended additional state scholarships for students needing financial assistance.

Mrs. Frances Willard Munds, elected to the State Senate of Arizona, is an undergraduate member of the Chautauqua Reading Circle. She has stated that her chief desire is to "idealize and specialize" on legislation favorable to the further uplift of women and children. She is working for circulating libraries for rural schools, and consolidation of such schools where practicable, in order that manual training, domestic science and kindergarten may be installed.

During the last session of the Chautauqua at Wapakoneta, Ohio, the saloons closed for two hours one day and the bartenders joined the business men who attended the lecture on "Community Building."

CHAUTAUQUA BELIEVES IN GETTING LIKE-MINDED PEOPLE TOGETHER

# THE SUM OF THE WHOLE MATTER

WHAT I BELIEVE AND WHY—FINAL PAPER

BY WILLIAM HAYES WARD

THE sum of the whole matter is this: Reason is the last arbiter; our own reason, our individual reason, my reason, nobody's else. There are various sources of authority, Bible, or Church, or God, but each one must be tested by our personal reason before it is believed. We are all of us at bottom pure rationalists, cannot help being. What God is, whether there be a God, we must decide by the best reason we have. If we are made in the image of God that image is in reason, not in body; and our little reason can and must get some true view of God, just as our little, blinking, myopic eyes can truly, if imperfectly, descry the infinite spangled universe. Reason may see faintly, even erringly, but it is all we have to guide us. It may rest on custom, tradition, social inheritance, the teachings from childhood of those whom we think possess of more knowledge and judgment than we, but all our beliefs rest on such reason as we have.

We may travel beyond our reason; we may imagine, or guess, or wish, but on these we can never rest. Poets, to tell a pretty story or point a lesson, have invented lovely or strange tales of gods and goddesses, and what they have told as story whole nations have taken as verities coming from the fathers who had better vision, and made a religion of them, and their children have believed them true, until wiser men have torn away the pomp and gold of gay religions and have found the true God enshrouded there, and have worshipped him with Platonist adoration, or they have found only a stock of wood under the gilded veneer and have burned the wooden sham of their faith. It is reason that has made them find faith under the false finery, or reason that has made them despair. It is by reason that we too must test the Bible as well as the Vedas, Moses as well as Hesiod or Zarathustra. If we find in our Bible anything of cosmogony or history or morals that does not approve itself to our reason, we must reject it; we cannot help it. That did not, could not, come direct from God, but came thru fallible men, the framework and the cord of whose harp was constructed after the fashion of their day, and could not sound perfect music. Reason prefers our school textbook to our Bible on matters of geology and astronomy, sifts Bible history by comparison with contemporary records recovered from the sands and clay of ancient empires;

and reason it is that judges the teachings of Jesus to be superior to the sacrificial cult of Leviticus, or the cursings of Ezekiel and Amos. Our light is better than theirs, for our reason has more knowledge, more experience, on which to rest.

## REASON FINDS GOD

The best human reason—I think I do not err—whether it looks outward or inward, finds God. He is in nature about us; he is in the reason within us. It is not simply that we wish to find God, but we find him whether we wish it or not. Because things are, therefore something always was, self-existent, existing from the necessity of its own being; something, matter or mind, or both, filling the vacuity of space, out of infinite ether creating finite atoms and worlds, doing it purposely, intelligently, with infinite power and boundless wisdom. We find evidence—we can hardly be mistaken—not only of creative power but of constant anticipative foresight, looking forward thru processes of development to the higher and highest forms of life and intelligence, to man; as if there were a Superior, a Supreme Power which guided the created world. So, in the beginning God; and so God thru all the processes of creative evolution; a God not only boundless in might and wisdom, but boundlessly Good, his laws imposed on man as good as they are wise, as beneficent as they are stern.

## BELIEF AND DUTY

To err about the laws of nature or of God is unfortunate, and may be calamitous; to disobey them wilfully is wrong. Our fallible reason may err as to these laws, or as to facts of profane or sacred history, but if one's belief is based, tho wrong, on the evidence accessible to him, it is only of secondary importance to him, because the error is intellectual and does not affect his moral character; and moral excellence or obliquity is infinitely more important than rightness or wrongness of mere belief. Character before God or man depends not at all upon what we believe, but upon what we do. If Abraham believed God commanded him to slay his son as a sacrifice, his attempt to do it was an act of supreme virtue; but he was in error, for it is impossible that a good God could have commanded it. It is not supremely important, however desirable, that any single one of our beliefs in religion should be correct,

not even our belief in God; but if we try to live up to the rule of duty, which is love, we shall be acceptable to God whether we know anything about him or not; and we shall not be acceptable to him, no matter how correct our knowledge of him, if love be wanting. Theology may be the queen of sciences, but it is all a matter of opinion or belief based on evidence, as to the value and bearing of which good men may differ. It is a noble study, worth giving one's best thought to, but the enforcement upon one's soul of the obligation of duty until it is natural to do right and impossible to do wrong—here is task, here is primacy.

For the most important of our beliefs, if not absolutely essential, is our common belief in God, which involves belief in the immortal soul and the future life. This allows hope and impresses duty to live such a life of goodness as will make the transition happy into the future life.

Yet, as it appears to me, our purpose and aim should be to love and cultivate goodness for its own sake, because it is good, rather than because it will secure happiness and avoid misery in the future life. In the answer to the first question in the Assembly's Shorter Catechism, "man's chief end" may be "to glorify God," but it is hardly "to enjoy him forever"; however that may be the result. To glorify God is very nearly the same thing as to magnify goodness, for God is infinite goodness. That is his ruling quality. To be utterly, totally good, loving, helpful, self-sacrificing, good as the holy God is good, to do justly, to love mercy, this is to walk humbly before God, and this is "man's chief end"; and this the promise of the life that now is and of that to come.

## GOD THE FATHER

I cannot quite agree with those who talk much of "coming back to Christ" as if it were a new discovery of the age. It is well to find in Christ a revelation of God, also inestimable teaching and example. But God is primary, not Jesus, as Paul himself would teach us, when he says that in the end Christ will give up the kingdom to the Father. God is quite as loving as Jesus. He holds no anger to be appeased. His fatherly love can hardly need any sacrifice to remove his anger. His attitude to us is that of a father, not of a jealous judge who rules under law which infallibly exacts penalty for every offense. I cannot but believe that mod-

ern theology has made too much of the atonement, much more than the Bible makes of it under the figures either of sacrifice or redemption. With Paul the great thing was the resurrection, more than the atonement. He makes much, to be sure, of the atonement, that is, Christ's death for us, but it is always *hyper*, for, in our behalf, not *anti*, instead of, in substitution. We know certainly, beyond historic doubt, that Jesus has revealed to us God, our Father, and the rule of life in the spirit, not in any forms or rituals, and the eternal life; also that his teaching of God and duty has been of mighty saving influences and that is enough; and if there be more in the counsels of God that made his death especially important, because otherwise "die he or justice must," in "rigid satisfaction, death for death," this we may properly leave in the counsels of God, who only knows, where our merits and our frailties in equal trust repose, the bosom of our Father and our God.

#### THE ESSENCE OF CONVERSION

There are those who will see a religious danger in the slipping away from the former views as to the supreme authority of the written word of God. There is such danger. There are those who will conclude that if the outposts of faith are withdrawn the whole fortress is lost. Their alarm we cannot help. If they have had the essence of Christianity, the love of God and man, their own faith will not perish. I think a clearer understanding of what Christianity really is, and the removal of its dubious theological defenses added to the simple gospel, as the Jews "fenced" the Law, will help not a few to choose the Christian life. And at any rate we ought not to hesitate to seek and proclaim what our best study believes to be true, out of any fear that the result will endanger our faith or that of others. Truth will prevail, and truth will be safe.

I find in the Old Testament, and therefore where I would not expect it, the clearest, the most philosophical, explanation of the transition by which the man who has sinned passes into the divine life. In vision Isaiah saw Jehovah on his throne, and he heard the seraphim about the throne cry, "Holy, holy, holy is the Lord God of hosts." That is, being interpreted, he was overwhelmed by the thought of the infinite sanctity of God, in whom holiness is supreme over every other attribute. He had a view of how beautiful and how awful goodness is, and of the God who loves and will support and crown goodness, and who hates and will op-

pose and crush wrong. The effect on him of this vision of the holy God was to make Isaiah look inward on himself and see his own failure to meet the faultless glory of such holiness, and he cried, "Wo is me, for I am undone, for I am a man of unclean lips, and I dwell in the midst of a people of unclean lips; for mine eyes have seen the King, the Lord of Hosts." That being interpreted is that a serious consideration of the infinite beauty and majesty of the goodness of God stirs the self-convicted soul to confess and repent of its sins, for "the goodness of God leadeth to repentance." So *repentance* is the second stage in the experience of conversion. The vision of Isaiah continues: "Then flew one of the seraphim unto me, having a live coal in his hand which he had taken with the tongs from off the altar, and he laid it upon my mouth, saying, 'Lo, this hath touched thy lips, and thine iniquity is taken away, and thy sin purged.'" This third step follows and must follow, if God is good, the pardoning word heard and joyfully accepted. This we call *faith*, faith in the present and instant love and forgiveness of God. The Old Testament speaks of the coal from the altar of sacrifice, but the New Testament says that "the blood of Jesus Christ his Son cleanseth us from all sin"; yet it is all faith in God's mercy, thru which we, as well as the elders, obtain a good report. But this third step does not conclude the vision or the experience of the forgiven soul; for the prophet continues: "And I heard a voice saying, Whom shall I send and who will go for us? Then said I, Here am I; Lord, send me." The soul that has a convincing sense of the splendor of the spotless goodness of God, that has then repented of sin, and then has the assurance of faith in the forgiveness and love of God, cannot fail to hear God's call, and the cry of a suffering and erring world for help on errands of mercy. He will give himself to fellow-service with Christ; and this is the final and completing stage in the process of conversion, what we call *consecration*, which is love regnant if not yet perfected in the soul, love sacrificial and conqueror over life or death, the fairest word, whether for man or angel, in the bright lexicon of love.

#### THE WILL TO BE GOOD

I have used the word *conversion*, a word not soon to go out of use. It designates the critical experience which every one must have possess who would live a worthy life. It has all these elements of religious experience, the vision of the beauty of

goodness, sorrow for the wrong that has been done, assurance of the loving mercy of God, and the will to live the life which goodness and the God of Goodness require. One need not know when the will so to live becomes first conscious; it may have grown in the child thru his earliest education, or it may have come later through a deep conflict and convulsion of the soul; but at some time it must begin to rule the man. One element or another may predominate in the experience, perhaps an overwhelming conviction of sin, with a sudden light driving away the gloom; or it may be that a sense of the love of God in Jesus Christ will so flood the soul that faith is swallowed up in victory; or it may be that a serious and yet passionless resolve may settle quietly on the soul to live a worthy and useful life—whatever the form of the experience may be it will finally settle into the conscious determination to the love and service of Being in General, that is, to God and man. And such a will, shown in life, is the crown of life, whether it appears under the Christian dispensation, or the older Jewish, or blossoms in the less favored soil of some pagan faith or some dubitant philosophy.

#### "WHAT SHALL I DO TO BE SAVED?"

Why do not preachers and Sunday school teachers understand how to make it clear to their hearers or their scholars just what it is thus to become a Christian? It is the most important thing to be taught in a Bible school or a theological seminary; but I do not think that I was properly taught it. My experience was that of many, I believe, who have been told they ought to become Christians, and who wish it, but who have not been told just exactly, in plain terms, what they must do about it. They get the idea that they must wait till it comes; or when they have asked, "What must I do to be saved?" they have heard the blind answer, "Believe on the Lord Jesus Christ and thou shalt be saved." But what is it, they have asked, to believe on the Lord Jesus, and how shall I go about it? I think that answer about the most unintelligible that can be given in these days. It had a more definite meaning when Paul said it.

I remember how the importance of having a clear answer to that question was first imprest upon me. It was in the first year after my graduation from the theological seminary that, shortly before the opening of the Civil War, I had charge of two churches in the troubled state of Kansas. The whole population of the

village where I lived was employed in cutting lumber from the neighboring Indian reserve. One day the older Methodist minister and myself were suddenly called to visit a man who had been hurt by the falling of a tree and had but a few hours to live. He was presumably of the reckless, profane class, but yet no unbeliever, and desperately wanted to make his peace with God during the very brief remaining period of probation. The older minister talked and prayed with him, but it did not seem to me that he had given any clear instruction. Then it came my turn, and the best I knew I said, but I went away sad at heart, for I felt that I had not said that something that ought to have been said.

What should be said? That, I think, which should be said to a little innocent child that knows very little of sin, and that same which should be said to the experienced man of this selfish world. The child should be told that God is good, that

God loves good children, that God will love him if he is good, that Jesus was good and loved little children, and that he died to help them be good and go to heaven; and then the child should be urged and persuaded—and the persuasion will not be difficult—to promise before God that he will try as long as he lives to be good, to please God, for God will love him and help him. That is all that is essential, but it must be followed up, that the purpose may not be forgotten, and that goodness may grow into a habit. That is all that is needed for the older people that they may be converted and become as little children. I should have told that lumberman—I hope I did substantially if imperfectly—that he knew, and God knew, that he had not lived a good and pure life, but that God is not resentful but very merciful and forgiving; and that before he went to meet his God he should follow me in a prayer of repentance and in the pledge before God that if his life

were preserved, or in the brief fraction of it left, he would forsake sin and live in such a way as would please God, and that if he did this earnestly, he might now die happy in the faith that the Heavenly Father who loves the returning prodigal will forgive him and receive him even as the penitent thief was received into Paradise.

That is all I know. It is the simple gospel of Jesus Christ, as he taught it to sinful men and women, who heard him gladly. And I believe that such faithful teaching to our children will give us purer and more intelligent Christians than will be gathered in by the excitement of septennial revivals. The revival is not bad when needed, but how much better that quietness of thought which offers the prayer:

Oh give to me, made lowly wise  
The spirit of self-sacrifice;  
The confidence of reason give,  
And in the light of love thy bondman let  
me live.

## THE WORD

BY M. E. M. DAVIS

What wilt thou say at the Questioning,  
Oh, Land who sittest between the seas?  
What word, when master, and lord, and king,  
Shall trumpet their splendid destinies?  
For, one will speak of the birth of Time  
In the lap of his robe, mayhap; and one  
Will tell of his craft that scorched the rime,  
Or chilled the fire of the primal sun.

*"Many feet pass over me,  
From sunrise ocean to sunset sea,  
Coming, going,  
—And all are free.  
This will I say at the Questioning."*

Nay, the Soldier will shout his battle-cries,  
And show on his breast a thousand scars;  
His voice on the blowing wind will rise,  
The bugle-blast of a thousand wars.  
The Master will boast of his pillared halls,  
Carved and wroughten by cunning hands;  
The Chief, enthroned on his world-old walls,  
Will cry aloud of his conquered lands.

*"Many feet pass over me,  
From sunset ocean to sunrise sea,  
Coming, going,  
—And all are free.  
This will I say at the Questioning."*

But, these by their battleships will walk,  
Those thru their busy marts will stride;  
While all, with jostling tongues, will talk  
Of growing power and rightful pride.  
Then, thou, what word wilt thou speak, dear Heart,  
When thou comest forth to the Questioning,  
And Conquest, Learning, Science, Art,  
Laughing loudly, the Nations sing?

*"Peace, dolt! Is Freedom a paltry thing?  
Many feet pass over me,  
From sunrise ocean to sunset sea,  
Coming, going,  
—And all are free."*

Thus will I answer, when lord and king  
Their power, and wisdom, and glory, sing.  
And, as far as the heavens my Word shall ring,  
My great, glad Word! at the Questioning."

# The New Books

## JAPAN TO AMERICA

*Japan's Message to America*, edited by Naoichi Masaoka, is a symposium by thirty-five of Japan's most representative men of affairs. It is designed to explain the friendliness of Japan to the United States.

As might be expected, a feeling of sadness and wonderment runs thru almost every article that the Japanese attitude toward the United States seems to be so misunderstood, and that all Japanese efforts to bring about a better understanding are so indifferent to us.

There is nothing more certain in international relations than that next to the preservation of the Anglo-Japanese alliance, Japan's one desire is to cultivate closer relations with the United States. Again and again she has gone out of her way to show her gratitude and good will. Not long ago the Emperor donated \$25,000 to the American Hospital of Tokyo, an almost unprecedented act of Imperial favor. But though we accept all these proffers of friendship as a matter of course, our people go right on insulting Japan with supreme indifference to the consequences. Indeed indications are multiplying that Japan is at last beginning to think that America does not prize her friendship.

This little book ought to touch the heart of the American people. We wish it could be put into the hands of every American editor and every legislator and executive, whether national, state or municipal, who is called upon to deal with the Japanese problem.

It is time for the United States to adopt a new Oriental policy. Has Europe no lessons for us now?

*Japan to America*, edited by Naoichi Masaoka. New York: Putnam. \$1.25.

## THE DEATH OF A NOBODY

Like a pebble this insignificant incident, *The Death of a Nobody*, is tossed into Nobody's circle and ripples of odd musings, of mind-twists stretch in odd directions. In this curious commingling of abstract philosophy with detail, Jules Romains has done an arresting piece of work which has found able translators. He makes the group, not the individual, his theme—the group as an entity—but in the same breath he demonstrates with enthusiasm how far, how unbelievably far the reach of the individual extends. The delicacy of his analysis of group psychology is joined with that penetrating simplicity of phrase and metaphor by which the French make homely things precious in the telling. Consider the stopping of a *diligence*:

The inside of the carriage remained motionless, trying to preserve its life un-

### NABISCO

#### Sugar Wafers

make an irresistible appeal to the palate. These bewitching dessert confections are made for the joyful occasion, the social gathering, the feast.

ANOLA—Delicious wafers of chocolate-flavored goodness; crisp baking outside, smooth cream filling inside, chocolate-flavored throughout. The taste is unique, the form is inviting, and the occasions upon which they can be appropriately served are without number.

ADORA—Another dessert confection invariably popular with the hostess. These little wafers are pleasing to look upon, entrancing to the taste, whether served with dessert or eaten as a confection.

FESTINO—Their resemblance to an actual almond is most attractive. FESTINO conceals beneath the delicate shells an enticing sweetened, almond-flavored filling.

It tells you how to select the home refrigerator—how to keep food longer without spoiling—how to cut down ice bills—how to guard against sickness—doctor's bills.

changed. But it felt abashed. The noise and movement, in withdrawing from it, had left it high and dry; it had lost its balance, and toppled sideways like a stranded hull.

The translators in their lucid dedicatory preface "can conceive M. Jules Romains having an influence upon a few—a few who may influence others." That would seem sure, for he has given fiction a new focus.

*The Death of a Nobody*, by Jules Romains, translated by Desmond MacCarthy and Sydney Waterlow. Huebsch. \$1.25.

## OLD KINDERHOOK

With a loving compilation of much rare material Rev. Edward A. Collier, D.D., in *A History of Old Kinderhook*, has created a handsome volume which tells the story of "that part of Albany County which touches the river where the 'Half Moon' of Hendrik Hudson dropt anchor furthest north." It was from the children playing on the shore that the place got its name of "Children's Corner," or Kinder Hoek. The town is now in Columbia County and does not touch the river at all. It has a long roll of illustrious citizens and famous homes, and Dr. Collier, who has been for half a century the honored pastor of the Reformed Church, tells the tale of local life with clearness and charm. Lindenwold, the spacious and beautiful home of Martin Van Buren, where Washington Irving often visited, and where he found the character of Ichabod Crane, is one of Kinderhook's most cherished possessions. The village was also the home of the retiring Governor of New York, Hon. Martin H. Glynn, and we may be pardoned for adding that the first newspaper owned by the President of *The Independent* was *The Kinderhook Advertiser*, which had a weekly circulation of five hundred copies, but in whose editorial and mechanical production its owner enjoyed some of the most thrilling experiences of his life.

*A History of Old Kinderhook*, by Edward A. Collier. New York: G. P. Putnam's Sons. \$5.

## THE GENERAL EDUCATION BOARD

The General Education Board is the corporation endowed by Mr. Rockefeller to aid education. It is under a well-chosen board of directors, and it possesses a productive fund of \$34,000,000, which in the last fiscal year produced an income of \$2,417,079. Since the first gift to it twelve years ago of \$1,000,000, according to its own account of its activities published by the board, it has expended \$15,894,365, of which all, except \$304,795 for operating expenses, has been given to education, and of this \$13,253,666 has been presented outright to universities, colleges and medical schools. The rest has gone to rural education, mostly in the South. The present volume gives briefly the history of the board, its charter, and its service in education, particularly in the South, and in agriculture. In its corn and canning clubs, by prizes as well as instruction, it teaches boys and girls better methods of agriculture. It is a splendid

work which is thus carried on. We have also the account of the fine work done in medical research, and the list of large gifts given to colleges, these always on condition of perhaps three times as much in private benefactions. And this is one of the chief foundations of which some people are so suspicious, dreading lest somehow they will either enslave the institutions or will enslave labor thru their large blocks of stock held in steel, oil and other corporations. Yet their work is open to the eyes of all, their doings fully published and their service patent to men and boys. The fifty illustrations in the book will interest and instruct any one who wants to learn how to make three big ears of corn grow where only one grew before.

*The General Education Board.* New York: 26 Broadway.

#### A PERUVIAN ROMANCE

Old and New Peru are skilfully blended in *The Bride of the Sun* by Gaston Leroux. He has woven a tapestry of Indian legends, modern commerce, palaces and altars of the Incas, revolution, geography, and adventure, of a highly-colored and intricate pattern.

McBride, Nast. \$1.25.

#### LABOR AND THE CHURCH

Craig S. Thoms' examination of the relation of the workingman's relation to the Church and Christianity in *The Workingman's Christ* is an interpretation of Christ's life and message in terms of present social strivings. It is earnest, thoughtful, convincing.

Dodd, Mead. \$1.25.

#### THE TENTH CHANCE

The quest for adventurous setting carries that prolific writer, Harold Bindloss, out upon the North Sea in the exciting tale of an ex-mate of a Pacific liner who, all for the love of one fair maid—not so irresistible to unprejudiced susceptibilities—stakes his all in a venture to probe *The Secret of the Reef*. Home the conquering hero comes bringing a water-logged casket of lead and carrying away the maiden's heart.

Stokes. \$1.30.

#### KEEPING JACK FROM BEING DULL

Henry S. Curtis is an authority on the subject of *Education Through Play*, the first of a series of books by him dealing with child culture. Restricting its discussion of play to that of the school and leaving the public, open playground and the element of play in the home for future consideration, he gives not only the practical suggestions of many years' study here and abroad, but deals as well with the entire psychological and sociological import of child play.

Macmillan. \$1.25.

#### GENIUS

Schopenhauer's dictum that genius is simply the completest objectivity and Goethe's observation that the one distinctive thing required of genius is the love of truth are accepted as the final criteria of genius by Dr. Hermann Türck in his lectures published under the title *The Man of Genius*. The author does not make an analysis of genius, but applies the canons of various philosophers to a large number of great men, and to the three aspects of life—the esthetic, the intellectual and the practical.

Macmillan. \$4.

#### HAUPTMANN THE SYMBOLIST

The fifth volume of the translation of the *Dramatic Works of Gerhart Hauptmann* edited by Professor Lewisohn of Ohio State contains three plays that would keep a Hauptmann Society busy all winter at interpretation. Even those who profess a clear comprehension of the meaning of "The Sunken Bell" or "Hanele's Assumption" may without humiliation confess themselves baffled by "And Pippa Dances"

—and this is the Mark on the Lamps that light the Exposition

## MAZDA

"Not the name of a thing but the mark of a Service"

You have long recognized in that word MAZDA etched upon a lamp the Mark of that far-reaching scientific Service organized to investigate the problems of better lighting and to supply new ideas, new methods and new materials to the manufacturers of MAZDA Lamps.

But here at the Panama-Pacific Exposition you will find a MAZDA exhibit that will give you a tangible idea of what MAZDA Service does and is—how, by its service to the lamp makers, it steadily brings more light into your home at less cost—and why the Exposition chose the MAZDA Lamp for its illumination.

or "Schluck and Jau." The third play of this volume, "Charlemagne's Hostage," a legendary drama in verse, is still less known to America than the other two.

Huebsch. \$1.50.

### THIRTEEN ECCENTRICS

Not for legal talent nor for judicial eminence so much as for strange kinks of character have the men whose lives make up the theme of *Some Old Scots Judges*, by W. Forbes Gray, been chosen. Scottish judges when Pretender fought for a throne, when Wordsworth's literary revolution was in swing, when Napoleon's vessels were held prizes before courts of admiralty, these thirteen men in gown and wig, from Lord Kames down to Lord Jeffrey, show vividly the life of Edinburgh.

Dutton. \$3.

### A TALE OF DUKES AND PRINCES

An anonymous author who writes such heresy as "the fad for feminine emancipation has become the most dangerous craze the world has ever known," and who describes costumes with all the detail of a fashion paper, is self-betrayed as a mere man. But realistic pictures of the Russian nobility do succeed in forcing themselves thru the engulging adjectives which quite logically follow in the wake of a golden-haired, blue-eyed heroine, who is comparable only to a *Moonglade*, and the bold, bad beauty who acts as a foil to her pure loveliness.

Harpers. \$1.35.

### THE SPIRIT OF A LAND

*California the Wonderful*, by Edwin Markham, is neither history nor scenic summary of "the land that stretches from redwood to cactus." It is rather an attempt to put between book covers something of the spirit, of the atmosphere, of California, something of the glorious adventuring and happy deeds of Californians. As such it borrows from the methods and the means of the historian, the traveler, the poet, and the man of vision. Altogether it is a book well worth reading, one which sketches moods and fills the sketches in with facts to hold the mood firm-fixed.

Hearst's International Library. \$2.50.

### ITALY'S FRIENDS AND ENEMIES

From 1903 to 1909 Italian Minister for Foreign Affairs, Senator Tommaso Tittoni laid the foundations of the Italian policy which continued unaltered until the outbreak of the European war. *Italy's Foreign and Colonial Policy*, a compilation of Senator Tittoni's official speeches, translated by Baron Bernardo Quaranta di San Severino, shows clearly the growth of the conviction that Italy's economic and political safety demanded strict loyalty to the Triple Alliance together with a sincere friendship for England and France—and reflects, as clearly, the growing distaste of the electorate for all alliances with Italy's old enemy, Austria.

Dutton. \$2.50.

### A PLAIN MAN AND HIS LIFE

*The Life of a Citizen at Home and Abroad*, by J. Augustus Johnson, formerly United States Consul General for Syria, has a double value of general interest and timeliness. It is the story of a man who was not great, written first for his own children, but, as well, for the children of other men not great, told in simple, straightforward fashion with the instinctive humor of the American man of action. Its especial timeliness lies in its picture of the Ottoman Empire in former administrative and international crises which resembles markedly the Turkey of today.

Vail-Ballou Press. \$2.

### LIFE IN A LONDON SUBURB

Frank Swinnerton is a writer who faces life as it is and who understands human relations and human emotions. He recognizes that the family is the center of modern life, but sees clearly that the man who cannot conform to its laws is destined to heart rendings and failure. His *On the Staircase* is one of the most remarkable and ablest books that have appeared in many

A small number of nerve-racked women may find a pleasant restful home, with the most thoughtful care of two experienced nurses, in Litchfield County, Connecticut, by addressing a letter to The Ranch, care The Independent, New York.

**FOR SALE:** Modern 6-room bungalow and 5 or 10 acres of land on trolley three and one-half miles from this city. Good fruit and vegetable land.

GARDEN STATE FARMS CO., Bridgeton, New Jersey

## CIVICS TEACHERS

should write for our 16-page booklet called "How To Use The Independent In The Teaching of Civics." It is free.

THE INDEPENDENT

119 West Fortieth Street.

New York

a day. It is admirably written and paints the perplexities, the struggles and the yearnings of a little group in a London suburb realistically and with force.

Doran. \$1.25.

#### ARISTOCRACY AND DEMOCRACY ALLIED

One cannot merely watch the progress of events in reading *Blue Blood and Red*: the drama is too intense, the actors too real. It forces one into the passionate struggle to equalize the love-equation of a man and woman of rare potentialities. There are other problems, but to an unusual degree Geoffrey Corson has fitted them into a well-balanced whole, in which the striking note in each scene and the touch that vivifies each personality show careful workmanship.

Holt. \$1.35.

#### A BOOKMAN'S WINDOWS

Neither essays nor tale nor incidents conjoined is J. H. Yoxall's *The Villa for Coelebs*, which began in contributions to the *Spectator* and the *Cornhill Magazine*. It is rather the sum of all, a novel total with a unique charm. An old bookman of London, full of the scholar's petulance at all things crude and empty, invests the villa of the new-wed Coelebs with a half-symbolistic significance—as if the past and present and the infinite centered round it, controlling, whimsically, the lives within.

Dutton. \$2.

#### THE WAR IN TERMS OF FAITH

Preacher and layman Henry A. Stimson has collected a few sermons under the title *While the War Rages*, which seek to evolve from the chaotic conflict such germs of good as patriotism, the dawn of a new democracy, a new radicalism and a new ethics, with a promise of a saner civilization. The book is possess of a firm optimism that is cheering even tho one hesitates to believe with the author that "the world is going to demand truth and honesty, and purity, even of politicians and statesmen, as never before."

Abington Press. 50 cents.

#### SELF-EDUCATION

*A Guide for All Students* elaborates the title of John Adam's book, *Making the Most of One's Mind*, but the qualifying adjective *diligent* should be interpolated. Singleness of purpose and untiring patience would probably win the goal by the path marked out by the home-study time-tables. Laws of Thought and other sign-posts of this English professor's placing, but many who presume to call themselves students would fall by the wayside unless they discovered a short-cut thru so much system and over-illustrative material to the real essentials.

Doran. \$1.

#### THE ART OF WRITING

*The Study and Practice of Writing English* is an excellent working test book for the high school and college student. The compilation of grammatic usages is clear and systematic, but at the same time brief. The suggested exercises are well chosen to galvanize the principles under discussion without being needlessly dull. The suggestions on how to take notes and prepare manuscripts are practical, while the treatment of the short story and the drama, by the authors, Gerhart R. Lomer and Margaret Ashmun, is extremely illuminating.

Houghton Mifflin. \$1.10.

#### SHAKESPEARE THRU THE GLASS OF HIS OWN AGE

Designed to give students of the present age an intimate appreciation of Shakespeare's work thru a knowledge of the social conditions of the great playwright's time, *The Study of Shakespeare*, by Henry Thew Stephenson, of the University of Indiana, combines an excellent historical picture, full of atmosphere, with a criticism marked by much suggestiveness. More comprehensive than most manuals of Shakespeare study, it has the merit of disregarding the obvious for the interpretative.

Holt. \$1.25.

## THE BOOK OF THE YEAR And Other Important Works

*"The most wonderfully illustrated book on Polar exploration ever published."*—*Boston Transcript*.

### Sir Douglas Mawson's

Own account of the now famous Australian Antarctic Expedition, 1911-14

## THE HOME OF THE BLIZZARD

Two volumes with 300 remarkable photographs, 16 color plates, drawings, plans, maps, etc.

\$9.00 net; postage extra

#### READ WHAT OTHERS SAY OF THE STORY:

*The Philadelphia Record*: "There are thrills in the story that surpass any that fictionists can create, and it is a tribute to strong men who went forth to meet perils and even death itself that the world might know something of the long unknown and almost forbidden land."

*London Saturday Review*: "One of the world's greatest stories of adventure; there is not a moment's doubt about this."

#### OF THE WORK ACCOMPLISHED:

*Boston Transcript*: "A treasure house of facts."

*London Athenaeum*: "No Polar book ever written has surpassed these volumes either in sustained interest or in the variety of the subject-matter."

#### NEW FICTION

### They're All Talking About The Rose-Garden Husband

By Margaret Widdemer

Illustrated. \$1.00 Net. Postage Extra.

*Boston Transcript*:

"The beauty and the strangeness that go to make romance are combined in the little tale of 'The Rose Garden Husband.' The reader . . . becomes immediately interested in the personality of the gay little 'Liberty Teacher' who realizes that no one wants to hear the 'cry-side.' . . . It is the manner in which the author tells her story and the charm she infuses into her heroine that make it such delightful reading."

### The Dusty Road

By Therese Tyler

Frontispiece. \$1.25 Net. Postage Extra.

*Philadelphia Press*:

"A tale of amatory misfortunes with a happy ending. It has been written as a trenchant criticism of the aimlessness of smart society, and it is all the more effective because of its frequently vitriolic quality. Pre-eminently calculated to provoke a storm of discussion. That it has already achieved this is abundantly demonstrated by the fact that it has promptly become a 'best seller.'"

*James L. Ford in the New York Herald*:

"The literature of the war is more remarkable for quantity than quality. One book, however, deserves serious attention and that is 'How Belgium Saved Europe.' . . . It is a long time since I have read a book that sets forth so briefly and convincingly the story of the part played by this gallant little kingdom as the savior of Europe—if not of our own country."

### How Belgium Saved Europe

"By an Eye-Witness"

the Eminent Belgian Scholar  
DR. CHARLES SAROLEA

\$1.00 net; postage extra

You may have read stories and books about the war, but until you read this work you can scarcely appreciate some of the principal points of the present conflict. The author has written a moving chronicle that is as thrilling as the greatest fiction. It is a story from the inside, and one which explains many things that you cannot learn from newspaper or magazine accounts. This book will soon become the standard presentation of Belgium's position in the present war, as well as the story of the greatest historical event of the century.

## Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....	\$27,964,578,109.00
Received premiums thereon to the extent of.....	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers.....	90,801,110.00
Of which there have been redeemed.....	83,811,450.00
Leaving outstanding at present time.....	6,989,660.00
Interest paid on certificates amounts to.....	23,020,223.85
On December 31, 1914, the assets of the company amounted to.....	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

WALTER G. HENDERSON, Treasurer

#### LIGGETT & MYERS TOBACCO COMPANY.

St. Louis, Mo., February 27, 1915.

A dividend of One and Three-quarters Per Cent. (1¾%) has been declared upon the Preferred Stock of Liggett & Myers Tobacco Company, payable on April 1, 1915, to stockholders of record at the close of business March 19, 1915. Checks will be mailed.

T. T. ANDERSON, Treasurer.

# THE MARKET PLACE

## COTTON AND POWDER

A cotton broker remarked last week that the bombardment of the Dardanelles forts was an argument for higher prices in the cotton market, because every time the greatest of British battleships fired one of her 15-inch guns a bale of cotton was consumed. It is true that the powder used in one shot from such a gun represents nearly a bale of cotton. For one shot from a 12-inch gun 300 pounds of cotton, or lint, are required. A first-class battleship in action may use 5000 pounds of powder in a minute, or from ten to twelve bales of cotton.

Large quantities of guncotton are consumed in the manufacture of smokeless powder. Guncotton is used in the production of more than two-thirds of England's output of powder, and in more than half of the powder made in Austria, Italy, Sweden and Norway. In Germany the proportion is larger. As the powder factories are now working at more than full time, some think that those of Europe are now consuming cotton at the rate of 400,000 bales a year. Cotton thus becomes distinctly a war supply, and for this reason the Allies may be unwilling to see it imported into Germany and Austria for use in powder factories.

## WHEAT AND THE WAR

Because Russia has at least 100,000,000 bushels of wheat in excess of the quantity needed by her own people, and has been unable to sell this surplus, the determined attempt of the Allies to open the Dardanelles outlet from the Black Sea has sharply affected the price of wheat in this country. If the Dardanelles route is soon to be opened large quantities of Russian wheat will be shipped to England, France and Italy, altho the Italian Government admitted last week that it had made contracts for 40,000,000 bushels in the United States and South America. This is one of the five European governments which have been buying at Chicago, and the official reports show that wheat exports to Italy in January exceeded the shipments to England or those to France.

The price at Chicago was affected not only by the progress made by the Allies in the Dardanelles, but also by rumors that large orders recently placed by foreign governments had been cancelled. On the 1st there was a fall of nearly six cents a bushel, and in the course of the week a decline of about ten cents more was shown, the reduction from the highest figures—1.67 for May delivery, on February 5—being a little more than thirty cents a bushel. The export movement has been impeded by the German and British blockades. But more than 8,000,000

bushels were shipped last week, and the week-day average since July 1 has exceeded 1,100,000 bushels, making a total for eight months which exceeds the largest quantity exported heretofore in an entire year. A shipment of 250,000 bushels to Australia was noticeable, because it was the first of its kind.

There must be taken into account not only the expected exports from Russia, but also the large surplus in India, which will be marketed two or three months hence, and the surplus in Argentina, where there has been a good crop. Chili may take part of Argentina's surplus, for she has recently removed her import duties on wheat and flour. Prices in Chili are very high. They are also high in Peru, where the Government has decided to import flour and sell it at cost. Neither our Federal Government nor the Attorney General of New York, in their inquiries at Chicago, has found any evidence of a conspiracy to increase the price of wheat. They found only the effect of the ancient law of supply and demand.

## AGAINST BUCKETSHOPS

For a long time the New York Stock Exchange has made war upon what are called bucketshops. These, which profess to be brokerage houses connected with and approved by the Exchange, are merely gambling places. No stocks are bought or sold in them, and their business is only the making and settling of bets on the current Exchange quotations. These they must get in some way, in order that they may have at hand the machinery, so to speak, by a manipulation of which a great many people have been swindled.

In the legislatures of Massachusetts and Connecticut there have been pending bills to permit or compel the Western Union Telegraph Company to deliver or sell the price quotations of the Stock Exchange to any applicant. The contract agreement between the Exchange and the telegraph company provides that the quotations shall be given or sold only to applicants approved by the Exchange. In Massachusetts more than one hundred applications have been approved by the Exchange, and only six rejected. In Connecticut only five out of about fifty applications have been disapproved. It may be understood that the accepted applications are those of banks, reputable banking houses and other concerns by which the quotations are not improperly used. One of the unsuccessful applicants is a company controlled by a man who was formerly a partner in the bucketshop firm or syndicate that was prosecuted by the national Government in 1910. He pleaded guilty and was fined. His present company has wire connections with of-

fices in half a dozen cities. It is from applicants of this kind that the Exchange and its officers desire to withhold the daily quotations.

They have convinced the committees in the Connecticut Legislature that the bill pending there ought not to be passed, and it is dead. They are using their arguments in Boston, and they have reason to expect that the bill pending there will be rejected. All this work is done in the interest of legitimate trading in securities and in hostility to the bucketshops. These betting places, by reason of the losses of many who have been swindled, and of the false claims of the swindlers concerning connection with the Stock Exchange, have excited prejudice against the Exchange in the minds of a considerable number of persons. The Stock Exchange has thus suffered unjustly in public estimation, to a certain extent. In striving to suppress bucketshops it not only works in the public interest but also defends itself against the undeserved hostility of those who are not well informed.

#### COST OF SHIP OPERATION

Under the new emergency law relating to ships 133 vessels, with a capacity of nearly 500,000 tons, have been brought under the American flag. At the same time their expenses of operation have been increased. Both the officers and the men have promptly demanded wages on the American scale, in some instances asking for discharge if the increase should not be granted. Written statements from several of the owners show what the increase is. In one case the wages rose at once from \$936 to \$1765 per month. On other ships the addition ranged from forty to fifty per cent. That is to say, the American wage scale is so much higher than the rates prevailing under the British or German flags. No comparison with wages in the Japanese merchant marine has been published.

This difference in cost of operation must be taken into account in all projects for the permanent enlargement of our merchant marine. We have in mind the ocean service, and not the coast field, from which foreign competition is excluded. The Seamen's bill, approved last week, by raising standards in various ways must increase the cost of operation and probably compel an increase of freight rates. On the Pacific our few merchant ships have to compete with the Japanese wage scale and Japan's subsidies. On the Atlantic, in normal times, our ships are opposed by wage scales much lower than their own, and also by the subsidies of European governments. Due weight must be given to these facts if we desire to retain the 133 ships after the end of the war.

With branches already doing business in Buenos Aires and Rio de Janeiro, the National City Bank of New York is preparing to open branches in Havana and San Juan, Porto Rico.

The following dividends are announced:

Liggett & Myers Tobacco Company, preferred, 1½ per cent, payable April 1

Utah Copper Company, quarterly, 75 cents per share (7½ per cent), payable March 31.

## Nation-wide Special Sale

**Ostermoor**  
**\$23.50** Regular **Hotel Style Mattress** **\$16.50** Special

## INSURANCE

CONDUCTED BY W. E. UNDERWOOD

*This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.*

### NO UNDERWRITING PROFIT IN 1914

In 1914 most of the fire insurance companies fared badly on their underwriting, which means that the aggregate of their losses, expenses and increased policy reserve liabilities exceeded their total premium income. As a matter of course, the consequent drain on their surpluses was, in the majority of instances, more than made up by income receipts on invested assets. By way of illustrating the experience encountered we quote the premium incomes, the investment profits or losses and the net underwriting results of a limited number of the largest companies.

Aetna of Hartford: total premiums, \$10,810,965; underwriting loss, \$165,690; investment profit, \$846,204.

Commercial Union of London, United States branch: total premiums, \$6,759,322; underwriting loss, \$787,580; investment profit, \$361,512.

Continental of New York: total premiums, \$8,347,375; underwriting profit, \$233,097; investment profit, \$245,535.

Fire Association of Philadelphia: total premiums, \$4,307,132; underwriting loss, \$285,562; investment profit, \$308,831.

German American of New York: total premiums, \$8,675,173; underwriting profit, \$92,795; investment profit, \$1,024,720.

The Home of New York: total premiums, \$15,259,556; underwriting profit, \$370,864; investment profit, \$1,817,621.

Insurance Company of North America of Philadelphia: total premiums, \$9,698,224; underwriting profit, \$10,137; investment profit, \$613,211.

Liverpool and London and Globe, Liverpool, England, United States branch: total premiums, \$8,667,549; underwriting profit, \$3197; investment profit, \$566,385.

National of Hartford: total premiums, \$8,643,551; underwriting loss, \$696,159; investment profit, \$760,168.

North British and Mercantile of Edinburgh and London, United States branch: total premiums, \$4,854,766; underwriting loss, \$145,528; investment profit, \$428,342.

Phoenix of Hartford: total premiums,

\$5,682,709; underwriting profit, \$213,201; investment profit, \$636,145.

Royal of Liverpool, England, United States branch: total premiums, \$7,879,239; underwriting profit, \$179,335; investment profit, \$493,810.

Springfield F. and M. of Springfield, Massachusetts: total premiums, \$5,880,495; underwriting loss, \$269,321; investment profit, \$266,105.

Westchester of New York: total premiums, \$3,372,637; underwriting loss, \$366,982; investment profit, \$278,201.

Here are fourteen of the largest companies in the country which received in 1914 total premiums of \$108,838,693, seven of which made an underwriting profit of \$1,102,626 and seven of them incurring a net underwriting loss of \$2,716,822. The net results for the fourteen was a loss of \$1,614,196. It will be noted that the surpluses of nearly all of them made a gain due, in the cases of those which lost on underwriting wholly to the investment profits. Gains from this source would have come if the companies had written no insurance whatever. As may be noted several of them would have been much better off if they had not.

J. C. K., Altoona, Pa.—The company you name maintains an adequate reserve and is under the supervision of a good Insurance Department. The company's surplus is small, but apparently sufficient for all probable contingencies. That it will make the savings (dividends) it calculates on to exceed the results of its competitors I do not believe.

C. M., Woodlawn, Ohio.—Both of the fire insurance companies mentioned are beyond criticism. The foreign companies doing business in the United States have special deposits here and their assets are under control of the state insurance departments. Policies for three and five years are issued by all companies. Write Hon. Price Russell, Superintendent of Insurance, Columbus, Ohio, requesting pamphlet containing names and financial data of companies doing business in that state.

B. A. M., Phoenix, Ariz.—Company commenced business in 1868, but languished until about 1900, when it passed into the control of more active managers. On December 31, 1900, its principal figures were: assets, \$2,335,268; surplus, \$829,846; life insurance in force, \$14,148,855. The figures at end of 1914 have not reached us yet, but those for December 31, 1913, are: assets, \$11,969,251; capital and surplus, \$673,317; life insurance in force, \$79,261,724. The capital is \$500,000. The company commenced writing accident insurance in 1911 and that branch has met with moderate success only, the actual underwriting results showing a small loss for each of the three years. The management is composed of men of integrity, but of mediocre underwriting ability.

Insurance Commissioner Young of North Carolina has made a report and recommendations to the Governor of that state respecting fire insurance in that jurisdiction, in which he takes reasonable ground on the subject of rate-making and rather inclines to the opinion that while rates should be supervised by the state the making of them should be left to properly constituted organizations of underwriters.

## PEBBLES

It is to be regretted that all those trenches could not be dug in a region that needs irrigation.—*Albany Journal.*

"The man I marry must have common sense," she said haughtily.  
"He won't," replied he bitterly.—*Denver Clarion.*

The Elderly Cultured Spinster.—I have a scarab that is five thousand years old.  
The Flash Young Man.—Ah! A school prize?—*Sydney Bulletin.*

"I have a splendid idea for a magazine poem."  
"Save it. You don't need it for a magazine poem."—*Augwan.*

Alice, an enthusiastic motorist, was speaking to her friend, Maude, in relation to the slowness of a certain young man at proposing.  
"Charley seems to start easy," she remarked, "and he speeds up well; but just at the critical moment he always skids."  
—*New York American.*

"As a matter of fact," said the lawyer for the defendant, trying to be sarcastic, "you were scared half to death, and don't know whether it was a motor car or something resembling a motor car that hit you."  
"It resembled one all right," the plaintiff made answer. "I was forcibly struck by the resemblance."—*Tit-Bits.*

There was a talk once of honeymoons, and the ideal places to visit; and a Wise Man observed that if it mattered to the honeymooners where they went, it didn't matter *where* they went; and if it didn't matter *where* they went, why, then it didn't matter where they went.—*F. P. A. in New York Tribune.*

## IN A GARRET

Four walls, eh?  
Ceiling cracked and smudged, you say?  
Nonsense, it's heaven if you have the eye  
To twist gray plaster into vaulted sky!  
And here's the little daub that Petri made,  
Petri, the artist, from the floor below,  
Who laughs and says that dreams are not a trade.  
Better, I think, because he loved it so.  
Far better than if he had preened his wit  
To trick some fat purse into buying it.  
Now like a god he gives his painted sea  
And one white ship that sets the whole room free,  
Blots the gray wall and lifts a gallant wing  
For our adventuring.

Four walls, eh?  
Come, let's crumble them away!  
You and I,  
Build us a world of sea and sail and sky.  
The mind gives title where the law gives none.  
The soul has more possessions than the sun.  
Here's Petri's art! That proves a man may go  
Into more worlds than wait upon his purse.  
See, where his brush has made the water glow!  
That's wealth without wealth's curse.  
And here where morning trembles on the skies  
Is freedom and a hint of paradise.  
And you and I have love! Shall we not dare  
Farther than Petri? Here's the lamp of art  
Lighting the road . . . Come, there are worlds to share,  
And you and I shall share them, oh my heart!

—*Dana Burnet in New York Evening Sun.*

## EFFICIENCY QUESTION BOX

CONDUCTED BY EDWARD EARLE PURINTON,  
DIRECTOR OF THE INDEPENDENT EFFICIENCY  
SERVICE

*Questions on health, work, business, home and everyday life will be answered by Mr. Purinton, in so far as may be possible, thru the Question Box or by personal letter. Please confine questions to one sheet. When books, institutions, manufactures, and other aids to efficiency are mentioned, they are not necessarily endorsed. The Service, being a clearing-house of information, assumes no responsibility for others.*

40. Prof. T. G. R., New Mexico. "You have stated, in substance, that efficiency requires one to be as cold as steel during work hours, as social pleasantries dissipate energy. Is not teaching a partial exception to this statement? The teacher is required to awaken in his pupils a love of study for its cultural, recreational and social values. The cold-as-steel teacher would lose these. Granted that teachers, as a class, are among the most inefficient people, given to puttering and text-book teaching, is not the really efficient teacher one who sees clearly the many-sided nature of his work, is full of enthusiasm for the same, and is a happy combination of driver, leader and entertainer, rather than the cold-as-steel director?"

You are a comfort and joy, brother. Having *thought* it yourself. A man who really thinks can generally answer his own questions.

However, we would slightly differ with you. Discipline is discipline—whether in shop, office, factory or school room. But affection and devotion should underlie all discipline. A teacher should be business-like in method, and a captain of commerce altruistic in motive. The head in each should be cold and steely, the heart in each warm and genial. You will get some idea of my meaning from Miss Ida Tarbell's recent series of articles in the *American Magazine*, on "The Golden Rule in Business." I wish some genius would write a book on "The Golden Rule in Teaching," showing the tremendous, well-nigh universal need for teachers who really feel with and care for their pupils as human beings, and as little brothers and sisters—not merely as automatic learning-machines.

I knew of a teacher who was able to compel instant, perfect obedience in the school room—then to play leap-frog with his boys in recess. If we figure out his secret, we get somewhere near a conception of an ideal teacher.

41. A Reader from Maine. "I have long believed that courage, faith, endurance, imagination, and other moral and spiritual factors in efficiency would be augmented by some positive demonstration of the continuity of life hereafter. Do you know whether such proof has been made, that would appeal to the logical mind of a business man?"

Belief in a future life is primarily a matter of faith. But there are an increasing number of men who believe that they have secured convincing evidence of existence after death. The American Society for Psychical Research has done pioneer work along the line of such investigation. Write Dr. James H. Hyslop, care of the society, New York City, for a list of reliable works on the demonstration of a future life. When hard-headed, scientific thinkers like William T. Stead, Professor William James, Dr. Isaac Funk and Sir Oliver Lodge publicly announce their belief in immortality based on irrefutable evidence and logical deduction, the skeptic or agnostic may well pause and consider.

42. Mrs. M. S. S., New York. "Are parents responsible for the noble or evil careers of their children?"

So far as children are concerned, two things are required of parents: That they

love each other with all the fervor, devotion and unselfishness of which they are capable, and that they employ all the known methods of science and religion for the bearing, rearing and training of children. Parents are responsible for their children only in so far as they themselves have obeyed, or refused, the guidance of love in their own life. Parenthood is the state and period of divine impress; wherever children fail to reach their highest, some lowered parental ideal was at least a contributing cause.

The father and mother of pure thought and lofty purpose bequeath to us a finer heritage than those of mere manual skill or psychic training. But a symmetry of parenthood is possible only to those who have made thoro study of sex-conservation, prenatal influence, physical, mental and spiritual aids to motherhood, privileges and responsibilities of fatherhood, psychology and hygiene of babyhood, principles and methods of Froebel, Horace Mann, and other true educators—in short, all that pertains to the growth of a child.

Are you a parent? Take responsibility for your children. Are you a child? Take responsibility for yourself. For, strange to say, the one who takes the most feels it least!

43. Mr. D. C. Y., Washington. "I suppose one ought not to give way to such fits of blues as a sensitive nature is apt to indulge when everything seems to go wrong. But it is hard to fight such spells off. Why is it that the friends one needs so much at times are always at a distance, and the ones at hand seem so inadequate to help? Would it be reversed if we were with the ones we think could aid us?"

There is nothing better for the mental and moral atmosphere than a good, honest fit of the blues—provided they end with a shower of tears. Blues without tears are like clouds without rain, they menace but do not refresh. Perhaps a wiser method may be suggested—vigorous exercise in the open air. A sensitive nature must create and preserve an extra share of vitality, to make a positive attitude easy in the face of discordant elements. Sensitivity is more "nerves" than spirituality.

Distant friends are greatest because we view them thru a halo of idealism. If we could always live up to our own standard of unselfishness and efficiency, we should find our neighbors most lovable. And the greatness of common people is clearly shown whenever a sudden crisis—like a burning home or a national disaster—appeals to the motives which are seldom stirred. Nearly every man is great when the need is great enough.

The friends at a distance often seem closer because we ourselves attracted them in response to our own growth; whereas the acquaintance of youth went with our surroundings and family inheritance, these being superficial and ephemeral. Instead of bemoaning a lack of sympathy in the people next door, why not enjoy and utilize the helpful understanding of those you have seen by faith alone?

44. Mr. W. R. H., Wisconsin. "Is the motion picture business a good one for a young man to engage in? Is a small town of three or four thousand population more suitable than a large city for such a venture? Do you think the 'movies' will continue to increase in popularity? Can you refer me to any magazine dealing largely with this line of work?"

The motion picture business is a remarkably good business, but without knowing you we cannot say whether it is a good business for you to engage in. The greatest theatrical producers, like Belasco and Frohman, have entered this field; the finest actors, including even Bernhardt,

have posed for the "movies"; very high salaries are said to be paid to the best players and managers by film concerns; and a man here in New York has risen from a small tailor-shop to the millionaire ownership of a chain of photoplay houses—all in a very few years. Schools and churches will probably use the reel picture for educational purposes, largely and more or less immediately. Even manufacturers are showing samples and selling goods by this method.

A town of 3000 people could hardly support more than one first-class photoplay theater. If none exists in your town; and if you can get some practical experience or employ a veteran manager before starting your venture; and if you have a few hundred dollars that you can risk, losing, in learning the business; and if a choice location is available, on a popular street near both home and trade sections of the town—then perhaps you can safely begin where you are.

The best magazine for your purpose is the *Moving Picture World*, New York.

45. Mr. A. J. A., Pennsylvania. "Following your first article, I made an inquiry or rather a request. I have never noted a response to it in the columns of *The Independent*. I am not at all impatient, but would appreciate the information greatly, and have been looking forward to receiving it."

We have been so overwhelmed by the hundreds of problems, requests and inquiries address to the Service, that we must ask our friends to be patient if replies are somewhat delayed. We aim to answer questions in priority of receipt, considering also the possible value and interest to other readers. But as some of the questions are exceedingly personal, complicated and difficult, requiring special study and investigation, we can aid you only as time and strength permit. Will you not coöperate by awaiting patiently our best endeavors?

46. Mrs. H. G., New York. "How can a widow be happy who has no one to care whether she is dead or alive; and whose only relative, a brother, drinks to excess? I get blue and despondent; I have become sour-tempered. Is there any hope for me? My heart leads at all times."

You are unhappy not because you are lonely and not because your brother drinks, but because your heart leads at all times. Get some work and let your brain lead part of the time; get some light and let your soul lead part of the time; get some exercise and let your body lead part of the time; take yourself out of your emotions and your troubles will seem infinitesimal, which they are.

The world is full of people who care whether you are dead or alive—you haven't found them, that is all. You haven't enough to do to keep your mind out of mischief. Look around you for people whose lives you can brighten; you will soon realize that others carry woes even greater than yours, and that you have been neglecting many sources of happiness. Cease trying to be happy—try just to be useful. And if Happiness doesn't catch you unawares, it will be the first time that anybody trod the path of loving service without meeting her.

47. Mr. F. C. A., New York. "I should like to ask whether attainable happiness here has necessarily a material side? And to what extent?"

Yes. Material beings cannot reside wholly in an immaterial world. Most of us need things, nearly all of us need people, to make us happy. But things and people have a spiritual significance, which, properly understood, lifts them out of the sordid and verifies them in the real.

I suppose a normal woman could not be happy without pretty clothes; I am quite sure a normal man could not be happy without "filling" food. Vanity is self-respect turned inside out, greed is strength in embryo. When the world has grown a little the strength of man will lie in his brain and the self-respect of woman in her soul. Whatever we earn, or make, for ourselves belongs in our scheme of happiness.

## A KEY TO THE INVENTORY

Students and readers who tried the "mental inventory" of the Germantown Friends School published in our issue of March 8 may grade their papers by the following answers. In the school the class averages ran from 13.2 per cent for boys and girls of ten or eleven to 48.2 per cent for those of about seventeen. In every class the boys on the average stand higher than the girls.

The test seems more difficult than that of a year ago. The averages this year run about five per cent lower than those for 1914.

Some amusing answers were obtained at the school:

Carranza is an opera singer.  
Three states of matter: Pennsylvania, New York and Texas.  
Pasteur: A man who invented a short cut to putrifying milk.  
Watchful waiting (an answer that might surprise President Wilson): Waiting until you got a chance to inflict a severe blow.

1. Thomas R. Marshall. 2. Sir Edward Grey. 3. Dr. von Bethmann-Hollweg. 4. Taft and Roosevelt. 5. Petrograd. (St. Petersburg to count wrong.) 6. "Marseillaise"; either "Deutschland über Alles" or "Heil dir im Siegerkranz" or "Die Wacht am Rhein" or their English equivalents. (Any one of the four to count full credit.) 7. Andrew Carnegie. 8. Great Britain and U. S. A. (Half credit *not* given for one country.) 9. California; San Francisco Harbor. 10. Europe not to interfere in American affairs. 11. California; San Francisco. 12. Portuguese. 13. English. 14. French. 15. Hoof and mouth disease. 16. China and Persia. 17. Vera Cruz. 18. Democratic. 19. President Wilson does *not* favor increase. 20. Lewis Carroll (pseudonym)—C. L. Dodgson. (Either one counts.) 21. Maurice Maeterlinck. 22. Winston Churchill. 23. Mark Twain—Samuel Clemens. 24. St. Luke. 25. Woodrow Wilson. 26. Dr. S. Weir Mitchell. 27. Sir Walter Scott. 28. P. P. Rubens. 29. Hoffmann. 30. J. M. W. Turner. 31. Van Dyke. 32. Raphael. 33. Massachusetts. 34. New York. 35. Texas. 36. Kentucky. 37. Indiana. 38. Ohio. 39. Virginia. 40. "Spirit of the body"—unity. *e.g.* The team lacks *esprit de corps*. 41. "With a grain of salt"; with some allowance. *e.g.* War reports should be taken *cum grano salis*. 42. "Black beast"; pet aversion, or bugbear. *e.g.* Examinations are my *bête noir*. 43. "A white card"—full liberty. *e.g.* He gave the architect *carte blanche* in building. 44. "For the public welfare," *e.g.* His services are given *pro bono publico*. 45. "Into the midst of the subject, or matter," *e.g.* The lecturer plunged in *medias res*. 46. "Without which not"—an indispensable

- ble condition. *e.g.* Hard work is a *sine qua non* to success.
47. Authoress. 48. Musician; composer. 49. President of American Federation of Labor; labor leader. 50. Scientist or electrician. 51. Author. 52. German general. 53. English War Minister. (Formerly commander in South Africa to count.) 54. Evangelist; former baseball player. 55. Authoress; peace worker; winner of Nobel prize. 56. Author. 57. Musician. 58. Investigator in bacteriology. 59. Mexican revolutionist.
60. England. 61. Belgium. 62. Mexico. 63. Ireland. 64. France. 65. Germany. 66. Germany. 67. Russia; Poland. 68. France. 69. Belgium. 70. Serbia. 71. China; German colony, now in Japanese hands.
72. Tuberculosis or "consumption."
73. Our Mexican policy has been termed "watchful waiting." The policy of exerting influence on the final solution of a matter, with as little direct interference as possible.
74. Booklets issued by Germany and England, containing diplomatic correspondence preceding the outbreak of war.
75. Yale Stadium.
76. Privilege given a community to decide whether the sale of liquor is to be permitted.
77. Conference held at Niagara Falls in 1914, between representatives of Argentine, Brazil, Chile and United States, to mediate in the Mexican problem. (Some Mexicans were present.)
78. Wireless message sent at sea from ship in distress.
79. *Incognito*, disguise, especially of person. Kings and celebrities often travel *incognito*. *Pseudonym*, pen name, *nom de plume*.
80. Mobilization. Carrying out of a prearranged plan by which citizens leave their homes and find themselves members of an active army.
81. Part of a submarine by which crew can make observations. Perimeter—distance around, as perimeter of a room. Two times length and two times width.
82. 32°. 83. The ocean is deeper; salt; more motion. (Any two count.) 84. Thomas Edison. 85. Air surrounding iceberg is chilled (cooled), producing fog. (Essential to mention the air.) 86. Because it contains a gas lighter than air; the pressure of the air forces it up. 87. No. 88. Sphere. 89. Three-inch cube is larger, having twenty-seven cubic inches. 90. No. Gravitation would bring it down.
91. Maud Adams is an actress who played in "Peter Pan." Jane Addams is a social worker.
92. "The quality of mercy is not strained." (To count as right, there must be *no* error.)
93. Substitute "Brown's" for "Jones's."
94. "Shall follow me all the days of my life." (See No. 92.)
95. Mr. Bryan is not private secretary to Mr. Wilson, but Secretary of State. "Formally" changed to "formerly."
96. Substitute Achilles for Siegfried, and invulnerable for intolerable.
97. "I know it is a sin  
For me to sit and grin  
At him here;  
But the old three-cornered hat,  
And the breeches, and all that  
Are so queer!"
- 98.
- "The splendor falls on castle walls  
And snowy summits, old in story;  
The long light shakes across the lakes,  
And the wild cataract leaps in glory."
- 99.
- "The world is too much with us; late and soon,  
Getting and spending, we lay waste our powers;  
Little we see in nature that is ours;  
We have given our hearts away—a sordid boon!"
- 100.
- "Beneath those rugged elms, that yew-tree's shade,  
Where heaves the turf in many a mould'ring heap,  
Each in his narrow cell forever laid,  
The rude forefathers of the hamlet sleep."

# Rest Scientifically

**R**EST may be generally divided into two classes—that which you take because you wish to and that which you take because you must—perhaps on doctor's orders.

A Boston young man, who regularly spends his vacation at the great Health Resort in Battle Creek, Michigan, says "Here I get, in three weeks, rest equivalent to that of a six weeks' vacation elsewhere because—*here I rest scientifically.*"

Another young man—one who recently completed the financing of a big real estate enterprise in Milwaukee—said to a friend of his, while both were staying in Battle Creek, "You should get all you can out of this while you are here because here *you rest under the direction of scientific men* who know how to tell you just how you may get the most benefit from all you do."

These are the personally expressed opinions of two successful young business men—neither one over thirty years of age.

What attracts such men to Battle Creek?

What do they find at Battle Creek which they do not find elsewhere?

Let us give you, in brief, an outline of the daily program which, if you were at Battle Creek, you could follow at will. (Most people—especially business men—see the advantage of following a definite program of this character.)

6:00 A. M.—Rise and take a cold plunge or shower, after which dress and take part in a series of morning exercises under the direction of a trained instructor.

7:40—Breakfast.

9:00—Report to physician under whose direction you are resting and being taught how to take care of yourself.

9:30 to 10:30—Receive a bath treatment, prescribed by your physician and given by an expert operator according to the hydrotherapeutic methods taught at this resort. Following this, a swim if you wish.

10:30—Mechanical exercises in Swedish Department, followed by games or exercises in the gymnasium or a leisure period.

12:00 Noon—Period for sleep or relaxation.

1:00 P. M.—Dinner.

After dinner, you may exercise in the gymnasium, play volley ball or indulge in any other amusement provided at the institution. In summer, this includes tennis and golf.

3:00—Wand drill, followed by volley ball, swimming and other sports. In winter, the wand drill takes place in the indoor gymnasium—in summer, in the outdoor gymnasium.

4:00—Massage treatment, if needed or desired.

5:00—Lecture or entertainment in the parlors.

6:00—Supper.

7:00—Indian club drill in the gymnasium.

7:10—Grand March in charge of the Director of Physical Development. This lasts until 7:30.

8:00—Health lecture or social entertainment in parlors or gymnasium.

9:00—Retire. This is not compulsory but recommended.

This program, which is flexible and varied to suit the needs of different guests, has been planned, and is directed, by scientific men who have demonstrated its effectiveness in restoring health and strength in thousands of cases each year.

Each day of one's stay here is scientifically arranged with a view to giving you the very greatest

amount of benefit, rest and relaxation in the very shortest possible time.

\* \* \*

This great Health Resort, which is, by all odds, the largest of its kind in the world, is devoted to teaching people how they may get health and keep it *through cultivation of natural health habits.*

Diet is most carefully regulated, in accordance with the needs of each guest and a most extensive and elaborate menu is provided for this purpose.

Equipment and facilities for teaching rational health methods are the most complete in existence.

There are two large outdoor gymnasiums, immense playgrounds, numerous tennis courts, a large indoor gymnasium, four swimming pools (two for men and two for women), a Swedish mechanical department, equipment for giving all kinds of scientific baths and every known contrivance for facilitating normal physical development and developing comfort and health in mind and body.

The resort is also within easy reach of a fine golf links of which each guest may have unlimited use.

The establishment includes over thirty buildings, the Main Building providing living accommodations for over six hundred guests, beside parlors, writing rooms, reception hall, lobby, gymnasium, bath departments, kitchens, dining room, offices for physicians and space for much of the scientific and laboratory equipment of the place. The Annex near to the Main Building accommodates four hundred guests.

There is also a large separate hospital for surgical work and serious cases and several dormitories and cottages for those who wish to live very quietly or in separate homes of their own.

At this resort, accommodations range from those of simple, homelike quiet to those of a first class modern hotel, and prices are in keeping with accommodations you prefer. You may live here very well indeed or as modestly as your pocketbook dictates.

Those seeking quiet are carefully guarded from all annoyance, while those wishing to make acquaintances have only to apply to one of the Social Secretaries to secure introductions to sociable people. Its delightful social life is one of the features of this resort.

If you are sick and wish to get well, this is the place for you. Or—if you are only tired and run down and in need of rest, this is the place to *rest scientifically* so as to get most good out of the shortest possible stay.

Further particulars, terms and other information may be had by writing to 303 Administration Bldg., Battle Creek Sanitarium, Battle Creek, Michigan.

A large illustrated book is sent FREE and fully postpaid on receipt of your request.

## Easily Reached

Battle Creek is a regular stop for all through trains between New York and Chicago over the main line of the Michigan Central Railroad and all trains between Detroit and Chicago over the Michigan Central and Grand Trunk Railroads.

Every afternoon at five o'clock, including Sundays, "The Wolverine" (one of the fastest and most completely equipped trains over the New York Central Lines) leaves Grand Central Station, New York, and arrives in Battle Creek the next morning at ten o'clock—giving you ample time to get breakfast before leaving your sleeper.

At the Battle Creek station, a luxurious limousine waits to take you to your destination.

NUMBER 3459

## MEXICAN ANARCHY AND AMERICAN DUTY

**T**HERE is no longer revolution in Mexico. There is anarchy. In the south Carranza wields a shadowy power. In the north Villa, his quondam ally, wages against his forces a desultory campaign. In Mexico City, Obregon and Zapata, Carranzista and Villista respectively, pop in and out like the little man and woman at the twin doors of their barometer house.

When Madero fought Diaz, and when Carranza and Villa fought Huerta, it was at least a tenable hypothesis that the revolutionists were striving to assert the rights and the interests of the Mexican people against the tyranny of a despot. Now the hypothesis has vanished. The revolutionists, successful against the tyrant, have fallen out among themselves. Each rival leader is fighting for his own hand.

Whoever wins, it is the Mexican people that lose—the Mexican people and the rest of the world. In Mexico there is neither peace nor order. There is no security for the property rights of foreigners; no safety even for foreign lives. Within a week an American citizen has been shot down in his own house by the forces that at that moment happened to be taking their turn at capturing the City of Mexico.

What in this parlous condition of affairs is the duty of the United States? It is fourfold. First, to insure respect for the rights of American citizens within Mexican borders. Second, to encourage the aspirations of the Mexican people for liberty and self-government. Third, since by our adherence to the Monroe Doctrine we frown upon the intervention of nations outside the Western Hemisphere in affairs upon the American continent, to protect the rights of the citizens of other nations in Mexico. Fourth, to see to it that the country

across our southern border does not continue to be an international plague spot.

As time goes on there is no improvement in conditions in Mexico. The drift is steadily from bad to worse. The time may come when a strong hand from without must be laid upon the clashing factions that peace may be restored, that respect may be commanded for the lives and property of foreigners, and that the people of Mexico may be given an untrammelled opportunity to seek the blessings of liberty and self-government. That time may not be far distant.

When that time comes, the United States must lead in the work. But it should not move alone. The three great nations of South America—the A B C powers whose good offices have already saved us from the conflict with Mexico threatened by our own impulsive action—should be invited to join in the work of intervention.

To invite their coöperation would be an assurance of our good faith and disinterestedness. It would quiet the suspicions, entertained with greater or less definiteness and intensity by many of our neighbors in South and Central America, that we are afflicted with an insatiable hunger for territory. It would imbue the act of intervention with the impressiveness and prestige of an international movement.

If and when intervention becomes inevitable—and the United States will not enter upon intervention until the deliberate judgment of the American people declares it to be inevitable—it should be Pan-American intervention. It should be the well considered act of the four great powers of the Western Hemisphere, extending a helping hand to a sister people and discharging a solemn responsibility to the rest of the world.

## AND THERE SHALL BE NO MORE KINGS

**E**UROPEAN nations have been taking a surprising interest in the United States of late. They all cultivate our friendship, they appeal to our sympathies, they seek to justify their actions in our eyes. This is a gratifying change from the open hostility or amused contempt with which American ideals and opinion used to be regarded in Europe and we welcome it as indicating a better understanding and consequently a more cordial relation between the two hemispheres than has prevailed in the past. But such an understanding cannot be attained by assuming as a basis a false unanimity of sentiment. We would gladly aid in bridging the gulf between Europe and America, but we would not begin by denying that any gulf exists. Frankness is the only true foundation of friendship and

it seems to be necessary to make plain that we Americans differ very decidedly from many Europeans on the fundamental principle of government. There is in much of what we read about America, even in what is written expressly for the purpose of winning American sympathy, an unconscious assumption that we have practically abandoned our republicanism and are willing to tolerate if not approve of the monarchical system.

That assumption is false. American republicanism is not so boisterous and blatant as it used to be. Travel and intercourse with Europeans have taught us to treat their views with more courtesy and often to keep silence rather than wound their feelings. This courtesy and silence has been sometimes interpreted as acquiescence and agreement, and so it becomes desirable once in a

while to make a plain statement of what we Americans do most firmly hold and believe. Such a statement cannot be better put than it was by Emerson in the ode he wrote on the birthday of free America, January 1, 1863:

God said, I am tired of kings,  
I suffer them no more;  
Up to my ear the morning brings  
The outrage of the poor.

Think ye I made this ball  
A field of havoc and war,  
Where tyrants great and tyrants small  
Might harry the weak and poor?

I will have never a noble,  
No lineage counted great;  
Fishers and choppers and plowmen  
Shall constitute a state.

This is what we believe to be the divine will, and so believing we hold that any man who stands up and says that he is by divine right or the Grace of God ruler of his fellow-men is a liar and a blasphemer. We make no exceptions. We have no more respect for the claim of the King of England to a divine right to rule than for that of the Czar of Russia, for the claim of the King of the Belgians than for that of the Negus of Abyssinia. We regard every monarch as *ex officio* either a tyrant or an absurdity. The word "tyrant" is here used in the original sense given to it by the first republicans, the Greeks, who applied it to any man claiming kingship. In the course of history the word naturally and inevitably acquired the secondary meaning of an oppressive ruler. We recognize of course the vast difference that exists between a mild and constitutional king and an unjust and autocratic king, but neither in our opinion has any right to exist. It often happens that the better the man the more dangerous he is as a king. There are from the American standpoint only two kings on earth who have any shadow of legal claim to their thrones; the rest are usurpers. The two apparent exceptions are King Peter of Serbia and King Haakon of Norway, both of whom were elected by the representatives of the people. But the King of Serbia came to the throne thru the assassination of his predecessor and was himself an accomplice of the murder after the fact if not before. The Norwegians are a democratic people and did not desire a king, but when they separated from Sweden, the monarchical powers of Europe, some say England, some say Germany, it matters not, compelled them to take a king as the condition of recognition. A Norwegian republic would have made the thrones of Europe unsafe. France, Switzerland and Portugal are standing menaces to monarchy and republican sentiment is growing in Italy and Spain.

In England, on the contrary, republicanism has declined while democracy has grown. The two things are quite distinct and ought never to be confounded. Democracy is the rule of the people regardless of the form of government. The Russian mir and the Chinese village are in some respects more democratic than England or the United States. Republicanism means the abolition of any individual or class claiming to rule by divine right, inheritance or similar form of privilege.

Fifty years ago there were many outspoken republicans in Great Britain. Now there is scarcely one. When Victoria was crowned some found the ceremony especially interesting because, as they said, it would probably be the last coronation that England would ever see.

One of the Chartists of '48 used publicly words as bold as those of Patrick Henry: "If Parliament will accept our petition, very good. If not—well, France is a republic." A British labor leader now would hardly dare to use such language.

Our British friends assure us privately that their king has no real power, that he is merely "a sort of glorified rubber stamp." Then a little while later, forgetting what they have said, they tell us how the virtuous Victoria overruled her ministers for the good of the realm and how the wise King Edward thru his own personal influence brought about the *entente* and the isolation of Germany. Now whether or not it was good politics to encircle Germany with the ring of steel we shall not know until we see the outcome of the war, but whether it be credit or blame that is to be given to Edward VII, we cannot regard him as a mere figure-head.

We are being inundated just now with literature from England filled with quotations from the speeches of the Kaiser and his sycophants. Our British friends believe that such exhibits of grotesque megalomania will arouse the disgust and abhorrence of Americans for a man who will make such claims and a people who will submit to them. That is right; we do feel so. But do our British friends realize that the phrases they themselves use so casually, so lovingly, grate almost as harshly upon republican ears? The British Prime Minister talks of "His Majesty's Government" and "His Majesty's Army" and writes "By Order of the King" at the bottom of a proclamation. You say that it is not true, that the King did not really have anything to say about it, it was all done by the ministers. Very good; we think better of the King—but what shall we think of Mr. Asquith?

We used to be told that kings were excellent things because by their intermarriages they kept peace in Europe. Perhaps we used to believe it. But that was before the publication of the "Dear Nicky" letters exchanged between the royal cousins while Russia and Germany and England and Belgium were actively preparing for war.

As a man Albert of Belgium is a decided improvement over the long-bearded satyr who preceded him. Even republicans must join in the general chorus of praise. But as a king he is a public menace. We have not forgotten that before the war his name was talked of as a possible candidate for the French throne in case the royalists inside and outside of France succeeded in overthrowing the republic. Perhaps the plan is not yet abandoned. Certainly King Albert has a stronger hold upon the affection of the French people than before for his courage and devotion in adversity, and if the French should again be seized with a desire for a king as they have twice before, he would make a much stronger candidate than the Bourbon or Napoleonic pretenders.

If this had been a war between Germany and France alone, in which one of the two was not notoriously the aggressor, there would have been no question where American sympathy inclined. America always tends to favor any republic against any monarchy regardless of the cause of the quarrel. But when the great European republic, to whom we owe undying gratitude for rescuing us from a king, unites with five monarchies and among them the most autocratic, our sympathies are divided

and we can only hope that the outcome will not be the crushing out of all republicanism in Europe.

It has been said that the Monroe Doctrine is the only thing that Americans would fight for. However that may be, it certainly represents a principle dear to the hearts of the American people, for we believe as firmly as in 1823 that any attempt on the part of European powers "to extend their system to any portion of this hemisphere is dangerous to our peace and safety." The Monroe Doctrine has been amplified and interpreted to mean many things, the hegemony of the United States, America for the Americans, the cultivation of Pan-American trade, etc. But its primary and fundamental purpose was simply the maintenance of republicanism. "Their system" meant the monarchical system and the United States opposes that now as it always has. The Monroe Doctrine means that one continent out of the five shall be kept forever free from the curse of kings. As for the rest of the world, it is not so much our concern. We rejoice whenever a people like the Portuguese or Chinese rises and overthrows its tyrants. We will give them what encouragement we can and we hope so to conduct ourselves that this republic of ours may become an example of the benefits of republicanism instead of a reproach. For we know we are right and we look forward with perfect confidence to the day when it may be there shall be no more kings in all the earth.

### THE SINKING OF AN AMERICAN SHIP

THERE are no two ways about it. When the German captain of the "Prinz Eitel Friedrich" sank the American ship "William P. Frye" he committed his Government to a grave responsibility. It is a responsibility which Germany cannot evade. It is a responsibility which the United States must require to be discharged.

The rules of maritime warfare on the subject of the sinking of neutral merchant vessels are clear and undisputed.

A neutral ship may be sunk if it attempts to run a blockade. But on January 19, when the "Frye" was sunk, not even the doubtfully legal blockade by submarine, which Germany has since declared, was in existence.

It may be sunk if it attempts to escape when the belligerent ship is exercising its unquestioned right of visit and search. But the "Frye" did not attempt to escape.

It may be sunk if carrying absolute contraband to an enemy port and if the exigencies of the case would make it impossible for the capturing ship to send the prize into port. But the "Frye" was not carrying absolute contraband.

It may be sunk if more than half of its cargo consists of conditional contraband, if the contraband is destined for the government or the armed forces of the enemy, and if the capturing ship cannot send it into port.

The "Frye's" cargo consisted of grain. Grain is conditional contraband. But there is no evidence that the grain was destined for the British Government or the British army or navy. The "Frye" was sailing to a British port. Its cargo was consigned "to order." The burden of proof, therefore, rested upon its captor to show that

the grain was intended for military and not civilian use. Captain Thierichens did not prove it; indeed, under the circumstances he could not. He merely sank the ship.

His action was without warrant in law or custom. For his action Germany is fully responsible. It is inconceivable that prompt apology and reparation will not be forthcoming.

### THE STATE OF JEFFERSON

A BILL has been introduced into the Texas legislature to form a new state out of the western part of Texas, to be named Jefferson. The motive behind the movement is the desire to become independent of the "beverage" which is said to be the ruling order of the state. This, however, is hardly a sufficient reason for a political change of so momentous a character. The "drys" should not secede but stay in and in time they may win the whole state.

The railroad and the telephone have made it as easy to manage a large community as a small one and the saving of the "overhead charges" of administration is enormous. To be sure, Texas would have ten votes instead of two in the United States Senate by exercising its peculiar prerogative of subdividing into five states, but this increase of power in the councils of the nation would not compensate for the weakening which would otherwise result from division.

Texas is big enough, however, to make several states if there were sufficient reason for it. It is a third larger than the German empire, which is composed of twenty-six several states. If Texas should split in half each part would be larger than any other state, or if divided by five each would be larger than twenty-two of the existing states. Or if divided by population into halves each would have more people than thirty-three other states, or if divided into five parts more than twenty of our states.

The right of Texas to form new states whenever it chooses was conferred by the act of Congress admitting it to the Union March 1, 1845, which says that "new states of convenient size, not exceeding four in number, in addition to said State of Texas, and having sufficient population, may hereafter, by the consent of said State, be formed out of the territory thereof, which shall be entitled to admission under the provisions of the Federal Constitution." This special privilege was due to the fact that Texas came into the Union as an equal. It had been for nine years an independent republic and was able to maintain its independence indefinitely. The British Government tried in vain to prevent annexation, for it meant that the United States would extend to the Pacific. Lord Palmerston in 1836 in a parliamentary debate on a motion to intervene to prevent annexation stated that Great Britain could not "allow the United States to pursue a policy of aggrandizement." Lord Aberdeen said in 1844 that if he could get the support of France England was willing "to go to the last extremity" to keep Texas out of the Union.

But in France Thiers stood up stoutly for the right of the United States to expand and denounced the proposed joint action as a crime against a republic whose aid might be needed at any time in a second war against England in defense of the principles of the revolution. Now when France is suffering from the invasion of a

monarchical power it is well to remember that we owe it to France that we are able to celebrate in San Francisco this year. If France had not stood by us in this crisis it would have been the Union Jack and not the Stars and Stripes which would have floated over the Golden Gate.

### EDUCATION FOR DEMOCRACY

**I**F you want anything done ask a busy man to do it. Professor J. McKeen Cattell, being the editor of only three periodicals, *Science*, *Popular Science Monthly* and *The American Naturalist*, finds so much extra time on his hands that he has started another one, *School and Society*, "a weekly journal covering the whole field of education in relation to the problems of American democracy." Possibly a clue to what this means may be discovered in one of the leading articles of the first number, "The State-Wide Campus," by President Foster of Reed College, from which we quote:

Popular government demands popular education of a new kind. The true university will not curb its studies in structural engineering for fear that its findings may condemn a state engineer, appointed by a partizan administration; nor will a true university curb discussion of woman suffrage merely because the results of such discussion are of immediate importance. Some universities give a question the freedom of the campus only as long as it remains purely academic, that is to say, as long as it has no pointed relation to actual problems—in other words, as long as it interests but few people. The university will drift into an eddy, and be overlooked, if the institution frowns on the fullest discussion of the dominant political issues of the day, whether they involve men or measures, or both.

If the new journal can follow up such an ideal as this it will be lively reading as well as informing.

### THE TREND OF AMERICAN LITERATURE

**F**ICTION and science are on the decline. Religion and philosophy, poetry and drama are gaining. Such is the conclusion to which we are led if we take the statistics of book production as an indication of popular taste. Comparing the annual trade reports of the *Publishers Weekly*, we find that the high water mark of the novel was in 1908, when 1489 volumes of fiction appeared in the United States. Last year there were only 1033; a decline of nearly thirty per cent. These figures are virtually reversed in theology, religion and philosophy, for books devoted to such subjects rose during the same period from 999 to 1440; a gain of forty-four per cent. If we compare the literary output of 1913 with that of 1914 we find the same trend shown, for theology, religion and philosophy have gained fourteen per cent and poetical and dramatic works have gained thirty-three per cent, while science and such technical subjects as engineering, medicine and agriculture have declined fifteen per cent since the year before. We hope this indicates not so much a falling off of interest in pure science or its useful applications as a curtailment in the production of superfluous books.

Of course these figures do not represent the extent of reading done in the various fields of literature. Many books are published which find few readers and no religious book in the last few years has had the sale of a popular novel. But, on the other hand, Winston Churchill's *The Inside of the Cup*, which has the unique distinction of heading the list of best sellers, owes a

large part of its popularity to its religious theme. On the whole, we are justified in seeing in these figures a definite tendency on the part of the American public toward serious thought on the fundamental problems of human life as well as toward poetry and the fine arts. Since most of the fall books were in print by August the statistics of output were not materially affected by the war. The emotional stimulus of the war will doubtless have a profound effect on literature, but it would be rash to predict what it will be. So far the chief result has been an increased production of poetry and a greater interest in contemporary history and geography.

### THE CASH REGISTER MIND

**T**HERE is one sort of mind that mints its own ideas. That is the sort most worth having. Then there is the mind which neither gives nor takes ideas. That is lamentable. And there is the cash-register mind. If you have it, it is worth being thankful for—in moderation.

The cash-register mind has one virtue. It registers what it receives. The process may be simple or complex: the machine into which your bootblack drops your dime does nothing very exciting, but the beautiful apparatus in the corner drug-store rings a bell and flashes a light and prints a record. Arnold Bennett or some other observer has confest his admiration for its gay efficiency. So there are some minds that simply register, and some that cannot for the life of them refrain from print; some that merely take business-like note of what is offered them, others that sparkle and thrill at the transaction.

But the essential thing is that they register. This sort of mind knows an idea when it is offered, clicks with recognition—and proceeds to pass it out again in small change.

### NEITHER LUCK NOR THE DEVIL

**T**HE British have been wondering whether the Germans have been favored by luck, Providence or the devil in that their attacks on Antwerp and Ypres were made in the most advantageous weather and their aerial and navy fleets arrived in England at the same time as a fog. It is now known that this, like others of their miraculous achievements, is simply applied science. The first German army corps entering Belgium was provided with a staff of meteorologists and astronomers who set up observation stations, equipped with instruments of the latest model from Berlin, in Liège, Brussels and Ostend. By means of hydrogen sounding balloons they explored the currents of the upper air and were able to forecast fog two days in advance.

During the first year of the Wisconsin law requiring a physician's certificate of health from the prospective bridegroom the number of marriages fell four thousand below the annual average. Evidently there was more need for such a law than even its advocates suspected.

The question whether the anti-alien labor laws of New York and Arizona violate the treaty rights of foreigners is now to be determined, as it should be, by the United States Supreme Court. Whatever the court's decision, the laws certainly violate human rights.

# THE STORY OF THE WEEK

## THE GREAT WAR

**March 8**—Bombardment of Kilid Bahr and other Dardanelles forts continued. British begin strong attack on German lines toward Lille.

**March 9**—Three British steamers sunk by German submarines. Germans bombard Nieuport with 42-centimeter guns.

**March 10**—German cruiser "Prinz Eitel Friedrich" takes refuge in Newport News. Heavy fighting in Champagne and Argonne.

**March 11**—Germans repulse Russian attack near Augustowo. Seventy mine-sweepers engaged in clearing Dardanelles.

**March 12**—British capture Neuve Chapelle near La Bassée. Count Sergius Witte, former Russian Premier and negotiator of Portsmouth Treaty, died. Three British steamers sunk in Channel by German submarines.

**March 13**—Bread riots in Spain. Russians report capture of 4000 Austrians in Carpathians.

**March 14**—Italy fully prepared for war. French take half of village of Vauquois on edge of Argonne.

The Attack on the Narew Forts Field Marshal von Hindenburg is concentrating his forces south of the Mazurian Lakes in preparation apparently for a movement against the line of fortifications which extend along the Narew River and its tributary, the Bobr. The recent victory of the Russians at Przasnysz proved to be only a temporary derangement of the plan, for Hindenburg hurried in troops from the north and the south, from the Niemen River on one side and the Bzura on the other, until he has now, according to Russian estimates, a half million men in this region ready for the advance into Russian Poland. The Germans are within a mile of Przasnysz again, and in regaining this lost ground have taken 11,460 Russian prisoners.

The German Krupps are still pounding away on the fortifications of Osowiec on the Bobr River, but the main attack seems to be directed at the fortresses to the southwest along the Narew. A large force is said to be assembled at Chorzele on the Russian boundary for an advance down the Orzyc River directed against Ostrolenka or one of the other fortresses lower down the river. The weather has turned colder and, the ground being frozen, movements are made easier, but entrenching is difficult.

The Russians are rejoicing over the withdrawal of the German troops from the neighborhood of Grodno and the other forts on the Niemen.

They claim that the Germans lost over 100,000 men within the last month.

The German attack along the Pilica River in central Poland continues, but is not developing much strength. It is apparently intended to divert the Russian troops to the south, while the greatest effort is being made to break thru the chain of forts on the Narew north of Warsaw.

### Opening the Dardanelles

The Anglo-French fleet has continued the bombardment of the Turkish forts and batteries on both sides of the Dardanelles, but no very definite progress is reported. The forts at Dardanus and Kephez on the Asiatic shore are, it appears, still able to reply, and the forts near Kilid Bahr on the European shore of the narrows are not yet demolished, altho they have been subjected to indirect fire from the other side of the Gallipoli peninsula as well as direct fire from the warships in the straits. Even the new superdreadnought, "Queen Elizabeth," has ventured to go several miles up into the Dardanelles, which proves that the fleet of seventy mine-sweepers had done their work thoroly.

But generally the "Queen Elizabeth" stands off the western shore of the Gallipoli peninsula, and from a distance of twelve miles throws her

15-inch shells over the hills and into the forts on either side of the narrows. The "Queen Elizabeth" has eight of these big guns so placed that they could, if desired, be all fired at one time in the same direction. The projectiles of such a broadside would weigh altogether more than six and a half tons and the cost of the smokeless powder used would be over \$5600. It is rumored that one of the sister ships to the "Queen Elizabeth" is also engaged at the Dardanelles. This is possible, for there was a group of five of them nearing completion when the war broke out, and of these probably the "Warspite" and the "Barham" are in commission. The other two of these superdreadnoughts are the "Valiant" and the "Malaya," the last so named because it was a gift from the Malay States to the British navy. The vessel that comes nearest to equaling the "Queen Elizabeth" class in any way at present is the American "New York," which, however, carries ten 14-inch guns instead of eight 15-inch and can make only twenty-one knots instead of twenty-eight.

The "Triumph," which a little while ago was aiding the Japanese in the reduction of Tsing-tao, has now been brought to the Dardanelles. She has been in action seventeen times during this war and has fired over 2000 rounds of ammunition from 10-

THE RUSSIAN LINE OF DEFENSE

Hindenburg's recent movement of his troops to the north has brought him for the second time within reach of the chain of fortresses along the Niemen, Bobr and Narew Rivers, which were built to protect Russia from invasion. The Germans are now bombarding Osowiec and are massing near Chorzele for an advance down the Orzyc River. A similar attempt to reach the Narew, made during the last week of February, was checked at Przasnysz by a strong counter attack by the Russians. The Russian fortresses are represented by stars and the area they hold is shaded.

International News

## THE REGIMENTAL LETTER-WRITER

A German whose superior education makes him very valuable to his fellow soldiers of the Landsturm in Poland

inch shells down. She has been hit fourteen times. One shell from Fort Dardanus burst inside the captain's cabin and destroyed the furniture. Most of the attacking vessels have been hit by shells, but the casualties are few. The chief difficulty of the Allies is to discover the new batteries, which have been so cleverly concealed that the aeroplanes are often unable to locate them, and attempts on the part of small vessels to draw their fire are generally in vain.

Vice-Admiral Carden, commanding the Franco-British fleet, is reported to have said that they will get thru the Dardanelles before Easter. But from the Turkish side the reports express confidence in the ability of Constantinople to hold out indefinitely. The Allies, they assert, are wasting ammunition lavishly upon the rocks and ground, while the main batteries are untouched and nobody hurt. An approach by land up the peninsula is not feared because the city is defended by 250,000 men entrenched in strong positions.

Vice-Admiral Sir Richard Peirse, commanding the British fleet before Smyrna, demanded, on March 11, the surrender of the garrison within twenty-four hours. The forts have been intermittently under bombardment ever since March 5. The Vali

has warned non-combatants to leave the city and has protested against the shelling of villages and residential quarters by the British. An attaché of the Turkish Embassy at Washington presents a list of twelve undefended towns and villages of Turkey which, he claims, were bombarded in December and January by the British, French and Russian warships.

## The British Advance

The new British army of a million men has in large part been safely landed in France and has begun its attack upon the entrenched positions which the Germans have occupied for the last six months. The point selected for the offensive movement seems to be north of Arras and near La Bassée. Here the British won a notable success in the taking of Neuve Chapelle, a village of about 600 inhabitants about ten miles south of the Belgian border.

With the change of tactics the British Government has adopted a different policy in regard to news. There has been so much dissatisfaction expressed in England over the refusal to allow war correspondents to go to the front that it has been decided to supplement the brief official announcements of results by a descriptive narrative from an author-

ized eye-witness. We will take advantage of this by summarizing in his own words the battle of Neuve Chapelle:

At 7:30 a. m. on that morning of March 12 the battle opened with a bombardment by numerous guns and howitzers. Our men in the trenches describe the fire as the most tremendous they have ever seen or heard. The shriek of the shells, their explosions and the continuous thunder of the batteries were all merged into one great volume of sound. The discharges of the guns were so rapid that they sounded like the fire of a gigantic machine gun. During the thirty-five minutes for which it continued our men could show themselves freely. They could even walk about in perfect safety.

Then the signal to attack was given. In less than half an hour almost the whole of the elaborate series of German trenches in and about Neuve Chapelle were in our hands. Except at one point there was hardly any resistance, for the trenches, which in places were literally blotted out, were filled with dead and dying, who were almost buried in the earth and debris.

Thruout the day the Germans continued to hold out in a strong position at an angle of the crossroads south of the village where there were established a perfect network of trenches and barbed wire. This position was known as Port Arthur. A hard struggle raged for some hours until at 5:30 p. m. it was taken by storm at the point of the bayonet. At nightfall we were in possession of all the enemy's trenches on a front of 4000 yards, which represented an advance of more than 1200 yards from our original trenches.

The number of prisoners officially reported as taken is 750, but there is reason to believe that others were captured and their names not sent in as yet. During the day there were two remarkable feats by our airmen. One flying at a height of only 150 feet dropt a bomb on an important railway bridge at Menin, destroying one of the piers. Another, flying over Courtrai railway junction, dropt a bomb on the station and completely wrecked it.

The enemy for the time being is beaten and on the run. It was the consciousness of this which filled the hospitals and ambulances with the cheeriest crowd of wounded ever seen. If further proof of this was wanted it could be found in the spectacle of an Irishman who had been shot thru the chest recounting his experiences in a stentorian voice that was audible to the furthest corner of the clearing hospital. It was found also in the sight of groups of wounded and injured men on the roads talking and laughing as they limped out of the firing line columns.

The prisoners as they marched back thru the ambulance transport between the waiting ranks of our reserves afforded no little encouragement. Many of their faces were a bright yellow from the effects of the lyddite shells and a majority looked shaken. All admitted that the attack had come as a complete surprise.

During the three days the British gained about two miles and the counter attack of the Germans was repulsed, with a loss estimated at 2000. The objective of the movement is presumably the city of Lille,

which the Allies have twice taken from the Germans but have been unable to hold.

In the recent activity in the Champagne region both sides claim success. According to the German account the French have sacrificed 45,000 men since February 17 without making any progress, while the German loss was not a third as much. According to the French account the object of their advance movement was for the purpose of forcing the Germans to concentrate troops at this point and so to prevent them from sending aid to Hindenburg in Poland. This object, the French claim, was accomplished, and, besides, they took 2000 prisoners and annihilated two regiments of the Guards. On February 28 the French began an attack upon the village of Vauquois, situated upon the edge of a plateau commanding part of the Argonne forest. Since then the effort has been repeated several times, and by fierce hand-to-hand fighting the French have succeeded in occupying half the village.

**The War on Commerce** Seven British merchant steamers were torpedoed by German submarines in the three days March 10 to 13. Three of these were struck on Friday morning by the "U-29" off Scilly Islands in the English Channel. The spectators on the shore of St. Mary's Island watched the "Indian City," a new steamer of 2921 tons from Galveston loaded with cotton, as it was overtaken by a submarine and ordered to show her colors. The steamer hoisted the German flag. The captain of the submarine, speaking thru the megaphone in perfect English, ordered the crew to take to their boats and then blew up the vessel. Two British patrol boats put out from the shore, but the submarine dived and came up two miles beyond. Next she sighted the "Headlands" of Hartlepool and gave chase. In spite of her dodging the steamer was soon caught, and, after the crew had left, torpedoed. Then the submarine went after a third steamer and was lost to view. All this took place within three hours.

On March 9, three British steamers fell victims to the German submarines. The "Tangistan" was sunk off Scarborough. The crew of thirty-eight took to the lifeboats, but the vessel sank before these could be disconnected, and the only man saved was one who clung to a piece of wreckage for three hours. The "Princess Victoria" was torpedoed twenty miles off Mersey bar. The crew was saved. The collier "Blackwood" was torpedoed in the English Channel and the crew escaped in boats.

#### AN INTERLUDE IN THE TRAGEDY

French soldiers billeted in a theater making appropriate use of their leisure and their surroundings. With the exception of the pianist the performers, one notes, are all soldiers

The British auxiliary cruiser "Bayano" was torpedoed off Corsewell Point, between Scotland and Ireland, on the morning of March 11 and about 200 men were drowned. Twenty-six of the men were rescued.

The British torpedo boat destroyer "Ariel" rammed and sank the German submarine "U-12." Ten out of her crew of twenty-eight were saved. They will not be treated as prisoners of war, but will, like the crew of the "U-8," be put in jail and tried for piracy. The determination of the British Government to treat in this fashion all men captured on German submarines has aroused hot indignation in Germany and reprisals are threatened. Altogether the British have sunk seven German submarines since the war began.

#### China Yielding to Japanese Demands

extensive concessions and special privileges in various parts of China from north to south have been under discussion at Peking for the last two months and no agreement has yet been reached, altho China has conceded many of the points and Japan has ameliorated others. It was reported from Peking on March 9 that Japan had threatened to employ

force unless China complied by March 12. The Chinese Government protested against such an ultimatum and pleaded that it was customary to devote more time than this for the consideration of a treaty involving such vast issues. The belief that Japan intended to impose her will upon China by arms was confirmed by the sailing of a second squadron bearing 30,000 Japanese troops to Manchuria. Japan, however, explained to the powers that the troops were merely intended to replace the railroad guards already in Manchuria. Barracks are being erected at the railroad stations in Shang-tung, now held by the Japanese.

It is reported that China has conceded the extension of the lease of the Manchurian ports of Dalny (Tai-ren) and Port Arthur for ninety-nine years. These concessions, which were originally granted by China to Russia for twenty-five years, would have expired in 1923, after which time China would have had the right to purchase the railroads. Japan also gets the exclusive right to prospect and to work mines and the preference in future railroad loans.

China is very reluctant to grant the demand for a Japanese railroad from the coast opposite the Japanese island of Formosa to Han-kow and

for a joint control with China of iron works there, because that would mean Japanese domination of the Yang-tse Valley and the coal and iron region. The Japanese garrison at Han-kow is said to be entrenched.

The demands for the policing of Chinese cities by Japanese, for the appointment of Japanese advisers and directors in financial and military matters, and for the purchase from Japan of at least half of the arms and ammunition needed by the Chinese army also meet with strong objection from the Chinese. It appears that these demands were omitted from the list as submitted by the Japanese Government to the powers. When the United States called attention to the omission of nine of the twenty-one articles the Japanese Government explained that these were general demands of long standing which it did not think necessary to mention.

The Chinese Y. M. C. A. and stu-

dents in the United States have made an appeal to President Wilson and the American people to prevent what they hold will mean the absolute absorption of the Chinese republic by Japan or will precipitate a war between the two countries. When the question was raised in the House of Commons, Neil Primrose, Under Secretary of State, replied that "His Majesty's Government has no objection to the expansion of Japanese interests in China provided the expansion in no way inflicts injury on British interests."

**Germans Sink an American Ship** In the early days of the war Germany fitted out fourteen auxiliary cruisers to prey upon the commerce of her enemies. Twelve of them have been sunk, captured or interned. One of the two survivors, the "Prinz Eitel Friedrich," entered Hampton Roads on the 10th and anchored near a pier at

#### A WIND-JAMMER SUNK ON THE HIGH SEAS

The "William P. Frye," carrying wheat from Seattle to Queenstown, was sunk by the "Prinz Eitel" in the South Atlantic on January 28. Her cargo was first dumped overboard

Newport News. Seven months ago she started out from Tsing-tau, armed with 3-inch and 5-inch guns taken from two gunboats. In these seven months she had captured and sunk eleven ships—five British, four French, one Russian and one American. She brought to port 360 persons, the crews and passengers of these ships, desiring to get rid of them and also to obtain repairs that were sorely needed. Of the passengers, eighty-five were from the French steamship "Floride." There was also on board about \$2,000,000 in gold taken from the sunken ships. The crews of the British bark "Kildalton" and French cruiser "Jean" had been marooned on Easter Island.

News of the sinking of an American ship by this sea rover excited great interest. The ship was the "William P. Frye," a four-masted sailing vessel, owned by the Arthur Sewall Company, of Bath, Maine. She had sailed from Seattle with a cargo of 183,500 bushels of wheat, valued at \$282,000, and consigned to Queenstown. Captain Thierichens, of the cruiser, decided that this cargo was contraband of war. He ordered the ship's crew to throw it overboard. When about half of it had gone into the sea he could wait no longer, but blew up the ship with dynamite. This was on January 28, in the South Atlantic. Captain Kiehne, his wife and two children, and the crew were safely on board the cruiser.

Our Government, it is understood, holds that the cruiser's action was not warranted and will ask for compensation, accompanied by expressions of regret. Unofficial reports from Berlin say that Germany will

express disapproval of the cruiser's act, as having been at variance with the rules and policy adopted by Germany at the beginning of the war, to the effect that mere consignment to the fortified port of an enemy must not be regarded as proof that the food in question is designed for armed forces. There must be additional evidence, and in this case there was none. The German captain had had no opportunity to know about these rules. He was guided by his own interpretation of the Declaration of London, which does not justify his course and the binding force of which in this war was not accepted at Washington. It is expected that Germany will disavow his act and make due reparation.

The officers and crews of the captured vessels speak well of the treatment they received from the commander of the cruiser, Captain Thierichens, tho there were some complaints of poor food and close quarters. The captured sailors and passengers were allowed to land, subject to the inspection of our immigration authorities. Probably the cruiser will be interned. The repairs will consume at least three weeks. Captain Thierichens desires to go out and resume his work on the seas, but if our Government should permit the cruiser to leave port she would be unable to escape from four or five British cruisers now lying in wait for her.

**The Federal Circuit Trust Cases** Court of Appeals has reversed the decision of the District Court in the case against President John H. Patterson and other officers of the National Cash Register Company, of Dayton, Ohio, and ordered a new trial. In a

Underwood & Underwood

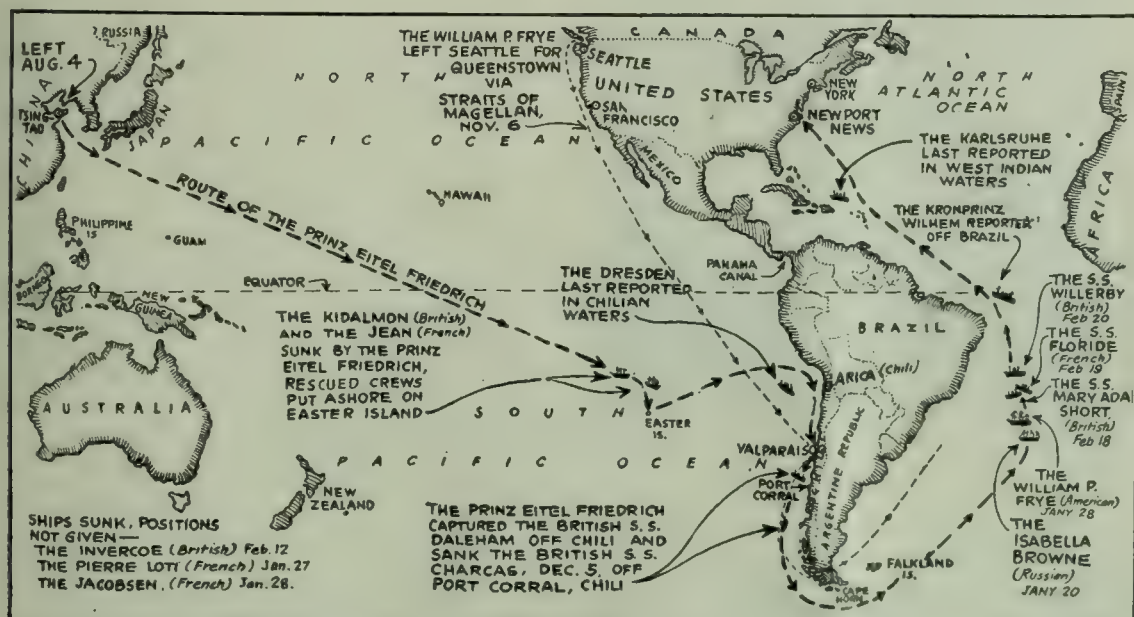

#### THE RAIDER THAT FLOUTED OUR NEUTRALITY

The "Prinz Eitel Friedrich" came into port at Newport News last week after seven months at sea. She sank eleven merchant vessels, one of them the American bark "William P. Frye," loaded with wheat, which is not absolute contraband. She was a North German Lloyd steamer before the war. The "Kronprinz Wilhelm" is now the only German auxiliary cruiser still at large out of the original fleet of fourteen

suit for violation of the criminal provisions of the Anti-Trust law, Mr. Patterson and twenty-six of his associates were convicted and sentenced to be imprisoned in jail, the term for a majority of the defendants being one year. The higher court holds that under the first of the three counts there was no proof that the company had been guilty of conspiracy during the three years before indictment, and that the second and third counts should not have been considered. In the course of the decision, which covered sixty printed pages, much was said which might be regarded as commendation of the company. There was great rejoicing in Dayton over the court's action. At the railway station 25,000 people were waiting to greet Mr. Patterson on his return from the court's session. A display of fireworks was accompanied by a parade and a reception. While his appeal was pending, a Red Cross gold

medal of honor was awarded to him for his rescue work at the time of the disastrous floods in Ohio.

It is expected that a decision in the Trust suit against the Steel Corporation will be made known within a few weeks. Owing to the requirements of the new Clayton Trust act concerning interlocking directorates, it is said that the number of the Corporation's directors will be reduced. The Attorney General of Missouri has been making inquiry concerning a combination said to have been formed to control the spelter market. Owners of zinc mines in that state assert that the price of their ore has been depressed while the price of spelter has been rising. Five officers of what is called a Potato Trust have been indicted in Boston for violation of the Sherman act. They are connected with the Aroostook Potato Shippers' Association, which controls about ninety per cent of the potato output of Aroostook County in Maine, and they are accused of using a blacklist to the injury of certain dealers in Boston and elsewhere.

New York Herald

#### THE COURSE OF THE "PRINZ EITEL FRIEDRICH"

She had just arrived at Tsing-ao from Bremen when the war began. She was fitted there with a fairly heavy armament and sent out to harry the commerce of the Allies. She had been at sea seven months when she reached Newport News and was in bad shape. In the South Atlantic the vessel passed within wireless range of British warships, but none were actually seen. Commander Thierichens believes that he was pursued by six British ships off the Virginia capes

**Zapatistas Murder an American** General Obregon and the Carranza army evacuated the capital of Mexico on the 10th, and Zapata, the bandit chief, who is in alliance with Villa, entered the city on the following day. The entrance of Zapata's forces was marked by an outrage which has excited much indignation in the United States. The bandit leader's advance guard murdered John B. McManus, a prominent and respected American resident, in his house, over which the American flag was flying, while the official seal of the Brazilian Government, whose Minister had charge of certain American interests, was on the front door. Mr. McManus, a man

© Harris &amp; Ewing

ADMIRAL FRANK FRIDAY FLETCHER

of thirty-eight years, was originally a resident of Chicago. For fifteen years he had lived in Mexico as the agent of the owners of a group of mines. He was a man of property, occupying a handsome house in the capital. In the suburbs he had a dairy farm.

While Zapata's men were holding the city, about a month ago, a band of fifteen attacked his house, intending to take what was in it. Standing on the roof, he defended his home and his family, repelling the attack and killing three of the thieves. The survivors promised to get even with him. When they retired from the capital with Zapata, before the victorious Obregon, they kept their promise in mind. When they returned, on the 11th, they went to McManus's house. He was there to defend it, but he had placed his wife and children in the house of a friend. The outlaws broke down the door and killed him. It is not known whether any of them fell before his gun. This time they were able to take their loot and get away with it. Relatives of McManus in this country have letters in which he graphically described his defense of his home at the time when he killed three of the robbers. He frequently said that he did not expect to get out of Mexico alive.

Our Government promptly sent to General Salazar, Zapata's officer commanding in the city, a demand for an apology, damages and the punishment of the murderers. He was told that Villa and Zapata would be held responsible. A similar message was sent to Villa. Salazar assured the Brazilian Minister that he would at once make inquiry and punish those who should be found guilty. He also

promised to assist the international relief committee and in other ways to improve the deplorable condition of the city. Villa's reply was not less satisfactory. He was in a northern town. There were many other outrages, as to some of which complaint was made at Washington by the French and German Ambassadors. The Swedish Minister reported the assassination of a Swedish resident by Obregon's soldiers.

#### The Factions in Mexico

Carranza's reply to our Government's sharp note about Obregon's course at the capital was delayed. The note spoke of Obregon's incendiary utterances, which were evidently designed to encourage the mob, and of his denunciation of foreign residents. It pointed out also that he was about to withdraw from the city, leaving these residents without the protection of an armed force. "When a factional leader preys upon a starving city," said our Government, "to compel obedience to his decrees by inciting outlawry, and at the same time uses means to prevent the city from being supplied with food, a situation is created which it is impossible for the United States to contemplate longer with patience. Conditions have become intolerable and can no longer be endured." If Americans should suffer by reason of

Harris &amp; Ewing

ADMIRAL THOMAS B. HOWARD

these conditions, the note continued, Obregon and Carranza would be "held personally responsible," and the United States would take such measures as might be expedient to bring those personally responsible to account.

Neither Carranza nor Obregon opened the railroad to Vera Cruz for food supplies and refugees. Secretary Bryan had warned Americans to leave the capital. They had replied that they were not permitted to use the railroads. In the city there are 2500 Americans and about 24,000 other foreigners. Reports from a few who have escaped show that both the soldiers of Carranza and those of Villa and Zapata have been guilty of countless outrages of all kinds. Our Government has sent two more warships to Vera Cruz, where now there are seven.

The revolt against Carranza's officers in Yucatan has led to the closing of the port of Progreso. On this account the British steamer "Wyvisbrook," bound for Progreso, put in at a neighboring port, where she was seized and her captain imprisoned because she had no clearance papers for that place. Therefore, Great Britain complains. It is said that the states of Yucatan, Campeche and Chiapas have decided to be independent, favoring neither Carranza nor Villa. The latter has published a statement in which he says that intervention by the United States to restrain or punish Carranza would cause a union of all Mexicans against the invading force. Secretary Daniels remarks that we have nineteen battleships and ten destroyers at Guantanamo, with nine cruisers in adjacent waters.

# PULPIT PRUSSIANISM

BY THE AMERICAN WIFE OF A TITLED GERMAN

WHAT has the German clergy been doing all these years that Prussia has been imposing her militaristic ideas upon the German people? We do not expect warfare to be relinquished among backward peoples. But that a civilized, great nation should persist in our day in inculcating war, and hear its ruler repeatedly praise the army as the pillar of his throne, and his ministers defy its popular parliament in the defense of gross military abuses, without protest above all from its religious leaders, seems incomprehensible, a supreme anachronism.

Who, then, is to feel the turpitude of militaristic principles, or to express Christian reprobation of them? Have no German divines whatever penetrated to the true nature of this Prussianism, which, while forcing the people ahead along material lines, has not only been keeping them behind in moral evolution, but arresting as well the weal of other peoples? The last great evil of modern society was circumscribed. Slavery did not entail the adoption of slavery by the rest of the world. Prussian militarism, on the other hand, has been forcing unprecedented, huge waste in armaments on half of Christendom.

But the attitude of the clergy in Germany today corresponds to that of the Southern clergy in slavery times; and, indeed, is equally natural. In the South, the lads who became ministers of religion, growing up amidst slave holding, assimilated the ideas and sentiments of the community, and sympathized with them ever after. The case is similar with German pastors. They are part and parcel of their people, having been brought up amidst the same ideas and subjected to the same training.

Moreover, were a pastor possess of unusual moral insight and independence of character to raise his voice against the prevailing national ideals, he would of a certainty be quickly supprest; for the Church in Prussia, we must bear in mind, is a state institution, the king being its head. The man in shining armor with the mailed fist towers menacingly over pulpits. No pastor would abide in his own for long if he showed himself unsubservient to his warrior superiors.

I gave an instance, in a former article, of how a lieutenant-colonel of the regiment garrisoned in the town whose church I attended entered the vestry and ordered "more patriotic" sermons from the clergy, tho, to my American ears, the earlier

*The Independent has already presented, in three articles by this lady of American birth, who for obvious reasons wishes to remain anonymous, various phases of the social import of Prussian militarism as she observed it in her thirty years' life in Germany. They were: "Militarism in German Social Life," November 16; "How Prussianism Warps Men and Women," December 14; "The Compensations of Militarism," January 18.—THE EDITOR.*

sermons had appeared blasphemous by reason of their joint laudations of Almighty God and Emperor William. The same two pastors who preached to us instructed school children (religious teaching is compulsory in public and private schools alike) and confirmed all the children of the town, with few exceptions. How are lads who are themselves to become pastors likely to escape a lively reverence for their war lord?

The last generation, a generation that still retained memories of the old liberty-inspiring days of '48, strenuously opposed the bill retaining compulsory teaching of religion in the public schools. But the opposition was crushed by the Government parties. And ever since religion has been used systematically by the state for the purpose of sanctifying militarism and autocracy in the souls of youth. From the week spent in school the young pass, on the seventh day, into the church; and in the one, as in the other, their minds are steeped in ideas prescribed by the Government. As these ideas are dubbed "patriotism," one can easily understand how it has come about that the passion of the people, in the present period of war, is sympathetically affecting their spiritual leaders to such a degree as to impel them to desire to go to the front.

THE only members of the Lutheran fraternity not unmarried, as a rule, are the candidates for pastorates. One sees much more of them, however, than of pastors. They are tutors in houses of rank or wealth; sometimes for long periods of years. *Kandidaten*, indeed, are in Protestant Germany what Jesuits used to be in Catholic Europe: the upbringers of the influential manhood of the country. Their influence, however, does not compare with that exercised by the churchmen of Catholic persuasion. Prestige is wanting. Their background, so to speak, is dingy. And the contrast of this state with the brilliance of all things connected

with the army, together with the obvious subserviency of the Church to the secular government, as well as the infrequency of noblemen among clericals, all makes the established Church in Germany as unlike the establishment in England as can be imagined.

ONE night at Castle G., we had gathered after supper around the library table, the governess of the daughters and the tutor of the son of the house being of the circle. At eight o'clock, the two teachers retired. Whereon we repaired to the boudoir of the countess. During the hour following, before the children were sent to bed, both father and mother referred to *das Fraulein* and *der Kandidat* several times in tones of contempt or ridicule. I had observed the like carelessness among our relations, and, indeed, it seemed quite general. On finding myself alone with my friend, I felt moved to expostulate.

"Don't you think it may tend to lower the children's esteem, Frieda, if their instructors are so criticized and belittled? Really, it always strikes me as being such a mistake educationally."

My friend dropped her embroidery on her lap and laughed in merriment. "If you aren't the most naïve creature!" she exclaimed. "Why, that is just what we do it for. If we didn't, the children would conceive a genuine respect for such sort of people. The *Kandidat*, especially, is so learned and dignified he might easily impress Manfred if we did not look out."

"You silly," she added, indulgently. I was not a silly, however; I was a woman suddenly and greatly enlightened. I thought of notorious historical personages who had had the wisest men for their tutors; and how historians have marveled over the fact that it was in vain. Have historians failed to take into account the secret influence of family suggestions, that paralleled the instruction of the wise men? And we visitors abroad, who have wondered that dull, brutish squires and officers are able in all seriousness to regard scientists, artists and saints as their inferiors; we have known and guessed nothing of the chatting of parents and intimates; nor of the unscrupulous craftiness of caste that secures the honest services of worthy men, then nips in the bud the natural "genuine" respect that their worthiness may inspire!

When a *Kandidat* attains a pulpit at last and becomes a pastor,

it may be of a church of old endowment with a local patron to please; or a coveted city post; or in a village, where his familiar social intercourse will be with the worthy but incongruous families of the forester and manor superintendent. The village pastor is the ideal pastor, the only figure in the native Church that has afforded a theme for poets. If his wants are modest he may enjoy peace. His opposites are the ecclesiastics attached to the court churches of reigning princes. But the majority of pastors preach, minister rites and give instruction interminably, for little pay, in the midst of exceedingly populous parishes. Pastoral visiting is out of the question, and, indeed, it is not customary to consider such visiting commendable. And whether it is due to this want of personal acquaintance that disables pastors from exercising discrimination when dealing with applicants for their services, or whether it is just the infection of the all-pervading rigid, inexorable Prussian ways in institutions of the state, I could not decide; but the fact remains that the pastors often alienate the affection and reverence of the simple poor by making them pay cash for a pastoral service or do without churchly sanctification altogether.

A man servant of ours laid before me his wedding plans (I was to provide the wedding repast and asked for them), when I noticed an omission.

"But when is the ceremony in church to take place?" I asked.

A spasm of pain passed over his face and he swallowed a rising sob. "I went to the parsonage and saw Pastor S.," was his reply. "The Herr Pastor said he would marry us with other parties at eleven o'clock, and asked me for the fee. I told him I couldn't pay right now. The shop contract had taken every mark we had; I would pay the fee with the first money we took in. Herr Pastor said not to come there till I had the cash to pay."

**T**HE Government, furthermore, lowers the clergy in the esteem of men by obliging pastors to be partial in the administration of the laws of the church itself, as will be seen in the following instances. In that same town where the lieutenant-colonel gave orders for sermons "more patriotic," it happened that a lawyer, suddenly discovering himself to be bankrupt, shot himself. His young widow was of foreign birth and was frantic when she was informed by their pastor that a law of the Church would prevent her husband from re-

ceiving Christian burial. She appealed to clergymen round about; then, hearing that I, too, was a foreigner, she came to me, thinking that my rank could effect what was denied her. That her husband had committed the deed in a moment of mental shock and aberration, the doctor who had attended him was willing to testify. This seemed to afford a ground for persuasion, and I was about to drive to Pastor S. when my husband forbade my risking the humiliation of a rebuff. (This, by the way, presents an example of the dilemmas in which American women married into rank abroad often find themselves.) Meanwhile, the legal period having expired, the suicide had to be interred, and this office was being performed in silence when a colleague strode forward, made an address himself, and asked the few persons present to join him in a prayer.

**I**N Dresden, the year following, my husband entered my boudoir one noonday, carrying two volumes, bound in black cloth, new and fresh.

"I stopped in at Schmidt's" (the Mudie's of the city), he said, "where the head librarian handed me these books. They had just come from the publishers, but he was afraid to let them pass into circulation. He asked me to look into them and tell him if I think them safe. I wish you would read them and tell me what they are about."

That evening I took up the volumes, not to lay them aside again till early morning. This is what they disclosed. On the afternoon of a holiday a girl, walking with another on a crowded street, was accosted by an officer in an insulting manner. The frightened girl turned to her brother, who stepped forward from the side of his companion, exclaiming at the officer, who drew his sword and slashed his face. Onlookers interposed and the scene was ending with the arrest of the brother, when somebody mentioned his name. It was that of a powerful patrician family, and on hearing it the young officer repaired to his captain, and reported the affair. Captain B. then charged himself with the office of presenting his junior's apologies to the father of the girl. The old patrician informed him that what he proposed securing was something more than an apology.

Both sides prepared for a trial before a court-martial. At this trial other officers swore the brother had committed the first provocation and assault; only one gave facts as he had witnessed and heard them.

From that hour forth this witness,

a young lieutenant, was taboo; if he appeared in a room, his fellow officers moved away to the other end; if he sat down at a table, they rose from it. He was repeatedly overpassed in the routine of promotion. The lieutenant kept on demanding justice. He was a nuisance. Captain B., now Major B., finally secured his sentence to a fortress. When out of this imprisonment, the lieutenant took up the old refrain. Thereupon Major B. had him pronounced insane and incarcerated in an asylum; this time for a period so lengthy as to expel the lieutenant automatically from the king's service.

When released, the broken man became secretary to a manufacturer in distant Saxony. Here one day came a letter inscribed with the handwriting of Major B. The next morning following the manufacturer handed the ex-lieutenant his pay. The major represented the military; and what man can afford to defy that power?

Dismissed from the factory, he went to the Rhineland, into the office of a wine grower. Presently followed a notice to his employer that, unless the lieutenant was expelled from his service, no military casino in the Empire would retain his vintages on their wine lists. "What can I do?" exclaimed the old friend of the patrician father.

"Nothing," affirmed the lieutenant, who requested possession of the notice, and departed.

**M**EANWHILE, in the Reichstag, Eugene Richter had been presenting, year in and year out, a bill granting to men who had quit active service in the army the right to bring civil suit in civil courts. Hitherto, such right had been withheld; suits against military men, as well as suits among military men, having to be tried before courts martial, even after retirement of the parties involved. Then one day it happened that the Government, needing the votes of Richter's faction for a measure of its own, agreed to let thru his bill in exchange for them.

One of the results of this transaction in the Reichstag I held in my hand. The publication of the records was to be coincident with the beginning of a suit against Major B. in the public courts.

In the morning, my husband inquired about the books. I told him their contents.

"My God, this is dreadful," he said. "I shall go to Schmidt's immediately and tell him not to dare to put the books out." So the circulating library was duly warned. Nevertheless, my husband came in from town a few days after in much per-

turbation of mind. Colonel B., it transpired, had been summoned the day previous to Torgau. There a secret court martial was sitting, the members of which returned his salute in silence. The presiding officer laid a pistol upon the table around which they sat and said:

"Colonel B., we suppose that you know your duty."

"I do," said B., taking up the

weapon and putting it in his inner coat pocket.

"Farewell, comrades."

The company greeted him gravely. The Colonel walked to the station, boarded a train to Dresden, and on arriving at home, shot himself dead.

No scandal could now ensue and touch the reputation of the military. My husband evinced the greatest admiration for the unfortunate suicide.

"We Prussians must attend the funeral in due force," he commented.

"But—" I exclaimed, "Is there to be a funeral, a regular funeral?"

"Yes; on high military orders (*auf hohen militärische Befehl*)."

And there was.

The church in Germany is an adjunct of government, a servant of militarism. And the clergy are faithful, hard-working and unfree.

## A YOUNG TEACHER OF LIVE LAW

**S**HOULD banks be compelled to guarantee each other's deposits, with the state the guarantor of all? Should the price of fire insurance be regulated? Should the price of gasoline, eggs, or neckwear, as well as freight rates, be fixed by law? Should the government, either national or state, tell us whom we shall employ, how much we shall pay them, how long they must work, how many cubic feet of air we must provide for them, what we must furnish in the way of equipment, what prices we may ask for our product and what profit we may be permitted to earn? What of personal liberty, what of freedom of contract, what of "inexorable economic laws," what of "constitutional safeguards"?

These are live questions with scores of similar ones pressing at their heels. The creation of the new Federal Trade Commission and the contemplated increase in governmental regulation of and "interference" with business make highly pertinent a study of the principles underlying this progressive departure from the unrestrained individualism of a generation ago. Is the movement economically sound? Is it socially wise? Is it personally just? Is it constitutional?

To discuss these questions the Harvard Law School has called to its faculty Professor Felix Frankfurter. The choice is a happy one and shows a determination on the part of our educational institutions to furnish the instruction which rapidly changing times demand.

Born in Austria thirty-two years ago, Professor Frankfurter came to America at fourteen years of age, unable to read or write English. In the public schools of New York City, however, his unusual ability quickly made itself apparent

PROFESSOR FRANKFURTER OF HARVARD  
*Harris & Ewing*

and in only eight years he had shot thru the public educational system of New York City and graduated from the College of the City of New York with the degree of Bachelor of Arts, and with numerous academic honors and prizes.

He was graduated from the Harvard Law School with high honors in 1906 and promptly began to serve as an Assistant United States Attorney in New York City under Henry L. Stimson. When Mr. Stimson became Secretary of War, he made Mr. Frankfurter his counselor for the

Bureau of Insular Affairs, in which capacity he continued to serve under Secretary Garrison until he accepted the call of the Harvard Law School.

Professor Frankfurter's academic achievements and administrative successes, however, are but part of his equipment for the work now in hand. He is young, not old; dynamic, not static; progressive, not reactionary. Alertly searching truth, he is at once an ardent student and an inspiring teacher. His sympathies are wide and deep, but intelligent and illumined with sense. His versatility and extensive experience have expanded these sympathies in manifold directions and enable him to bring to his work the points of view of all kinds of men and women. His unusual capacity for hard work and his uncanny skill in maintaining efficiently a large number of interests will stand him in good stead as he enters a field where much more lies before than behind.

His zeal is tempered with humility; his brilliance is warmed with understanding; his horizons have been widened and his sense of values quickened by public service. The Harvard Law School, in calling him to its service, seems to have put the square peg into the square hole.

## THE ALASKA BOUNDARY QUESTION

THE SIXTH OF A SERIES OF EIGHT ARTICLES

BY PRESTON WILLIAM SLOSSON

ON THE HUNDRED YEARS OF PEACE AMONG ENGLISH SPEAKING PEOPLES

THE Territory of Alaska, which the United States bought from Russia in 1867 for seven million and two hundred thousand dollars, is larger than all our Atlantic states taken together and could be split into about ten countries each the size of England. When we bought Alaska everybody, including the Russians, believed that the price was a generous one. Alaska was regarded as a vast expanse of frozen land surrounded by frozen or at least ice-filled seas, worthless for farming and impossible for city life, a country no more valuable in itself than Greenland, northern Siberia or the land around the South Pole. This does not mean that the people of the United States were unwilling to buy it from Russia. We remembered the favor that we had received from that empire during our Civil War; we were willing to do a favor in return. Then, while Alaska itself was not believed to be very important, the fact that we owned it gave us a chance at the seal hunting in the Bering Sea which lies between it and Siberia. But the strongest argument at the time for buying Alaska was that this would remove another European country from America. We were glad to see Russia sell Alaska for the same reason that the Americans of Jefferson's day were glad to have France sell Louisiana; that it was safer for us to have great areas of unoccupied land in North America in our own hands rather than those of any powerful military nation of Europe, however friendly at the time. But for whatever reasons we bought the territory, it was one of the best bargains the nation ever made. If it were on sale today at the same price as in 1867 we could buy it over again every year with the gold found there, and still make a handsome profit of several millions of dollars a

year over and above that cost. Nor is gold the only value of the territory to us; there are mines also of silver, copper and coal. Alaska is rich as well in the three F's which make up most

STILL GOOD FRIENDS

THE BRITISH LION—No need of a war about a little matter of boundary.

THE AMERICAN EAGLE—No, indeed; not when you have one on wheels like this.

A cartoon, published in 1899 in the *Minneapolis Journal*, on the provisional boundary agreement which preceded the final settlement

Modified from Balch: *The Alaska-Canadian Frontier*

## THE DISPUTED ALASKA BOUNDARY

Note that the British line cuts across all the inlets. Thru the Portland Channel the Canadian claim was adopted by the boundary commissioners

of the wealth of northern countries the world over:—furs, fish and forests. Even farming and stock-raising is now possible, and there is water power enough for many factories. What Alaska most needs is a railroad system to carry its products cheaply to other parts of the world.

We made, however, one mistake in buying Alaska, that is we did not take care to find out exactly how much territory the word covered. Since Canada is the eastern neighbor of the territory, this uncertainty caused another of our many boundary disputes with Canada, a dispute that might easily have meant war but for the good feeling between Great Britain and the United States at the time. If you look at the map, you will see that the mainland of Alaska has two parts. One of these is a vast, compact area bounded on the east by a straight line reaching from Mount Saint Elias northward to the Arctic Ocean. The other is a narrow strip of land extending southeast along the Pacific Coast and with a very irregular border facing Canada. The dispute was about this

part of the frontier. It had been marked out by agreement with Great Britain in 1825, when very little was known about the country. When we bought Alaska of course we also bought all of the Russian claims, including the uncertain boundary with Canada, and the treaty of 1867 simply repeated the terms of that of 1825. The boundary was to begin at the historic parallel of fifty-four degrees and forty minutes north (which marked the northern limit of the "Oregon country" so long in dispute between the United States and Great Britain). Starting there the line went thru Portland channel and then ran parallel to the windings of the coast, following the summits of the mountains except where there was

no chain of mountains within thirty miles of it; which distance was in that case to mark the limit of the American strip of land. A range of mountains following the windings of the coast was shown on the maps of the time, but unfortunately it did not really exist. Instead of a continuous range there were single peaks, groups of mountains and spaces of high ground, often more than thirty miles from the coast and rarely parallel to it. So the Americans claimed that since there was no definite chain of mountains the boundary should be drawn from start to finish at the distance of thirty miles from the coast. The British insisted that the frontier should follow a line formed by mountain groups near the coast and the highest levels of ground between them where mountains were lacking. Another difficulty came in the phrase "windings of the coast." The Americans held that these included every inlet of salt water; the British that the words meant only the broadest bays and that everywhere else the line should be drawn from one headland to another. Even the "channel called Portland channel" was open to question, for more than one inlet claimed the name.

It seems incredible that a boundary dispute over a rocky ribbon of land between Canada and Alaska, small in area and almost unsettled, should have brought two friendly nations to the verge of war. That is, it seems incredible until you look twice at the map. It was not the size of this disputed strip of territory which made it so important. It was the fact that if the American claim were allowed Canada would have no outlet on the Pacific north of the parallel of "fifty-four forty," while the line proposed by the British would cut across several harbors and inlets, giving northern Canada access to the open sea without passing thru American territory. This fact made the British, and especially the native Canadians, very greatly interested in the southeastern boundary of Alaska. But so long as northern Canada remained a mere wilderness of snow and forest the lack of a north-western seaport was not a serious injury to the prosperity of the Dominion. The boundary dispute only rose from the position of a long-unsettled and unsettling question to a live issue of practical politics when gold was discovered in the Klondike. The Klondike is a small region on the Yukon River just beyond the Alaska boundary, where gold is found in even richer deposits than in Alaska itself. Gold was discovered here about 1896 and miners flocked in from all over the world as they had

Paul Thompson

## LORD ALVERSTONE

Lord Chief Justice of England from 1900 to 1913. His vote in favor of the American claims decided the action of the boundary tribunal

rushed to California in 1849 when gold was first found there. In a few years the wilderness of the upper Yukon River became a densely peopled mining settlement. The only drawback to the great discovery from the Canadian point of view was the difficulty of getting the gold from the desolate north back to civilization. The easiest and cheapest route at the time was to carry it south to the "Lynn Canal," an inlet on the Pacific coast, and thence transport it by water to any part of western Canada or the western coast of the United States. But the Lynn Canal was within the strip of land in dispute between the United States and Canada. To find a purely Canadian port the gold would have to be carried overland some three hundred miles.

A commission of British and American representatives met in 1898 at Quebec, but could not come to an agreement as to the meaning of the Russian treaty of 1825 on which the American claims rested. Instead of settling the question, the commissioners drew a compromise line between the boundaries claimed by the United States and by Canada.

## REFERENCES

A very good brief account of the work of the Boundary Commission of 1903 is in J. H. Latané's *America as a World Power* (Hart's American Nation series), pages 192-203. An equally compact account of the arbitration is given in W. A. Dunning's *The British Empire and the United States*, pages 326-30; 332-33. *The Alaska Frontier*, by T. W. Balch, and *The Alaska Boundary*, by George Davidson, review the history of the dispute, but these, as well as most of the other special studies of the question, are strongly partizan. W. R. Shepherd's *Historical Atlas* gives a small map of the British and American claims and the boundary as finally decided on page 212.

This compromise line was to stand only until the true boundary could be settled, but it was necessary to make some sort of arrangement in the meantime. It was not till 1903 that the question was finally settled, when a conference of three Americans and three British representatives met at London to debate all the points at issue.

The three Americans were Elihu Root, Secretary of War; Senator Henry Cabot Lodge and ex-Senator George Turner. The British representatives included two Canadians, Sir Louis Jetté and Allen B. Aylesworth, and the Lord Chief Justice of England, Lord Alverstone. Since the commission stood three to three, there could have been no decision unless one side or the other would yield most of its claim. The two Canadians stood out against the three Americans to the end, but Lord Alverstone, an "impartial judge" who deserved the name, took the side of the Americans on the most important question of all: the question as to whether Canada had any right to a Pacific port north of "fifty-four forty."

The decision, by a vote of four to two, gave the United States complete control of the disputed seacoast and all the bays and channels opening into it. Yet the decision was not entirely one-sided. The boundary, as determined, did not run thirty miles from the coast but along a line drawn thru the summits of the chief mountain peaks near the coast, which were declared to form a "chain of mountains" within the meaning of the treaty. By this division Canada got about a third of the area in dispute and the "Portland channel" chosen as the southern end of the Alaskan strip was the one claimed by the British. But Canadian public opinion was not content with the result and for several years many Canadians were angry with Lord Alverstone, accusing him of giving up the rights of Canada in order to gain favor with the United States. We cannot blame the Canadians for being "more British than the British" where their own interests are concerned, for it is always easier to be fair at a distance than where the decision directly affects one's pocketbook. What is worth remembering about the Alaska boundary decision is, firstly, that our Government was willing to risk land which we had considered our own for many years in order to uphold the principle of arbitration, and that we lost none of our "vital interests" in doing so; secondly, that the decision in our favor was due above all to the fair-mindedness of an English chief justice.

# THE ROAD TO EFFICIENCY

## FIFTH ARTICLE IN THE SERIES ON EFFICIENCY AND LIFE

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

**A**LL failure is a form of stupidity. The cure for stupidity is study. Study prevents failures. Unpreparedness and misfitness are the two great handicaps in the business world today. These would both be removed by study.

Study maps the road to efficiency. Work carries one to the goal.

By study I do not mean, however, the mental process of a bookish man, by an oracular method, in a sequestered place. To study a book without knowing the why and how and whence and whither of the matter is like sitting down, blindfolded, to a dinner in a strange restaurant, then dipping your spoon into any and all dishes with no regard save to keep on dipping. You are likely to mix olives and ice-cream, on your mental menu. Very studious persons often look as if they had just eaten olives and ice-cream together.

Brain-worship is the fetish and curse of most of our educational institutions. The aspirations, emotions and instincts are neglected, while the mere corrugations of a cerebrum are idolized.

I know a shrewd business man who never sets foot on a college campus—he will walk a mile to go around it. He says that the aimlessness of college students irritates him beyond words; among them he would waste so much energy in flaying the school system that his work would suffer the next day.

The gentleman is not entirely wrong. I spent eight years in college walls—first as student, afterward as teacher. The lessons gained were invaluable. Yet, having studied books for eight years, then having studied life for sixteen years, I am convinced that the majority of college students never learn how to study, and that fully half the time is wasted. No one is to blame; we simply have not learned what study is for.

In a New Jersey town a man was arrested lately for begging on the street. He had no money, no home, no friends who would help him. He could speak ten languages—and he could not earn the wages of a messenger boy. He was much grieved because the erudition he possessed

was no protection from starving; and the fact of his arrest was the crowning sorrow of his bleak, forlorn existence. An hour devoted to the measurement by efficiency standards of the course of study he had taken would have prevented this man's pitiful failure.

But I am not a materialist, I do not put commercial values first. Therefore I would have each man or woman taking up the study of efficiency analyze the motives, determine the aims, and fix the principles governing the study. The mental, social, moral and spiritual advantages outweigh the financial reward. Efficiency is not a money-making device. It prevents waste, but only by teaching a man how to think. It improves income, but only by increasing quantity and quality of output. A clear view of the benefits to be derived must precede a rational course of study. I have spent fifteen years in study, research and experiment along efficiency lines. The chief reasons for this prolonged endeavor have been as follows:

Efficiency helps us do and have and be everything worth while. Being and having both follow doing. The largest factor in doing our best is doing our most. Hundreds of progressive teachers and ministers are asking how to use the principles and methods of scientific management in schools, churches, and other philanthropic institutions. No further proof is needed of the moral value of efficiency study.

Efficiency shows us what we can do best. The majority of people never learn this lesson. It cost me thousands of dollars, and ten years of most arduous, bitter experience after I left college. Such a waste is a crime, and the only prevention lies in systematic study of one's nature, talents and opportunities.

Efficiency adds to our productivity, hence to our income; it helps to cure whatever ails us—whether it be poverty, pessimism, vice, disease, worry, failure, grief; it ensures self-command and therefore self-respect; it promotes human service by inculcating a spirit of understanding and coöperation; it prepares the way for

life's realities—fellowship, culture, idealism, faith, growth, truth. I want efficiency, to give me freedom for greater, better things than efficiency.

The word "study" is often misconstrued. A real student is not a pale, sad person with a heart of stone, head of wood, and glassy eyes glued on the pages of a book. Nor is study the memorizing and repeating of disjointed facts in an automatic, paralytic way! Study is the focus of heart, mind and body on a practical method of attaining a specified ambition. Of all the different factors in scientific study, book-learning is of least importance. I mention this fact here in order to prevent the almost universal mistake of trying to depend on books for wisdom. A student's first move should be not to hunt a book but to hunt a backbone. Study means more than the average student ever dreamed of!

Study means the faith to believe that the man who teaches you is competent, the method practical, the result beneficial, the principle ideal. Study means the will to do all that any man ever did for the accomplishment of a similar purpose. Study means the power to observe the successes and failures around you, in your line of endeavor, and to apply the lessons to yourself. Study means the calmness to reason as to whether teacher and text may be right or wrong—and the courage to think for yourself, in spite of prestige or precedent. Study means the energy to attempt whatever you are prompted to undertake, and to follow a regular or an irregular method, whichever seems best. Study means the caution to safeguard your own errors, by asking your teacher and friends what your weak points are, and by stopping to think before you act. Study means the honesty and bravery to learn by your mistakes, and to hold yourself accountable for such temporary failure and misfortune as we all have to meet if we get anywhere. Study means the persistence to overcome ten thousand obstacles—and the faith to smile at the ten-thousand-and-first. Study means the wisdom to emulate the leaders in

your chosen field, and the modesty to remain a student, no matter what your eminence may be. Study means the aspiration to attain hights of culture and character, not measured by money, and not reached till your money-making period is safely past.

In efficiency study, we have two primary divisions, correlated but distinct; the personal phase, which is general and fundamental, and the technical or vocational, which applies to our specific trade or profession. These are related as the trunk of a tree to the branches; human nature being the trunk, and our various occupations being the branches. To study the mechanical side of a business before mastering the physical, mental, social and spiritual sides would be as foolish as trying to climb a cherry tree by jumping at a branch of it. The coördination of a man's brain, body, heart and soul, and their concentration on his work, normally precede the choice and use of any tool, method or equipment required for the work.

Let us take, for example, the case of a man sawing wood, and observe the elements that make him efficient or otherwise.

First, we study the tool, then we

study the man's way of employing the tool. There are at least ten constituents to be found in a reliable saw: (1) the size, weight and function must be appropriate; (2) the edge must be keen; (3) the steel must be of fine quality, well tempered; (4) the handle smooth, firm and properly shaped; (5) the blade and handle scientifically balanced; (6) the right oil or grease available for keeping the saw bright; (7) a good sharpening instrument handy; (8) a receptacle near, high and dry, and safely enclosed; (9) a guarantee furnished by the maker as to the flawless character of the tool; (10) a set of complete instructions on the use and care of the saw, given to the purchaser without fail. Nearly every home contains a kit of tools; every home was built from a long list of materials; every business or profession calls for a certain group of utensils; but how many people ever gave an hour of scientific study to this matter of equipment? And nothing is needed but a little common sense.

Now let us study the man himself. We find a hundred variants, depending on the personal equation, and all as important as the nature of the

saw. If he is weak in the sense of calculation, he will saw crooked—and lose his job as a carpenter. If he is of a nervous temperament, he will saw by jerks; and if he is poetic besides, he will saw his thumb instead of the board. If he has not eaten for several days, he lacks the energy to saw wood manfully; but, if he has just eaten a table d'hôte dinner, his strength has gone to his stomach and all he can do is breathe. (This is a purely hypothetical case—any man with so little sense as to eat a full table d'hôte dinner cannot be safely trusted with a saw.)

If he wears a tight collar, he may precipitate vertigo; and if he also wears scratchy flannel underclothes, his volubility will sound like vertigo and black fever mixt. If he takes alcohols or other stimulants or drugs, and attempts to be a sawyer, he violates the "Safety First" principle, now becoming cardinal thruout the trade world. If last night he was "out with the boys," he lacks the clear eye, steady nerve and store of vitality needed in the efficient sawyer of wood. If he has just passed thru a great sorrow, he is numb—in brain, heart and hand. If he hates the work, or begrudges the "boss," or belittles the

EFFICIENCY STUDY LIST

(FOR SELF-IMPROVEMENT AND SELF-ADVANCEMENT)

DIRECTIONS. If you are well informed, by personal inquiry or descriptive literature, on a given subject for study, write 5 in the blank space at the right. If you have specialized on any subject and feel that you are better informed than the average, give yourself a higher grade, with 10 as a theoretical maximum, which, of course, you have not attained. If you have ignored any field of study mark yourself zero in that field.

1. Study of books, on hygiene, food science, baths, clothing and exercize, finance, economy, vocation, scientific management, household engineering, etc.....

.....
2. Study of organizations and institutions engaged in efficiency promotion or extension, and offering data or hints on the subject.....

.....
3. Study of magazines, (a) on self-improvement in general, (b) on the technical or vocational side of your work.....

.....
4. Study of biographies, of leaders, past and present, in your line of endeavor.....

.....
5. Study of courses in your business or profession, or in vital aids to personal efficiency, whose value has been definitely proven.....

.....
6. Study of men, whether employer, employees, clients, customers or business associates, to locate and emulate the superior excellence of each.....

.....
7. Study of materials, tools and facilities, whether yours or your company's, with a view to increase of quality and speed, and decrease of labor and cost.....

.....
8. Study of aims, principles and policies forming the establishment where you work, especially in regard to your own future, its professional, industrial, and financial outlook.....

.....
9. Study of yourself, your greatest ambition or aspiration, your capacities and drawbacks, your past and present advancement, your technical skill and personal character.....

.....
10. Study of psychological principles that help you to develop the special powers of mind required in your work .....

.....

NOTE. This is merely a general preparatory outline—not a final scheme of study. The author will be glad to suggest books, institutions, and other aids to efficiency study on application to The Independent Efficiency Service.

Total equals your grade in efficiency study \_\_\_\_\_

## SUCCESSFUL MEN HAVE THE POWER OF CONVINCING SPEECH

Salesmen, lawyers, professional or business men—in every line of endeavor—lift themselves above the ordinary by their ability to express themselves *forcefully* and *intelligently*—by their power to command and hold attention either by the spoken or written word. In the wonderfully interesting volumes of

## MODERN ELOQUENCE

you'll find countless specimens of the finest examples of English expression in existence—models of style and rhetoric that will enable you to acquire a splendid command of language, to increase your vocabulary, to express yourself clearly and interestingly both in business and social circles. The most famous efforts of the world's greatest speakers, the brightest thoughts, the wittiest sayings of the great minds of the Nineteenth Century—epoch-making speeches that moved not only audiences but Nations are all here just as they were delivered by these distinguished speakers.

If you are ever asked to write an address or to make a speech you will find these volumes the greatest help imaginable, because they contain nearly every variety of good pattern for the various classes of oratory. Many an inexperienced banquet chairman, toastmaster or honored guest, casting helplessly about him for a good story or appropriate remarks, has found here just the inspiration needed.

### A WONDERFUL BARGAIN

at an insignificant price that you can easily afford to pay. Send us the attached coupon by return mail and we will name this price and tell you how you can get the books on easy monthly payments. We will also send you a beautiful descriptive booklet and our

### BOOK OF FAMOUS SPEECHES—FREE

Containing specimen addresses by Woodrow Wilson, Champ Clark, Thomas Huxley, Russell Conwell, Lord Kitchener, William Jennings Bryan, Henry M. Stanley, Abraham Lincoln, Mark Twain, Robert Ingersoll, Wendell Phillips, etc. Send the coupon places you under no obligation to buy. Tear it off and send it NOW. Don't wait. The offer is limited.

### 10 Large, Richly Bound Volumes Containing:

**300 After-Dinner Speeches** by Joseph H. Choate, Benjamin Disraeli, James G. Blaine, Wm. M. Everts, John Hay, Oliver Wendell Holmes, Sir Henry Irving, Chauncey M. Depew, Henry Ward Beecher, Mark Twain, Henry W. Grady, Joseph Jefferson, Robt. G. Ingersoll, Seth Low, Albert J. Beveridge, Woodrow Wilson, etc.

#### 150 Great Addresses

by Lyman Abbott, Charles Dudley Warner, William Allen Bryant, Rufus Choate, Theodore Roosevelt, Arthur J. Balfour, Jonathan P. Dolliver, Edward Eggleston, William E. Gladstone, Charles Francis Adams, John L. Spaulding, Joseph Chamberlain, Grover Cleveland, Fisher Ames, Lawrence Barrett,

Henry Drummond, Hamilton Wright Mabie, William Jennings Bryan, etc.

#### 60 Classic and Popular Lectures

by Charles A. Dana, Robt. J. Burdette, Russell H. Conwell, Canon Farrar, John B. Gough, Andrew Lang, Wendell Phillips, Josh Billings, John Tyndall, Geo. William Curtis, Artemus Ward, Paul DuChaillu, John B. Gordon, Newell Dwight Hillis, John Morley, John Ruskin, Henry M. Stanley, Wu Ting Fang, etc.

#### 2000 Short Stories and Anecdotes

by Mark Twain, Chauncey M. Depew, Horace Porter, Champ Clark, Joseph H. Choate, John M. Allen, etc.

Name.....

Address.....

pay, he will skimp on time or speed or attention. If his health is below normal, his work will slump, in both character and amount. Briefly, any condition of the man which affects unfavorably the mental, physical, emotional or spiritual energies of the man reacts on his work, the measure of such reaction being incalculable thruout every large industry. Would it not seem that such matters are as worthy of study as rivers in Africa or dates from antiquity?

Another basic item is that of expense. For illustration, take the matter of a cooking-stove; the original price, the cost of fuel, and the charges for upkeep. Not less than eight different kinds of heat have been used in America for cooking purposes—coal, wood, coke, oil, gas, electricity, denatured alcohol (liquid), denatured alcohol (solid). How many wives and sweethearts, planning their first home, consider the choice of fuel as of great importance, learn which kinds are available, desirable and economical—then base their cook-stove squarely on the result? Is it not the usual custom for a housewife to inherit a coal-stove from her ancestors, or accept a gas-stove from her architect, being guiltless of thought in either case? Yet, in a large household, the variation in cost of heat may run as high as \$50 a year, and the time expended in managing the heat may be 100 hours a year more than it should. There are women who have learned, in 100 hours, to become self-supporting, and to earn \$500 and upwards a year, instead of losing \$50 and 100 hours. The heat factor is but one of many, all demanding equal application of science and system.

Other essentials are time-study and motion-study. Here is an example. I knew a gentleman, of precise habit and punctilious mind, who would open his morning mail somewhat in this fashion: He would first arrange the letters in a beautiful geometrical pile, all facing to the front. Then he would take a pair of shears and slowly detach a minute portion of the envelope. Then he would read the letter, prepare the answer in his mind, put the letter back in the envelope, and the envelope in a desk-basket with an artistic label. Then, having treated each communication thus, he would arrange and proceed with other work. At 4 p. m. he would rescue the pile, ruminate on the letters and call his stenographer. By this time she was thoroly tired and had lost her dictation-speed, while he was irritable and had forgotten what he wanted to say. To get the mail out, she had to stay overtime every night, and delayed answers to correspondents were of chronic regularity.

Efficiency revolutionized this man's method. He bought a letter-opening machine; told his secretary to operate it—which she did in five minutes every morning; had her pin each envelope to the back of each letter, and sort the letters by subjects. He worked out a series of form-replies, put a numeral on each, and dictated a large percentage of his correspondence by mentioning a series of numbers. He changed

the dictation-hour to the morning, when he and the stenographer were both fresh and bright. And he now saves from thirty to forty minutes a day by such reform. His time is worth probably \$10 an hour. On this one item, efficiency study has been worth at least \$30 a week to this one man. The principle avails for every man—whether his work be writing sermons or digging ditches. We never happen on the best, quickest and easiest way of doing anything; we have to study it out.

Hundreds of people, from housemaids and farm boys to government officials and college presidents, have asked the writer for concrete suggestions on self-training and self-advancement. There are at least ten lines of thought and action leading to personal efficiency. Follow as many as you can.

1. Study books on health, diet, baths, exercise, economy, finance, vocation, scientific management, household engineering, and every other subject relating to efficiency. Your city library should contain these books. Look there first.

2. Study organizations and institutions that are recognized leaders in efficiency work. You can do this, no matter if you live on a rural delivery route, twenty miles from the nearest village. A number of societies, clubs and leagues aiming at efficiency will provide you with literature by mail, delivering the benefits of membership at your door.

3. Study magazines on the general topic of self-discovery and self-improvement, also on the technical phases of your work. Every ambitious man or woman should take regularly at least one such magazine on the personal side, and one on the professional.

4. Study biographies of the individuals who have won a high place in your field of work. The stories of their lives you can find in books; in current magazines; in the journals devoted to business, education, art, music, religion, or almost any other occupation. The stories of great men and women now living are far more inspiring than those of the past. History is only biography embalmed. There are, moreover, certain names that have no predecessors or prototypes in history. Helen Keller, Jane Addams, Thomas A. Edison, Luther Burbank, Alexis Carrel, Henry Ford, Andrew Carnegie, John D. Rockefeller, Ben B. Lindsey; these are the first of their kind. Who are the men or women at the head of your profession? Learn how they reached the eminence—and resolve to go as far.

5. Study courses, residence, or mail, that offer real instruction and coöperation for the achievement of your purpose. But apply, first, every possible test for discovering the genuineness, authority and practicality of any course given by mail—some are useless and some worse than useless.

6. Study men, around you, above and below you, to observe how they surpass you in the way of getting things done. Your least paid clerk has something to teach you, in manner, method, nature or character. And if you are an official

in a corporation or institution, the president is worth a library to you, as a focus of observation.

7. Study *materials, tools and facilities*, beginning with those required in your own work and proceeding till your analysis covers the whole establishment. Often a poorly-paid worker has risen to power and affluence by detecting the leaks in expenditure caused by inadequate, unreliable or overcostly methods of equipment.

8. Study the *aims, principles and policies* of the concern with which you are identified. Look ahead five or ten years, and see what the prospects are for your advancement. At least in spirit, the directors want you for a partner, or they don't. If they do, get ready for a partnership; if they don't, get out.

9. Study *yourself*, applying all the known tests of vocational guidance, experimental psychology and character analysis. You can afford to drudge for years if you are on the road to destiny; but under any other circumstances, drudgery is a crime.

10. Study *psychology* and systems of specialized mind-culture, which tend to build up the mental and moral qualities in efficiency; such as will-power, concentration, memory, optimism, enthusiasm, energy, economy, originality, faith, foresight, persistence. Each trade and profession demands the prompt, clear and continual use of certain groups of brain-cells, and the men who are preëminently successful have merely developed a system of "intensive farming" for that particular brain tract where they sow their work-efforts and industrial ideas. The brain, like the soil, can be made to double its output by regular use of the right methods.

Have you exhausted these ten means of efficiency study? If not, you will find their investigation a source of immediate interest and of ultimate reward—mental, social, financial and spiritual. Nothing in the world can dislodge a mind firmly set in the place of its power. To find and occupy this place should be the first aim of study.

Harduppe—Why so despondent?

Flubbub—Oh, I can't seem to get out of debt.

Harduppe—Gee! That's nothing. I can't even get in.—*Life*.

"Mr. Murphy asked what would be the cost of doing these works. Surveyor—I cannot say vbqkqis shr mc."—*Wicklow Newsletter*.

Neither can we, but we should never have thought of mentioning it to Mr. Murphy at this juncture.—*Punch*.

A well-known judge dined recently at a West End hotel, where the man who takes care of the hats is celebrated for his memory about the ownership of headgear.

"How do you know that is my hat?" the judge asked him, as his silk hat was presented to him.

"I don't know it, sir," said the man.

"Then why do you give it to me?" insisted the bewildered judge.

"Because you gave it to me, sir," replied the man, without moving a muscle of his face.—*Tit-Bits*.

Ichabod—Father, why do the Chinese believe in ancestor worship?

Father—I presume, my son, because they have no family photograph albums.—*Puck*.

## Men's Shirts Custom Made at McCutcheon's

Our complete assortment of foreign fabrics, suitable for shirts and pajamas, made to measure, is now on hand.

Samples of these materials will be furnished upon demand, and when requested, we will send a salesman to take measurements and show samples anywhere in the metropolitan district.

We can copy accurately any garment which has been found to fit satisfactorily.

Our Men's Furnishing Department carries a complete assortment of the better grade of Men's Furnishings and gives to each patron the fullest measure of personal attention. Prices moderate.

*Mail orders receive our prompt attention.*

**Fifth Ave., 34th and 33d Streets, N. Y.**

## Can You Do What 4100 Others Have Done?

Can you succeed where 4100 men from every walk in life—from every state in the Union, are making big money in a new business?

These are only three AVERAGE CASES—not the most remarkable examples by any means—taken from our new TESTIMONY BOOK. This book contains letters from over a hundred, and there are thirty-five times that many more men who have gained independence for themselves through our course of instructions.

### THE COLLECTION BUSINESS

is a money maker for any ambitious man. You do business with the largest and most successful business houses—they are glad to get the kind of service we fit you to give, and all have plenty of business for the man who can deliver the goods.

We teach you the secrets of getting the money. We do more—we offer you the aid of our established, trained graduates who form the Co-Operative Bureau for exchange of business. They will help you—you will help them.

### Will You Investigate?

Will you let us lay before you the full, comprehensive and convincing evidence—the facts and figures showing what hundreds have done—are doing—what YOU too, can do?

Will you use this coupon today—NOW? The results of your investigation will please—will astonish—will certainly convince you.

**W. A. SHRYER, President**  
AMERICAN COLLECTION SERVICE  
649 State Street, Detroit, Michigan

### \$1,721.00 One Month's Commissions

"My commissions average about \$270.00 weekly. The largest month's collections were \$4,700.00, with commissions of \$1,721.00. I started with nothing but your lessons, a rented typewriter, a very small office and a great determination to make good—and I have."—C. J. Woodman, New Haven, Conn.

### \$50,000 Yearly Business

"Started agency in spare time, but growth soon compelled exclusive attention. Have now 700 clients. Collections for year will aggregate \$50,000. Average commissions 30%. Net profits of last month's business \$854.65."—E. M. Stanley, Los Angeles, Cal.

### \$263.00 Profit First Month Spare Time

"First month following enrollment profits were \$263. This was done in spare time and evenings. Business has increased tremendously and am now devoting full time. Give all the credit to Mr. Shryer's system. It is worth ten times the cost."—A. Philip Hyde, Holyoke, Mass.

## The New Books

### BOOKS FOR THE TEACHER

Dr. J. Welton, professor of education at the University of Leeds, discusses in *What Do We Mean by Education?*<sup>1</sup> its aim in a philosophical manner and reaches a generalization that will not be acceptable to all educators. Welton says that personality is the whole man in all activities, in all relations and in all aspirations. These aspects may be homologized to the classical "physical, mental and moral" but are not exactly the same. Thus, Welton accepts the existing stratification of British society as an ultimate fact of human relations, and accordingly concludes that we must have class schools. An American writer, Hollister,<sup>2</sup> recognizes differences in individual capacities, and therefore calls for differentiated types of instruction for children after the sixth grade, but would apparently not establish one school for the sons of professional men and another for the sons of mechanics. Welton's three aspects of complete personality may be better compared to Holmes' statement of the aims of education as the "harmonious development of the individual, communal and ideal self." Holmes' book of a few years ago, *What Is and What Might Be*, contrasted the deadening effects of the prevailing education with the methods and results of a teacher pursuing methods similar in many ways to those of Dr. Montessori. This book drew forth a great deal of adverse criticism, mostly based on a failure to grasp the philosophy behind it; and the author elaborates in his new book, with an excellent analysis of the principles of Herbart, and a good running exposition of the practical implications of what has been loosely called the "doctrine of interest" in education. The main purpose of his book is concerned, as the title indicates, with administrative problems, and not with the philosophy of the thing.

The methods of Dr. Montessori continue to be eulogized and criticized. Carolyn Sherwin Bailey<sup>4</sup> reprints a dozen sentimental stories of children who attained to grace under the influence of the Montessori schools, with a sketch of the Dotoressa, and some interesting pictures of children at work and at play. She does not attempt to analyze the results, or to evaluate the methods.

Dr. Jacoby, a recognized authority on neurology, gives a condensed summary of the work of Seguin, Itard, Montessori and others who labored with feeble-minded children in the attempt to educate them, and who drew from these efforts guidance in the treat-

## GIVE YOUR BOY A CHANCE

You want your boy to read good literature. Every thoughtful mother and father wishes the same thing. Then send him every week a copy of *The Independent*. You will find it will stimulate both his mind and his imagination. It will help to crowd out what you don't want him to read. Take out a subscription for him now. It is the best way.

*The Independent*

THE INDISPENSABLE WEEKLY ILLUSTRATED NEWSPAPER

ment of normal children.<sup>5</sup> The discussion is based on a frank assumption of the psycho-physical parallelism, and indicates the functions of specially trained psychologists and physicians in the education of children that show various degrees of abnormality.

What is at present the best critical summary of the principles developed by Dr. Montessori is furnished by Professor Kilpatrick of Teachers College.<sup>6</sup> The limitations of the philosophy and its possibilities are tersely set forth, and the hour the little book takes for its reading would be well spent. That Dr. Montessori can accomplish valuable results without being able to formulate a scientific theory in explanation of her methods, we can well understand.

Two examples of successful educators who have not produced convincing accounts of their work come to our notice. Superintendent Kennedy, who has had charge of the schools of Batavia, New York, for twenty-five years, developed some sixteen years ago a system of individual instruction for the pupils in the classes. The system has received considerable attention from educators everywhere, and has been widely imitated.<sup>7</sup> In Batavia it has produced good results, and it has helped to convince the world that equal opportunities are not afforded the children by uniform or identical opportunities.

A system of training for children under school age is offered by Mr. Hillier, head master of the Calvert School, in Maryland.<sup>8</sup> In attempting to avoid sentimentality, effeminacy, emotionalism, mysticism, exaggeration of the trivial and other faults common in child training, the author has slipped into others, perhaps as serious. He has set forth to cultivate the general faculties that the psychologists tell us are not there. Nevertheless, the book contains a mass of suggestions that ought to be helpful in the hands of a good teacher.

The play instinct of children is treated from two entirely different points of view in two recent books. Dr. Elinora Whitman Curtis<sup>9</sup> shows how the "burglarizing and trainwrecking" of small boys, and the other activities that personify the notions that they pick up can be utilized for educational purposes. Dr. Henry S. Curtis gives us a systematic psychological and sociological study of the problem of play, and shows the application of experiences and principles to the practical problem of play in relation to school, home and vacation.<sup>10</sup> Of special interest and value are the accounts of experiments that have been made to utilize the play instinct in promoting the education of children.

The underlying science that must in the end determine all our methods, and to some extent influence our aims, is the science of "educational psychology." The latest word in a rapidly growing body of tested doctrine is Professor Thorndike's three large volumes dealing respectively with *The Original Nature of Man*, *The Psychology of Learning*, and *Individual Differences and Their Causes*. The essentials of this work have been brought together in a

## If You Want Your Letters to "Get the Business"

THERE'S only one way to make letters sell goods—collect money—speed up road men—to do those thousand and one things that only letters can do. Make your letters impress a man at a glance as worth reading. Then you've got a big lead over "the other fellow" who may think that most anything will do to write letters on—or who doesn't think at all. Make your business stationery tell a story of stability, integrity, pride in the house, assurance of good value. That's the way to make your letters get the business.

To make this impression you need substantial, impressive stationery on Construction Bond. Insist upon Construction Bond because it is your kind of paper—as fine as any business paper can afford to be—at a price *you* can afford to pay. Construction Bond is sold only in large quantities *direct* to responsible printers and lithographers in the 203 principal cities of the United States. It carries no jobber's profit, no expense of handling small lots, no losses on questionable accounts. No wonder it offers better value. And since only the best manufacturing stationers handle Construction Bond the result for you is always fine business stationery on a paper of manifest quality, all at a moderate price.

Let us send you the names of printers and lithographers in your locality from whom you can secure Construction Bond.

## Use Construction Bond

*Construction Bond is made in white and eight attractive colors, in various finishes, with envelopes to match.*

# THE TURMOIL

By Booth Tarkington

"I want to be the first to register my opinion that Booth Tarkington's new novel, 'The Turmoil,' is the biggest thing that has been done in fiction during the last ten years. 'The Turmoil' will stand the test of a great book. The 'Tired Business Man' will revel in it. The school-girl will find it the most charming love story she has read in months. The reader of literary taste has waiting for him a book of rare truth and strength."—ALBERT FREDERICK WILSON, New York University. *Ill'd.* \$1.35 net.

## THE LONE STAR RANGER

By Zane Grey

"It is a story of such intense interest that the reader is swept along from page to page until he fairly lives through each desperate adventure in which 'Buck' participates. It is one of the most fascinating of all Zane Grey's tales."—*Boston Globe*.

"There's a punch in this yarn that makes it one of Grey's best."—*Portland Telegram*.

*Frontispiece.* \$1.35 net

## JOHNNY APPLESEED

By Eleanor Atkinson

A sympathetic interpretation of a real character into whose unusual and quaint personality the author has succeeded in penetrating as she did into the dog nature of the real "Greyfriars Bobby." All the romance of our early frontier life fills the pages of the book.

*Illustrated.* \$1.25 net

## MOONGLADE

By the Author of "The Martyrdom of an Empress"

Brittany and Russia—the two countries the author knows so well—form the picturesque settings of this cosmopolitan novel of aristocratic life. All those readers who are familiar with the other books of this author will find in this new story the same colorful descriptions of ancient castles and modern palaces, of loyal servitors and graceful customs.

*Frontispiece.* \$1.35 net

## A-B-C OF GARDENING

By Eben E. Rexford

This book on gardening contains all the information necessary for starting and keeping in order an outdoor flower-garden or indoor plants. The instructions are so simple that no reader who follows them could fail to make his garden a success. Here is the manual for those who sigh to have growing things about, but who are bewildered by the numberless directions of so many volumes on the subject.

*16mo.* 50 cents net

## THE KEY TO THE LAND

By Frederick F. Rockwell

Full of practical information, gained by actual experience, is this book which recounts the "making good" of a city man in the country. While the healthful life and the pleasure of a dweller in the fields and woods are not overlooked, it is the economic feature which is the keynote of the book. The author has preferred to record in fictional form the actual happenings he recounts.

*Frontispiece.* \$1.00 net

# WHEN A MAN COMES TO HIMSELF

By Woodrow Wilson

The distinguished author voices his belief that every man, like Kipling's ship, finds himself some day. Live by enthusiasm, he urges; don't be driven by necessity. "Necessity," the author says, "carries a whip," but "enthusiasm sets spirits free." And if you fail, make failure a stepping-stone.

INDIVIDUAL COMMUNION SERVICE CO.

1701-1708 Chestnut Street

Philadelphia

single volume,<sup>11</sup> making this admirable collection of principles available to all teachers. The author's frank presentation of principles, his constant reference to experimental data, his ready illustrations from common human experience and his immediate applications to practical problems account for the growing popularity of his writings.

In a survey of educational literature a few words should be said about the teacher. At the fiftieth annual convocation of the University of New York last fall, Professor Palmer<sup>12</sup> of Harvard said some wise things on the relation of the teacher to his work, and his economic background. This inspiring address is worth reading, not only for teachers, but for all who have anything to do with either of the two items in the title of the address—*trades* and *professions*. That ought to include all of us who take our jobs seriously.

<sup>11</sup>*What Do We Mean by Education?* by J. Welton. London: Macmillan & Co. \$1.60.

<sup>12</sup>*The Administration of Education in a Democracy*, by Horace A. Holister. New York: Charles Scribner's Sons. \$1.50.

<sup>13</sup>*In Defence of What Might Be*, by Edmond Holmes. New York: E. P. Dutton & Co. \$1.50.

<sup>14</sup>*Montessori Children*, by Carolyn Sherwin Bailey. New York: Henry Holt. \$1.25.

<sup>15</sup>*Child Training as an Exact Science*, by George M. Jacoby. New York: Funk & Wagnalls Co. \$1.50.

<sup>21</sup>*Educational Psychology*, by Edward L. Thorndike. New York: Teachers' College. \$2.

<sup>22</sup>*Trades and Professions*, by George Herbert Palmer. Boston: Houghton Mifflin. 35 cents.

## SOURCES OF THE SCRIPTURES

Theodore Wehle's *Origin and Meaning of the Old Testament* is a concise and accurate resumé of Old Testament history viewed critically. There are no literary valuations nor attempts at stating religious teachings, but the sources and literary structure of the writings are indicated.

Fenno. \$1.

## CHRISTIANITY AND EVOLUTION

The course of man's evolution, the meaning of personality and the rise of Christianity are held to guarantee the permanency and future development of the Church in *The Place of the Church in Evolution*, by John M. Tyler. The study is conspicuous for breadth of knowledge, clarity of thought and graceful literary style.

Houghton. \$1.10.

## A CRITIC OF WELLS

Considering his power and influence, Wells has received surprisingly little study, so *The World of H. G. Wells* is welcome and especially so since it is done with a fine literary insight. Van Wyck Brooks writes as an admirer but not a devotee of Wells, and his analysis of the themes and psychology of these varied volumes is well considered and well put.

Kennerley. \$1.25.

## THE TEXAS BORDER

The University of California is making splendid use of the unequalled store of material on the West it has in the Bancroft Library, in a series of monographs, the latest of which is a *History of the Western*

*Boundary of the Louisiana Purchase* from 1819 to 1841, by Thomas Maitland Marshall. In regard to this boundary Napoleon said that "If an obscurity did not already exist, it would perhaps be good policy to put one there." We made good use of this obscurity.

University of California Press. \$2.

#### WITHIN THE GOLDEN GATE

Mr. W. E. Hutchinson is a genial guide thru the *Byways Around San Francisco Bay*, and his photographs and sketches, full of charm, will tempt every stay-at-home to join the throng of this summer's visitors to the Pacific coast.

The Abingdon Press. \$1.

#### OUR THIRTEENTH PRESIDENT

Dr. W. E. Griffis is evidently performing a labor of love in this succinct, readable life of *Millard Fillmore*. The book is a swift review of the events of Fillmore's congressional and presidential years and an appreciation of his usually underestimated services.

Ithaca, N. Y.: Andrus & Church.

#### WAR BRIDES

The play of that title by Marion Craig Wentworth, which is now being acted by Alla Nazimova and which we discussed in the editorial, "The Women Who Save the Race," in *The Independent* of February 22, is now obtainable in book form. It is a powerful tho repellent drama and is intended as an argument for peace, tho it seems to us misdirected and mischievous.

Century. 50 cents.

#### HELL'S KITCHEN

The Russell Sage Foundation, whose imprint stands for serious and careful study, has issued two essays, one *The Middle West Side*, by O. G. Cartwright, mainly useful to workers in New York; but the other, by Katherine Anthony on *Mothers Who Must Earn*, important to all interested in the working conditions, wages and home life of women breadwinners.

New York: Survey Associates. \$2.

#### WHAT EVERY READER WANTS TO KNOW

The *American Year Book* was never more welcome than it is this time when we feel the need of information on foreign affairs, agriculture, industry and commerce. The volume is more than a mere reference work; it is really readable and any one would be benefited by running over its concise summaries of the year's progress in state and municipal legislation, in the arts and sciences and in literature and education.

Appleton. \$3.

#### AN AMERICAN CLASSIC

It is a far cry from the three shabby brown books that at first held *The Works of Edgar Allan Poe* to the ten dignified volumes edited by E. C. Stedman and Professor Woodbury. So scholarly was their work that, save for additions to the bibliography, this is practically a reprint of the edition of 1902. Its completeness, its notes, the biographical and critical essays, make it all that the lover of our master of the short story could ask.

Scribner. 10 v. \$10.

#### AN IRISH WOMAN'S DIPLOMACY

St. John G. Ervine calls his book *Mrs. Martin's Man*, but in reality Mrs. Martin and not her husband is the center of this story of life in the north of Ireland. Mr. Martin, who is a sailor, returns after sixteen years' absence. He is selfish and rather brutal, but altho he alienates the affection of the others, yearns to gain the love of his daughter. Mrs. Martin, who has learned to be tolerant and diplomatic after harsh experience, succeeds in binding the family together. The style is simple and homely.

Macmillan. \$1.35.

#### A NEEDLESS TRAGEDY

With reproductions of six most beautiful pictures for text, Mr. Daingerfield has written of his fellow artist, Ralph Albert Blakelock, a study at once enthusiastic and critical. He discusses the painter's technique as could only one of the craft.

## EASTER GIFTS

### Living Bread from the Fourth Gospel

William Hiram Foulkes, D. D.

\$1.25 Net

Devotional literature receives a notable addition in an attractive volume arranged for daily use through a year in *Living Bread from the Fourth Gospel*, by William Hiram Foulkes. A verse is chosen for each day, followed by a short exegetical and devotional comment and a brief prayer. The author has the rare gift of condensed writing and epigrammatic expression. In each page some sentence may be found which might well be treasured in the mind as a motto for the day.—*Congregationalist*.

### Concerning Them That Are Asleep (New Edition)

Daniel Hoffman Martin

50 Cents Net

In less than a hundred pages the author reviews the grounds of faith in the future life and reveals its springs of comfort.

The book has the charm of a quiet talk with a personal friend. It takes the reader by the heart in the opening sentence and doesn't let go until the final word.

The first edition of the book was quickly exhausted. It is just the thing to send to any one in sorrow or suffering, and especially comforting to those who have been bereaved of dear ones.

### When I Have Crossed the Bar

James Robinson

50 Cents Net

A book of comfort and inspiration for the Eastertide, and for all times. Simply and Scripturally the author discusses questions of the future life, heaven, the intermediate state, et cetera.

*Extract from the Preface:* "As soon as the echoes of the other world are heard in the human heart, men will ask, 'What does the other world hold for me?' This book is an attempt, in a simple manner, to throw some light on the problem of the other world."

### A Prayer to Begin the Day

John Timothy Stone, D. D.

Cloth, 25 Cents Net; Leather, 35 Cents Net

"The Daily Prayers," by Dr. Stone, are prayers for each day of the year, very short, yet pointed and practical, such as the busy men ought to find invaluable. It is a dainty little book, small enough to go in one's pocket.—*Presbyterian Standard*.

### GREATER KNOWLEDGE AND EFFICIENCY

You Need It Every Day  
You Need It In Your Private Life  
You Need It In Your Public Life  
And You Can Have It

In every issue of *The Independent* about fifty distinct subjects are discussed, not counting the minor items.

This means that in the course of a year the opportunity is given of gaining information about twenty-five hundred timely topics. For the business man there are weekly pages of practical talks on finance, insurance, commerce and industry. For the teacher there are discussions of all phases of education from kindergarten to the university. For the clergyman and the church worker there is abundant information about the modern movements in theology and about the methods of social service. And so on throughout all spheres of human labor.

You know the value of *The Independent*—if your next door neighbor knew it as you do he would be a reader also. Send his name and address and *The Independent* will send him a specimen copy with your compliments.

## The Ely School for Girls

Ely Court, Greenwich, Conn.

A country school. One hour from New York. Certificates to Vassar and the New England Colleges.

## Fisk Teachers' Agencies

Boston New York Washington Chicago  
Denver Portland Berkeley Los Angeles

## Albany Teachers' Agency

has good positions for good teachers with good records. Harlan P. French, Pres.; Vincent B. Fisk, Sec., 81 Chapel St., Albany, N. Y.

**WANTED—SUPERINTENDENT.** American or English, of gentleman's estate. Woodstock, Conn.; married, under 35 years. Thorough experience in poultry raising, care of grounds, roads, trees, including apple trees. Must be generally useful. Best of references as to character, sobriety and experience. Reply by mail. **C. W. BOWEN**, 5 East Sixty-third St., New York.

## DREER'S 1915 Garden Book

contains gardening knowledge that is the result of practical experience, and Cultural articles written by experts.

It is full of information valuable to both amateur and professional gardeners.

The list of worthy novelties and old favorites in both flowers and vegetables is complete and dependable.

Especially noteworthy are the sections devoted to Roses, Dahlias and Hardy Perennials.

Mailed free if you mention this publication.

Dreer's Superb Asters—Selected strains of finest varieties for garden decoration or cutting. Packet of eight best colors, containing enough seed to produce more than one hundred plants—ten cents per packet. Dreer's Garden Book with each order.

## Henry A. Dreer

714-716 Chestnut St. Philadelphia

He makes one acquainted with the tempestuous, unpractical, devoted genius, and without comment, for it needs no comment, he tells that most awful story of the sordid bargaining by which at last this eager spirit has been driven into darkness.

New York: F. F. Sherman. \$10.

## "THE SADDEST STORY"

An unpleasant imagination and not much thought are the prerequisites of such stuff as Ford Madox Hueffer's new book contains. If his conception of *The Good Soldier* be a true one, open-faced, honest evil is a much less dangerous companion. The semblance of a plot carelessly flung together is swamped by tawdry detail that finds a ready, frank narrator in an American millionaire of exaggerated density.

John Lane. \$1.25.

## BORN FOR THE LIMELIGHT

The provincialism of the Pennsylvania German is a delight in itself, and the charm of Elsie Singmaster's touch adds to it. The quaint folk of Millersstown, ambitious to put their native tongue behind them, struggling with the refractory th and v of the coveted English, just a bit superstitious, but altogether lovable, make a very effective background for the vivid spirit of *Katy Gaumer*, flashing thru their quiet life like a bright flame.

Houghton Mifflin. \$1.35.

## COMPREST COUNSEL

*The American Girl* has received her due quota of attention from all sides and it is not for lack of advice that she still falls short of perfection. Miss Anne Morgan is not a mere theorist and her wisdom on the education, responsibilities, recreation, and the future of that many-sided creature is well worth absorbing. Repetitions are inevitable in so popular a subject, but they are the drops of water that wear away the stone of unenlightenment.

Harpers. 50 cents.

## A STRIKING BIT OF MODERNISM

The beauty of sheer strength and force is in Ernest Poole's word sketches of *The Harbor*, but the roots of the book's potency strike deeper—to the clear, vigorous thought that grapples with the modern problems of labor and capital mirrored in that port of the world—to the evolution of an artistic temperament into a "hay-mind." The harbor displaces each in turn the little gods of art and efficiency, to raise in their place its own god of the freedom of mankind.

Macmillan. \$1.40.

## FROM OUTLAW TO RANGER

Buck Duane had the blood of his fighting father—which called for the blood of other men. He killed, and the two shots from his gun thru the heart of cowboy Bain could be covered by the spot of black of the ace of spades. In *The Lone Star Ranger* Zane Grey tells the story of Duane from the day of his flight from home until, reclaimed by his love for a woman, he rids the state of its worst outlaw and gains respite from the remorse that had weighed on him thru his hunted nights.

Harper's. \$1.35.

## IN THE DUTCH EAST INDIES

The latest volume in the Modern World Series is Antoine Cabaton's study of *Java, Sumatra and the Other Islands of the Dutch East Indies*. That the Dutch colonies in the East deserve to rank with these phenomenally modern empires we cannot believe, but that modern ideals of progress have been a potent factor in those once backward islands is clearly shown. The book is an unusually broad dissertation on the geography, administration, ethnography and economics of the islands.

Scribners. \$1.50.

## LITERARY SNAPSHOTS

The fact that B. Russell Herts has entitled his character sketches of men and movements *Depreciations* must not mislead any one into assuming that he is a professional iconoclast. He mingles with his deft criticism a sufficient amount of appreciation of real merits to satisfy any but the

most idolatrous. Readers of The Independent will recall his visit to Chesterton's "Defender of the Discarded" and may be assured that his views of "Little Arnold Bennett," "The Shadowy Mr. Yeats," "George Moore the Mundane," are equally lively.

New York: Boni. \$1.25.

#### CASTLES FROM A MOTOR CAR

Thru the romantic heart of Scotland, Wales and England is a pleasant journey of an evening's length, with Robert and Elizabeth Shackleton in *Four on a Tour in England*. In their motor car, however, it took six weeks. Castles, winding streets, cottages in twilight lanes, scholastic walls and silent cathedrals are all here, without the false comparisons with things American that characterize so many travel-tales, and with a charm of wording that makes each scene distinct and appealing.

Hearst's International Library. \$2.50.

#### OUR KALEIDOSCOPIC PRESENT

*On the Staircase* is an entrancing novel of the experiences, adventures, emotions of a little group of ordinary young folk, by Frank Swinnerton. First the period of revolt, fired by the passions of youth, and then reconciliation and inevitable compromise. Behind the individual, the family, the hard-working, old-fashioned mother who cannot comprehend the new feminism, but is ready to soothe in time of stress, is pictured as sympathetically as the daughters. This is a living story.

Doran. \$1.25.

#### A NOVEL OF ADVENTURE

Sword play and adventure, love and intrigue make *The Presentation* by H. de Vere Stacpoole a novel of absorbing interest. Set with a background of the court of Louis XV of France, the action has the flavor of the writings of the elder Dumas. The hero, brave, haughty, brilliant, carries the day, despite plot and counterplot, artifice and prison bars. There is also a romantic filip of a charming love affair, while the dashing lover has many qualities not unlike d'Artagnan.

John Lane Co. \$1.30.

#### A MODERN PROMETHEUS

Rhys Carpenter in his poem, *The Sun Thief*, has chained another Prometheus to the rock of ages. This sun thief is not Shelley's spirit of freedom, but the spirit of cosmic pity and social conscience. The form of the poem is classical, but at times Mr. Carpenter strikes notes of real lyrical beauty. Of the shorter poems, "In a Cathedral," in conception and imagery, is delightfully original. "Michelangelo," altho showing keen intellectual acumen, does not have the personal ring of passion which is reached in some of the shorter verse.

Oxford. \$1.75.

#### THE PHILOSOPHY OF FREEDOM

*The Free Spirit* is not so much a collection of poems expressing the fire of youth as the exposition of a philosophy of life. Only at intervals does the emotion of Henry Bryant Binns conquer his intellect. The poetry is subsidiary to, the note on personal expression which follows the poems. Mr. Binns makes a strong appeal for the free growth of personality, the development of the individual and the realization of human purpose. In essence this is the philosophy of the Individual, softened by the recognition of social considerations.

Huebsch. \$1.50.

#### A POLITICAL HISTORY OF CANADA

In *Sir George Etienne Cartier, Bart., His Life and Times*, John Boyd has compiled the results of much research and careful selection. The greatest father of the Canadian Dominion, and sixty years of Canadian history, are both treated impartially and thoroly by a writer, who tho English, assigns to the French-Canadians a just place in the confederation and unification of Canada. Undoubtedly the best biography of Cartier, it supplies, as well, the need for an exhaustive, non-partizan history of our northern neighbor's most critical period.

Macmillan. \$5.

## 3 Hours a Day and Health

That is what the editor of the New York Financial Bulletin got from ONE of the lessons of this course. He cut down his working day three hours, and used the time to get back his long lost health. Is it any wonder that he says: "Could the course be studied for one year in the High Schools of this country, within 20 years the nation would make a progress equal to a century of inefficient progress found on every side today." What he found—you, too, can find through the

## Course in Personal Efficiency

Prepared by Harrington Emerson, conducted by Review of Reviews Company

to bring to you the power to make the most of your abilities, to do less work and get more for it. Maybe you have all the health you want. There is something else you want, though, and that you have not got—and Efficiency will show you the shortest, quickest, easiest way to that thing.

Is it Skill you want? Efficiency taught the

### It Would Cost You \$50,000

For the knowledge, the experience that enabled him to write this course, corporations have paid Harrington Emerson as much as \$50,000. Harrington Emerson has taught thousands of young men who today are highly paid Efficiency Experts; he has taught Efficiency for forty years; he has taught it for thirty years; he has worked to make this course for the individual man or woman for twenty years. Now it fits you. You can have the value of forty years of experience for little more than a dollar a lesson and 15 minutes a day. Now he is ready to show how you can save an hour, two hours, a dollar, ten dollars, a hundred dollars—out of each day. And how you can make that day a better day at the same time.

U. S. Navy to shoot 1,200 times as well today as at Santiago. *Is it Money?* Efficiency brought a great Western railroad a million and a half in one year. *Is it Economy?* G. Douglas Jones of California saved \$2700 on one job after he had his third lesson of this course. *Is it Education?* J. B. Burbank of Louisville, Ky., got his first big step that way from the first lesson of this course.

### INDEPENDENT OPINIONS

Our editorial of February 22, "The Women Who Save the Race," treating as it did a question of the most vital importance now and ever, called forth many letters of disapproval and commendation. A University of Chicago woman writes as follows:

Let the Kaiser promise them that there will be no more war and they will gladly bravely endure the pangs of widowed motherhood. But what woman is there who wants to bear a child, rear it to manhood, and then give him up as she did his father to satisfy the greed of a nation or an emperor? The Independent says that "there is less chance now than ever that a child born now should fall prey to militarism." Possibly this is so, but how can these women have this optimism—these women who are living in such terrible times—where the ambulances ooze blood as they rush by from battle field to hospital—what assurance is given them that their yet unborn babes will not be taken in the same way? So instead of the lesson of "War Brides" being false and immoral. I think it drives home to the people a poignant truth.

It seems to us that the writer of the above has, like the author of the drama, confused two very different things, the desirability of peace and the necessity of keeping up a high standard of the race whether we have peace or war. There will of course be no falling off in population altogether. The population of Europe is increasing even during the present terrible year, but there is great danger that the population of the next generation will be recruited from the incapable, the cowardly and the diseased, who are rejected from the army.

Of course no assurance can be given by the Kaiser or any one else that there will not be a war in the next generation, but we will be quite safe in saying that a babe born now would be more likely to die from being run over by an automobile or a railroad train or from the measles than by being killed in battle. In spite of this uncertainty women have been brave enough to continue the bearing of children, and we trust that they will not be lacking in such courage in the future.

An officer of the Ohio W. C. T. U. makes an equally irrelevant point:

It has long been a mystery to me how intelligent people could plead for a higher birth rate, when in every land there is a great army of the unemployed even in prosperous times, and millions living in degradation and poverty, a misery to themselves and a menace to society. There seems to be no place on earth for them. The great majority of them never should have been born.

I can readily see how employers seeking for cheap labor and nations depending on armies for their existence advocate more births; but how a man who stands for the highest and best in society can join in the demand passes my comprehension. From my standpoint the great enemies of the race are the people who urge the young to get married and have families, without regard to whether they are fit to become parents or able to provide for their needs after they are born.

This system has flooded the world with incompetents and demands every rightful effort to abolish it.

The hope of the world is the people who have the wisdom and courage to stand for *quality* and not quantity of births. No nation can afford to sacrifice its true manhood for its life; better go down, and on its ruins will rise a higher and greater

# Tired Nerves

## a Symptom—NOT a Disease

"Neurasthenia," says Dr. John Harvey Kellogg, Superintendent of the Battle Creek Sanitarium, "is a symptom—not a disease—and may be relieved through correct habits of living." Speaking from the standpoint of nearly forty years as Superintendent of the Battle Creek Sanitarium, where he has had opportunity to observe, prescribe for and treat thousands of cases of nervousness, Doctor Kellogg is recognized as one of the foremost authorities of the world upon this subject. In his new book, "Neurasthenia or Nervous Exhaustion," Doctor Kellogg describes the different varieties of nervousness and tells how they may be successfully overcome through the cultivation of right habits of living. If you suffer from exhaustion—sleeplessness—or any other form of nervousness, you should read this book and find how you may obtain relief from such suffering. Doctor Kellogg's book is neither dry nor technical, but couched in terms which anyone may understand. Doctor Kellogg has the happy faculty of making his writings intensely interesting and most convincing. This new book contains over 250 pages, printed on fine book paper, with numerous full-page illustrations, diet tables and instructions as to relaxation, rest, exercise and sleep. The regular price of the book in board covers is \$2 but, to put the work within easy reach of all, Doctor Kellogg permits an edition in library paper covers for only \$1 a copy. Order today. We send the book promptly and fully postpaid upon receipt of remittance. You take no risk because, if you are not entirely satisfied, the book may be returned for prompt refund. Write for it today and find the way to relief from nerve weariness and exhaustion. Address—GOOD HEALTH PUBLISHING CO., 303 W. Main Street, Battle Creek, Mich.

## You Know at Least Ten People

who would be very glad to receive a copy  
of The Independent with your compliments. If you will send their names and  
addresses by an early mail, we will send  
the copies promptly.

THE INDEPENDENT, 119 West 40th Street, New York

nation, for in God's economy it is men and  
women that count.

As men and women become more intel-  
ligent and humane, the birth rate will de-  
cline. They will not bring children into ex-  
istence that they cannot properly care  
for and for whom society makes no pro-  
vision.

This objection arises from a miscon-  
ception of the editorial. It was because  
we felt so strongly the injury to the  
race due to the war which sacrifices its  
best and bravest that we felt the need  
that women should do what they could  
do to repair what otherwise would be  
an irreparable loss to humanity. We  
were considering entirely the question  
of quality and not at all the matter of  
numbers. No doubt there will be just  
as many people in the world within the  
next generation as if there had been  
no war, but certainly they will not be  
of such high grade. This argument of  
ours has been elaborated and proved  
by other pacifists, such as President  
David Starr Jordan in his "The Hu-  
man Harvest." Our own loss from the  
Civil War would have been much great-  
er if it had not been for the "war  
brides" on both sides of the conflict.  
Those who have known some of these  
noble women will not be willing to join  
with those who sneer at them for their  
love and self-sacrifice.

The protests of other correspond-  
ents are based upon still greater mis-  
understanding of our point of view.  
If they will refer again to the editorial  
in question they will find that we did  
not advocate a higher birth rate or in  
any way favor loveless or forced mar-  
riages. As for the objection that chil-  
dren born under such distressing cir-  
cumstances will turn out badly, we re-  
peat that some of the most useful citi-  
zens of the United States are the sons  
of boys in blue or boys in gray who  
made their sweethearts wives just be-  
fore they marched to the front or when  
they returned for a few weeks' fur-  
lough.

A Boston man sends us this com-  
ment:

In view of The Independent's leading  
editorial, denouncing the foolish play,  
"War Brides," I wonder what you would  
have to say concerning the Sunday lay-  
sermon of a Boston professional philoso-  
pher, as follows:

"I call for a women's peace party that  
shall really fight. Women should raise  
the threat of refusing motherhood rather  
than risk the bearing of children to furnish  
food for powder, at the behest of the crazy  
kings, the selfish plutocrats, the clumsy  
diplomats and the fanatical 'patriots' of  
the world. A boycott of mothers might be  
one effective deterrent of war."

Manifestly! Let the human race die out,  
and naturally wars of humankind would  
cease. For the plan would have to be uni-  
versally adopted, since no possible mother  
could look ahead twenty years, the period  
which must elapse before her child could  
very well become a member of a training  
camp, and tell whether it would be a time  
of peace or war.

This is the matter in a nutshell.  
There are two ways of destroying  
a nation. One is to kill off all the  
men. The other is to persuade all the  
women not to have children. The second  
process is slower but just as fatal as  
the first. And it is just as wicked to  
destroy a nation by the second as by  
the first.

## Quickly Relieve Inflammation

by rubbing in a few  
drops of Absorbine, Jr.  
It is surprising how  
promptly it pene-  
trates and acts—how  
clean and pleasant it  
is to use and how eco-  
nomical, because only  
a few drops are required to do the  
work. In addition to being a depend-  
able liniment, Absorbine, Jr., is a safe,  
powerful, trustworthy antiseptic and  
germicide, which doubles its efficiency  
and uses.

**Absorbine, Jr.**  
THE ANTISEPTIC LINIMENT  
TRADE MARK REG. U.S. PAT. OFF.

When applied to cuts, bruises, and sores,  
it kills the germs, makes the wound  
aseptically clean and promotes rapid  
and healthy healing. It allays pain  
and inflammation promptly. Swollen  
glands, painful varicose veins, wens and  
bursal enlargements yield readily to the  
application of Absorbine, Jr.

### Doctors

prescribe and recommend Absorbine, Jr.,  
where they wish a thoroughly aseptic con-  
dition produced.

### Dentists

use Absorbine, Jr., in cases of Pyorrhea  
(Riggs Disease), and for spongy or bleeding  
gums, abscesses, sinuses and ulcerations.

### Athletes

use Absorbine, Jr., in advance of games to  
condition their muscles, and afterward to  
prevent lameness, stiffness and soreness.

A 10% solution sprayed into the throat  
is cleansing, healing, and kills germs.  
An excellent preventive—thoroughly  
efficient and yet positively harmless.  
Absorbine, Jr., is made of herbs, and  
is non-poisonous and non-destructive of  
tissue.

Absorbine, Jr., is sold by leading drug-  
gists at \$1.00 and \$2.00 a bottle or  
sent direct postpaid.

### A Liberal Trial Bottle

will be mailed to your address upon receipt of  
10c. in stamps. Send for trial bottle or pro-  
cure regular size from your druggist today.

## THE MARKET PLACE

### FOREIGN LOANS AND GOLD

A Swiss Government loan of \$15,000,000 was placed, last week, in the New York market without any difficulty. The bonds, or notes, which bear an interest rate of five per cent and are for terms of one, three or five years, were readily sold at prices ranging between ninety-five and ninety-nine. It is understood that the money will remain in this country and be expended here for supplies of various kinds, or be used in part to meet debts already contracted. Switzerland can borrow at home at a lower rate, but the balance of trade, with respect to the United States, is against her, and the condition of the international exchange market makes it expedient for her to negotiate this loan.

Switzerland is a neutral nation. We are now lending to belligerents as well as to neutrals. Several banking houses in New York are inviting and receiving subscriptions to the new German war loan, the securities of which bear interest at the rate of five per cent and are sold here at about 98½. It will be recalled that our Government some months ago prevented the issue of a French loan in New York by expressing its objections to the bankers concerned. Such an issue was regarded at Washington as something closely resembling a violation of neutrality. So far as can be learned, our Government has not opposed the marketing of this German loan, and the change in its attitude has caused some surprise. It is expected by the bankers that subscriptions here will amount to \$50,000,000.

Loans procured here in various ways by foreign governments since the beginning of the war exceed \$100,000,000, but the greater part of the money has remained here, to be expended for supplies. Canadian borrowings, mainly provincial or municipal, amount to about \$40,000,000. Russia has established a credit of \$25,000,000, and there are agreements for other large credits between bankers abroad and bankers on this side of the Atlantic. Our debtors abroad strive to avoid the shipment of gold for discharge of their obligations.

But gold has been received in recent weeks. The amount imported since January 1, with what is on the way or has been engaged, exceeds \$22,000,000. Much of this has come from Japan and Canada. There is a trade balance against Japan. Gold crossed the Atlantic last week for the first time since the early days of the war. On an American ship \$750,000 was brought from England. When we recall the attempted voyage of the German steamship "Kronprinzessin Cecilie," not long after the war began, the great change in conditions is seen. That ship was carrying

\$10,000,000 in gold to discharge in part our obligations abroad. She did not reach the other side, but was driven back to our coast and interned at Bar Harbor. Since that venture there has been no direct transatlantic shipment of gold, until last week, and now the precious metal is moving the other way. We are no longer trying to pay our debts in Europe, but Europe is striving to pay the large sum she owes to us without parting with her gold.

An impression has prevailed that European owners of our securities were selling large quantities of them here. This is not confirmed by a recent report of the Steel Corporation, which shows that since the beginning of the war the foreign holdings of the company's shares have been reduced by the sale of only 84,558, out of a total of 1,587,079. Incidentally this shows that stock having a par value of \$158,000,000 in only one of our companies was held abroad. Some estimate the entire quantity held there at more than \$4,000,000,000. As a rule, probably foreign investors have not sold their American securities unless their urgent needs compelled them to do so. For a time, however, there was active selling in New York by foreign traders, because the New York market was the best in the world.

### NEW YORK'S BOND SALE

Those who watch the course of the money market are accustomed to study carefully the borrowings of the State of New York. Last week the state borrowed \$27,000,000 by selling bonds having that value at par. The money is to be used for the barge canal and its terminals, and for highway improvements. A year ago, when \$51,000,000 of bonds were sold, the state gave an interest rate of 4½ per cent on the bonds, but the rate on last week's issue is only 4¼. The term is fifty years for \$22,000,000, and thirty years for the remaining \$5,000,000.

The price realized was unexpectedly high, and the volume of bids was large, amounting to nearly \$100,000,000. All of the bonds were awarded to a group or syndicate composed of Harris, Forbes & Co., the Guaranty Trust Company, the National City Bank, and White, Weld & Co., whose bid—for the entire issue—was 103.459. This gave the state a premium of \$933,000. At the sale price, the investment return is about 4.08 per cent. From the state's point of view this is much more favorable than the sale in January a year ago, when the price (1.07¼, for bonds at the higher rate of 4½ per cent) gave an investment yield of 4.21 per cent. From 1909 to 1913 the interest rate of New York's bond issues was four per cent; for a short time thereafter it was 4½, and now it has been reduced

to 4¼. The bonds sold last week were promptly offered to the public at prices which give the syndicate a small profit. There have been large purchases, and the success of the issue has stimulated investment and trading in the municipal bonds that are on the market. The officers of the State Government regard the reception of the issue with much satisfaction, and to financiers generally it is an indication of favorable conditions.

THE TREASURY DEFICIT

The national Treasury's deficit for the current fiscal year is, at the present time, about \$105,000,000. At the corresponding date one year ago it was \$50,000,000. Returns for February are not encouraging. The shortage in that month was \$12,500,000, which shows that the Government was running behind at the rate of \$150,000,000 a year. Treasury officers are looking forward to the income taxes which are to be received in July, but estimates of the total to be collected have recently been reduced from the \$80,000,000 expected some time ago. The deficit would be greater by \$12,000,000 if we had not sold two warships to Greece for that sum. The condition of business and manufactures will affect the income taxes.

Congress could not be induced to impose new taxes or to regulate its appropriations in accord with the "simplicity and economy" which the members of the majority had advocated in the national platform of their party. An example of the shortcomings of Congress is seen in its failure to pass a Post Office Appropriation bill. By joint resolution the appropriations of the current year were continued for an additional year. Congress thus failed to make provision for a normal annual increase of eight per cent in postal expenditures, or for an increase of cost which it had ordered by special legislation. It had increased the pay of rural delivery carriers, but the sum allowed for the rural delivery service remains unchanged. For this reason and for others the department is now planning economies which may not be satisfactory to postal employees. Adequate provision for the department would have required an increase of the appropriation, it is true, but there might have been reductions of other appropriations that were passed and approved.

Full time has been resumed in the Lake Superior copper mines, altho all of the men laid off in September are not yet employed. The district is now producing ninety per cent of its normal output.

The following dividends are announced:  
American Car & Foundry Company, preferred, 1¼ per cent; common, ½ per cent, both payable April 1.  
American Brake Shoe & Foundry Company, preferred, quarterly, 2 per cent; common, quarterly, 1¼ per cent, both payable March 31.  
La Rose Consolidated Mines Company, quarterly, 1 per cent, payable April 20.  
Liggett & Myers Tobacco Company, common, extra, 4 per cent, payable April 1.  
Otis Elevator Company, preferred, quarterly, \$1.50 per share; common, quarterly, \$1.25 per share, both payable April 15.  
United Fruit Company, quarterly, 2 per cent, payable April 15.

**Atlantic Mutual Insurance Co.**

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....\$27,964,578.109.00  
 Received premiums thereon to the extent of.....287,324,890.99  
 Paid losses during that period.....143,820,874.99  
 Issued certificates of profits to dealers.....90,801,110.00  
 Of which there have been redeemed.....83,811,450.00  
 Leaving outstanding at present time.....6,989,660.00  
 Interest paid on certificates amounts to.....23,020,223.85  
 On December 31, 1914, the assets of the company amounted to.....14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

**GET THE SAVING HABIT**

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

**INSURANCE**

CONDUCTED BY W. E. UNDERWOOD

**PHYSICAL DETERIORATION**

The aggregate annual deaths in the United States from organic diseases of the kidneys and urinary system and of the heart and circulatory system total 410,000, according to statistics compiled by Elmer E. Rittenhouse, president of the Life Extension Institute. In a recent address before the Academy of Medicine in New York City Mr. Rittenhouse said that because we know that at least eighty per cent of the mortality due to these causes is postponable—if the scientific knowledge we already possess is applied—that we are wholly warranted in believing this excessive waste of productivity will be checked. It is evident from the observations he made that American prodigality in this matter surpasses that of other comparative civilizations. The threatened decline in our national vitality shadowed forth by the figures astonishes not only the general public but many professional men, educators, philanthropists and other investigators and students of human affairs.

It is amazing to learn that in a period of thirty-seven years the mortality due to the causes mentioned increased eighty-six per cent in Massachusetts and ninety-four per cent in fifteen American cities. The advance in ten registration states was nineteen per cent in ten years. The reverse is true of England, Wales, Prussia, Denmark, Sweden, France and several other countries.

It is of interest to all beyond the age of forty to know that the *general* death rate for all ages upward has been and is steadily increasing. Evidence of this pressure, says Mr. Rittenhouse, is also found in the report of the New York City health department, "indicating that the expectancy of life has decreased above age forty in the past thirty years." In contrast with our unfavorable tendencies a decrease in the general mortality is shown by England, Wales, Prussia and the other European countries named above.

To what causes is our deterioration due? Many, according to Mr. Rittenhouse; among them, alcohol, tobacco, use of drugs, alleged increase in the diseases of vice, perhaps the "melting pot"—the process of assimilating the working classes from foreign countries. "But," says Mr. Rittenhouse, "if the actual facts were known, I am sure we would find that the broad theory of lack of adjustment to the extraordinary changes in living habits, which have occurred in recent years, is the correct answer." He then particularizes, briefly:

"The most important of these changes in our methods of living has resulted from the extraordinary prosperity that has prevailed during the last two generations. The march of

progress has literally become a stampede, bringing with it nerve-strain that must be reflected in the death rate. The increase in wealth has brought increased comforts, luxuries, and very greatly enlarged the proportion of people engaged in sedentary occupations.

"The excessive life-strain, due to these changes, has been described by the general term 'strenuous life.' A better term is the intemperate life; that is, intemperate eating, drinking, working and playing. This is the common answer as to the cause of the high mortality from organic disease; and it seems most reasonable.

"There is one important factor not always included in this answer, the influence of which is overlooked by many people, and that is, the extraordinary decline in physical activity in a very large portion of the population. The high-tension class is but a small minority. The vast majority of Americans are not putting an excessive physical or mental strain on their vitality from undue activity."

The Governor of Connecticut has approved the bill authorizing the Aetna Life Insurance Company to increase its capital to \$10,000,000.

Following an examination of the West Coast Life Insurance Company of San Francisco, the Insurance Department of California has turned the report over to the grand jury. It is intimated that the company has been operating during the past three years on a fictitious financial showing.

Kansas is again endeavoring to organize and sustain a fire insurance company of its own. The charter of the Central States Fire Insurance Company of Wichita, with \$250,000 capital, is announced. The Shawnee Fire Insurance Company of Topeka, which failed several years ago, was the latest effort in that direction there.

Interests in control of the United States branch of the London and Lancashire Fire Insurance Company are organizing the Safeguard Fire Insurance Company of New York, with a capital of \$200,000 and a surplus of \$300,000. The company will do a general fire insurance business thruout the United States.

The Missouri Senate evinces a disposition to obstruct the enactment of the progressive insurance legislation recommended in the report of the State Commission and favorably regarded by the lower house. The Senate is inclined toward the adoption of reactionary amendments. It has, in addition, appointed a committee to investigate and report on the practicability of state insurance.

The Metropolitan Life Insurance Company, through the American Social Hygiene Association, has offered a prize of \$1000 for the best original pamphlet on Social Hygiene for adolescents between the ages of twelve and sixteen years. Manuscripts should not exceed 3500 words, must be in English and must not have been previously published. The contest will close July 31, 1915. Full particulars may be secured from the American Social Hygiene Association, 105 West Fortieth street, New York City.

## PEBBLES

"Father, I think it only fair to tell you  
that I need \$50. I'd rather owe it to you  
than to some outsider."—*Century*.

"Did you hear about the terrible fright  
Bobby got on the day of his wedding?"

"No, but I was at the church and saw  
her."—*Life*.

Lady Bountiful (to dry-goods clerk)—  
Have you any nice warm underclothing?

New Assistant—Oh, yes, miss, thank  
you.—*London Opinion*.

"My wife says that she is going to buy  
cheaper hats and save money."

"Ah, I see; reducing her overhead ex-  
penses."—*Cornell Widow*.

"Well, we have exhausted reason, logic,  
common sense, and justice. What more can  
we do?"

"I guess we'll simply have to go to law."  
—*Life*.

First Figure—Are you a pillar of the  
church?

Second Figure—No, I'm a flying but-  
tress—I support it from the outside.—  
*Yale Record*.

Movie Operator—What shall I do with  
this film? There is a tear in it that cuts  
right thru the hero's nose!

Clever Manager—Ha! just the thing!  
Bill it as a feature in two parts.—*Sun Dial*.

Yankee—If some one were so ill-advised  
as to call you a liar, colonel, in what light  
would you regard the act?

Kentucky Colonel—I would regard it  
simply as a form of suicide, sah.—*Dallas  
News*.

"I am sorry, but I advertised for a Scan-  
dinavian cook," said Mrs. White. "Lawd  
sake!" replied Paralysis Pearl Waddles.  
"What diffunce do it make what a lady's  
'ligion am, dess so's she kin cook?"—  
*Judge*.

"I wish Ingomar to think only of me."

"I would not distract his thoughts too  
much from business, my dear," counseled  
her mother. "Remember, you will need a  
great many expensive things."—*Louisville  
Courier-Journal*.

Mary's godmother is an estimable wom-  
an, but in Mary's scale of affection she  
ranks inconspicuously.

"Of course I love God first of all," Mary  
said in reply to her aunt's question. "You  
have to do that—anyway you have to say  
so. Then I love my father and my mother,  
and my sister and brother. Then you,  
aunty. You wouldn't expect to come before  
my very own family, of course."

She went on with her sequence of affec-  
tion. At last aunty interrupted:

"But don't you love your godmother?"

"Oh, yes, I love her. I love her, but she  
comes at the very, very end of the list—  
the last one. And in between—in between,  
are quite a good many dogs."—*New York  
Evening Post*.

## SINGULAR DISAPPEARANCE

Particulars wanted of a medium-sized  
gentleman with a silver tongue and a  
pointed beard, partly bald, with a dome-  
shaped head and blue eyes. Was last seen  
coming out of the Adelphi Theater, London.  
Was well known at one time, many people  
now claim a speaking acquaintance with  
him, but upon investigation their claims  
are almost invariably proved to be false. Is  
not a college man and is uneducated; par-  
ticularly poor speller; not used to the best  
society; has had trouble with his wife;  
was at one time in the real estate business;  
could not write on the typewriter, and is  
thought by many to have employed a man  
named Bacon to do his work; was fond of  
scenery, but used it scarce at all; liked to  
dress up boys in women's clothes to deceive  
the public; had few morals, and was loved  
entirely by disreputable people. Traces of  
him have been discovered in London, Ber-  
lin, Copenhagen and even in Boston. An-  
swers to the name of William Shakespeare.  
—*Life*.

# A Number of Things by Edwin E. Slosson

I had been working all the afternoon in the big reading room of the city library until the daylight had become so dim that I could not read another word. I snapped the electric lamp over the table, but evidently the time had not come, according to calendar and clock, to turn on the juice.\* My eyes were weary, anyway, so I stacked up my books, stuck a reserve card on them and went out to get something to eat. As I came out between the stony lions I saw across the street the sign

LIBRARY LUNCHROOM  
DEWEY SYSTEM

"Just the thing," I thought, and entering took my seat at a vacant table. In the course of human events a waiter came around and asked for my "order slip." "You haven't given me anything to order from," I replied indignantly. He looked down at me with the cold contempt always felt for the uninitiate and said, "Menu catalog room on the right of the entrance."

Meekly I crost the hall and found myself in a room surrounded by cases of little drawers neatly numbered. I saw I was in for something new, but under such circumstances he who hesitates is lost, so I walked with a firm and confident step to one of the cases and pulled out the first drawer to hand. It was labeled "11400 Articulata," and I found myself among the lobsters and shrimps and a lot of things that I did not know that anybody ever ate. I exchanged it for the drawer above, marked "11300 Mollusca," and ran over the cards "Ostrea edulis," "Venus mercenaria, *pseud.* quahaug," "Helix pomatia, *pseud.* escargots." No, not this time. I peeked into the next above, "11200 Radiata"; mostly guide cards, the rest not appetizing. Catching sight of "Bêche de mer, *see* Mott St. branch," I hastily closed the drawer and started to leave.

But as I passed the desk marked "Reference" the little lady playing solitaire with catalog cards looked up and asked, "Did you want something?"

"Yes, I want something to eat," I said shortly.

"What do you want to eat?" asked the patient, tired voice.

I thought this was a time to follow the advice of Emma McChesney, so I said, "Roast beef, plain."

"You will not be apt to find that under Invertebrata," said the attendant, turning to another case and pulling out a drawer without looking. "It is a very simple system when you understand it. Here it is, you see; 10000 Animal Foods, 12000 Vertebrata, 12471 Mammalia, Family Bovidae, Genus Bos." And I looked on with awe while she wrote out the order slip and added the specifications in decimals, .2 mature, .07 sirloin, .004 roast, .0009 well done, S21 with brown gravy.

"Oh, yes, I see. Thank you," I replied eagerly, and to prove it I took another slip out of the tray on top and began digging potatoes out of the index. It was easy, Phanerogamia, Dicotyledonæ, Sympetalæ, Solanum tuberosum (here I narrowly missed getting a cigar instead, for it was on the next card), 23259.6FF, *i.e.* French fried. Elated at my success and interested in the game, I added mushrooms, Cryptogamia, Hymenomycetaceæ, Agaricus, 21347.24Z, and a pot of 23714.5B9, or in plain English, Camellia theifera, leaves, dried, English Breakfast, infusion, not decoction. Then returning to the dining room, filled with self-satisfaction in default of anything better, I handed my order slips to the waiter.

Fifteen minutes later he came back and said: "Head waiter wants to see you."

"Why doesn't he come then?" I asked.

"He don't come. You go to him," was the reply.

I went. The head waiter was an imposing personage with a long gray beard. As I approached his desk he looked at me as a floorwalker looks at a suspected shoplifter, then put me thru a catechism: "What's your name? Address? Profession? Are you a church member? Can you produce a certificate of character from your pastor? Have you a physician's prescription?"

Here I rebelled. "Why do you ask all these questions?" I demanded.

"Because you have ordered a Z dish," he answered. "All the dishes marked Z are poisonous and we have to be very careful to whom we give them."

"But I did not order poison," I said.

He held up my slip and pointed out the last item. "This calls for the Deadly Amanita. If you meant it for Agaricus campestris you should have written 21346.57."

I meekly made the correction, but I could not help inquiring: "Why do you keep poisonous foods at all?"

"Because we must have a complete stock. Such things exist. They can be eaten and if any one really wants them we must serve them. But we try to see to it that the immature and weak-minded do not get hold of them. We should have served it to you if you had insisted, but we would have watched to see that you did not eat too much and did not enjoy it."

I thanked him for saving me from dying of a misplaced decimal and returned to my seat, where in about twenty

minutes the meal arrived. All went well until I came to pour out my tea when I discovered that the waiter had not brought any sugar. Calling his attention to the omission he said: "No slip for it."

I acknowledged the fault and asked him for the number.

"Menu catalog room on right of the entrance," he replied as before.

I made a dash for the vegetable section and soon was hot upon the trail as follows:

20000 Vegetable Kingdom  
26000 Carbohydrates  
26100 Monosaccharides  
26200 Disaccharides  
26250 Pentoses  
26260 Hexoses  
26264 Sucrose  $C_{12}H_{22}O_{11}$   
d-glucose + d-fructose

.1 pulverized  
.2 granulated  
.3 domino  
.4 cube  
.5 loaf  
.01 brown  
.02 yellow  
.03 white

This led directly to 26264.33, which I jotted down with a pencil, pens being barred, and then, with the providence born of experience, I took down the single drawer marked "Mineral Kingdom" and made out slips for 327.3 which is NaCl, fine, and for 314.7, which is H<sub>2</sub>O, Croton, iced.

I got back to my table before the tea was quite cold and finished the meal without a mistake unless my omission at the end to hand the waiter any 384.6Ag might be counted such. As I settled for my order slips at the desk by the door I noticed that an extra item, 26904.2Mx, had been added. It evidently stood for some polysaccharide, which I was sure I had not eaten. There was no charge for it, but I had the curiosity to look up the card in the catalog. It read: "Toothpick, orange wood, round, double pointed, sealed in paper."

A ruler who appoints any man to an office, when there is in his dominions another man better qualified for it, sins against God and against the state.

So spake Mohammed. Would it not be well to get some pious Moslem to serve as Secretary of State? But on second thought is the Ottoman administration any better than our own, in spite of its having the Koran as a constitution?

I wonder what has become of that Australian film which was so popular a year ago, showing the horrors of a prospective Japanese invasion of Australia, the burning of cities, the massacre of innocents, etc. Is it still exhibited to wildly patriotic crowds in Sydney and Melbourne, or has the censor ordered its withdrawal until Germans are substituted for Japanese?

It is, to judge from the papers, apparently not incompatible with the laws of physics that two victories should occupy the same place at the same time.

\*Yes, that's all right. Brander Matthews said we should say "juice" and he is a member of the Academy.

## JUST A WORD

We venture to give to our readers a letter which we have jst received from the Bishop of the Philippines, which indicates the appreciation of a highly distinguished reader.

Your number of The Independent comes just as a mail goes out. I want to send a line of congratulation and good wishes. I have read your first paper with interest and profit. Words wear out sometimes if they are overworked. "Efficiency" has lost its edge. The thing it stands for I embrace, but the symbol has been so abused that I wish we could get a new one to replace it. However, perhaps you can give "Efficiency" a new suit of clothes and make the word more respectable as a symbol!

Apropos of your subject there is a delicious Japanese proverb—"As a man who does not suffer from headache forgets his forehead, and a man who does not suffer from toothache forgets his teeth, so the upright man thinks not of himself." The truly efficient man is so much of a unit, so absorbed in his vocation, that the self-consciousness due to self-analysis which eats up strength is unknown to him. If a fellow does a thing well he is caught in the arms of a joy that takes his mind away from himself: if badly he becomes corroded by anxiety.

Good luck to you and do invent a new and sticking terminology for efficiency!

C. H. BRENT

## STUDYING IMMIGRATION

The Committee for Immigrants in America, with headquarters in New York City, has started a quarterly, *The Immigrants in America Review*, for the discussion of all phases of the problem. The editor, Frances A. Kellor, outlines the policy to be advocated in this concise and comprehensive fashion:

1. Direct, expeditious and safe distribution of admitted aliens to destinations, with suitable train, terminal and transfer facilities and municipal facilities for directing immigrants within the city, comprizing the subject of *transportation*.

2. Security of employment and adequate, coördinated, regulated labor market organization thru which admitted aliens may find work, with equal opportunity to engage in occupations by which they may earn their living, comprizing the subject of *employ-ment*.

3. Maintenance of American standards of living, by removal of discriminations in localities, housing, sanitation, overcrowding, rentals, and supplies, comprizing the subject of *standard of living*.

4. Opportunity for intelligent, safe investment of savings, with such information, organization and legislation as will accomplish this, including banking institutions, loan funds, agricultural colonies and workingmen's home projects, comprizing the subject of *savings and investments*.

5. Reduction of illiteracy and advancement of knowledge of the English language and civics, extension of public social facilities and industrial training, comprizing the subject of *education*.

6. Higher and more simplified standard of naturalization requirements, uniform state naturalization laws, simplification of processes and increase of facilities for naturalization and for coördination of educational requirements with educational facilities, constituting the subject of *naturalization*.

7. National coöperation in the care of public charges, increased facilities for locating deportable persons, and better coordination of state and national work, constituting the subject of *public charges*.

This is a well-planned program and we hope that the new review will do something toward accomplishing it.

## RED CROSS CONTRIBUTIONS

The total amount contributed to the Red Cross Relief Fund thus far thru The Independent is \$5882.37.

The following list covers the contributions hitherto unreported:

A Friend, Duluth, Minn., \$3; A Friend, Gentry, Ark., \$2; Class in Primary Dept. of Bible School of First Cong. Church, Walla Walla, Wash., \$1; Miss Jonnie J. Edwards, Hookerton, N. C., \$2; Miss Mattie E. Edwards, Hookerton, N. C., \$2; Eugene S. Edwards, Hookerton, N. C., \$4.75; Mary E. Elder, Baker, Ore., \$5; Mrs. Josiah Jewitt, South Carver, Mass., \$5; Mrs. H. T. Lawrence, Spiceland, Ind., \$2; Eugene Maupin, Lentner, Mo., \$2; W. K. N., West Alexander, Pa., \$5; Marion Pryne, Orange, Cal., \$2; Charles H. Price, Philadelphia, Pa., \$2; Dora S. Secrane, Unga, Alaska, \$5; The Parker Chautauqua Club, Armstrong Co., Pa., \$2; Miss Martha E. Whited, Harrisburg, Pa., \$5; Mrs. Willis Whited, Harrisburg, Pa., \$2; Mr. and Mrs. F. R. Wilson, Pago Pago, Samoa, \$5; Private L. A. Woolsey, Texas City, Tex., \$2; Miss Grace D. Harding, Mansfield, Ohio, \$2.

## THE PASTURE

From the little book of arresting verses, *North of Boston*, by Robert Frost, shortly to be reviewed in The Independent, we take the foreword, not because it is typical of the book as a whole—there is too much grimness in Mr. Frost's New England for that to be true—but partly because it does suggest his method by its directness and simplicity, and chiefly because it is a delightful trifle and we like it:

I'm going out to clean the pasture spring;  
I'll only stop to rake the leaves away  
(And wait to watch the water clear, I may);  
I shan't be gone long.—You come too.

I'm going out to fetch the little calf  
That's standing by the mother. It's so young.  
It totters when she licks it with her tongue.  
I shan't be gone long.—You come too.

NUMBER 3460

## A CONFERENCE OF THE NEUTRAL NATIONS

**T**HE Great War has now been raging for eight months.

Four million men have been killed, crippled for life, wounded or stricken with disease.

Many men, women and children are now living in cellars, barns, chicken houses and dog kennels.

Children have been mutilated or starved to death.

Thousands of square miles of territory have been laid waste.

Nearly ten thousand million dollars have already been expended in the work of devastation. The war is costing fifty millions dollars a day for military expenses alone, taking no account of the loss due to the stoppage of business and industry.

And the war has not yet begun, says Lord Kitchener.

It now seems likely that the next few months will witness the most stupendous human holocaust known to history. Yet who dares prophesy that even then it will not end in a stalemate, such is the advantage of modern defense over offense.

In the face of this doom of civilization is the rest of the world to sit silent and supine waiting for the conflagration to devour itself? Almost anything is better than doing nothing. What is the duty of the United States? Are we or are we not our brother's keeper?

In the first issue of The Independent published after the war broke out we said:

President Wilson should now invite all the governments of the world represented at the second Hague Conference, except those at war, to unite in a joint note to the belligerents in the name of civilization, looking to the settlement of the questions at issue and the restoration of peace.

The United States did not call the neutral nations together. Mr. Bryan was understood to believe that the neutrals in anything resembling a caucus could not go so far as the United States could go alone. Accordingly the United States offered mediation to the belligerents on its own responsibility. It was not accepted. Nothing further has been done along this line as far as is known.

**C**AN the neutrals then do nothing either individually or collectively?

At the recent Chicago Peace Conference—the first national peace conference to assemble in the world since the war began—a suggestion was made that is worth considering.

The platform of the Chicago conference suggests that the United States immediately call a conference of the neutral nations. This idea is, of course, not new. Not only have many unofficial voices united with The Independent in urging it, but bills have been introduced in the United States Senate by Mr. Newlands and Mr. La Follette asking the President to convoke a confer-

ence of the neutrals, and Venezuela has made a formal proposal to the same effect.

The two novel ideas in the Chicago platform are these:

1st. The Conference of Neutrals shall sit continuously until the war ends.

2nd. It shall make to the belligerents, from time to time, suggestions concerning such things as the amelioration of the conditions of war, the rights and duties of neutrals, the termination of hostilities, or the basis of a lasting peace, such suggestions to be in the nature of good advice and good offices and not formal mediation tho presumably leading to it.

Formal mediation implies a regularly organized conference of representatives of neutral nations before which representatives of the belligerents appear and present their respective demands in order that the conference, acting as a quasi-court, may attempt to reconcile the conflicting interests by suggesting bases for compromise. Mediation cannot go forward until the belligerents have agreed to it in principle. But there is no reason whatever why a Conference of Neutrals should not be organized without securing in advance the assent of the warring nations. Obviously no proposal that such a conference could make would be successful until it had been accepted by the interested nations; but that is quite a different thing from securing their coöperation in advance.

**T**HE belligerents could not possibly object to such a conference, because the representatives of the powers at The Hague Conferences have recognized that efforts toward peace on the part of neutrals can never be considered offensive by either party at war.

Moreover any proposals emanating from such a conference would constitute the highest official utterance of that part of the world which still retains its reason. Consequently it would be likely to have a profound effect not only on the governments of the belligerents but on the public opinion of the entire world. Even if at first its proposals were rejected, they might eventually be accepted, and in the meantime the conference would be organized and ready to seize the first opportunity to propose formal mediation.

Such a course of action on the part of neutral nations at this time would be somewhat analogous to that in a labor dispute where representatives of the public use their good offices to get both sides together under some practical modus vivendi. Such a procedure has often settled industrial war. Why might it not be tried in the case of international war?

We may add that this suggestion of a continuous conference of neutrals repeatedly offering suggestions

originated not with some statesman, international lawyer, or peace advocate, but with a young instructor of English in the University of Wisconsin, Miss Julia Grace Wales by name. Miss Wales laid her plan before the local Peace Society where it was enthusiastically adopted as "The Wisconsin Plan" and submitted to the Chicago Peace Conference by the Wisconsin delegates and there embodied in the Chicago platform.

We earnestly call the proposal of Miss Wales to the attention of President Wilson and Secretary Bryan.

### WHEN HINDENBURG CASTLES

THERE is an old belief that chess is the game of generals and that the lessons of strategy may be learned by practise on the checkered board. Since *Wer ist's?* differs from the English *Who's Who* in not giving recreations in its biographical data we do not know whether Field Marshal von Hindenburg is a devotee of chess or of its modern form, *Kriegspiel*, but we may well believe it, for his favorite maneuver is one of the most effective moves of the game. So successful has it been that "the Hindenburg *rochade*," as the German newspapers call it, seems likely to become an established term in military science. The *rochade* is simply what our chess-players call "castling" and for those who are unfamiliar with the game it is sufficient to say that it consists of a sudden shift behind the frontal screen of pawns so that the weakest piece on the board, the king, is replaced by one of the strongest, the castle. This is very disconcerting to an opponent because it renders useless the forces he has brought to bear upon the former point of attack and obliges him to meet a new offensive from another quarter.

Three times in the present war has Hindenburg made this move on a grand scale and each time he has scored a victory against the Russians. His opponent, Grand Duke Nicholas, either does not understand the move or, what is more likely, cannot meet it quickly enough for lack of railroad facilities. But the Germans have a complete system of railroads paralleling the frontier from Tilsit to Cracow, and along these they can shift their troops from one end to the other of the five hundred mile line of battle while the screen of German troops established on the Russian side of the boundary conceals the movements of the army behind. The only indication that General von Hindenburg is preparing one of his famous *coups* is the sudden silence that falls on the eastern frontier. When Berlin's official bulletin says: "Nothing of importance to communicate today," the Russians must look out for something, but which way to look they can only guess.

Early in February, for instance, while the Russians were rejoicing over the repulse of the Germans before Warsaw there came the mysterious news that all communication with Dantzig by ship or rail, by telegraph or telephone, was cut off. Did this mean that an earthquake had swallowed up the city or that the Russian fleet had captured it? Otherwise why should this city on the Baltic far to the north of the scene of active fighting be affected? The next news we got was that the Russians had been driven from East Prussia. Then it was clear what had occurred. Hindenburg had castled.

Quietly withdrawing a large part of his troops from the Bzura River where the Russian forces had been

massed in defense of Warsaw, he took them around by Thorn and Dantzig and surprized the enemy behind the Mazurian lakes by a simultaneous attack from the north and the south. It was, as Petrograd admits, only by miracle or accident that the Russian army in East Prussia escaped annihilation.

Last October Hindenburg had played the same trick by just the opposite movement. He had suffered a severe defeat in the forest of Augustowo, east of the East Prussian frontier. It might have been expected that he would either have brought up reinforcements to renew the attack or have stood on the defensive to protect East Prussia from invasion. But instead he shifted his troops from the left wing to the center and before the Russians knew it he was within gunshot of Warsaw.

But Grand Duke Nicholas quickly gathered his forces at this point and drove the Germans clear back to their country. Then General von Hindenburg countered by castling; this time by rushing Austrian and German troops from his right wing to the center. The Russians retreated more swiftly than they had advanced and the Germans established themselves on the Bzura River, where they still remain.

The significance of these maneuvers is simply that each party is using its strongest weapon. Russia has an exhaustless supply of men and can hold any point where they may be massed. Germany is short of men, but is trying to compensate by superior mobility. Neither side has gained a decisive victory, so in spite of its rapid fluctuations, the situation of the eastern frontier is so far very much the same as on the western, that is, a stalemate.

### TOO MANY RELIGIONS

IT was a Frenchman who once made his jibe against the United States as the country which had a hundred religions and only one sauce. He underestimated the number with us of both sauces and religions, if by religions he meant, as we suppose, denominations. The list of religious bodies, with their statistics, compiled for this year by Dr. Henry K. Carroll, associate secretary of the Federal Council of Churches, embraces 169 religious bodies, large and small, but of these perhaps six or eight do not call themselves Christians or would not generally be thought of as such. Not less than 160 claim the Christian name, and of these 150 denominations are Protestant. To be sure, many of these have only the shadow of a name and are not worth the counting, such as the Yorker River Brethren, with only 423 members, and the Old Two Seed in the Spirit Predestinarian Baptists, famous for their name, with 781 members, and neither of them heard of since the religious census of 1906.

The total membership of all these Protestant Churches as given is about 24,000,000. They would make, if united, an imposing power, sufficient to control the policy and destinies of the country, for with them must be counted their non-communicant adherents, more than as many again. And yet further are to be added the nearly 14,000,000 Catholics, which includes the whole population over seven years of age.

But why are these 24,000,000 members of Protestant Churches not gathered into one body? Well, 17,438,862 of them are so gathered into the Federal Council of Churches, in which are represented thirty out of 150

denominations. These thirty include all the larger bodies, with the exception of the Southern Baptists. That is, nearly three-fourths of the Protestant Church communicants in the country whether called evangelical or non-evangelical are already federated, and the others, 120 of them, are of the smaller and less influential class. They are largely of the extremist, "come-outer" sort, protesters against other Protestants, good Christians, doubtless, but peculiar if not uncomfortable. It would be amusing, if it were not pitiable, to find nine kinds of "Faith" associations, and only one with a thousand members; twelve sorts of Presbyterians; sixteen of Methodists, and twenty-one of Lutherans.

What should be done about it? First, the Federal Council of Churches should go out into the highways and hedges and compel these careless or recalcitrant or beggarly bodies to come by the dozen in to the feast; and they should batter the doors to get in. But still more, denominations should each peer about to discover with what other one it can incorporate itself, gaining and adding life thereby, grafted into a good olive tree, or, if not, how it can best by dying glorify God. It is not to the glory of God if there are 169 religions, so called, in the United States.

#### THE MOBILIZATION OF GERMAN WOMEN

THE war has swept away the chief argument against the admission of women to political and industrial equality in Germany. The opponents of woman's rights have been willing to admit that the bearing of children demanded as much courage as military service and even that it was as useful to the nation, but since it was an individual act it could not—in German estimation—rank with the organized activities of men. So long as women showed themselves deficient in the ability to organize and coöperate they could not claim membership in the supreme organization, the state.

But now the women have demonstrated that they can equal the other sex in what the Germans regard as the highest attainment of *Kultur*. Their success in forming and managing an association of varied activities and national scope is in some respects a more remarkable feat than the mobilization of the German army, for it was effected without compulsion or previous training. On the morning of the day when Germany declared war against Russia Dr. Gertrud Bäumer, president of the Federation of Women's Clubs, issued a call for the mobilization of German women for social service. The Federation itself includes half a million members and with it are associated all the philanthropic and relief organizations of the country as well as an army of other women all working under the general direction of the *Nationale Frauendienst*. It corresponds somewhat to the Ladies' Aid Society of our Civil War but has a wider range. While one branch is working with the Red Cross and another caring for the comfort of the soldiers in the field, the chief duty assumed is looking after the homes deprived—perhaps forever—of the breadwinner. Here are women and children, sometimes sick and often helpless, thrown suddenly upon their own resources when industry is paralyzed and times are hardest. Self-supporting women were deprived of employment and the singers and actresses were harder to place than the discharged factory girls and housemaids. During the first months the volunteer visitors in Berlin made personal

investigations of 255,000 cases and in October the twenty-three relief committees distributed 100,000 bread tickets, 56,000 milk tickets and 300,000 meal tickets to the needy of the capital.

One of the most valuable forms of social service has been the establishment of cooking schools in various quarters of the cities, where free instruction has been given to housewives in the preparation of cheap and nutritious foods, in the use of the fireless cooker and in making bread twenty per cent potatoes and cooking according to the Government War Cook Book. In the National Women's Service the same spirit of unity has been displayed as in Germany otherwise and for the first time in the history of the country rich and poor, bourgeois and socialist, churchly and worldly, worked together in a common cause. Let us hope that when peace comes the German women will not forget what they have learned to do and that the German men will remember it, too.

#### THE LARGER AMERICA

THERE came on the wires the other day the report that Villa—or was it some other one of the fighting chiefs that are distracting poor Mexico?—was planning to set up an independent government in north Mexico, a secession, and leave the capital and the richer and more populous south to the Carranzists and Zapatists, or whatever the factions may be that will carry on the fight. Indeed, the papers had a map to show how the dividing line would run. It may be all nonsense, perhaps not; but could one help thinking about it?

Mexico had one such division, or secession, in the Alamo time, and it worked happily for the people. To be sure, we helped the Texans, for they wanted to come under our wing, and they needed our help, and in those days we wanted more land for slavery, something we are ashamed of now. Now we have no wish to intervene with a single soldier to help either or any faction, not even if the leaders, looking at Texas and at the other states that were then Mexican, should offer annexation as the price of aid. Tho we know it would be a blest thing for them to join their future with ours, they must come, if at all, of their own free will and initiative, not seduced by us.

But think what this long Mexican revolution means. Mexico is not free. She is a land of peons and slaves. Because peons and slaves they are poor and ignorant and dissatisfied and all poisoned with sedition. There are 13,000,000 Mexicans, and 7000 men own nearly all the land. One man owns over 30,000,000 acres. That is the condition which caused the French Revolution, when by a most beneficent act of violence the feudal and ecclesiastical estates were confiscated and divided among the people. In a different way the lands in the states from California to Texas that were once Mexican have been portioned out to settlers and we have no more peons there. Not unless Villa, or any one else that should lead a possible North Mexico, shall find some way to break up the feudalism of Sonora and Chihuahua and Coahuila can there be peace, or ought there to be peace, to that distracted land. Nor does it need French confiscation. In a peaceful way, and by an act of Parliament, the vast estates of Ireland are passing into the ownership of those who were tenants, and Señor Zeferino Domingally,

an intelligent Mexican landholder, is now in this country asking the sympathy of our people for such an effort to answer "the cry of the peon for land and liberty."

Why should not the American people have an intense compassion for the pitiable condition of poor, distracted Mexico, as well as for Belgium and France and Germany and Austria? Perhaps the way of relief may come thru division, possibly followed by annexation; but Heaven forbid that it be by another Mexican war. We are better-minded than we were then. And yet we cannot help remembering that treaties and federation are good, but union is better. Do we dream when we anticipate the time when, not by annexation, but by some future organic act in equal agreement, all of North America from Panama to the Pole shall embrace one united people, ruled by and for the people, sufficient in themselves, fearing none, feared by none, forgetting all names and all pride of race in the one common name, *American*, one commonwealth for the common weal? Is it a dream? Then let us dream till the dream comes true. It may be far off, but to that the higher statesmanship will look, as it looks for one *Bund* for all Europe, when armies and navies shall cease to be.

#### OUR DIPLOMATIC SERVICE

IN an address before Harvard students some time ago Mr. Curtis Guild told some of the infelicities of our diplomatic service as he learned of them during two years while Ambassador at St. Petersburg, now Petrograd. One of the least of them was that our Congress allows only beggarly salaries for the service, and does not even yet generally supply the residence, so that he had to hire a house near a police station, while Spain supplied its Ambassador with a worthy residence on a worthy avenue.

But the chief blunder of our Government is a much worse one and Mr. Guild made it clear what it is. We make our diplomatic posts prizes for political service, paying in honors for service to the party instead of securing the best men to serve the country. Foreign affairs should recognize no party.

The United States is the only supposedly civilized country which changes its Ministers and Ambassadors with every change of administration. The custom is, to find the best rich man possible, who has helped the party, and who can afford to pay handsomely for the honor by spending two or three times as much as the salary paid him. They are likely to be good business men, able to do admirably in helping sufferers in case of earthquake or war, but quite ignorant of diplomatic business. Indeed we are never sure that a Secretary of State will know anything about statesmanship. What would a merchant think of sending a commercial agent to Germany who could not talk German or to France who could not talk French? And yet we send men to do the most important business of the nation who do not know the language of the country they go to. No man ought to be our representative abroad who cannot speak three or four different languages, and particularly the language of the country to which he is sent.

Then he must have time to get acquainted with the country itself and with its statesmen, and particularly with the representatives of other countries. This cannot be if the office is a political one. We are now learning

that the consular business must not be political, but must have a stable tenure. Much more should this be true of the diplomatic service on which good relations must depend so as to maintain peace and avoid war.

Diplomacy should allow a career. It should require a careful training with transfer from the lower secretaryships to the highest positions for the most competent. We have had some admirable Ambassadors abroad, but they succeeded best at a time when the position was more ornamental than it is coming to be now. We have more international business than we had before we entered into world politics. American interests are much wider than they were, and of all nations we ought to be most influential in securing and prescribing terms and treaties of peace. Do we find it to our profit to take our foreign trade out of politics, and shall we make our international relations the football of party success? Shall we train our consuls whose business is trade, and not give experience and training to our diplomats? Let us think of it.

Writing letters to a princess is a task that a good many American youngsters who write other letters under violent protest would willingly undertake. The Belgian Relief Fund Committee, at 10 Bridge Street, New York, invites American children to fill an "Easter Argosy" with food for Belgian babies and with their own particular messages to Princess Marie Jose, the pretty little nine year old daughter of King Albert. Marie Jose may perhaps be pleased to get the twenty-word letters, but the Belgian babies and their mothers will surely be saved from starvation by the food.

Probably nothing that the United States can say will effect much change in the blockade policies of either Germany or Great Britain. The conflict is too bitter for that. But whatever protests we feel called upon to make will prepare the way for pressing American claims for compensation when the war is over. Thus it has been in every war. The fighters have often hurt the "innocent bystander." And when the fight is over, the "innocent bystander" has sent in his bill.

The National Child Labor bill passed the House by an overwhelming majority, was favorably reported by the Senate committee—and was kept from a vote in the last hours of the session by the objection of one man. The next Congress should see it become law in spite of the efforts of those men who consider the making of cotton cloth a more important industry than the making of men and women.

Thousands of women have promptly responded to the call of the British Government for volunteers to take the place in various industries of workmen who are needed in the army. Why not try letting women take the place of the soldiers at the polls as well? Or is voting so much more a masculine accomplishment than work?

The origin of the word "jitney," which seems to mean a five-cent piece, is lost in obscurity. But the "jitney," meaning a bus with a five-cent fare, is rapidly becoming a very definite reality in many American cities. It is making many a so-called public service corporation sit up and take notice.

An article in the January number of *The British Review* entitled "The True History of the War," has had eighteen passages excised by the censor. What is left may be "the truth," but it is evidently not "the whole truth."

Altho the soldiers in Europe have converted their swords into spades and their spears into pick-axes the millennium is not yet come.

# THE STORY OF THE WEEK

## THE GREAT WAR

**March 15**—German cruiser "Dresden" attacked in harbor of Chilean island of Juan Fernandez by three British warships and blown up by her commander. Russians capture eastern defenses of Przemyśl.

**March 16**—British and Germans fighting over St. Eloi near Ypres. Zeppelins drop bombs on Calais.

**March 17**—French battleship "Bouvet" and British battleships "Irresistible" and "Ocean" sunk by mines in Dardanelles. Russians capture Memel, East Prussia.

**March 18**—Germans bombarding Oso-wiec at closer range. French report gains in Champagne and Wœvre.

**March 19**—Engagements between Russians and Germans along Narew, Niemen, Orzyc, Bobr, Bzura and Pilica rivers. Kaiser holds council of war at Lille with Kings of Saxony and Württemberg.

**March 20**—Russians cut off Erzerum from Black Sea. In Galicia Russians attacking Kolomea from the east.

**March 21**—Two Zeppelins drop bombs on Paris. Germans storm Great Reichackerkopf, Vosges.

Zeppelins Raid Paris Paris has been visited many times by the German aeroplanes, but the damage done has been so slight that the Parisians have regarded them more as a diversion than a danger. The first attack by dirigibles took place at one o'clock Sunday morning, when two Zeppelins came from the neighborhood of Compiègne, where the German lines for the last seven months have been maintained within forty-five miles of Paris. The capital was notified by telegrams from the front and buglers were sent thruout the city in taxicabs to warn the inhabitants. All the lights were at once extinguished, but the factories in the northwestern suburb of Courbevoie were still lighted for the night work on war material, and the glass roofs served as a target to the visitants. Bombs of terrific force exploded in two of the factories, completely wrecking them, but only one workman was hurt. Bombs were also dropt in the suburb of Neuilly, north of the Bois de Boulogne and the Batignolles quarter, with no fatal results. The airguns of the forts opened fire on the balloons and a flock of aeroplanes with searchlights pursued them beyond the outer fortifications, but they escaped to the German lines without injury.

A Zeppelin took advantage of a fog on the morning of March 18 to drop incendiary bombs on Calais. One fell upon two railroad cars and killed nine mechanics sleeping there. Another bomb struck the Cathedral

of Notre Dame and a third a hospital filled with Belgian wounded.

The Germans protest against the act of French aviators in dropping bombs upon the undefended Alsatian town of Schlettstadt. One of them fell upon a school, killing the woman teacher and two children and severely wounding ten others.

### Three Warships Sunk in Dardanelles

The attack on the Dardanelles made on March 18 resulted in very serious losses to the Allied fleet. The trawlers had been engaged for weeks in dragging the strait by day and night and it was supposed that all mines had been cleared away up to the narrows so the fleet could venture in to shell the forts at this point. Accordingly the superdreadnought "Queen Elizabeth," accompanied by the battleships "Inflexible," "Agamemnon" and "Lord Nelson," entered the channel and at 10.45 opened fire at the forts near Chanak on the Asiatic side and Kilid Bahr on the European. The battleships "Prince George" and "Triumph" followed and engaged the guns at Kephez Point and the shore opposite. An hour and a half afterward four French battleships, the "Suffren," "Bouvet," "Gaulois" and "Charlemagne," came in and attacked at closer range.

Later in the afternoon the battleships in the strait were ordered to retire, and a British squadron composed of the "Vengeance," "Irresistible," "Albion," "Ocean," "Swift-

sure" and "Majestic" was sent in to relieve them. Just at this time, when the channel was occupied by the retiring and advancing fleets, a number of floating mines were released in the narrows or above and were carried down by the strong current, which runs from the Black Sea to the Ægean. One of them struck the French "Bouvet," which sank within three minutes in the bay of Erenkeui, on the Asiatic side, where the water measures thirty-six fathoms. Only sixty-four of her 600 men escaped. At four o'clock the "Irresistible" was struck and at six the "Ocean." Both vessels sank in deep water, but there was time to rescue most of their crews. The British battle cruiser "Inflexible" and the French battleship "Gaulois" were struck by 14-inch shells from Kilid Bahr and Chanak and disabled. According to the Turkish account other vessels of the Allied fleet were sunk or damaged. This action was fought under the command of Rear Admiral John Michael de Robeck, as Admiral Carden, who has hitherto had charge of the operations, is reported ill. The casualties will not interfere with the continuance of the attack, for the "Henri IV," now on the Syrian coast, has been ordered to take the place of the "Bouvet," and the British warships "Queen" and "Implacable" are on their way to the Dardanelles.

The British light cruiser "Amethyst" made a daring raid into the narrows on March 13 to cut the cable connecting the Asiatic and European sections of the Turkish Empire. She

Punch

STUDY OF A PRUSSIAN HOUSEHOLD HAVING ITS MORNING HATE

succeeded in hooking up the cable and breaking it and escaped under fire from both shores. She was struck many times and thirty men were killed.

**Russians Capture Memel** The Russians, expelled last month from their positions east of the Mazurian Lakes, have resumed the offensive by an attack upon the strip of East Prussia which stretches north along the Baltic. A detachment entered Memel, the most northerly seaport of Germany, in the evening of Thursday, and after some street fighting, in which civilians took part, the city was occupied. Another force of Russian troops operating forty miles southward of Memel regained Tauroggen, a Russian town just over the border, which has been for some time held by the Germans. This brings the Russians again within a few miles of Tilsit on the Memel (Niemen) River, which they captured in August, but were forced by Hindenburg to relinquish.

The Germans claim that in this invasion the Russians are burning villages and pillaging estates, leaving a bare and devastated country in the wake of the army. They threaten to retaliate by destroying three Russian villages for every Prussian village destroyed and by burning the public buildings of Suwalki or other provincial capitals now in their hands in case the Russians set fire to the public buildings of Memel. According to the German official figures the Russians in their two former invasions of East Prussia destroyed 8000 houses and the refugees from the province number over 300,000. East Prussia is a great horse-raising region, but there are now scarcely 6000 left of 100,000 horses before the war.

On the other hand, the Russians estimate the damage done to Poland amounts to over half a billion dollars. Ninety-five Polish towns and 4500 villages have been destroyed. However much one may distrust the accuracy of the figures on either side it is certain that the suffering of the population of East Prussia and Poland is much worse than Belgium, for the people are poorer and part of the country has been fought over several times mile by mile.

**Allies Attack in France and Flanders** All three of the Allies, Belgians, British and French, have undertaken a vigorous offensive during the last fortnight, and, altho the territorial gains do not show up on the map, they are more considerable than have been reported since last fall. The Belgians

have crossed the Yser River between Nieuport and Dixmude and taken possession of the German trenches. This region is still partially flooded, but the Belgians as they advanced built roads under fire and got over the canals and ditches by means of planks and bundles of faggots.

South of the ancient Flemish city of Ypres the British and Germans have been engaged in a desperate struggle for St. Eloi. This village has changed hands several times during the week. When the British captured it fresh troops were brought up from Bruges and the British trenches carried, tho at terrible sacrifice. Later in the same day some

of them were regained by the British.

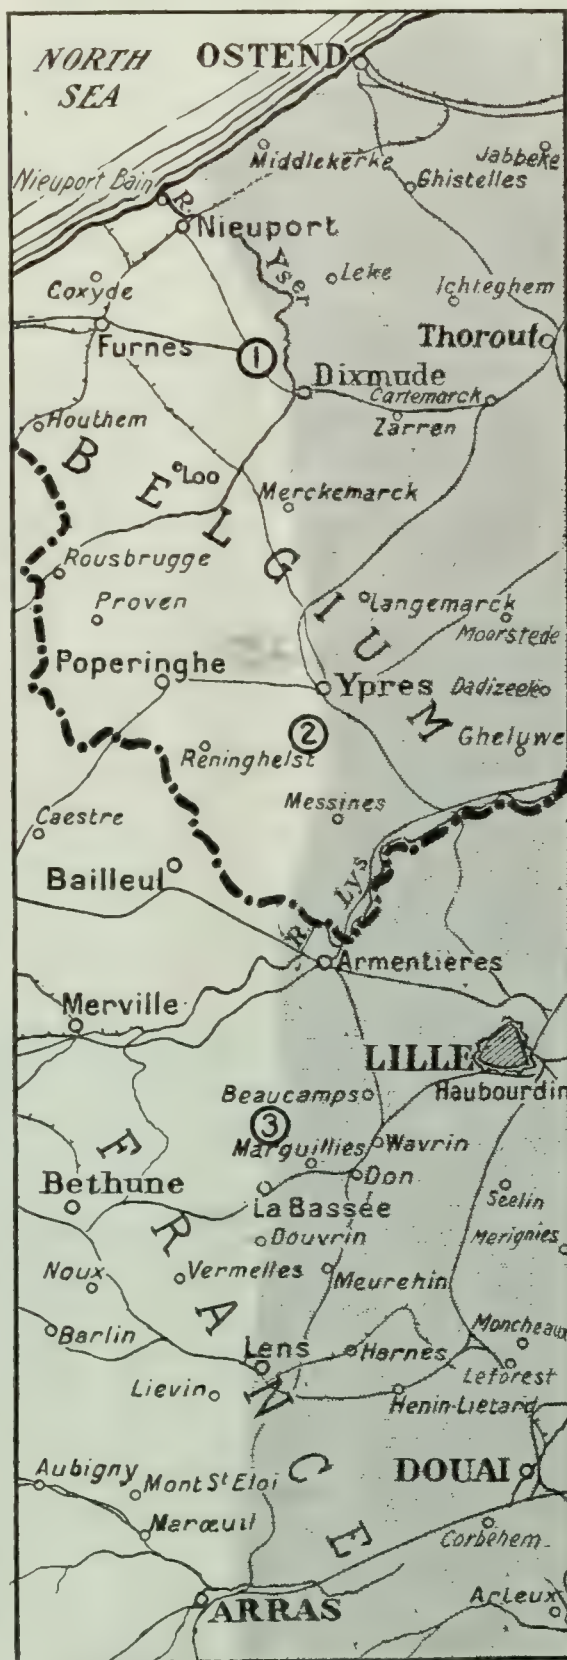

North of La Bassée the British have held the town of Neuve Chapelle, which they captured on March 10. In that engagement the British took 1720 prisoners, and it is estimated that the total German casualties amount to 5000 dead and 13,000 wounded. The Germans attempted for three days to regain the ground they had lost, but made no progress. In this action the British lost 263 officers killed and 427 wounded. This astonishing fatality among the officers is due to the fact that in advancing over intricate country intersected with hedges and ditches platoon commanders had to go forward to find gaps and bridges where their men might pass.

**The War on Commerce** The American Government has given out its correspondence with Germany, France and Great Britain in regard to the rights of neutral shipping on the high seas. On February 20 our Government addressed identical notes to Germany and Great Britain in which it was suggested, first, that both countries agree not to sow floating mines or use submarines to attack merchant vessels or use neutral flags as disguise; second, that Germany agree to permit American agents in Germany to receive and distribute foodstuffs to noncombatants only, and, third, that shipments of foods and foodstuffs to such authorized agents be permitted.

In a reply dated March 1, Germany accepted in general most of the American stipulations on condition that England accept them and consent to abide by the Declaration of London. The British reply presented a long list of alleged German atrocities and violations of international law and ended with the declaration that France and Great Britain had decided to stop all supplies going to or from Germany, and that "the British fleet has instituted a blockade effectively controlling by cruiser cordon all passage to or from Germany by sea."

On March 5, our Government sent identical notes of inquiry to the French and British Governments criticizing their declaration of intended retaliation upon commerce with Germany and raising especially the following point:

The language of the declaration is "the British and French Governments will therefore hold themselves free to detain and take into port ships carrying goods of presumed enemy destination, ownership or origin. It is not intended to confiscate such vessels or cargoes unless they would otherwise be liable to condemnation."

THE WESTERN THEATER OF WAR

After seven months of deadlock there is a renewal of activity in France and Flanders. The spring campaign opens with a vigorous attack (1) of the Belgians north of Dixmude, (2) of the Germans south of Ypres and (3) of the British north of La Bassée

The first sentence claims a right pertaining only to a state of blockade. The last sentence proposes a treatment of ships and cargoes as if no blockade existed. The two together present a proposed course of action previously unknown to international law.

As a consequence neutrals have no standard by which to measure their rights or to avoid danger to their ships and cargoes. The paradoxical situation thus created should be changed and the declaring powers ought to assert whether they rely upon the rules governing a blockade or the rules applicable when no blockade exists.

In reply the British Government declares that the proposed form of blockade is less hard upon neutrals than the regular blockade, in that it is not proposed to confiscate ships or cargoes but only to stop shipping to or from enemy territory. The French reply is similar, but adds the assurance that it is not intended to extend the action of French cruisers beyond European waters, including the Mediterranean.

**Sedition in India** It was hoped in Germany and perhaps also feared in England that the outbreak of the war would be the signal for a native rising in India which would keep a large part of the British army busy there. These anticipations have not been realized. The Indian troops have done valiant service in France, the native princes have voluntarily contributed men and money to the support of the empire and there has been no serious disorder among the people.

But it is now transpiring that conditions in India have not been as peaceable as the outside world has been led to suppose and that the danger of trouble is increasing. Sir Reginald Henry Craddock, a member of the Viceroy's Council, speaking in support of a bill for the defense of India, stated that it had become necessary to arm the military authorities with special powers to act in emergencies and nip in the bud any and all manifestations of lawlessness. Owing to the stringent censorship nothing is known about the disorders to which Sir Reginald referred except as he alludes to the "campaign engineered on the Pacific coast of America, whence some deluded men had returned during the past few months with their minds poisoned and had committed acts of violence in Bengal."

It has been the custom for many years for the Indian Nationalists to send their sons to American universities in order that they might be brought up in a more democratic atmosphere than that of the British schools. These young men are as a rule decidedly anti-British in their sentiment, but it is hardly to be sup-

posed that they are engaged in engineering any serious rising.

On February 15 there was a mutiny at Singapore among the Bengalese troops about to be transported to Egypt. The British censor has allowed no detailed information regarding it to be sent out, but from Tokyo and Manila it has been learned that eight hundred men of the Fifth Light Infantry revolted and terrorized the town until the following day when the arrival of Japanese, French and British warships put down the insurrection. The Chinese of Singapore are said to have joined with the mutineers in fighting the Japanese and fifteen Germans from the detention camp also took up arms on that side. As fast as the mutineers were caught they were publicly executed in the public square of Singapore as

#### A NEW MONUMENT TO BISMARCK

Completed last month in Nürnberg. On the sides are figures representing Justice, Truth, Courage and Right, while the Iron Chancellor himself tops the shaft. Bismarck was born a hundred years ago—April 1, 1815

a warning to their race. The Sikhs remained loyal and assisted the Japanese and French marines in putting down the Bengalese. The British loss was thirty-six, including several civilians and one woman. Several hundred of the Indians are reported killed. According to the London India Office the German consular and commercial agents are fomenting disorder in India and urging the Mohammedans to rise in accordance with the Sultan's call for a Jihad or Holy War against the Christians.

**Chinese Concessions to Japan** The landing of two battalions of Japanese troops at the Chinese port of Tientsin has aroused great indignation among the Chinese, and mass meetings held in various cities of the republic have voiced a demand that China resist Japanese encroachments by force of arms. In England also considerable apprehension is expressed over the sweeping character of the Japanese demands, especially those giving Japan control of the railroads, mines and steel works of the Yangtse Valley. It was rumored that Great Britain and Russia had remonstrated with their Asiatic ally, but this report is officially denied from London.

Washington is said to have directed a note of inquiry on the subject to the Japanese Government, and Count Okuma, the Premier, states that the reply fully satisfied the American Government that Japan had no designs upon the integrity of China. According to the Japanese the anti-Japanese agitation in China is due to emissaries of Germany.

According to the London *Times* the Chinese negotiators have accepted three more of the Japanese demands, namely, that Japan be given the first option on any foreign loan, that preference be given to Japanese in engaging foreign advisers and police inspectors, and that new treaty ports be opened in Mongolia. The Chinese representatives at the Peking conference are holding out against exempting Japanese residents in China from taxation and local law.

**War Cases** Richard Peter Stegler, a German, who has resided in this country for some years, recently attempted to obtain a passport for England by means of a false birth certificate and other fraudulent papers. He was arrested, with two men, Gustave Cook and Richard Madden, who had assisted him for pay. At the trial, in New York, Stegler testified for the prosecution, mak-

ing a full confession. He was sent to jail for two months, and terms of ten months were given to his associates. The case has excited much interest because of Stegler's assertion that he was encouraged and assisted by Captain Boy-Ed, the naval attaché of the German embassy at Washington. The story told was that Stegler was to act in England as a spy for Germany; that he received from the naval attaché \$178, most of which he used in paying for the fraudulent papers, and that his wife was to have a pension if he should lose his life. This provision was suggested by the fate of the German spy Lody, who was executed in the Tower of London. When Stegler was sentenced, his counsel expressed regret because "the representative of the German Government who had led him on" was immune.

Werner Horn, the German who attempted to destroy the railroad bridge at Vanceboro, Maine, will be taken to Boston for trial. The Federal commissioner before whom he appeared gave no weight to his counsel's plea that he should be released because his offense had been a beligerent's act of war.

William Muller, the German consul at Seattle, and his secretary

Press Illustrating Company

#### GLORY

A cemetery "for heroes" at Munich

have been arrested on the charge that they conspired to buy the business secrets of the Seattle Construction and Dry Dock Company by corrupting one of the company's clerks. This clerk's story is that he was to be paid by the consul for bills of lading which showed that the company was shipping to Canada, in violation of neutrality, parts of submarines. The bills of lading, or copies of them, were in the consul's office. The company says that it has shipped no parts except those of submarines ordered by Chili and sold before the war by that country to British Columbia.

**Trust Decisions** A Federal court, composed of Judges Putnam, Brown and Dodge, in Boston last week dismissed the Government's suit, begun four years ago, against the United Shoe Machinery Company, which was accused of violating the Anti-Trust law. The court held that the company's patents enabled it legally to prevent the use of the patented machinery by its competitors. The judges said they had failed to find any support for "the charges of intended oppression, arbitrary conduct, or anything of that nature." Nor was there any evidence of "a purpose to destroy what could not be acquired by straightforwardness." The company had not enforced its leases in an unreasonable manner.

Attorney General Gregory has dismissed the complaint of the New

York *Sun* against the Associated Press, in which it was alleged that the latter exercised powers in violation of the Anti-Trust law. He expresses the opinion that it is no violation of the law for a group of newspapers to collect and distribute news for their common benefit, and to that end to agree to furnish the news collected by them only to each other or to the association. He also says that newspapers desiring to form such an organization may lawfully determine who shall be and who shall not be their associates.

**The Railroads** Two important decisions concerning railroad rates have been announced by the Supreme Court. The first annuls the West Virginia law of 1907 making the passenger rate two cents a mile. This statute is held to be virtually confiscatory, because, if it allows any profit at all, it is a very small one. The second condemns North Dakota's law making a maximum rate on coal in carload lots, for the reason that the rate permits no profit or return in excess of the cost of transportation. The court holds that a state cannot compel a railroad company to carry any specified commodity at a loss, or for an inadequate profit, even if the profit on all the other commodities transported is reasonable and sufficient. This doctrine is applied to the passenger traffic as well as to any kind of freight which may be singled out for

Press Illustrating Company

#### GLORY

A French lieutenant kissed by his general after receiving the decoration of the Legion d'Honneur

rate legislation. The decisions are believed to be far-reaching and are regarded with much satisfaction by the railroad companies.

In Michigan the freight rate increase of five per cent sought by the lines on the peninsula has been granted by the state commission. The increase of revenue will be about \$1,200,000 a year. Additional testimony has been taken in support of the application of forty-one Western roads for permission to increase their freight rates on certain commodities. It was asserted that fresh meat, live stock and grain were carried at a loss, and that the two-cent laws of several states had assisted in preventing the roads from making a fair profit. The loss on the transportation of meat and other products shipped by the packers was said to be more than \$1,000,000 a year.

The Central Railroad of New Jersey has been found guilty of rebating in favor of the Lehigh Coal and Navigation Company. In the indictment there are 185 counts, and the maximum penalty provided by law is \$3,700,000. It is reported that the Government will ask for payment of the entire sum. Upon a charge that it has granted rebates on coal the Pennsylvania Railroad Company has been indicted.

#### The War in Yucatan

The people of Yucatan revolted against the Governor set up in that state by Carranza. For a time they were victorious, and were talking

#### COLLECTING COPPER FOR GERMANY'S ARMY

According to the photographer this shows the results of a school collection of copper utensils to make good Germany's need. Sweeping decrees for the seizure of copper—unmanufactured, wires, scraps, alloys, etc.—together with nickel, tin, aluminum, antimony, and hard lead, have been issued at Berlin

about declaring their independence or asking the United States for a protectorate. On account of this revolt Carranza closed Progreso, the chief port of Yucatan, and enforced his order by two gunboats. One of these prevented the departure of two American ships, loaded with sisal hemp. The Yucatan insurgents wrecked the other by a bomb.

Our Government sent word to Car-

ranza that it did not recognize his right to close the port and gave warning that he must not interfere with American ships there. He promptly withdrew his gunboat and gave notice that the port was open. Great quantities of binder twine are used every year in our wheat fields. More than three-quarters of it is made of sisal, and nearly all of the sisal comes from Yucatan. It was a matter of much importance to our farmers that Yucatan's shipping port should remain open. Unfortunately, the revolt has affected the supply of sisal, for several large plantations have been made almost worthless and much sisal has been burned. The insurgents' success was shortlived. Defeated, their soldiers fled to Guatemala. Many refugees were taken away from Progreso by one of our warships, and 473 were carried on another ship to Havana. The victorious soldiers of Carranza looted and sacked Merida, the capital.

The Condition of Mexico There are conflicting reports about the condition of the City of Mexico. Some say there has been improvement under the rule of Zapata; others that his soldiers are robbing and killing the residents. Zapata has promised that those who killed McManus, the American, shall be punished. A similar promise has been made by Villa, but he is in the north. Villa is quick to punish those who are disloyal. Last week he ordered the trial of General

## A PEACEFUL WAR SCENE

In the distance a German Fessel balloon, flying over Savoniers, France

Almanza and the latter's entire staff at Torreon. All of the accused were found guilty and shot. Almanza, commanding 2000 men, had supported Provisional President Gutierrez and then had turned to Carranza. While in the service of the latter he was captured by Villa. Our Government has urged Carranza to open the railroad from Vera Cruz to the capital, for the transportation of food and refugees. It is said that Carranza and Zapata will coöperate in doing this.

There is much complaint about the condition of Manzanillo, on the west coast. Carranza's men hold the city, which is besieged by Villa, and their conduct is bad. The British consul asked for a warship and the cruiser "Cleveland" is now at that port.

It is supposed that Provisional President Garza, who fled with Zapata or was kidnapped by him, is now in the capital, but there has been no word from him. Fifteen of the 180 imprisoned priests have been set free and permitted to go to Vera Cruz. There has arrived in New York a priest, Father Santos Quiron, who brought with him in a battered suitcase \$300,000 worth of jewels which he took from the statue of Our Lady of the Rosary in the old cathedral at Puebla. These jewels—diamonds, pearls, rubies and emeralds—were given for the adornment of the statue long ago.

Provisional President Gutierrez has sent to Washington an envoy who has told there his story. Gutierrez fled from the capital when Villa undertook to put him in prison. He asserts that Villa caused the as-

sassination of the convention's vice-president, Aragon, and its secretary, Berlanger; that many members left the city to save their lives, and that Villa and Zapata easily controlled those who remained. They elected Garza, who criticized Zapata, and for that reason was said to have been kidnapped and put to death. Gutierrez says he controls parts of three states and has the support of 40,000 men, scattered about, whose commanders he names. He asks that the original convention be reassembled. Villa laughs at this, saying that Gutierrez attended the sessions of the convention after he had been deposed, and that the letters he left

behind him proved that he had been secretly negotiating a treacherous alliance with Carranza.

Villa's Campaign It has been difficult to ascertain what has really taken place on the Mexican battlefields. Reports are published by the Washington agents of the several factions, but they are not in agreement. Villa's long-delayed movement against Tampico now begins to deserve attention. He needed coal, and the coal fields, together with the district in the vicinity of Eagle Pass, Texas, are now in his possession. They are held by a force under the command of Raoul Madero. Before going southward from Monterey, Villa imposed a tax of \$500,000 upon the merchants and other business men of that city. The foreign residents at once complained, and in their behalf our Government has made protest. Villa, at the head of 28,000 men, is approaching Tampico, and his advance guard is said to be only twenty-five miles from that port.

Another part of his army, led by General Chao, is attacking Ebano, a town west of Tampico. Carranza has sent reinforcements to Tampico and there has been much preparation for defense. As similar preparations at Vera Cruz are reported—barb wire entanglements, trenches, etc.—some think Carranza foresees the fall of Tampico and an attack soon afterward upon the port where he has set up his capital. Villa says he will have Tampico by April 1. The situation will call for help from Washington, as there are many Americans in or near the city.

SCOUT SAVINGS

# POSTAL THRIFT

BY ALBERT SYDNEY BURLESON

POSTMASTER GENERAL OF THE UNITED STATES

out injury to the savings banks of the country. Inasmuch as these banks did not show during the first year, and have not shown

since then, any decrease in deposits to account for the millions in the custody of the postal savings system, it may be taken for granted that practically all the savings taken in by the postal authorities consist of money that was not saved prior to 1911 or that had been kept hidden, or both.

Yet there is little doubt that today there may be \$50,000,000 more that could be added to the already stupendous total of approximately \$54,700,000 in the postal savings system October 31 last. The sum mentioned is kept beyond reach of the postal savings system by the provisions of the law which limit the amount that may be accepted from a depositor to \$100 in a calendar month and restrict his maximum deposit to \$500. In compliance with recommendations made by the Post Office Department and the President, Congress passed last spring a law increasing the maximum, but limiting the amount "on which interest shall be paid to \$1000." This law was vetoed by the President because of a Senate amendment which enabled state banks and trust companies to receive deposits of the postal savings system regardless of whether they were members of the Federal Reserve system or not. The President desires a law that can be coordinated with the provisions of the reserve law. The money which goes into the postal banks is at once deposited in the Government's depository banks and thus enters the channels of trade.

The \$500 limitation was essentially experimental and now has outlived its usefulness. Its retention will seriously impair the intended utility of the service, which is to restore to business uses a large amount of money secreted by skeptical or ignorant foreigners.

The greater part of the segregated \$50,000,000—and this estimate is substantially correct, because it is based upon official reports—ought to

be in circulation to serve the purposes of liquid currency. It represents funds that will not find their way into the average bank, especially in the great cities, because many prospective depositors do not know its officials. This is true especially of foreign-born wage-earners, but there are many of our own citizens who are equally skeptical.

When the postal savings system was in its legislative stages there existed an apprehension in financial circles that the innovation would draw large sums of money from the channels of trade. Actual experience has shown that that apprehension was unfounded. The American Bankers' Association has officially gone on record in favor of the postal savings system, with the statement that "there has been no complaint anywhere tending to show that any considerable amount of money had been deposited with the Government that would have gone into the banks had the postal savings system not been in operation."

We must bear in mind that a considerable number of the wage-earners in this country are either foreign-born or of foreign citizenship. Very many of them, tho distrustful of banks, were familiar with the postal savings systems in Europe. It is natural for them to seek to deposit their earnings with the United States Government. They know that the Government will keep faith with them; but they cannot understand *why it will safeguard part of their savings and not all of them!* The testimony of postmasters is almost unanimous on the point that, when foreigners tender larger amounts than can be legally accepted at present, which are therefore refused, they usually decline to open an account at all. The result is that either such money goes back in hiding or is tendered at the money-order windows and sent to foreign postal banks.

Why permit this money to be returned to hiding and disuse?

I am convinced that the interest of the public will be best served by ultimately removing altogether the restrictions on the amount that may be accepted on deposit, but this condition should be approached gradually and as experience in administering

the system indicates that additional steps may be taken toward the desired goal. In my annual report I recommended that the maximum balance which may be accepted be increased, under certain conditions, to \$2000, but limiting the amount on which interest shall be paid to \$1000.

The war has brought out, more forcibly than ever, the usefulness of the postal savings system. It is a strong factor in quieting financial disturbances, and with the advent of the war deposits at the American post offices began to grow by leaps and bounds. According to the latest available statistics, upward of \$10,000,000 has been added since August to the total of deposits for reasons directly due to the war, and if the restrictions had not existed this sum might have been trebled.

Another interesting point is that every bank failure since 1912 has been followed by substantial increases in deposits at the postal savings stations in the respective neighborhoods. But again the postal savings system has suffered because of its restrictions. There is an instance in the official records which shows the withdrawal of a single account of \$9600 from a suspected savings bank. The depositor tendered the amount at the post office, and upon learning that only \$100 a month, and a similar sum for five months, could be accepted, he bought money orders on an Italian post office and made

his deposit in Italy. These cases are not the exception; they are the rule. Yet it is very likely that, inasmuch as the bank in question was solvent and had qualified as a depository, the very fund tendered by the panic-stricken Italian would have been returned to the very bank from which it had been hastily withdrawn.

Of course, the postal authorities are proud of the postal savings system. On October 31 last there were 9639 offices with more than 10,000 depositories (which includes branches and stations) in operation in the United States, Porto Rico and Hawaii. On that date there were about 475,000 depositors, and the amount on deposit was about \$54,700,000, which is exclusive of \$5,508,060 withdrawn by depositors for the purpose of buying postal savings bonds. The total represented an average of \$115 per depositor. In a year there had been a gain of more than 50,000 depositors.

The increase in October was about \$3,500,000 and is the second largest since the system began operation. New York City, with \$7,505,829, leads all offices, with an average daily receipt during that month of \$60,000.

Some interesting sidelights on the working of the system are given by the statistical tables for the fiscal year ending June 30, 1914. New York leads in totals, but Chicago, second in the list, has an average principal

per depositor of \$130, against New York's average of \$98. Roslyn, Washington, has the highest individual average, of \$257, altho it is the forty-second in rank. Providence, Rhode Island, has the lowest average, with \$70, and is twenty-ninth in the list. Brooklyn, which is part of New York politically, has an average of \$80 per depositor, but is third in rank as a city.

By states, equally interesting facts are obtainable. New York is first in rank; South Carolina is last, with \$20,923 on deposit. Hawaii is next and the very lowest, with \$19,395. Texas, the largest state in the Union, is also at the bottom of the list with little more than \$500,000.

It would seem from statistics that the highest totals and the highest averages obtain in states and cities, respectively, where the the foreign element is strongest. Agricultural communities do not show, on a given basis, as high an average or total as communities where industrial pursuits are the rule. Yet this does not signify that the agricultural population is less thrifty; because the postal savings facilities may not appeal to the rural population as they do to the city wage-earners, and also because there is a tendency on the part of agriculturists to buy farms on the deferred payment plan. Possible savings of cash, therefore, are turned into real estate.

Washington, D. C.

ONE EFFECT OF THE WAR

Since the war began, the foreign-born have been depositing their savings with Uncle Sam to the extent of several millions of dollars a month, and have largely ceased purchasing foreign money orders. This awakened confidence in our Government will be of lasting benefit to both them and our country.—A cartoon from "The American Leader," a magazine published in the interest of the foreign-born population

# UNREDEEMED ITALY

## WHY ITALY IS LIKELY TO HURL ITSELF INTO THE GREAT WAR

THE opportunity which the Great War affords for Italy to obtain the Austrian territory which, under the name of Italia Irredenta, Unredeemed Italy, she has long claimed is too favorable to be missed, and she is evidently determined to use force if necessary to carry out her long cherished ambition. As in France the schools have been utilized ever since 1871 to impress upon youth the duty of "revenge" upon Germany and the recovery of the lost provinces of Alsace and Lorraine, so in Italy the present generation has been trained to believe that the unification of Italy is not yet completely accomplished. In the elementary textbook of history used in most of the Italian schools the lesson is taught in these words:

By the capture of Rome, Italy was freed almost entirely from the domination of foreigners. We say *almost* entirely because two parts of Italy belong still to Austria, namely, southern Tyrol and Istria with Trieste; two beautiful countries which possess more than a million inhabitants.

It will be noticed that nothing is said about Savoy, which belonged to the reigning house of Italy from the twelfth century, but has been in the possession of France since 1860. Nor would the dutiful pupil get any suspicion that most of the two "parts of Italy" mentioned have belonged to the House of Hapsburg pretty continuously for some five hundred years. The Hapsburgs got the Tyrol in 1363 thru the bequest of Wide Mouthed Meg, the richest, ugliest and most licentious princess of her time. And Trieste was offered to Archduke Leopold of Austria in 1382 by its citizens. The Trentino under its Prince Bishop became a fief of the Empire in 1027.

But the custom of playing fast and loose with history is so common that we need not stop to consider it. The question of historic claims, which usually receives most attention in determining the rightful ownership of territory, is actually entitled to the least. An ancient map is no better than a modern one. Every European nationality can point with pride to some time in the past when it held sway over the lands of its neighbors and in any rational settlement of boundary lines the first thing that ought to be done would be to slam shut the history book. Then the ownership of the disputed territory could be determined by reference to the interests, first, of its inhabitants, present and prospective; second, of its neighbors; and third, of the rest of the world.

But such sensible procedure is far

to seek and for the present claims are based largely on parchment and tradition. The ardent Italian Irredentist appears to believe that his Rome has a right to all the lands over which ancient Rome held sway. This was, in fact, one of the popular arguments brought forward three years ago in defense of the Italian conquest of Tripoli and it is now adduced in support of Italy's claim to the Dalmatian and Albanian coast. Here there are indeed remnants of a Latin race, but impartial antiquarians dispute the Italian assumption that they were Venetian colonies. However that may be, the Albanian ports of Avlona and Durazzo are now held by Italian warships and Italy is demanding of Austria a chain of ports and islands extending all the way along the eastern coast from Albania to the Gulf of Trieste, which will give her the command of the whole Adriatic.

If these ambitions of Italy were fully satisfied it would mean that Austria, Hungary and all the Balkan states except Greece would be virtually barred from the Adriatic Sea. Germany would then be bottled up as Russia has been by being shut off from southern seas by hostile territory.

Trieste is the seaport of Austria. Fiume is the seaport of Hungary. Pola is the Austro-Hungarian naval base. These three are now demanded by Italy under threat of war. On racial grounds there is much to be said in favor of the Italian claim. The population is largely Italian; at least half in the case of Fiume and Pola and about four-fifths in the case of Trieste. Like all the Italians of the Coastland they are devotedly attached to their language, religion and customs, which they have striven for centuries to preserve against the constantly increasing Slavonic pressure from the hinterland.

For while the city people on the eastern Adriatic coast are mostly Italians the country people are mostly Croats or Slovenes and the Government has favored the Slavs in order to root out the Italian influence. The districts were so gerrymandered as to secure a Slavic majority wherever possible and then Croatian or Slovenian took the place of Italian in the schools and courts. It made the Italians furious that their children should be cut off from the rich heritage of Italian culture and forced to learn a language which had no literature. Some thirty years ago when the question of recognizing Slovene as the language of the province of Carniola, Count Auersperg entered the Diet carrying under one arm a bun-

dle of books which he presented as containing the entire body of Slavonian literature. Nevertheless the bill passed. As in Alsace and Poland the attempt to eradicate the language degenerated into petty persecution and obstinate resistance. Every case of injury was echoed thruout Italy, magnified and multiplied in the process, and served to swell the ranks of the party whose slogan was "Italia Irredenta." The fact that the "Unredeemed Italy" of Istria was enjoying greater prosperity than at any former period of its twelve hundred years of history and that this was due to its serving as the sole gateway to Austria-Hungary did not reconcile the Italians on either side of the Adriatic to being separated by the sea. The question of what should in equity to all become of the Küstenland and the Dalmatian islands would be a difficult one to solve even if approached in the spirit of good will and unselfishness by both parties. But under existing circumstances there is little hope for a solution that will be either just or satisfactory. The fate of the country is to be decided by war or bargaining with little regard to the desires of its mixt population.

The case of the other territory demanded by Italy is not so difficult. Here the Italian claim is clearer and could be granted without involving any fatal consequences to Austria. The Tyrol sticks its tongue down into Italian territory in most offensive fashion and fairly tempts the cutting off. It would be a real "rectification of the frontier" to draw the boundary line across it, probably somewhere between what Italy demands and what Austria is willing to cede. The lower part, the Trentino, as the Italians call it, drains southward into Italy and its commercial interests lie in the same direction. The population, if we exclude Austrian garrisons and government officials, is almost solidly Italian. It has suffered by the unification of Italy, for it has shared neither in the recent prosperity of the kingdom from which it is separated or of the empire with which it is incorporated. Austrian rule has been oppressive and unintelligent and the people are sullen and disloyal. It is a country of peasants and mountaineers, a very different type from the Italians of the Istrian cities. The most profitable outlook for the Trentino would be the tourist industry, but this has been neglected by the people and discouraged by the officials. At Trent was held from 1545 to 1563 the ecumenical council which set the standards of Catholic faith and anathematized the heretics.

"When the snow melts on the mountain tops then the conquest of the Trentino will begin" is the saying with which the Italian Irredentists have been holding in check their eagerness to enter upon the war. Now the snow is melting and the Italian army is mobilized, but they will not have an easy task before them in spite of Austria's exhaustion and preoccupation on her other frontiers. In 1866 the Italians invaded the Trentino in coöperation with the Prussians, who were simultaneously attacking Austria from the north. But in the battle of Custozza the army of Victor Emmanuel was defeated by the Austrians. The Prussians, on the contrary, succeeded and as a result of their victory at Königgratz first Austria and later Italy were brought into the alliance with Prussia which has lasted to the present. During all this time the Italian Government has out of deference to Austrian sensibilities been

compelled to repress all overt manifestations of the Irredentist movement, but now freed from the bonds of the Triple Alliance it need no longer set itself in opposition to the popular demand for the rescue of "Unredeemed Italy" from the Austrian yoke.

Bismarck foresaw the change in Italy's attitude which has now taken place, for in 1888 he said:

In case of a reconciliation with France, Italy might resume her Irredentist policy and renew her claims on Austrian territory.

Curiously enough Italy's desire for expansion in Africa was the reason why Italy became a member of the Triple Alliance and why she left it. It was Bismarck who made Italy the enemy of France by consenting to the French conquest of Tunis in 1881. It was Sir Edward Grey, probably as great a diplomatist as Bismarck ever was, who alienated Italy from Germany by consenting to the Italian

conquest of Tripoli. The partition of northern Africa by mutual agreement between Great Britain, France and Italy in spite of the protests and threats of Germany nearly precipitated the war in 1911. But none of the European powers was ready for it then, so it was postponed. During the Tripolitan war Italy took pains to draw her troops from the southern and eastern parts of the country so as not to weaken the defenses on the Austrian frontier. Austria began to build dreadnoughts in preparation for the coming struggle for the Adriatic. Then a new complication came in, for the Balkan wars doubled the power of Serbia and aroused her ambitions to take not only Bosnia and Herzegovina from Austria but also Fiume and the Croatian and Dalmatian coast and islands, which Italy also covets. So we have the curious situation that Italy proposes to fight on the side of Serbia for territory they both plan to annex.

#### ITALIA IRREDENTA

The shaded part of the above map shows the territory which Italy demands of Austria under threat of war. It includes South Tyrol or the Trentino, Istria and the Küsten land, the seaport of Fiume and the chain of islands extending down the Dalmatian coast to Montenegro. The Emperor Francis Joseph refuses to make any concessions except the valley immediately north of Lake di Garda, but not including Trent

# LIVING ON THE BUDGET PLAN

BY HELEN LOUISE JOHNSON

**M**OST men and women have a fixed income upon which to live. In many cases this cannot be increased by any amount of effort, because the margin of productiveness has been reached. The theory is that there is no limit to what a man can do. The condition which confronts most of us is that there is a fixed limit to the money we can earn, but no end to the increasing cost of living.

There has always been good reason for the actual study of household expenditures, but the present economic pressure forces the need of this upon our attention to an extreme degree. No woman has any right, in these days and months of war, to avoid the realization of her personal responsibility toward the prosperity of this country, as well as that of the dependence of her family upon her knowledge of values.

Prosperity can be increased only in one of three ways: by producing more efficiently, choosing more wisely, consuming more intelligently. All of these methods must now be used, but of the three the most necessary and effective is consuming more intelligently. Consumption means use. The happiness, the comfort, the welfare, the fortunes of any family depend more upon how its resources are used or consumed than they do upon the amount of these. And many of us believe that our resources can not be used to the best and greatest advantage without a study and use of the budget, a learning how to live on the budget plan.

## WHAT THE BUDGET IS

A budget is but a prearranged scheme of expenditure with the purpose in view of getting the most out of one's resources, whether these be money, strength or time. Its fundamental basis consists of some old well-known rules, which have been pushed out of sight into a dusty corner of our mental attic. You cannot spend money, time or strength on this thing and still have it for that other one. If one has just money enough for ordinary living expenses, there is not enough for the extraordinary cost of an automobile. If one has so many belongings it takes all her time to dust them, there is no time for hearing, seeing or doing lovelier things. You cannot "eat your cake and have it too."

It all sounds very commonplace. Perhaps it is, but it is not commonplace to live on the budget plan. Too few people do it. Even being efficient is not remarkably commonplace yet, in spite of all the talking about it.

A budget is a plan. Efficient living, doing, working, is the result of the carrying out of a good plan. And it does not matter in the least whether it is a country, state, city, family or individual, the plan is the thing; some prearranged scheme of expenditure from which the best and happiest results may be secured.

## BEGIN THIS WAY

To frame a budget means to take your pencil in hand and first put down your definite yearly or monthly income. Let us say, for the sake of illustration, that you are earning \$200 a month or \$2400 a year, the average good income of thousands of families of wage-earners all over the United States. Let us further say that you have been receiving this income for the last few years, but until today have omitted to ask the searching question, "What will this income buy?"

You have cheerfully or reluctantly handed over the money required by your wife for the food and clothing of your growing family. You have made an honest endeavor to save. You have preached economy and scolded at the cost of living. If you squarely face the situation, you will probably acknowledge that you have never really ascertained what \$200 a month will buy.

Your income must first buy shelter—some kind of a place in which to live. Then it must buy food, clothing and those items which make up operating expenses—the lighting, heating, laundry and so forth. It must pay carfare and water rent, doctor's bills and the dentist's, buy newspapers and magazines, take you on vacations or picnics, give you a seat in church, or at the theater, or the ball game. This sum must provide for every need and want you and your family have developed in the years of your well-planned or thoughtless life. And the strangest thing is that it mainly depends upon you and your wife how many of these things it will get.

If you have lived in the traditional way, as fast as your income grew your wants grew with it. When you earned \$75 a month you lived in a simple way, in a simple little house or flat, but when you began to earn \$125 a month you moved. The old house, the old ways, were discarded, and your prosperity did not increase with increased pay because you at once changed your standard of living. You had, or made, no real plan of life.

The question is, how may we get life out of mere living? The difficulty

is that it involves thought; some use of arithmetic, and the doing of that avoided thing, the keeping of household accounts. Above all else, it requires a virtue that is quite out of style in this century, one that has laid the bed rock of many a man's prosperity, namely, self-restraint.

Isn't it foolish to talk about self-restraint when a man's \$200 a month income will just suffice to get a poor house, sufficient food for a flock of lusty youngsters, some clothes on their backs and the hundreds of shoes they seem to require, with nothing left for that rainy day when measles or the whooping-cough arrives? Nevertheless, we repeat, self-restraint and self-control are the foundation of that success which is measured by material prosperity, and those who have steadily raised their standards of living have done so because they have exercised these traits.

## THE BIG THING

We may, however, urge no person to practise these virtues until we give him a good reason for doing so. Into the lives of each family must be brought a Big Thing. Because there are so many Big Things of so many different kinds, students of the budget have named this division "higher life," a comprehensive, indeterminate term under which are grouped some evil as well as many good and beautiful things. For this higher life the other divisions of the budget exist. Rent or shelter, represented by actual payment of rent, or the money paid in taxes and repairs; the amount required for operating or running the house, food and clothes are primary needs. They may be amplified and extended, augmented and increased, but the money paid out for each of these may be easily grouped and accounted for. It is not so easy to plan for the division which is the real purpose of life.

Into "higher life" must come the doctor's and the dentist's bills; the pew rent, life insurance, all savings, all pleasures, money spent for education, books, magazines, music, lectures, the "movies," a trip to Coney Island, any seeming needs, or real wants, outside of the divisions already made.

## A SPECIMEN FAMILY

Suppose we grant that Mr. and Mrs. Livewell have a family of three children and the \$200 income. That they reside where a sum of \$600, or \$50 a month, must be spent for adequate housing facilities for this family. This is twenty-five per cent of

\$2400, the yearly income. Let us agree that Mrs. Livewell, not being a trained housekeeper nor a good mathematician, altho considered a good wife and mother, cannot run that house for less than \$40 a month, or \$480 a year, twenty per cent of the income; nor buy the food with less than \$728 a year, \$2 a day, a little over thirty per cent of the total income, \$2400.

This means that over seventy-five per cent, or \$1800 of the \$2400, has been used in the first three divisions, leaving but \$600 for clothes and higher life. How much higher life can there be after clothes for five people have been purchased out of \$600? Perhaps this has never been put to Mr. and Mrs. Livewell in just this way before and consequently they have not seen where their trouble lies.

The percentages of the income which may properly be used for the various divisions of the budget differ in nearly every place. The budget is a very individual affair, naturally modified and affected by the conditions and circumstances surrounding each case. Yet there are certain guiding principles which should help in adjustment. In each case the plan probably will be revised and reformulated many times before the wisest and best basis of division is established. The grouping given here of rent, operating expenses, food, clothes and higher life is about the simplest division which can be made, needing explanation in some details, but capable of such subdivision and rearrangement as seems best for the particular family.

CROWDING THE BIG THING

One thing, however, is almost invariably true. Any extravagance in one or more of the first four divisions is usually subtracted from higher life. Certain other things should be plain to the one who figures it out. If your rent is too high it will probably also take too much to operate it. If you spend all your income for the first four divisions, it is obvious that you are spending yourself in getting a living in place of getting life out of the living. Your prosperity depends upon the wise and proper use of your income, and that primarily means a wise and prearranged plan.

Let us say that in Detroit, Michigan, Mr. and Mrs. Livewell and three

children can live comfortably as follows:

Rent, 17½% or \$420; operating expenses, 10% or \$240; food, 25% or \$600; clothes, 17% or \$408 = \$1668, or 69½% of \$2400, leaving 30½, or \$732 for higher life.

This means \$35 a month for rent; \$20 a month for heat, light, soap, starch, matches, etc.; fifty dollars a month for food, and a possible proportionate expenditure for clothes, of \$75 for the father, \$150 for the mother, \$75, \$50 and \$63 for each child. Under many circumstances, this could easily be reduced and the margin applied to operating expenses. But suppose we leave it and claim this can be done with ease in the city mentioned. Then something happens and the family, accustomed to a measure of comfort, having lived in a decent house in a good street, move to Chicago.

For the standard of living to which they are accustomed, the surroundings in which they feel the children must be reared, they find they must now pay \$50 a month rent. Readjustment of the entire budget follows. They find that, as against seventeen and a half per cent, or \$420, they must pay twenty-five per cent, or \$600, for rent. This necessitates, in place of ten per cent, or \$240, fifteen per cent, or \$360, for operating expenses. Food remains twenty-five per cent, or \$600.

But these three items bring up the cost of living to \$1560, leaving but \$840 for clothes and higher life. If this family are the traditionary kind they will continue paying the \$408 for clothes, or even adding to this in their new environment, and take this amount from the \$722 they have been using for education, enjoyment and savings. Using the \$408, they have left but \$332, and this quickly goes

for insurance, newspapers, magazines and incidentals, leaving them nothing at the end of the year. They have begun to be poor on the income upon which they were once well-to-do. And the all too common custom of the day is to begin to abuse the Government, the party in power, the tariff or tinkering with it, the trusts or investigating them, the rich capitalist or the poor immigrant. Anything, everything, is to blame but one's self, when as a matter of sane and undisputed fact the blame lies almost wholly with ourselves and our mistaken ways of living.

THE RIGHT WAY TO DO IT

Let us grant that Mr. and Mrs. Livewell for proper, sanitary and educational reasons must pay the increase from \$35 to \$50 a month rent, and find \$360 a year a necessity to run that rent adequately and properly. Yet in place of permitting poverty and trouble to enter the door, they sit down together and look the future squarely in the face, realizing that the Big Thing for them must be the education, the proper upbringing of their three children. The decision is reached that twenty-five per cent or \$600, *must* be kept for "higher life." So that with twenty-five per cent for rent and fifteen per cent for operating expenses, sixty-five per cent is used, leaving thirty-five per cent, or \$840, for food and clothes. What will it cost properly to feed and clothe five people, two adults and three small children, in Chicago? What will \$840 buy? This is the problem, and it cannot be properly solved without learning and using its factors.

If Mrs. Livewell knows how, she will say to herself, "Twenty cents per day per person should purchase an adequate amount of nourishing food, provided I learn how to buy and use it well. This is a dollar a day, \$365 a year, and it leaves \$475 a year for clothes. Can I buy the clothes for the five of us while the children are little for \$325 a year? Surely I can try." This is not all of living on the budget plan. It is merely a step in the knowledge of how and why to form a budget, that fundamental necessity for all men and women who assume family responsibilities. The budget is an economic necessity, but it is also an ethical ideal when it is rightly used. If efficiency is the power to produce an in-

INCOME \$2400—FAMILY 2 ADULTS, 3 CHILDREN				
First Adjustment				
Rent .....	17½%	\$420		
Operating expenses .....	10%	240		
Food .....	25%	600		
Clothes .....	17%	408		
Higher life .....	30½%	732		
				\$2400
Second Adjustment				
Rent .....	25%	\$600		
Operating expenses .....	15%	360		
Food .....	25%	600

Food }	35%	{ 20% or \$480 } 840		
Clothes }	15% or \$360 }			
Higher life .....	25%	600		
				\$2400

tended effect, then the budget is the fundamental to efficient living.

Adjustment of the budget is invariably made with reference to the Big Thing. Countless people find just buying enough food and clothes and shelter to keep body and soul together all there is in life. Others establish wrong ideals because of a method of living for which a most expressive phrase was coined—"Keeping up with Lizzie." We know that two things persistently confront the majority of people, first, the minimum wage or income a man can probably earn. This is not fixed by ideals or needs and wants, by aspirations or

even education alone. It is limited by the economic laws of supply and demand; by one's physical or mental ability to produce, on the one side, and the opportunity presented to sell brain or brawn on the other. There are thousands of families whose income never can be more, and it is this fact which so presses upon us the extreme need of knowing how to use that income so that it may yield the utmost return in every line.

The second is that there is an expenditure required for the maintenance of life below which a man cannot go. This may not seem to affect the one whose monthly salary is

\$200, but it does if his family so squanders that amount that debt and consequent disaster stare him in the face.

It is all important to study the budget because it is the only safe and sure means of adjusting income and outgo so as to keep the family's finances on a solvent basis. You may argue that you know what you have and never exceed it. But the point is not there. To merely live within one's means is not to get the most out of those means, and to get the most one must make and keep to a plan, a budget plan, of life.

Watertown, New York

## THE IRON CHANCELLOR

BORN APRIL 1, 1815

BY GEORGE SYLVESTER VIERECK

Above the grave where Bismarck sleeps  
The ravens screeched with strange alarms.  
The Saxon Forest in its deeps  
Shook with the distant clash of arms.

The Iron Chancellor stirred. "'Tis war!  
Give me my sword to lay them low  
Who touch my work. Unbar the door  
I passed an hundred years ago."

The angel guardian of the tomb  
Spake of the law that binds all clay,  
That neither rose nor oak may bloom  
Betwixt the night and judgment day.

"For no man twice may pass this gate,"  
He said. But Bismarck flashed his eyes:  
"Nay, at the trumpet call of fate,  
Like Barbarossa, I shall rise.

"In sight of all God's Seraphim  
I'll place this helmet on my brow,  
For lo! We Germans fear but Him,  
And He, I know, is with us now."

The dead man stood up in his might,  
The startled angel said no word.  
Thru endless spheres of day and night  
God in his Seventh Heaven heard.

And answered thus: "Shall man forget  
My laws? They were not lightly made,  
Nor writ for thee to break. And yet  
I love thee. Thou art not afraid.

"Bismarck, from now till morrow's sun  
Walk as a wraith amid the strife,  
And if thou find thy work undone  
Come back, and I shall give thee—life."

With stern salute the specter strode  
Out of the dark into the dawn.  
From Hamburg to the Caspian road  
He saw a wall of iron drawn.

He saw young men go forth to die  
Singing the martial songs of yore.  
Boldly athwart the Flemish sky  
He saw the German airmen soar.

A thousand spears in battle line  
Had pierced the wayward heart of France,  
But still above the German Rhine  
The Walkyrs held their august dance.

He saw the sliding submarine  
Wrest the green trident from the hold  
Of her whose craven tradesmen lean  
On yellow men and yellow gold.

In labyrinths of blood and sand  
He watched ten Russian legions drown.  
Unseen he shook the doughty hand  
Of Hindenburg near Warsaw town.

The living felt his presence when  
Paternal, blessing, he drew nigh,  
And all the dead and dying men  
Saluted him as he passed by.

But he rode back in silent thought,  
And from his great heart burst a sigh  
Of thanks. "The Master Craftsman wrought  
This mighty edifice, not I.

"No hostile hoof shall ever fall  
Upon my country's sacred sod;  
Tho seven whirlwinds lash its wall,  
It stands erect, a rock of God.

"I shall return unto my bed,  
Nor ask of life a second lease.  
My spirit lives, tho I be dead,  
My aching bones may rest in peace."

Up to his chin he drew the shroud,  
To wait God's judgment patiently,  
While high above a blood-red cloud  
Two eagles screamed of victory.

## FISHERMEN AND STATESMEN

THE SEVENTH OF A SERIES OF EIGHT ARTICLES

BY PRESTON WILLIAM SLOSSON

ON THE HUNDRED YEARS OF PEACE AMONG ENGLISH SPEAKING PEOPLES

THE image of a cod which decorates the capitol of Massachusetts is a symbol of much meaning. Like the "wool-sack" in the British House of Lords it stands for a great industry and the prosperity of thousands of people. When the British first stuffed a cushion with wool for the seat of the Lord Chancellor, England was not as now a nation chiefly concerned with manufacture but the greatest sheep-raising country in Europe; and when Massachusetts honored the cod, New England did not have a population of factory workers but of farmers and fishers. Yet the cod may still feel at home in a legislature, for the proper adjustment of fishing rights has been for over a hundred years and even now continues to be one of the most difficult and important questions for our diplomacy.

At the close of the Revolutionary War, Americans were given the most liberal rights of fishing off the coast of British North America. They were allowed to take fish equally with British seamen on the banks of Newfoundland, in the Gulf of Saint Lawrence "and also on the coasts, bays and creeks of all other of his Britannic Majesty's dominions in America," besides the right to dry and cure fish on the shore of any unsettled part of Nova Scotia, Labrador or the Magdalen Islands. But the War of 1812 brought a great change. The British insisted that the war had ended the fisheries agreement as ordinary treaties of that sort are ended by a war between the nations making them; the Americans insisted that the right of their fishermen to frequent the British-American coasts was a permanent grant like the independence of the colonies which England had granted at the same time. The diplomats who framed the Treaty of Ghent at the close of the war could come to no agreement on this point and so the treaty was drawn up without any mention of the question and an entirely new agreement was made in 1818. By this agreement the Americans were restricted to certain definite regions, and outside of these they had to stay at least three miles from the coast to fish and they could

not come to shore at all except for shelter from a storm or to make repairs or to get wood or water.

But this "settlement" settled very little. The American and the Canadian fishers could not even agree what the "three marine miles" from the coast meant. Did it mean that Americans could fish inside a bay which was more than six miles wide or should the coast line be drawn from headland to headland of the bay and the three miles measured from that line? The situation was so unsatisfactory, especially for the Americans, that another treaty was made in 1854 by which the American fishermen did not have to keep three miles from shore but could go anywhere in British waters except up the rivers. In return all British fishers were allowed to fish off the American coast as far south as the thirty-sixth degree of latitude. Even under the new agreement it was sometimes hard to tell just where our fishermen were allowed to fish, for along the coast of Prince Edward Island and elsewhere in British America there

were inlets of salt water which could be called either "rivers" or "sea creeks," according to whether they were judged by their shape or by their lack of fresh water. An umpire was selected to decide a number of these doubtful cases. After 1866 the treaty came to an end and so all the old disputes about the agreement of 1818 came to life again. Another treaty was made in 1871, but by this the Americans had not only to permit British fishing off part of their coasts and to admit fish and fish-oil free of duty from Canada (Canada agreeing to ask no duties on our fish), but to pay a large sum of money to boot. A commission of three members met at Halifax to decide whether the United States gained more than the British by the treaty of 1871 and, if so, how much the United States should pay to make the bargain an equal one for both parties. Finally it was decided that the United States should pay a sum of five and a half million dollars. This treaty, too, came to an end, but various arrangements and agreements have been made from time to time to extend the privileges granted under the law of 1818 which is still the basis of our fishing rights in British America.

The question of fishing rights could not be wholly settled by treaty. Every Canadian province has the right to regulate local affairs for itself and this enabled the Canadians to add as many restrictions on American fishing as possible without breaking the treaty. Hours and seasons for fishing were declared. American ships were forbidden to hire foreign crews, harbor dues were charged and severe penalties were laid upon American fishers who came ashore to buy bait or supplies. A number of these questions were brought to The Hague Court of Arbitration in 1910. The judges who determined these points at issue included an Austrian, a Dutchman, an American, a Canadian and a South American. The South American was Drago of Argentina, famous for his protest against the right of any nation to use arms to collect debts. The decision was that the local Canadian authorities could adopt any measures

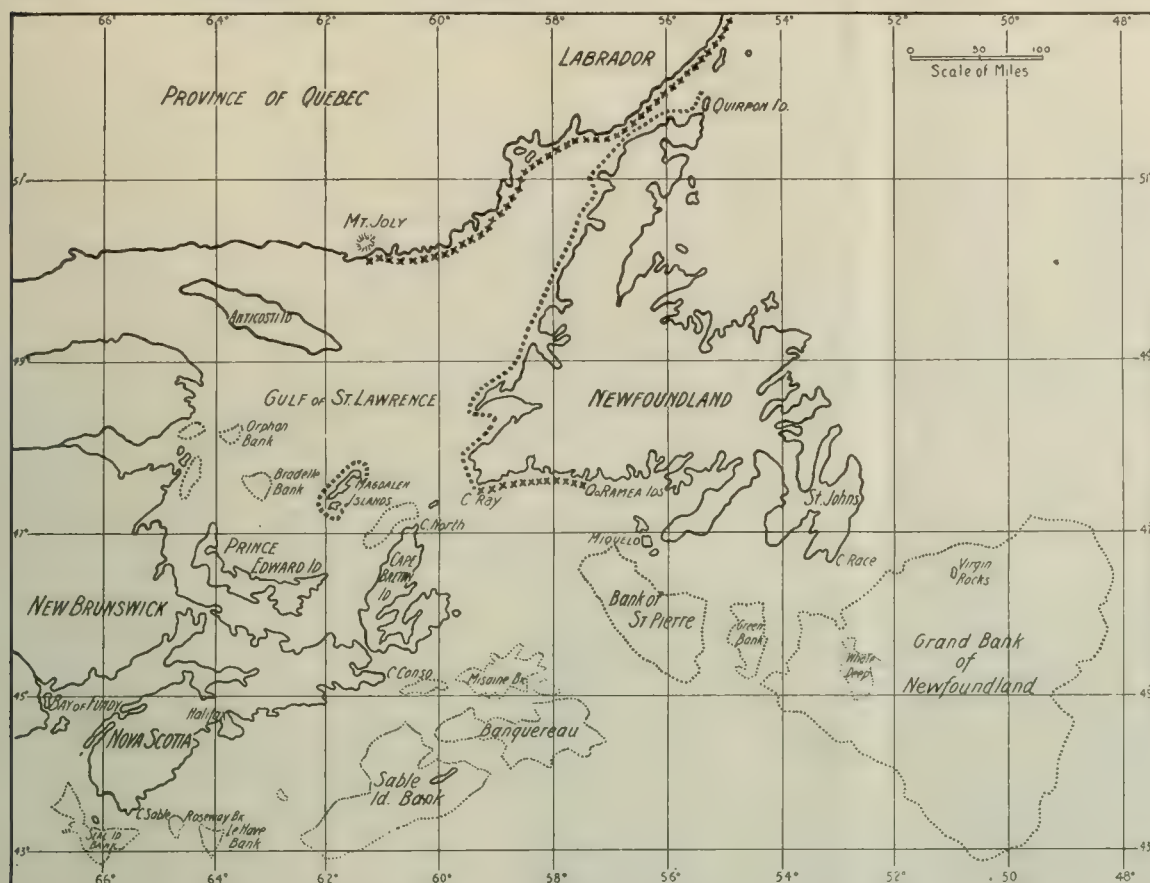

George Grantham Bain

## THE PREMIER OF NEWFOUNDLAND

Sir Edward Morris, who came to New York this winter to make final adjustment of some of the fishing rights which had been under dispute since the award at The Hague in 1910. He said, while here, "There never has been a better feeling toward American fishermen than at present. We have not had a case against an American fisherman in six years"

From McFarland's History of the New England Fisheries (University of Pennsylvania)

#### THE NORTH ATLANTIC FISHING GROUNDS

By the terms of the treaty of 1818 Americans had the right to take fish of every kind on the coasts marked with a heavy dotted line. They had also the right to dry and cure fish in the unsettled bays, harbors and creeks along the coasts marked with crosses

of regulation which applied equally to their own citizens, but could not discriminate against Americans or charge them special harbor dues or make them pay for coming to shore in case of necessity unless they stayed over two days. The fishing regions were more exactly defined and the British doctrine that the "coast line" should include bays within it was confirmed. Unless a bay was more than ten miles wide at its mouth, Americans could not fish within it without special permission, nor within three miles of the mouth.

In the early days of our republic it was always the Atlantic States, and chiefly the New England States, which insisted upon the rights and privileges of American fishermen: the West was quite indifferent. With the gaining of the Oregon country a new field of fisheries was opened to us on the Pacific, and, with the purchase of Alaska in 1867, the question of sealing became as complicated and perhaps as important as any or all of our Eastern fishing rights. When Russia owned Alaska the Government declared a monopoly of all the fur-seal industry for a hundred miles from land. Both the United States and Great Britain protested and so Russia modified the rule to permit a certain amount of seal hunting by men of these two nations as well. When we bought Alaska we acquired a large part of the industry. Seals had already been killed off so recklessly that it was feared that this useful animal might

become very rare if something were not done to check the slaughter. Congress, therefore, past laws fixing a close season when no seals might be killed and restricted the number which might be killed in a year. Canadian vessels which entered Bering Sea to kill seals were seized by United States authorities. The British protested that no ship which was more than three miles from land could infringe on any right that Americans had from owning the land, that Bering Sea was part of the general Pacific Ocean and that the United States had no right to act as policeman on the high seas. The United States claimed in return that Bering Sea was a closed sea under Russian rule and that America was entitled to all the powers which Russia had once enjoyed. Besides this, the Americans appealed to the general interests of humanity for the right to prevent unauthorized seal catching. Mr. Bayard, then Secretary of State, estimated that over 130,000 seals were taken every year from the Russian and American islands in Bering Sea, or two-thirds of all the seals killed over the whole earth, and he appealed to all the nations interested in the sealing industry to keep Bering Sea closed as the one great breeding ground of a very important animal. Both nations had so much and, on the whole, such favorable experience of arbitration that they were ready to turn the whole question of America's right to police Bering Sea over

to a board of arbitration. Two men were named by the United States, two by Great Britain and one each by the President of France, the King of Italy and the King of Sweden and Norway.

Much of the argument on the fur-seal killing seems rather amusing. The fate of a great industry and the very existence of a species were, or seemed to be, at stake, and yet the question was argued in terms of whether a seal ought to be defined as a "wild animal" or a "domestic animal." The British urged that no wild animal could be treated as specially valuable "property" and that seals were certainly not domesticated animals. The Americans urged in reply that an animal so tame and useful as the seal could not be called "wild" even if it were not attached the year round to a particular master as his property but went at random in the seas. The actual points at issue were decided favorably toward Great Britain when the decision was finally rendered in 1893, but something was done to protect the seals for the future. Fur seals were not to be killed within sixty miles of the Pribylov Islands, Bering Sea was to have a closed season and some methods of killing seals were forbidden as too destructive. Indian natives were allowed to take what seals they needed for their own necessities. The United States paid damages for the ships it had seized outside the three mile limit.

It is hard to realize that such issues as fishing and sealing rights are as apt to strain international relations to the breaking point as questions of boundaries and alliances. But the other questions we consider have received definite settlement at some definite time, while the fisheries question is as old as our nation and may recur at any time in the future. Even this brief account has given some instances of how out of every treaty on the matter arise fresh doubts as to its exact meaning and application which need for their settlement not only good statesmanship but unfailing good will.

#### REFERENCES

Almost any good history of America will tell something of the story of our fisheries and there are several special works on the subject, such as *A History of the New England Fisheries*, by R. McFarland. J. B. Moore's *International Arbitration*, Vol. 3, pages 426-494 and 703-753, is very complete. A briefer account may be found in J. Foster's *A Century of American Diplomacy*, pages 64-5 and 253-6. For the fur seal question there is no better reference than *International Arbitration*, pages 755 to 961, altho there are special works on this topic also. W. A. Dunning's *The British Empire and the United States* treats of the fisheries' disputes on pages 22-6; 188-91; 261-64; 334-39.

# THE MESSAGE OF LORD BRYCE TO THE AMERICAN PEOPLE

**T**HERE is no man in England whose voice the people of this country regard with higher respect and confidence than that of the late British Ambassador, Lord Bryce. At a Washington-Lincoln dinner given by American women in London, Mr. Harry Brittain, chairman of the Overseas Committee of the Anglo-American Peace Centenary, read the following message from Lord Bryce to the American people:

The celebration of the Centenary of Peace between Britain and the United States has been like a ray of sunlight across a landscape of gloom and storm. In the midst of the calamities of a war of unprecedented range and suffering, it is a consolation to remember that our two nations, between whom many controversies arose during the last hundred years, settled all those controversies amicably, and that every successive settlement made peace and good will more certain for the future.

May I add that I hope that the American friends whom you are to address will let their friends in America understand that we in England comprehend the difficulty and delicacy of the position in which the Government of a neutral power finds itself, and that we don't complain of its calling attention to questions of international law, such as always have been raised during maritime war. We have the fullest confidence in the sense of justice and in the pacific spirit of the American people, and feel sure that any questions that may have to be discussed will be adjusted by mutual good will.

We appreciate the hearty sympathy which the vast majority of the American people, who have always loved freedom, are giving to the cause which they believe to be the cause of freedom and international right, the cause we are championing at the cost of our best blood.

Another letter from Lord Bryce to President Charles H. Thwing of the Western Reserve University contains these internationally patriotic words:

At such a time as this, it is specially cheering to the friends of peace on this distracted continent to hear of such an association as that over which you preside. The awful calamity of a world-wide war, in which more than half of the human race are involved, compels us to study more earnestly than ever before the means by which war may be averted. Chief among these means are two. One is the maintenance of the faith of treaties as the guarantee of safety to small nations. For those things—the faith of treaties and the rights of unhappy Belgium, England is now fighting, and it is the justice of that cause and compassion for the sufferings of the innocent that have won the sympathy of the vast majority of the American people.

The other means is the setting up of arbitration as the proper method for settling international disputes. Your nation has led the world in this worthy cause;

and both America and England have by their resort to this method set many examples and given many proofs of their belief in its value.

I earnestly trust that your association may do much to extend and strengthen the power of this beneficent principle. Let me wish it all success; and let us all hope that the increasing influence of American opinion may be more and more exerted for the promotion of peace and good will thruout the world.

And in the London *Daily Chronicle* of February 29 there is an article by Lord Bryce, from which we quote as follows:

I doubt whether we in England have yet fully realized either the magnitude of the service which the United States Government and its representatives abroad have rendered in protection of British subjects in the belligerent countries or the noble spirit that has animated them in that service.

Their embassies and legations have become enormous business offices, manned mainly by voluntary workers. The looking after our prisoners of war in Germany alone has become a gigantic task.

We have officially expressed our thanks for what has been done by the ambassadors in Berlin and Constantinople as well as for the splendid work of Mr. Herrick in Paris for our nationals at the outbreak of the war. Ever since that moment the Berlin Embassy and the Brussels Legation have been hard at work, and Mr. Morgenthau in Turkey has shown zeal and friendliness in helping British subjects and other Christians there, for which we owe him the warmest gratitude.

Immense labor has been thrown on the American Embassy here in London by having to carry on communications for the release of prisoners and the ascertainment of the condition of our subjects interned abroad. This labor was undertaken with ungrudging

cheerfulness, and for it all the belligerents are deeply indebted.

One thing more deserves to be noted: It is the wonderful zeal that has been shown in the efforts to relieve distress and suffering in Belgium, and, indeed, in every region where the war has caused suffering. The liberality shown by the people of the United States in their charitable efforts is beyond all praise. . . .

As for Belgium, it is the contributions and work of Americans that are saving her people from starvation and are recalling the invaders to some slight regard for the elementary duties of humanity. The organization of the Relief Committee has been admirable and its zeal unwearied. Never before has so much voluntary work been done to relieve suffering caused in war and by war. No people exceeds, if indeed any people quite equals, the people of America in compassionate sensitivity for suffering, and in the open-handed generosity with which they hasten to relieve it. Their love of liberty is equaled only by their sense of human brotherhood.

*Lord Bryce*

# The New International Encyclopædia

## SECOND EDITION

Editors of the  
Second Edition { FRANK MOORE COLBY, M.A.  
TALCOTT WILLIAMS, LL. D., L.H.D., Litt.D.  
Director, School of Journalism, Columbia University

THE IDEAL ENCYCLOPÆDIA IS

- late in its information ; alphabetical in arrangement ;
- comprehensive in number and treatment of subjects ;
- plain and concise in its statements ;
- fair in treatment of disputed topics ;
- international in handling national and international affairs ;
- in short, an encyclopædia which will quickly and accurately answer every question arising in reading or in conversation.

Such A Work Is The Second Edition of the New International Encyclopædia. It is made in America, but responds to demands made upon it in all parts of the world.

The Second Edition is absolutely NEW—printed from new type, with new subjects, enlarged and improved. There will be 24 volumes instead of 21 as in the first edition.

Thus it becomes an encyclopædia giving valuable information on all subjects for all classes of people, at all times and in all places—equally valuable to the boy or girl in school, the student in college, the workman in his shop, the professional man in his technical duties, and the business man in his selected vocation.

Therefore it is now presented for your consideration, not only because it is “made in America,” but also because it is most recent, comprehensive and

OF GREATEST VALUE TO AMERICANS

Of the first edition the *New York Evening Post* and the *Nation* said: “As an encyclopædia of American interests for American readers, it is undoubtedly the best and fullest in existence.” The first edition is in practically every public library and is recommended by librarians as the best. The Second Edition will fully maintain the high standard of the first edition.

There will be 80,000 articles—about 30,000 more than in any other standard encyclopædia, due in part to the great number of recent topics included.

It Is Illustrated on a scale more elaborate and costly than ever before attempted in this country.

**Thin Paper:** Printed on a thin paper made especially for the Second Edition—light, opaque, strong, that will not crumple. The page is of proper size for convenient handling.

**A Special Library Edition** is printed on regular book paper and bound in library buckram as specified by the American Library Association.

**A Free Research Bureau** is at the service of subscribers to the Second Edition. It may be consulted, without expense, for detailed information on all encyclopædic subjects.

A SPECIAL PRICE NOW

Immediate subscribers are offered a very advantageous introductory price—the lowest for which this edition will be offered. As publication progresses, this price must necessarily be increased.

Fill Out and Mail Coupon

It will bring you, without charge, an interesting book giving information of the scope of the work, sample pages of text, maps and illustrations, details of special price, payment plan, etc.

# New Course for Reading Clubs and Circles 1915-16

Four cloth-bound Chautauqua Books, all relating to one general plan, and a year's subscription to The Independent as covering topics of the hour.

**\$5 ——— An American-Year Course ——— \$5**

1. "Social and Economic Forces in American History." Different writers, Edited by Albert Bushnell Hart. (\$1.50) 510 pages. Discreet in touching all controversial matters, each section or element being treated by someone sympathetic toward it. Very readable, yet scholarly and authoritative, with the dignity of Professor Hart's name as a guarantee. Varied points of view will be agreeable to those who usually find historical reading tedious. Yet it has the coherence of a definite history, An exceptionally good "backbone" for all other studies of the year.

2. "Changing America." Edward A. Ross. (\$1.50) 236 pages. Sprightly and stimulating in manner, distinctly and admirably informing in matter. Exhibits facts that only a diligent, courageous, and scholarly worker would have arrived at, then presents a query or a mild suggestion rather than a declaration as to the inferences. Avoids categorical assertion of any mere theory and is therefore safer from criticism than most equally progressive books. Sure to provoke beneficial thought and to excite live discussion among groups of persons reading together.

3. "American Ideals in Character and Life." Hamilton Wright Mabie. (\$1.50) 330 pages. Conveys a great deal of wholesome reflection in Mr. Mabie's perfectly acceptable manner. Chosen to give the course its literary element. Though not a formal history of American Literature, it treats much more largely of literature than of anything else, having chapters devoted also to art, to schools, and to universities. A model of literary style and conventional good taste in handling the various matters involved. Tolerant even towards what it deprecates. If for a moment in passing it notes the "flamboyance" of our fellow American travelling abroad, for example, it does so with a word thrown in as to his many worthy traits.

4. "The Ways of the Planets." Martha Evans Martin. (\$1.25) 266 pages. Popular astronomy. Same author as "The Friendly Stars," used with so great success in the Chautauqua course of 1909-10. The simplicity, charm and instructiveness of the Star book will cause former readers to welcome this new volume with enthusiasm.

5. So far as the war and strictly current topics are concerned, they will be found treated in the weekly issues of The Independent. (\$3.) A subscriber to the Chautauqua Course receives The Independent week by week precisely as though he or she subscribed for The Independent alone. Only some half dozen pages of each issue, under the title, "The Story of the Week," is required to be read.

Separate parts of the course at prices marked in parentheses. All four books without The Independent, to one address, postpaid, \$4. The price of the entire set of material sent to one address is, as usual, \$5.

Program Outlines, Bibliography, Helps and Hints in a Monthly Bulletin, "The Round Table," without extra charge. For Topical Outline (Year Book) free, address

**Chautauqua Institution**  
Chautauqua, N. Y.

# The New Books

## BELGIUM AND FRANCE

A change is coming over the spirit of the war literature. Books of protest, apology and denunciation, minute analyses of diplomatic documents and sweeping characterizations of national psychology, are fortunately on the decline and we are getting now some descriptions of actual operations, very much needed since almost the only news we have had are the meager and misleading official bulletins.

*Fighting in Flanders*, by E. Alexander Powell, does not deal with strategy or tactics, but describes chiefly the Belgian people as the wave of invasion rolled over the land. His account of the fall of Antwerp is especially interesting, since he was a witness of Winston Churchill's dramatic entry at the last moment to "save the city." Up to October it was possible for the correspondents to live in Antwerp and "go out to the front" every day as a commuter goes to his office, a strange situation as he says:

For one whose previous campaigning had been done in Persia and Mexico and North Africa and the Balkans, it was a novel experience to leave a large and fashionable hotel after breakfast, take a run of twenty or thirty miles over stone-paved roads in a powerful and comfortable car, witness a battle—provided, of course, that there happened to be a battle on that day's list of events—and get back to the hotel in time to dress for dinner. Imagine leaving a line of battle, where shells were shrieking overhead and musketry was crackling along the trenches, and moaning, blood-smeared figures who no longer moaned were sprawled in strange attitudes upon the ground—imagine leaving such a scene, I say, and in an hour, or even less, finding oneself in a hotel where men and women in evening dress were dining by the light of pink-shaded candles, or in the marble-paved palm court were sipping coffee and liqueurs to the sound of water splashing gently in a fountain.

The sending of Irvin S. Cobb to Belgium as a war correspondent was criticized on the ground that the battlefield was no place for a humorist. But those who were acquainted with Mr. Cobb's work as a whole knew that he was more than a mere funny man and they are not surprised now to see that he has given in his *Paths of Glory* a very moving and vivid narrative. Like all this group of amateur and professional war correspondents and unlike most war correspondents of the past, Mr. Cobb came back with an ineradicable horror of war in itself regardless of how it is conducted. Also like his associates he found no direct proof of any of the brutalities charged against the Germans by the Belgians, or *vice versa*, but as he rightly says, "Belgium herself is the capsheaf of atrocity of the war" and of her misery and ruin there is no question. Mr. Cobb had a better chance than

# LUXEBERRY WHITE ENAMEL

## Whitest White Stays White

IN the nursery, living room, any room throughout the house, Luxeberry White Enamel adds a touch of brightness and beauty.

Finger marks and spots never penetrate its snow white, durable washable surface.

And for floors use Liquid Granite, the durable lustrous varnish, never harmed by water or the hardest sort of wear.

You can secure further finishing facts at any time from the nearest Berry Brothers dealer or from our factory direct, as you prefer.

## Are You Going to Re-Shingle?

It is hard to improve upon good shingles both for service and appearance. You can make the next job last a lifetime by using

**"CREO-DIPT" STAINED SHINGLES**

17 Grades. 16, 18, 24-inch. 30 Different Colors.

They come in bundles ready to lay.

They last twice as long as brush-coated shingles or natural wood. They are proof against dry-rot, decay, worms and weather. They save time, money and expense of staining on the job. We select best cedar shingles and by our special process preserve them in creosote and stain them any color desired. Best earth pigments—no aniline dyes. No wedge-shaped shingles—no waste.

Write today for sample colors on wood and book of "CREO-DIPT" houses in all parts of the country. Names of architect and lumber dealer appreciated.

Standard Stained Shingle Co., 1032 Oliver St., No. Tonawanda, N. Y. Shipments prompt. Branch factory in Chicago for West'n trade

Architect A. N. Oviatt, Cleveland, for Mr. A. C. Dutton.

Soft, even color tones of "CREO-DIPT" Shingles can be selected to harmonize with surroundings. There are over 1,500 homes in and around Cleveland where "CREO-DIPT" Shingles have been used.

# From 2 to 2,000,000

Forty years ago I bought two cigars.

I was delighted with them—they seemed to meet my exacting requirements. Their rare mellowness and delicious flavor made me want more. I traced their manufacture, and found the exquisite leaf came from the mountainous Vuelta district in Cuba.

## WHAT HAPPENED

Soon I began to order all my cigars from there. Friends bought with me. That reduced the price. Their friends joined. Until now there are over 12,000 of us buying these unusually fine cigars at about half what they would cost if we could buy them at stores.

Last year we bought over 2,000,000 cigars. Some of us wanted better cigars for what we were paying, some wanted good cigars at half what they were paying. But whatever the reason, all these men unite in approving my discovery. None of us has ever found a ready-made cigar quite so enjoyable at anywhere near the price.

The price is so low because we buy together in large quantities, and have no dealer's profit or salesman's salaries or expenses. The price is but \$5.00 per hundred, \$2.60 for fifty. That's about what they cost us.

It is only fair to your complete enjoyment of smoking and to your pocketbook to try these private brand J. R. W. Havanas.

## FIRST FIVE FREE!

Send me your business card or write me on your business stationery, enclosing 10c for packing, revenue and postage, and you'll be furnished with five free as a trial. You'll probably want more. Send today for your five free cigars!

## RHETORIC

"It certainly gives me great pleasure to recommend to teachers everywhere the special merits of The Independent for schoolroom work. We use it weekly in connection with our regular Rhetorical work. One-third of our Rhetorical period time is used for Current Events. Outlines of the week's events are prepared from the magazine. We find the news to be concise and very readable. The special articles are especially good, and the debate outlines are excellent. I am glad to commend it."

most of the correspondents to get close to the fighting, for he was with the German army at the front, and he tells us many little but important things not mentioned in the dispatches. For instance, the steel arrow dropt by the French aviators, which we pictured in our issue of January 18, is a more effective weapon than has been supposed, according to the account of a Red Cross civilian:

One dart hit a trooper on top of his head. It went thru his helmet, thru his skull, his brain, his neck, his body, his leg—all the way thru him lengthwise it went. It came out of his leg, split open his horse's flank and stuck in the hard road. I myself saw the man afterward. He died so quickly that his hand still held the bridle rein after he fell from the saddle.

The Duchess of Sutherland, who was in charge of a British ambulance under the French Red Cross at Namur during the siege, tells of her experiences in *Six Weeks of the War*. She, like the rest of the world, is unable to understand why the Namur forts were taken so quickly and why the Belgian General Staff went away and left their troops without officers. She was passed out of the German lines thru the aid of our Minister, Brand Whitlock.

Dr. Charles Sarolea, who was with Mr. Powell at the battle of Malines and came near being captured by the Uhlans, has presented the Belgian cause in a most effective way in *How Belgium Saved Europe*. Besides his experiences as an eye-witness of the first month of war he discusses the past and future of Belgium. He explains how Belgium was made a neutral state in 1831 and debarred from entering into any treaty of alliance or seeking the protection of any single power. He tells how the little Belgian army held back ten times their number of Germans in daily expectation of the arrival of the French and British troops, which had been promised to come to their aid but never came. He has a great deal to say in praise of British generosity and hospitality to the Belgian refugees but not a word about the American.

Mr. Kauffman, in his volume on Belgium, *In a Moment of Time*, is concerned with the bread-line rather than with the firing-line. He makes a strong appeal for American financial aid for "the nation crucified" and will devote all the profits of the book to the relief fund. From the refugees he has gathered abundant evidence of German atrocities, the burning of buildings, the butchering of babies, the outraging of girls and the mutilation of men. Mr. Kauffman was in Antwerp during the siege and in Scarborough during the bombardment.

*From the Trenches* is the only one of this group of books which attempts to deal with military movements and this part of the volume is of comparatively little value. Mr. Young had exceptional opportunities. He was near the French front on the Marne, the Aisne, the Oise and the Somme, and in Brussels, Louvain, Antwerp, Namur and Paris, but it is impossible to give in diary form any intelligible account of these grand maneuvers and what they mean, especially under the restrictions of the

censor. On the other hand, what he says of the attitude of the French and English soldiers, of the conduct of the Belgian and French people, of the appearance of a battlefield and of the mechanism of the modern army, is interesting and often new to us. For instance, we had heard little about the looting of German shops in Paris and harrying of German men, women and children in France at the outbreak of the war.

It is, as we might expect, Mr. Altsheler who gives us the first boys' novel on the war. *The Guns of Europe* begins a new trilogy which should be as popular as his Civil War and Texan Series. In fact it should be better, for Mr. Altsheler is too young to remember the Civil or Mexican wars, while he was on the spot when the European war broke out. The publishers state that "both the story and the illustrations are historically accurate in every particular." But this does not prevent them from publishing as an illustration of a 42-centimeter German gun on a concrete base a 28-centimeter Austrian gun on caterpillar wheels.

It is hard to know how to take *What I Found Out in the House of a German Prince*. The publishers vouch for its genuineness and it is told with seeming sincerity and ingenuousness. But there is no apparent reason why the "English-American governess" should not sign her name, for she gives details enough to identify her and her "German prince," if these are true. If not, we cannot tell how much of the rest is falsified. Then, too, her story reads like the well-made drama or the conventional historical novel. Just those characters appear that we want to see and they behave just as we should expect them to behave from reading the British war literature. The Kaiser, the Crown Prince, Enver Bey, Bernhardt, Zeppelin, the Krupps, Kluck, Dernburg, Hindenburg, the cast is complete with the exception of the ghosts of Nietzsche and Treitschke. Even the 42-centimeter guns are not missing, and we learn that their concrete foundations at Soissons were prepared under the personal direction of General von Kluck. As for the war games of the children and the toy Zeppelins dropping bombs on London—well, it is lucky for our reputation in England that the authoress never happened upon a group of American children "licking the Britishers."

## THE FOE AT THE DOOR

There are probably no more interesting present-day medical questions than those concerning cancer. There are said to be at least half a million deaths a year from this disease among civilized peoples alone. Is it on the increase? Is it inherited? Is it due to certain kinds of food? Is it contagious? Can it be prevented? Can it be cured? Dr. Bainbridge in his comprehensive and valuable book, *The Cancer Problem*, from the latest literature and his own experience gives the answers to these questions as far as they can be given at this time. Cancer is probably not increasing, physicians are better able to recognize it and so more cases are reported. But in spite of all the investigations of recent years and many promising announcements doctors are forced to confess that they do not know its direct cause.

As to cure, only early surgical intervention is of real service. Recent hopes raised by announcements of radium cures have an interesting commentary in the news that one investigator thinks that the reason why the clay pipe is more frequently followed by cancer of the lip than any other form of smoking is that pipe clay gives off radioactive emanations which set up chronic irritation.

With Dr. Bainbridge's book Dr. Keen's *Animal Experimentation and Medical Progress* properly finds a place. Practically all that has been learned of definite value with regard to cancer has come from animal experimentation. Dr. Keen brings out very clearly all the value that experiments on animals have been for medicine and surgery and shows how utterly lacking in good faith have been the opponents of animal experimentation. Dr. Keen dwells on the fact that progress in medicine can only come by experiment. Shall the experiments be made on human beings or on animals? With proper safeguards surely the latter. He calls attention to the fact that every experimental laboratory is open to any one who wishes to visit it, and see that the experiments are humanely performed. Dr. S. Weir Mitchell just before his death visited an anti-vivisection exhibition and assured the committee that they needed just one more exhibit. That should be a dead puppy beside a dead baby with the label, Which?

*The Cancer Problem*, by William Seaman Bainbridge, M.D. New York: The Macmillan Co. \$4.  
*Animal Experimentation and Medical Progress*, by Prof. William Williams Keen, M.D., LL.D., with an introduction by Charles W. Eliot, LL.D. New York: Houghton Mifflin Co. \$1.75.

## THE GOSPEL OF BIGNESS

Since the days when, fresh from Princeton, Booth Tarkington wrote *Monsieur Beaucaire*, his has been one of the brighter promises of American fiction. In *The Turmoil* the subject is the largest that Mr. Tarkington has yet attempted. He has tried to give a picture of the confusion, recklessness and waste of modern industrial life; to do this not as a "problem," but as the background on which to paint the inevitable romance between two very young people. He is still more the teller than the novelist, for his main char-

"You gave me courage to go into business for myself"

"For years I had wanted to," writes a man from the Middle West, "but I did not dare. The first three lessons gave me the courage." That is what he got from the

## Course in Personal Efficiency

Taught by Mail, Prepared by Harrington Emerson

So deep in our lives are the foundations of this new Efficiency idea applied to the individual, that each man gets what he needs most from it. One man gets courage, one gets health, one gets time, one gets wealth. For Efficiency means the shortest, quickest, easiest way to reach *your* goal. And Harrington Emerson, who has taught Efficiency to so many corporations, has adapted it to you in 24 powerful, complete, condensed lessons.

The corporation has capital, plant, men; you have brains, time, energy. Through these lessons you will learn to make the most of your brains, time, and energy with the least effort.

These principles are not casual ideas of Mr. Emerson's. They are the scientific principles he has developed in forty years of study. He has applied them in over 200 factories, railroads and other organizations. They are studied by other Efficiency Engi-

neers in America, England, France, Germany and other countries who have learned them from Emerson. His big organization in New York—he has 40 assistants—has taught Efficiency to steel mills and railroads, factories and publishers.

Theodore Vail of the New York Telephone Company—Cornelius Bliss, the merchant—Henry Bruere, Chamberlain of the City of New York—enthusiastically endorse the practical value of this course.

## 5000 Students Enrolled

Efficiency for the individual has swept through the world. 5000 students have already rushed to enroll for this course. From California comes one who is saving thousands on a government job—from Iowa one whom the course has put on the right path to success—from New York an editor who got back his health—a writer who does twice as much work in less time—the Secretary and Treasurer of the biggest bond house in the Northwest saved an hour and a half a day from the first lesson.

## First Lesson FREE

If you want to do less work and get more for it—send this coupon and learn to be efficient. If you are trying to get ahead and the way seems closed, send this coupon and open a new way. If you need more money and see no way to get it—send the coupon. If you are overworked and tired, send this coupon and learn through Efficiency to throw off the burden of useless drudgery. Whoever, whatever, wherever you are you need Efficiency.

Because this thing is too big to explain in any advertisement, we will, until the public is familiar with the idea, give the first lesson absolutely free of charge.

Send the coupon today for the whole story and the first lesson free.

# Doran Company New Books

## THE VALLEY OF FEAR The New Sherlock Holmes Novel By A. Conan Doyle

The first Sherlock Holmes story in ten years; half the scene of action laid in America. All the features which have made Holmes the most popular fiction-hero in the world, with a new and surprising sort of mystery, which will keep the reader intensely absorbed. *Sherlock Holmes at his best.* Illustrations in color by Arthur I. Keller. Net, \$1.25

## RED FLEECE By Will Levington Comfort

The noble romance of a great-souled woman told with the vision and originality which distinguish all work by Mr. Comfort, and by a new and happy "popularity." The story of the Russian advance into Germany, the Russian revolutionists who risk execution by preaching peace, and a white-browed woman. Net, \$1.25

## PATHS OF GLORY Impressions of the War Written At and Near the Front By Irvin S. Cobb

"The first book of the war; the first account of the fighting that gives us a real picture of the conflict. There is a great deal more than the roar of battle in his story; there is that crying out of the heart when it cannot be comforted."—*Portland Telegram.* Net, \$1.50

## MUSHROOM TOWN By Oliver Onions

Towns have personalities not less fascinating than those of persons. Here Oliver Onions, with all the sharp drama and realism of his *The Story of Louie*, chronicles in a highly original novel the growth of a boom town. Net, \$1.25

## THE WOODEN HORSE By Hugh Walpole

"The author of *The Duchess of Wrex* and *Fortitude* has nowhere shown a greater grip upon life's realities, a stronger appreciation of the elusiveness of man-made conventionalities and a better artistic sense of the dramatic value of contrasts."—*Public Ledger* Net, \$1.25

## THE THEATRE OF IDEAS By Henry Arthur Jones

The premier English dramatist, in a burlesque allegory preceding three new interesting short plays, tells wittily how amusingly idiotic are most fads to the seeing mind. Net, \$1.00

## ARUNDEL By E. F. Benson

Love may be destructive as well as creative. When love with its utmost passion came to a man smothered by a stuffy family there was a dramatic destruction of his comfortable dullness—and glory was born. Net, \$1.25

## HERE'S TO THE DAY!

### By Charles Agnew MacLean and Frank Blighton

A thrilling story of an American man and girl caught in the mill of the Great War. "Aviation plays an important part and it is particularly realistic because of Mr. Blighton's own experiences as an aviator."—*Boston Transcript.* Net, \$1.25

## THE VEILS OF ISIS By Frank Harris

"A volume with such stuff as the work of genius is made of. We have many fine short-story writers, but none so great as Mr. Frank Harris. And he is full of that divine charity we call love; the crowning glory of his rare and beautiful art."—*London Bookman.* Net, \$1.25

## JAMES By W. Dane Bank

"A novel of delicious entertainment; a book of surprises, with an irrepressible hero; and a novelty in that it deals with 'get-rich-quick' schemes."—*St. Louis Republic.* Net, \$1.25

## NEIGHBOURS By Herbert Kaufman

Little pictures from real life that make living beings out of that unknown race of people—the men and women in the crowd through which you pass daily. Net, \$0.75

## 5 Minutes Deep Breathing

is of more real benefit than an hour devoted to vigorous physical exercise.

DEEP BREATHING directly revitalizes the blood, and reaches every muscle and nerve cell of the body. A few minutes practice will throw off fatigue, depression and brain fog.

I employ Deep Breathing in a far wider scope than has been done heretofore by any scientist. The results I have attained in over 50,000 pupils are incredulous. The curative power of Oxygen is unlimited.

Send for my book, "Deep Breathing." It's free. The facts presented therein are of vital import to you.

Paul von Boeckmann, Respiratory and Nerve Specialist  
2090 Tower Building, 110 West 40th Street, New York

acters have little to do with the setting, nor are they convincing products of its conditions.

Harper's. \$1.35.

## MAKING MEALS ATTRACTIVE

In *Table Service*, L. G. Allen has prepared a thoroly practical, concise handbook on the duties of the waitress. But This book is quite as useful to those having no waitress. The directions for the care of hard wood, linen and silver, the preparation of fruits and salads, the serving of teas and evening spreads will be found suggestive and useful to any housekeeper.

Little, Brown. \$1.25.

## UNEASY NEIGHBORS

With Mexican affairs again at a crisis a dispassionate study of its problems and its leaders would be valuable. But this is hardly the time for such a study, least of all by a Mexican. However Carlo de Fornaro is an enthusiast if not an historian, and his account of *Carranza and Mexico* at least gives an idea of the situation as it appears to one party of the combatants.

Kennerley. \$1.25.

## POETRY OF THE CHURCH

Every lover of hymns has his favorites and marvels that any collector should omit these. Amos R. Wells includes in his *Treasure of Hymns*, for instance, few from ancient liturgies and other tongues. But he has gathered many of the best known and loved from more modern authors, making each hymn the text for an interesting account of the writer and the lines.

Boston: Society of Christian Endeavor. \$1.

## THE PETROLEUM BUSINESS

The strategic importance of oil wells is now realized as never before, for the Gallician, Caucasian and Persian fields are the centers of fierce conflict and Germany seems likely to lose her mobility for lack of gasoline. To realize the dependence of modern civilization on petroleum products one needs only to read F. A. Talbot's *Oil Conquest of the World*, a fascinating account of the development of the industry and its processes.

Lippincott. \$1.50.

## NUGGETS HIDDEN IN SAND

Appreciative of life's caviar, especially as it relates to sex and the charm of women, are the leisurely, colorful tales from the odd corners of the earth Frank Harris has grouped together in *The Veils of Isis*. Piecing together bit by bit the romance of a pearl-fishing voyage in the South Seas, or of bohemian life in Paris, Moscow, or Nice, after Conrad's fashion, such stories as *A Daughter of Eve* and *A French Artist* are far superior artistically to any others in the book.

Doran. \$1.25.

## APRIL, 1865

Seventeen addresses made by prominent men at the time of Lincoln's death are here reprinted in the memorial volume, *Our Martyred President*. These speeches and sermons all have the value of contemporary comment, but that of Dr. Cuyler still vibrates with the feeling of those tragic days, and Dr. Storrs even then pictured that strange, great figure in the proportions in which it is seen today, now that a half century has soothed prejudice and emotion.

Abingdon Press. \$1.

## EUROPE IN 1870

Bismarck—*The Man of Iron*—lives in Richard Dehan's book as a personality unique in power and magnetism. Watching by his side the great game of strategy played below, or stumbling over fresh fields of battle with a young war correspondent, absorbing all its horror and agony—one only changes names and dates to see a merciless picture of Today. One does not forget the streets of Berlin after the declaration of war, but one remembers, too, the odd little newspaper editor in England to whom life is a series of headlines. It is a fine piece of work, this blending of fact and imagination in an historical novel of timely significance.

Stokes. \$1.35.

PEBBLES

HINT TO THE GERMANS AT ST. MIHIEL  
"Alas! What boots it with incessant care  
To strictly meditate the thankless Meuse?"  
—Punch.

Whenever a man begins to take himself  
very seriously everybody with a sense of  
humor moves up nearer, so as to miss  
nothing.—Puck.

Jessie—Please, auntie, the new lady next  
door says, her compliments, and will you  
play very low, because her husband is ex-  
tremely musical.—Sydney Bulletin.

Perhaps the most amiable and mischiev-  
ous type of fool is the one who writes a  
piece for little children wherein he says:  
"Yes, Mary, there is a Santa Claus."—  
E. W. Howe's Monthly.

"Why does the Senator keep talking in  
that rambling way? I don't know what he's  
aiming at; do you?"  
"Sure I do. He's filibustering to keep his  
daughter from singing."—Puck.

"What is your idea of the duty of a  
patriot?" "He ought to be willing to fight  
for his principles," replied the member of  
Congress. "What principles?" "That's what  
I'm going back home to learn from my con-  
stituents."—Washington Star.

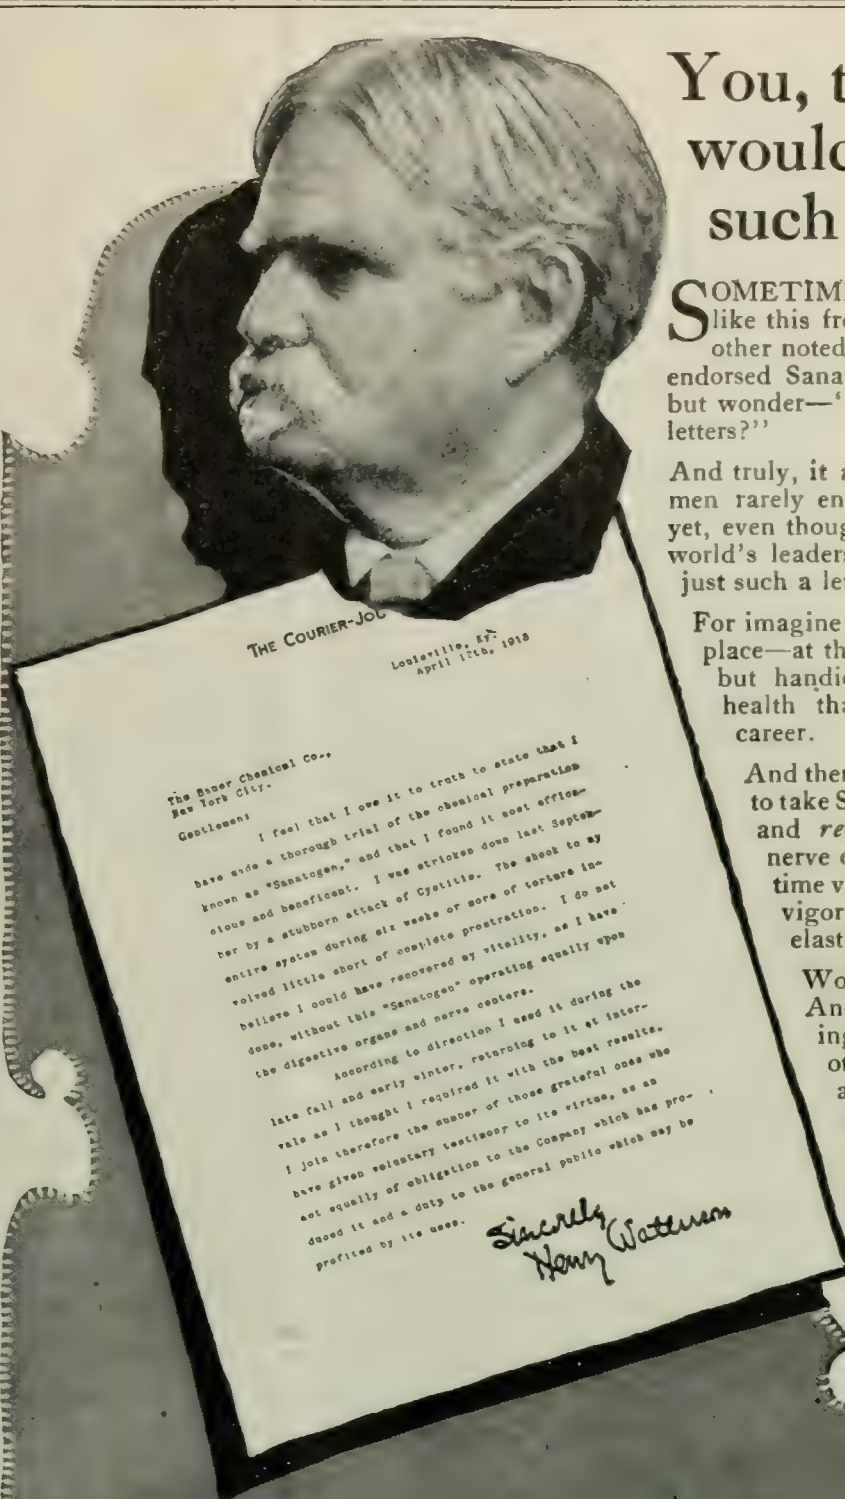

"Young man, what profession do you ex-  
pect to follow when you grow up?"  
"I'm going to be a doctor," answered the  
young man, taking out a notebook and pen-  
cil. "May I count on you to save your  
appendix for me?"—Judge.

She—No, I won't have the fish. I don't  
like the look of it.  
Hawker—No, and yer wouldn't like the  
look of yerself, missus, if you'd been chiv-  
vied abaht by submarines ever since the war  
started.—Punch.

Arthur sat on the front doorsteps cry-  
ing softly.  
"What is the matter, little boy?" asked  
a kind hearted woman who was passing.  
"Ma's gone an' drowned all the kittens,"  
he sobbed.  
"What a pity! I'm awfully sorry."  
"An' s-she promised—boohoo—at I  
c'u'd do it."—Boston Transcript.

William Allen White, writing in the Em-  
poria Gazette, claims that as a result of  
Kansas being "dry" there has been a sav-  
ing of \$20 per capita, and he then an-  
nounces that he can furnish an itemized  
statement of the manner in which this \$20  
is spent. He submits the following:

You, too,  
would write  
such a letter!

SOMETIMES when you read letters  
like this from Col. Watterson and  
other noted men of affairs who have  
endorsed Sanatogen, you cannot help  
but wonder—"Why did they write such  
letters?"  
And truly, it is remarkable—for such  
men rarely endorse any article. And  
yet, even though YOU were one of the  
world's leaders, you, too, would write  
just such a letter!

For imagine yourself in such a man's  
place—at the height of your powers,  
but handicapped by stubborn ill-  
health that threatens your very  
career.

And then, suppose that you begin  
to take Sanatogen, and as it feeds  
and rebuilds the impoverished  
nerve cells, you FEEL the old-  
time vitality return, with a new  
vigor of mind and a new  
elasticity of body—

Wouldn't you be grateful?  
And wouldn't you be will-  
ing, ay, even eager, to tell  
others the good that San-  
atogen had done for you  
just as Col. Watterson  
and scores of other noted  
people have done?

Sanatogen is sold by good  
druggists everywhere in  
three sizes, from \$1 up.

Grand Prize, International  
Congress of Medicine,  
London, 1913

### DIVIDENDS

## American Telephone and Telegraph Co.

A dividend of Two Dollars per share will be paid on Thursday, April 15, 1915, to stockholders of record at the close of business on Wednesday, March 31, 1915.  
G. D. MILNE, Treasurer.

### D. C. HEATH & COMPANY BOSTON Preferred Stock

The regular quarterly dividend of one and three-quarters per cent. has been declared by the Directors of this Corporation, payable April 1, 1915, to preferred stockholders of record March 25, 1915. Checks will be mailed.

WINFIELD S. SMYTH, Treasurer.

### OFFICE OF THE NIAGARA FALLS POWER CO. 15 Broad St., New York, March 16, 1915.

At a meeting of the Board of Directors of this Company, held on the 16th day of March, 1915, a dividend of \$2 per share was declared on the capital stock of this Company, payable on and after the 15th day of April, 1915, to stockholders of record at the close of business on the 31st day of March, 1915.

F. L. LOVELACE, Secretary.

### UNITED FRUIT COMPANY. Dividend No. 63.

A quarterly dividend of two per cent. on the capital stock of this Company has been declared, payable April 15, 1915, at the office of the Treasurer, 131 State street, Boston, Mass., to stockholders of record at the close of business March 25, 1915.

CHARLES A. HUBBARD, Treasurer.

## The United Shoe Machinery Corporation

The Directors of this Corporation have declared a quarterly dividend of 1½% (37½c. per share) on the Preferred capital stock and a dividend of 2% (50c. per share) on the Common capital stock, both payable April 5th, 1915, to stockholders of record at the close of business March 16th, 1915.

L. A. COOLIDGE, Treasurer.

### THE NEW YORK CENTRAL RAILROAD CO. New York, March 19, 1915.

A Dividend of ONE AND ONE-QUARTER PER CENT. (1¼%) on the Capital Stock of this Company has been declared payable May 1, 1915, at the office of the Treasurer, to stockholders of record at the close of business April 1, 1915.

For the purpose of a Special Meeting of the stockholders of this Company, which will be held April 20, 1915, the stock transfer books will be closed at 3 p. m. April 1, 1915, and reopened at 10 a. m., April 21, 1915.

EDWARD L. ROSSITER, Treasurer

# THE MARKET PLACE

### FROM THE COTTON FIELDS

If the cotton-growers of the South could have foreseen the Great War they would have sought to reduce last year's output by using a part of their cotton land for other products. With the war at hand they gave to the world's markets the greatest crop ever harvested here. The Census Bureau's report, published last week, shows that the yield was 16,102,143 bales of 500 pounds each, to which may be added 791,461 bales of lint. With this crop may be compared those of the three years immediately preceding. These were 14,156,486 bales in 1913, 13,703,421 in 1912, and 15,692,701 in 1911. No one of these totals had been reached before 1911. The value of last year's great crop, reduced by the war, is now estimated to be about \$700,000,000.

For a time after the beginning of the war our exports of cotton, as everybody knows, were very small. In August they were only 21,210 bales. Nearly two-thirds of our cotton is sold abroad, in normal times. But the shipments steadily increased, and in February they amounted to 1,501,701 bales, or nearly twice as much as was exported in February, 1914, and a greater quantity than had been sent out from our ports in any other February. The total for the seven war months, however, is only 5,481,040 bales, against 7,240,765 in the corresponding months of the preceding year. In these seven months the quantity sent to Germany was only 236,000 bales, or less than five per cent of the exports. Shipments have not thus far been considerably reduced by the new sea policy of the belligerents. Last week's total was 254,055 bales.

When the loan pool for the relief of the cotton-growing industry was formed, the cotton planters of the South were urged to reduce acreage for this year's crop. Bankers were advised to withhold credit from those who would not promise to make the proposed reduction. Such methods were commended by prominent officers of the Government. Market conditions and prices improved, the loan pool was not used, and the movement for acreage reduction lost some of its force. But this year's cotton fields are not to be so large as those on which last year's great crop was grown.

An inquiry recently made in Texas and Oklahoma points to an acreage reduction of twenty-five per cent in the first of these states and thirty per cent in the second. The land withdrawn from cotton is used for wheat, corn and oats. Little reduction is expected in the Mississippi valley, it is said, but in states east of the valley the wheat, corn and oats acreage is to be increased largely. In parts of the South there will be more idle land than there was last

year, owing to the sale of mules and horses to the European belligerents. Much of the South's agricultural industry depends upon credit. Cotton acreage reduction is restrained, it is said, because bankers, accustomed to finance cotton, are slow to promote the production of grain in the same way. But a considerable reduction of the cotton field area appears to be assured.

### LOANS AND WAR EXPORTS

Owing primarily to the large orders for war supplies, but immediately and directly to the volume of bills or drafts offered to the various agencies in connection with payment of the debt, the rate of exchange on London declined again last week, almost to the lowest point reached a few weeks ago. While the debtor foreign governments avoid, so far as possible, the shipment of gold, the receipts of gold here are steadily increasing. Several millions from Canada were engaged last week. Most of this is virtually from the Bank of England. The quantity of gold received since January 1, with the amount now on the way, exceeds \$26,000,000.

As the issue of foreign securities in London is prohibited, and the French and German markets are virtually closed, several foreign nations are looking to New York for loans. We spoke last week of the Swiss loan of \$15,000,000. It is now said that Brazil seeks here a loan of \$15,000,000, and that Uruguay desires to borrow in New York. Our recent loans to Canadian provincial governments, cities and great corporations amount to \$56,000,000. The stock of gold in the United States is large. Foreign financiers admit that New York is rapidly becoming the leading international money market of the world. Very little has been heard about the attempt to borrow here for Germany. It is said that a syndicate of bankers has taken \$10,000,000 of short-term notes at a price which will yield about six per cent.

Exports thus far in March have been very large. In the second week of the month the reports from the thirteen chief ports, which amount to eighty-six per cent of the total, showed an excess of \$47,000,000 of exports over imports. This made a new high record. The excess for March promises to be larger than that of any preceding month. This balance in our favor amounted to more than \$411,000,000 in the three months of December, January and February.

As the war goes on, the demand for horses, arms, shrapnel, etc., continues. Altho Italy is not yet in the fight, her expenditures here for war supplies have been large. Last week fifty of her cavalrymen, with six officers, arrived at New York to supervise the shipment of munitions and 10,000 horses. On the

15th a contract was signed in Kansas City for 26,000 horses to be used in the artillery and cavalry of a belligerent. Since September 1 there have been received in Kansas City, to supply foreign orders, 72,316 horses, more than 60,000 of which were taken by the British Government. These purchases called for more than \$12,000,000. France is making arrangements for a new credit of \$3,000,000 in New York, in addition to \$10,000,000 procured some time ago. This money is for war supplies. It is reported that Russia has given to a great air-brake company an order for \$30,000,000 worth of shrapnel shells, and is in the market for \$42,000,000 worth in addition. We hear of an order for 10,000 tons of bars, at Pittsburgh, to be used in making shrapnel, and of another placed there for \$15,000,000 worth of shrapnel. Russia has bought 10,000 tons of ship plates. A Brooklyn firm received an order last week for 150,000 uniforms. These contracts and others have required the erection of new buildings and other plant enlargements at a cost of more than \$2,000,000.

#### BUCKETSHOP BILLS

We spoke a few weeks ago of the successful efforts of a committee of the New York Stock Exchange to prevent the enactment, in the Connecticut Legislature, of a bill clearly designed to promote the interests of what are called bucketshops. The bill, if it had become a law, would have permitted or compelled the telegraph companies to deliver or sell the current daily stock quotations of the Exchange to any applicant, and one of those desiring the proposed legislation was a man whom the national Government prosecuted to conviction in the bucketshop cases of four years ago.

The Stock Exchange committee also opposed a similar bill then pending in the Legislature of Massachusetts, and was confident that it would be successful in that state. We are glad to hear that this bill is now dead. But measures of the same kind are pending in two or three other states, and there is work still to be done by the representatives of the Exchange. The contract of the Exchange with the telegraph companies provides that the quotations shall be delivered only to those whose applications the Exchange approves. Those who desire to make a proper and legitimate use of the quotations can easily obtain them, and the Exchange's approval has been given to more than a hundred applicants in Massachusetts and Connecticut. It strives to have the quotations withheld from the bucketshops, which are merely houses for gambling and betting.

The following dividends are announced:  
 American Telephone and Telegraph Company, \$2 per share, payable April 15.  
 D. C. Heath & Co., quarterly, 1½ per cent, payable April 1.  
 Niagara Falls Power Company, \$2 per share, payable on and after April 15.  
 United Shoe Machinery Corporation, preferred, quarterly, 1½ per cent per share; common, quarterly, 2 per cent per share: both payable April 5.  
 The New York Central Railroad Company, 1½ per cent, payable May 1.

# ROMER AXES

FOR EVERY CHOPPING NEED

MADE  
IN  
DUNKIRK  
U. S. A.

## Axe Facts

**R**OMER Axes are known round the globe. They stand for high development of axe quality, durability and cutting efficiency.

There is a Romer Axe for every chopping need—in the forest, the factory, the workshop, the home, on the farm, in every country and under all conditions.

For thirty-eight years, Romer Quality has been a tradition in the axe trade. This is simply the result of the application of scientific principles, insistence on perfection of materials, and advanced manufacturing methods.

The Romer Test is famous—driving an axe through solid iron without seriously injuring its shape or cutting edge. Every axe expert knows what that means: "Not too soft, not too hard."

No home is fully efficient without one. No camping, hunting or fishing trip is complete without one. No country place, stable, garage, woodshed or work bench is well equipped without one. The Boy Scouts and the Campfire Girls need an axe in their outfits. You never know when you may need an axe, but when you do you will need it badly and you will want a Romer Axe.

All hardware and sporting goods dealers who are well stocked carry Romer Axes. If your dealer does not, send us his name and we will see that he promptly supplies you.

ASK YOUR DEALER

# ROMER AXE CO.

DUNKIRK

NEW YORK

attention during recent years, and a few of them are convinced that some measure moderating its increasing unfavorable effects will eventually become necessary. Some of the more far-seeing companies have already advanced the interest rate on this class of loans, hoping thereby to discourage them among policyholders.

#### THE RESERVE IN PRACTISE

A recent statement issued by the Northwestern Mutual Life Insurance Company enables us to use some actual facts and figures to illustrate our explanation of March 8 last, of life insurance reserves. We find that at the end of 1914 the Northwestern Mutual had in force \$1,365,299,749 of insurance, against which it held reserves aggregating \$296,033,374. By deducting the amount of the reserves from the total insurance in force we will arrive at the net amount at risk. This is found to be \$1,069,266,375. So that the mortality portion of the premiums paid by policyholders in 1914 was to carry \$1,069,266,375 of risk and not \$1,365,299,749.

The total amount thus contributed by policyholders last year was \$14,030,193. This was the amount called for by the Mortality Table in use by the company, and it represented the net amount at risk on about \$22,000,000 of insurance that would mature by death. But the actual death rate was much lower than that provided for in the Table. It was, in fact, \$12,466,635, gross, and it was met by reserve funds in the keeping of the company amounting to \$4,628,554, making the net mortality \$7,838,081. The difference between the expected and the actual, \$6,192,112, constitutes a portion of the dividends to be distributed among surviving policyholders.

To sum up: the outstanding insurance was \$1,365,299,749; the accumulated reserve was \$296,033,374; thus making the company's total net liability \$1,069,266,375. The expected mortality in 1914 was calculated under the Table at \$14,030,193. The actual death losses were \$12,466,635 under policies which had to their credit \$4,628,554 of reserve, leaving the net actual mortality cost \$7,838,081.

A careful study of these figures should enable any one interested in the subject to get a clear idea of the use of reserves in an old line level premium company.

J. L. R., Kansas City, Mo.—The company was organized in 1912 and commenced business in January, 1913. It is comparatively small but clean and sound. Its directors and officers are men of ability and integrity. It writes non-participating policies only, for a maximum amount of \$5000 on one life. The company is well managed, its investments are sound and you will find it reliable in every particular.

An examination by the California Insurance Department of the Commonwealth Bonding and Casualty Company of Fort Worth, Texas, discloses an impairment of capital which the company promises to make good immediately.

According to the figures of the Philadelphia Fire Insurance Patrol, the losses by fire in that city in 1914 were \$2,754,000 as against \$2,189,936 in 1913. The insured losses were, respectively, \$2,520,000 and \$1,920,836.

## The Joy of Owning a Boat

FIFTY LEADING BOAT BUILDERS have joined with the Gray Motor Company in issuing a catalog, showing the specialties of each concern. A catalog of "specialized boats," from a complete little fishing or pleasure launch at \$110.00 to a solid mahogany express launch equipped with a modern 6-cylinder, self-starting, 4-cycle Gray Motor—or a snug, safe, roomy, little cruiser, with all the comforts of a home—in fact a range to select from that can satisfy every individual who is wanting a small boat—we help you to experience the "Joy of Owning a Boat." Write for the Boat Builders' Catalog today.

safe, roomy, little cruiser, with all the comforts of a home—in fact a range to select from that can satisfy every individual who is wanting a small boat—we help you to experience the "Joy of Owning a Boat." Write for the Boat Builders' Catalog today.

STANDARD Equipment of a Modern Model "C" 4-Cycle Self-Starting Gray Marine Motor as shipped from the factory, a complete unit, ready to install.

GRAY 1915 4-Cylinder, 4-Cycle Model "D" 16-20 H. P. Motor—silent, powerful, reliable. Representing the latest ideas of gas engine design construction. \$210 and upwards, depending on equipment.

You handle a 1915 Gray 4-cycle Marine Motor just as you do your automobile. Nothing exposed but lever and controls. No gears, no grease, no dirt, no heat, no noise.

GRAY 2-Cycle Motors are standard the world over. Their simplicity, reliability, power, finish and low cost have made them so. \$55 and upwards.

3 to 36 horse power. One, two and three cylinders

Write today for Catalog

GRAY MOTOR COMPANY, 356 Gray Motor Bldg., DETROIT, MICH.

## BROWN'S Bronchial TROCHES For the Voice

Promptly relieve coughs, irritation or soreness of the throat. Used throughout the world by prominent public speakers and singers. The standard remedy for throat troubles.

Convenient and effective and perfectly safe to use freely. Contain no opiates—will not affect the appetite or digestion. Sold only in Boxes—never in bulk. 25c, 50c, and \$1.00. Sample Free.

JOHN I. BROWN & SON Boston, Mass.

## TYPEWRITERS ALL MAKES ALL PRICES

Look at these bargains! Typewriters Rebuilt in our own Factories. Every machine is guaranteed for one year.

Remingtons \$20 to \$55	Smiths \$18 to \$40
Underwoods \$35 to \$60	Royals \$25 to \$45
L. C. Smiths \$30 to \$50	Olivers \$20 to \$35

We have others. Send for catalog describing them, and address of nearest branch office.

American Writing Machine Co., Inc., 345 Broadway, N. Y.

## PATENT YOUR IDEAS

\$9,000 offered for certain inventions. Book "How to Obtain a Patent" and "What to Invent" sent free. Send rough sketch for free report as to patentability. Patents advertised for sale at our expense in Manufacturers' Journals.

CHANDLER & CHANDLER, Patent Attys  
Est. 16 Years 1077 F. St. Washington, D. C.

# EFFICIENCY QUESTION BOX

CONDUCTED BY EDWARD EARLE PURINTON, DIRECTOR OF  
THE INDEPENDENT EFFICIENCY SERVICE

Questions on health, work, business, home and everyday life will be answered by Mr. Purinton, in so far as may be possible, thru the Question Box or by personal letter. Please confine questions to one sheet. When books, institutions, manufactures, and other aids to efficiency are mentioned, they are not necessarily endorsed. The Service, being a clearing-house of information, assumes no responsibility for others.

48. Mr. J. G. H., Chicago. "Does the body serve us most perfectly, and in the most vigorous condition, when we are thinking most or least about it?"

The purely animal functions work best when left alone—the purely human functions work best when completely governed by the human brain. Animal functions include the vital processes that we share in common with our neighbors of the forest—eating, sleeping, bathing, exercising, and the like. Human functions include the operations of mental or manual skill exacted by our industries and pleasures. Think about your work—don't think about your digestion.

49. Mr. W. M. B., California. "I am at the head of a department in a concern employing several thousand men. Certain employees under my charge have been with us for years, but do not yet seem able to perform their duties as effectively as they should. Ought I to discharge them, in spite of their faithfulness and good intentions? Is it my responsibility to be just to the men, or to the company?"

You can be just to both—and to neither unless to both. It is estimated that the cost to a company of discharging an old employee is from \$25 to \$40. If you discharge only three workers you are losing probably \$100 to your firm; which amount has to cover the mistakes of the new men, your own time in training them, and the disorganization and readjustment, mental, industrial and financial that new associations in a business always involve.

Each of your unsatisfactory workers may somehow be made efficient. His talent and interest may belong in some other branch of the business, to which he might be transferred; a class in personal or technical efficiency might be formed, and awards voted to the men who make the most improvement in their work; methods of scientific management might be installed. The discharge of a man who tries to do good work is generally an indication of unfitness on the part of his chief.

50. Prof. C. W. H., Illinois. "How would you force a child, who hates his books, to study a prescribed course, regularly and conscientiously? When a youth fails in a subject, mathematics, for instance, tho he has studied earnestly and long, is it just and right for the officers of the school to hold the pupil back, in view of an apparent inability to master one subject?"

When a child "hates his books," the books are generally to blame. A normal child wants to learn all about life, but must respect and admire the teacher, and must have the subject of study presented in an attractive way. Stupid children are the product of stupid methods of teaching, save in the rare case of "defectives" or other abnormal types. The text-book, the teacher and the school are the first objects to investigate when a child refuses to study. A scheme of rewards for good study, or of merit marks entitling the child to some special privilege on gaining a certain number; or an "honor system" among the pupils themselves, granting prizes to the best scholars and laying penalties on the worst ones—some such plan might be thought out, appealing to the ambition, pride and expectation of even the poorest student. I am

not sure that "trading stamps" would not thus perform a noble service.

Your second query may be answered in a word, but the remedy cannot be given in a library of words. When a youth fails in a subject, after doing his best, of course it is unjust, unwise and unpsychological to hold him back in the same grade or class because of this inborn defect of mind. A friend I had in college used to spend three hours a day on "higher mathematics," and he couldn't tell the difference between a logarithm and a cube root. He was "passed" because he was the son of a professor in the college, but for ten years after graduation he used to be haunted by the nightmare of "failure"—he would wake up in a cold sweat, just in the act of being refused his diploma in the scornful view of the assemblage at commencement day exercises. The teachers of that youth were guilty of intellectual malpractice—they injured his mind as a quack doctor injures people's bodies, and they should have been prosecuted accordingly.

There should be a reliable character analyst on the faculty of every college, to decide what the talent, temperament and character of each freshman would require as a proper course of study; and if one was born to be a blacksmith, a chair in the Honorable, Scientific and Remunerative Art of Blacksmithing should forthwith be established. One of the first duties of a college is to find what a man can do best, and immediately prepare him to do that thing in a scientific and satisfying manner.

51. Mrs. R. A. L., Maine. "How can the daughter of the house learn domestic science, as you recommend, and at the same time acquire a college education which now is considered an essential for women as well as for men? We should like our daughter to receive both kinds of efficiency training, but do not see how to combine them."

Select a college where the rudiments of home science are now being taught, then let your daughter take a correspondence course in domestic science during her summer vacation. The average college girl is a very proud and haughty person; she will not be greatly attached to humble household tasks, economies or appliances unless they be properly endorsed by one of her favorite college professors. Accordingly, the value of giving her a start in home duties while at college is of great importance.

I am by no means sure that a complete college education is now, or ever will be, "an essential," to either young men or young women, till the college curriculum is so changed as to prepare young people for the active work of real life. Unless your daughter has a professional career in view, such as that of teacher, writer, lawyer or physician, there is reason to believe that two years of ordinary college experience will suffice for both cultural and practical advantages. This belief is personal and may not express the opinion of *The Independent*.

52. Mr. E. F., New York City. "Do you regard a dictating machine as the most efficient method of taking business correspondence? A number of these are widely advertised, but I hardly wish to spend \$100 on the experiment for our work in a small office, unless the machine is likely to pay for itself."

A business phonograph is economy in some cases, extravagance in others. If most of your important letters are individual and unique, not mere business forms; if the time of the man who dictates them, and of the stenographer who transcribes them, is of exceptional value—and if these two officials are now overworked; if the volume of your correspondence is large and growing, with clients or customers demanding personal attention by mail steadily increasing; or if any dictation of a literary or commercial nature is done at the home of

a leading official—you will probably find a dictating machine a wise investment.

Most companies manufacturing these machines will, if you insist, allow you to rent an instrument for a month or two on trial, with the rental payments applied on the purchase price in case you buy.

53. Mrs. F. P., Ohio. "My husband and children are very fond of fried oysters, potatoes, crullers, and other articles of food cooked in lard. I do not believe that lard should be eaten, but wish to prepare meals acceptable to my family. Is there a way out of the dilemma?"

There is always a "way out." Of course you know that frying should be done in very hot fat, with great rapidity, then the food allowed to drain thoroly, so that "swimming in fat" would be a nautical impossibility. Fried food served not more than once a day and made crisp instead of greasy should not be harmful to people of active life and good digestion. But if you do not wish to use lard, there are several vegetable cooking oils and fats which are palatable and wholesome. See what your grocer has, find what he can get.

54. Miss R. Y., Tennessee. "I am a high school pupil, and am going to write a paper on 'Our Country Tomorrow,' as a forecast of general improvement and a help to practical patriotism. I will appreciate any suggestion you can give me."

You would probably find material in your nearest public library; ask the librarian. We may suggest *The New Era*, by Josiah Strong (Doubleday); *True and False Democracy*, by Nicholas Murray Butler (Macmillan); *The Promise of American Life*, by Herbert Croly (Macmillan); *Four Aspects of Civic Duty*, by W. H. Taft (Yale University Press); *Christianity and the Social Crisis*, by Walter Rauschenbusch (Macmillan).

55. Mrs. R. D., Connecticut. "I have lately read the advertisements of a brewing house, claiming that physicians advise the use of beer for digestion, vitality and longevity. While I am in need of such a tonic, I cannot, as an advocate of temperance, indulge in alcoholic beverages. What do you recommend?"

Beer is only slightly alcoholic, but the habit of drinking anything alcoholic tends to both mental and moral deterioration—no matter what may be said in print even by physicians. There are preparations of malt, hops and all the beneficial ingredients of beer to be found in a first-class drug store. The druggist, not the saloon-keeper, should be the dispenser of alcoholic products—if they should be sold at all.

56. Dr. L. A. S., Michigan. "Does not the question of health underlie the problem of efficiency, and should not a system of health instruction be adopted by the U. S. Government?"

Emphatically yes, to both questions. Write Professor Irving Fisher, New Haven, Connecticut, for particulars of the work of the National Health Committee of One Hundred, and associated endeavors.

57. Mr. M. M. G., Illinois. "Some teachers of mental science tell us that such emotions as anger are extremely injurious, acting as a poison to the system. Others assert that occasional outbursts of temper (as indignation) act upon the mind and body as a tonic. What seems to you to be the truth?"

The truth, as usual, may be found halfway between.

Anger is a poison. But so are emetics and purgatives—which we sometimes need to counteract the effect of other poisons already in the system. Anger is a powerful antidote for such deadly things as injustice, insincerity, incompetency. To be thoroly indignant because of a wrong is purifying, stimulating, hygienic. But to be "mad" at people is confusing, depressing, suicidal.

## KITCHENER STORIES

Behind Kitchener's army is Kitchener—K. of K. hitherto, K. of something else, something much bigger than Khartum, hereafter; but we are not presumptuous enough to prophesy just how his handling of the Great War will be translated into a nickname. Just now Kitchener books and Kitchener stories are many. The old anecdotes are being revived and new ones are cropping up. From Mr. Begbie's *Kitchener, Organizer of Victory*, reviewed this week in our book columns, we take a group of stories worth retelling:

Mr. Lloyd George called one day upon Lord Kitchener to explain to him that recruiting in Wales would be far quicker if the men were told that they would form a Welsh army and serve under a Welsh general who understood their traditions and spoke their language. "But where is your Welsh general?" demanded Kitchener, who does not greatly like to be bothered with details of nationalism. "We had better discuss that with Colonel Owen Thomas, who has come with me, and is now in your waiting-room." Kitchener rang his bell and gave orders for the visitor to be admitted. As soon as he saw him he said, "You were in South Africa?" "Yes, sir," replied the colonel. "Well, you're now Brigadier-General Commanding the Welsh army; you'd better go and get to work at once."

Kitchener's family knew long before the world did just what Kitchener expected to do. Here is evidence:

A brother of the present writer was a cadet at the Royal Military College of Sandhurst at a time when one of Kitchener's brothers was on the staff of lecturers. It happened one day—this was in the early eighties—that my brother was walking in the grounds of the college with Kitchener's brother, and as they went along the lecturer said to the cadet, "My young brother has got himself appointed to Egypt; he'll never come out till he's at the top."

Kitchener's mechanical, heartless methods are familiar in tradition. Mr. Begbie offers the record of two cases where in the view of the common man Kitchener showed himself sadly lacking in ordinary sympathy:

I will now tell the two worst stories I know about Kitchener, and get rid as quickly as possible of this particular aspect of his character. One is of Egypt and one of South Africa; both are true.

It happened that Kitchener, during his Egyptian command, wanted a certain bridge to be built and sent for an engineer to give him his orders. When the command was finished he added, "I will inspect the bridge on —," naming a certain date. The engineer expressed his doubt whether the bridge could be finished in so short a time. He was told that on that day Kitchener would come to the spot and if the bridge was not finished there would be trouble. There the interview ended.

The engineer set off on his labor of Hercules. He was young, devoted and ambitious.

He worked by night and by day, did incredible things, and at the moment when Kitchener arrived had everything ready for inspection. His eyes shining with pleasure, his hands still grimed with the anxious work of last touches, he advanced to Kitchener, saluted, and said, with a smile, "Well, sir, we've just managed to do it in time." The only answer he received, the dreadful eyes fixed upon him, the voice cold with authority, was this: "Yes, but you ought not to appear before me unshaved."

This is what I call the Prussian element in Kitchener's character, and for myself I hate it so much, detest it so spiritually, that I would give much to add to my story that the engineer threw the piece of cotton-waste on which he was wiping his dirty hands straight into K.'s face, even if one had to record that he was subsequently buried in close proximity to his bridge. Nevertheless, I remind myself that Kitchener is a man burdened with responsibility, that the East is not good for the liver, and that perhaps something had occurred that day to put him out. But I don't like to hear that when this story was retold to Kitchener in after years he laughed heartily. It would have been rather nice to record that he covered his face with his hands.

The other story is this. During the war in South Africa it was necessary on a certain occasion for Kitchener to make a quick and highly perilous journey by train. A daring and high-spirited youngster volunteered to drive the engine. The journey was accomplished. The volunteer driver, delighted that he got the great general safely thru most dangerous country, said to Kitchener as the Chief of Staff passed him standing beside his sweating engine: "We weren't so very long, were we?" To which K. of K. replied, scarcely looking at him, "You'll have to be quicker going back."

But K. of K. is by no means unable to be gallant on occasion, and Queen Victoria once provided the occasion:

When he was at Simla and at a time when he was exceedingly busy, one of his friends died at Lahore. As soon as the news reached him, Kitchener started off from Simla, not to be present at the funeral, but to comfort the widow of his friend, a woman for whom he entertained great respect and affection. The idea that Kitchener is a woman-hater is false, and has its origin only in a busy man's natural distaste for chatter and frivolity. It is said that Queen Victoria challenged him on this question, anxious to arrange a match for the triumphant young general, and that Kitchener replied, "But I love one woman already, ma'am, and always have loved her." Here was romance and mystery. The old Queen raised her head. "Who is she?" asked Victoria. "Your Majesty," replied Kitchener.

Some of the finest jokes extant come thru the fact that the printer's finger slips. Here is one which, like all others, is funny a long long, long time afterward—not at the time.

A Buffalo paper, in describing the scene when Roosevelt took the oath of office as President, said it was a spectacle never to be forgotten when Roosevelt, before the Chief Justice of the Supreme Court and a few witnesses, took his simple bath.—Associated Advertising.

## WHILE IT WAS YET DARK

**A**MID the confusion of the early records which tell about the great event which Easter celebrates one thing stands out very clear. No human eye saw the resurrection of Jesus or watched the inscrutable process. The Christian witnesses bore testimony only to the accomplished fact. The change from death to life culminated in the obscurity of the tomb. "While it was yet dark," there came, according to the most philosophical of the Gospels, anxious watchers who found the transformation already complete and the tomb empty. The darkness which shrouded the event is paralleled by the confusion and uncertainty of the conflicting testimony that has reached us. In fact the whole course of Christian beginnings lies shrouded in the mystery of indefiniteness and the shadows of the unknown.

But all great beginnings are thus conditioned and surrounded. Man becomes conscious of the result long after the causes have apparently ceased to operate. He sees the product after the early stages of the process have receded into the dim past. Only the scantiest remains mark the pathway of early developments, and the highest intelligence is necessary to descry the scraps of evidence and by comparison and imagination reconstruct the methods and movements of these living forces.

Nestled in the darkness of mother earth the seed takes on the new life which is first observed springing in vigor from the soil. Out of the mothering womb of time has come forth the human race thru its various stages, progressing thru barbarism, primitive civilization, and the historic era.

Since man began to think upon the past he has evolved unnumbered theories of his beginning, and still to the most instructed the early stages in each onward course of development must be approached thru a twilight that ends in darkness. The rude beginnings of his culture are buried beneath the rubbish heaps of time. The institutions of religion, home and government we know only in their higher forms. Language, art and thought can be studied in their monuments alone. The keenest and most critical investigations have only partially revealed

the successive steps of Hebraism and the founding of Christianity. Those centuries in which directive forces were forming the incipient movements which have culminated in what we call western civilization are often termed the Dark Ages. On the whole we must conclude that the great forces operating in society and in life conceal their most significant phases, those phases which carry the greatest import for the future, from the contemporary eyes of men. We cannot "look into the seeds of time, and say which grain will grow and which will not." While it is yet dark the great movements of the future are being planned and the first steps toward the realization of the plans are being taken.

Around us at this Easter time the darkness and confusion of human affairs are almost beyond parallel. A crisis in history has, no doubt, been reached. We seem to see not only the disruption of international and national life, but the clashing ideals of races, the spread and deepening of hatred and strife, the failure of human capacity for organization to hold in check the elemental passions and aspirations of mankind, and even the breakdown of Christianity itself.

Nevertheless, the seeds of a new and grander future have doubtless been already sown. The ways of nature and human development lead us to expect that this is so. Life is positive, death is negative. The breakup and sloughing off of the old and outworn may appear as the darkness of dissolution, but the stirrings of a new life to result in a higher order are scarcely to be apprehended until the growth directed by the Unseen Mind has brought some reorganization out of the old chaos. "Out of the cradle endlessly rocking" come the strength and wisdom that shape and advance the world's destinies. The patient, brooding spirit of man, inspired by hope and faith in the Divine Order, will yet bring to power and dominion the living principles of international brotherhood and service now obscured in the bitterness and darkness of war and racial strife. Future generations will surely say: "While it was yet dark" we discerned the birth throes of a new world order.

## THE JUSTICE AND DESIRABILITY OF WOMAN SUFFRAGE

**T**HE men of three eastern states—Massachusetts, New York and New Jersey—will have an opportunity this fall to put themselves on record for or against woman suffrage. In each state a constitutional amendment extending the suffrage to women is to be submitted to the voters at the polls. What will the men of Massachusetts, New York and New Jersey do with the opportunity? Will they follow the enlightened example of the men of Wyoming, Colo-

rado, Idaho, Utah, Washington, California, Arizona, Kansas, Oregon, Alaska, Illinois, Montana and Nevada? Or will they choose to keep their states a while longer groping in the mists of reaction?

Women should vote for four good and sufficient reasons—and for one other reason greater than all four. And the four reasons are these:

It will be good for the women.

It will be good for the men.

It will be good for the family.

It will be good for the state.

In the first place, then, it will be good for women to vote—not, it should be noted, to have the right to vote, but *to vote*, for the suffrage is not only a privilege but an unescapable obligation—because it will broaden their mental and moral horizon. It will give them something new to think about; and there is no better, one might almost say no other, road to intellectual development than thinking. It will give them new responsibilities—responsibilities to their neighbors, to the community, to the state. There is no better road to moral development than the assumption and the bearing of responsibility.

In the second place, to have women vote will be good for men. It will put them on their mettle, for it would go hard with masculine pride to find the “weaker sex” beating them at their own traditional task. It will make the men think too. For there is no greater incentive to clear thinking than, first, the necessity of explaining a matter to an inquiring mind and, second, the need of defending one’s own position in argument. It will sharpen men’s moral responsibility. For women have a way of going straight to the heart of things; and it might be a new and stimulating experience for a man to have to explain to his wife, or his mother or his daughter—as fellow voters—just why he was voting on the side of a corrupt boss or in favor of the liquor traffic or against the suppression of child labor.

In the third place, the voting of women will be good for the family. It will create a new bond of union among its members. Husband and wife with a common duty to the state will find themselves drawn closer together. The mother who goes to the polls with her son, the father who accompanies his daughter to the performance of their common civic task will find a new pleasure in their parenthood and a new outlook upon its possibilities. The son who grows up to find his mother a voter, informed on public affairs and intelligent to discuss them, will have a new appreciation of his mother’s companionship, a broadened respect for womanhood.

In the fourth place, woman suffrage will be good for the state. The comment has been keenly made that the state, like the family, needs not only a father but a mother. Women, by the very nature of their being, and of their normal existence, are experts on certain vital subjects. And the state needs expert knowledge quite as much as it needs good intentions and sound principles. Municipal housekeeping could not but gain in efficiency from the participation in its affairs of those in the community whose peculiar business housekeeping is. Women will bring to the activities of government a new point of view, valuable because it is a sound point of view and no less valuable because it is a different point of view. On such subjects of the highest importance to the well-being of the state as education, working conditions for women, the purity of food, child labor, the liquor traffic, the social evil, and war, women have that to contribute in the way of special knowledge and special sympathy which the state can ill afford to be without.

Women have different qualities of mind from men. Men are, in theory at least and often in practise, reasoning beings. Women are creatures of intuition. Men plod to a conclusion; women leap to it. It is sometimes startling to observe how woman’s intuition surpasses man’s reason in soundness of result. But to whichever

quality be awarded the palm for usefulness, there is no question that the two taken together are greatly more valuable than either alone.

But to come to the last and greatest reason of all.

Partial suffrage—the suffrage of men alone—is a denial of democracy. Democracy will never be full and complete until every individual in the community has an equal right to determine how the affairs of the community shall be managed. Democracy—the rule of the people—is no democracy while half of the people are excluded from the ruling. The United States is a nation “conceived in liberty, and dedicated to the proposition that all men are created equal.” There is no liberty while women are free only to be governed and not to govern. There is no equality which does not include political equality—and political equality for all persons regardless of sex.

### THE INFERNAL TRENTINO

WHAT sort of land is this that Italy covets so that she is willing to fight Austria to get it? Nothing less than that which Dante sketched in his *Inferno*. For Dante once lived at Trent in what is now Austrian Tyrol. If the tourist doubts it there is Dante’s statue in front of the railroad station to prove it, an eyesore to the Austrians who look with not unnatural suspicion on the devotion of their Italian subjects to the literature of their would-be fatherland. More than one Dante culture club has been found to be a nest of hot-headed Irredentists.

But tho Dante was a dweller in the Trentino he did not like it, for he hated mountains and feared rocks. So when he came to describe the descent into the Seventh Circle of the *Inferno*, where are confined the men of violence, he draws his comparison from his Alpine reminiscences:

The place where to descend the bank we came  
Was Alpine and from what was there moreover,  
Of such a kind that every eye would shun it.  
Such as that ruin is which in the flank  
Smote, on this side of Trent, the Adige,  
Either by earthquake or by failing stay,  
For from the mountain’s top, from which it moved  
Unto the plain the cliff is shattered so  
No path ’twould give to him who was above;  
Even such was the descent of that ravine.

This is the passage which Ruskin picks out to prove his point that the taste for wild and rugged scenery is a recent acquirement of the race. In his *Modern Painters* he comments on the lines in this wise:

The fact is that Dante, by many expressions thruout the poem, shows himself to have been a notably bad climber; and being fond of sitting in the sun, looking at his fair Baptistery, or walking in a dignified manner on flat pavement in a long robe, it puts him seriously out of his way when he has to take to hands and knees or look to his feet; so that the first strong impression made upon him by any Alpine scene whatever is, clearly, that it is bad walking. When he is in a fright and hurry and has a very steep place to go down, Virgil has to carry him altogether.

But the mountain scenery which was abhorred by the classical and medieval authors is, thanks to the rise of Romanticism, beloved of the modern man. The attractiveness of a landscape increases with the angle of inclination to the horizon. At forty-five degrees it begins to get interesting, at ninety it is thrilling. So the barren lands of the world have now become the most productive and rocks pay better than soil. Tourism is already the most profitable industry of the Tridentine Tyrol and in Italian hands it will be worked more skil-

fully. From all parts of the world people will flock to the Triple Toothed country and have their photographs taken as they clamber down the Adige landslide that leads to the Seventh Circle.

### "REAL WAR" AND WAR AS IT IS

ARE exhibitions of the motion or still pictures which are coming from Europe one often hears expressions of disappointment that there are no photographs of "real war." These soldiers entrenching—they might as well be Italians laying sewer pipes. This gun going off—where's the enemy? These sick and wounded, doctors and nurses—they might be in any hospital. This train of supplies—it is as dull as the loading of a ferry-boat. These refugees—why, they can't be real, for, see, the children are laughing, not crying, and the women have on their best clothes.

The popular disappointment is natural, but it arises from the fact that we are now getting for the first time real pictures of real war. This is actually what war is, nine-tenths of it, ninety-nine hundredths of it, mere ditch-digging, and firing at an invisible target and convalescing in the hospital and carting and being cheerful in adversity. What the painters have palmed off upon us before the rise of photography is not real war, or at most, only a small part of it. There are still occasionally hand-to-hand fights with the bayonet and cavalry charges, but one who gets his idea of warfare from Meissonier, De Neuville or Détaillé will find it a very different thing when he enlists. Thanks to the silver film war is now being stripped of the glamor with which artists and poets have conspired to invest it and now stands revealed in all its dreary nakedness.

### A MISSING WORD CONTEST

This dastardly affair on the part of the —, who could not attack like men. This deed of barbarity of which none were deemed capable but savages. Those cruelties enacted at — by destroyers of the weak and defenceless, besiegers of boudoirs, who bombarded drawing-rooms and nurseries and made the name of — a byword among nations.

Puzzle: to supply the missing words and give the date and origin. But we fear this may be too hard for the reader, so we will add that the blanks are to be filled out by the word "Yankees," "Vera Cruz" and "America," and the quotations are taken from British newspapers of March, 1847, according to the *Silver Standard* of Roger Bros.

### THE SHIFT IN MODERN LANGUAGES

ONE curious effect of the war on America is a decline in the popularity of the German language. In recent years German had been gaining and French losing ground in our schools and colleges. Where the two languages were offered as alternate electives, it was common for at least three or four times as many students to choose the German. But at the fall opening a great change was observable. The entrance and optional German classes fell, in many places, to a small proportion of their former size. The students declining German have not, however, gone over to French as a rule. Some take Latin, but most of them have gone in for Spanish wherever this is offered. The Spanish classes

everywhere have been swamped and there is great difficulty in getting enough qualified teachers for it.

The influence of the war is also shown in the increased attention given to Russia. Courses in Slavonic languages and history have been offered for some years in a few universities, but were poorly attended. This year their numbers will probably be five times what they were last year.

This new interest in Spanish and Russian is a good thing, for they have been deplorably neglected by our students. But the present popular aversion to Germany should not blind us to the importance of a knowledge of the German language. Before the war our commerce with Germany alone was twice the value of our commerce with the whole of Spanish America, and while we hope that intercourse with the countries south of us will increase it will be a long time before it equals that with Germany. Unless the German nation is completely crushed out by the war its literature, science, art and industries will continue to be worth our study.

### AN EVIL RECRUDESCENCE

IT has been a satisfaction to lovers of law that the annual register of lynchings in this country has shown a pretty regular decrease. This comes from a growing public sentiment, both North and South, which is unwilling to tolerate or excuse what is the chief shame of our country in the eyes of foreign peoples. But this is dependent on the reiterated expression of indignation against the evil.

We have received lately letters from both Georgia and Florida which tell of a recent increase in the number of lynchings of negroes, and that for offenses not of the most flagrant character. Take the case that came recently to us from Florida. A negro entered a store, bought cigarets, and handed an insulting letter to the lady clerk. He is said to have hung about the store outside, until he was arrested. The courts would have speedily tried the man without fear or favor, but tho he denied that he was the one who had committed the offense, sixty masked men took him from the sheriff and riddled him with bullets. The *Time-Union* of Jacksonville prints the full story from Anthony, Florida, ending with the usual defense:

This is a peaceful community of law-abiding citizens, who do not under any circumstances hold with lynching; except for the one offense and its associate suggestion. And this we say to the self-appointed headlights in other parts of the country who stand dismayed at "Southern barbarity" in protecting white women from being insulted and outraged.

Those guilty of lynching always boast thus that they are the defenders of our social institutions.

The pronunciation of Przemysl and other Polish names would give less embarrassment to the reader if a rational system of transliteration were used in putting foreign names into English. Our custom of spelling by sight instead of by sound is the cause of endless trouble. In this word the *r* is silent; the *l* barely sounded. The *z* is pronounced like *zh*. The *e* has the sound of *ay*. The accent is on the first of the two syllables. As pronounced by a native it sounds almost like *Pshame'-ish*. The Russian for it is Peremysl and this may become its name to the outside world if it remains in the hands of the Russians. But we had better not anticipate the outcome of the war. Otherwise we might have to use Lüttich for Liège.

# THE STORY OF THE WEEK

## The Attack on the Dardanelles

Since March 18, when the Anglo-French fleet which entered the Dardanelles lost three battleships, there has been no renewal of the attempt. On the 24th the "Queen Elizabeth," the "Agamemnon" and the cruiser "Cornwall" did venture in again, but this time after dark and only for the purpose of protecting the mine-sweepers, which have continued their work during the week. Two destroyers are said to have gone up the strait as far as the Narrows beyond Chanak. The unfavorable weather and the heavy sea running thru the Dardanelles are alleged as the reason for the suspension of operations. Besides this, it is known that most of the vessels which took part in the attack on the 18th suffered more or less from the Turkish shells and needed repair. As to the damage done to the forts, reports differ. According to the Allied account the fort near the ancient city of Dardanus, which gave name to the Dardanelles, was completely demolished, and several of the forts about Kilid Bahr and Chanak were disabled. On the other hand, a German observer states that the Allied fleet expended more than 2000 shells in the seven-hour bombardment without

## THE GREAT WAR

*March 22*—Przemysl, chief Galician fortress, surrenders after six-month siege. Germans regain Memel on the Baltic.

*March 23*—Russians gain Lupkow Pass in Carpathians. Germans take 2500 Russian prisoners northwest of Ostrolenka.

*March 24*—"Queen Elizabeth" and "Agamemnon" again enter Dardanelles. Russians invade Hungary thru Dukla Pass.

*March 25*—Kurds massacre Christians about Urumiah, Persia. Albanian insurgents shell Durazzo.

*March 26*—French take Hartmannsweilerkopf near Thann, Alsace. Turkish attack on Russian Transcaucasia along Black Sea repulsed.

*March 27*—Germans bombard Arras. Italian Alpine troops called to colors.

*March 28*—Ten more warships join Allied fleet at Dardanelles. Okuma ministry wins Japanese elections.

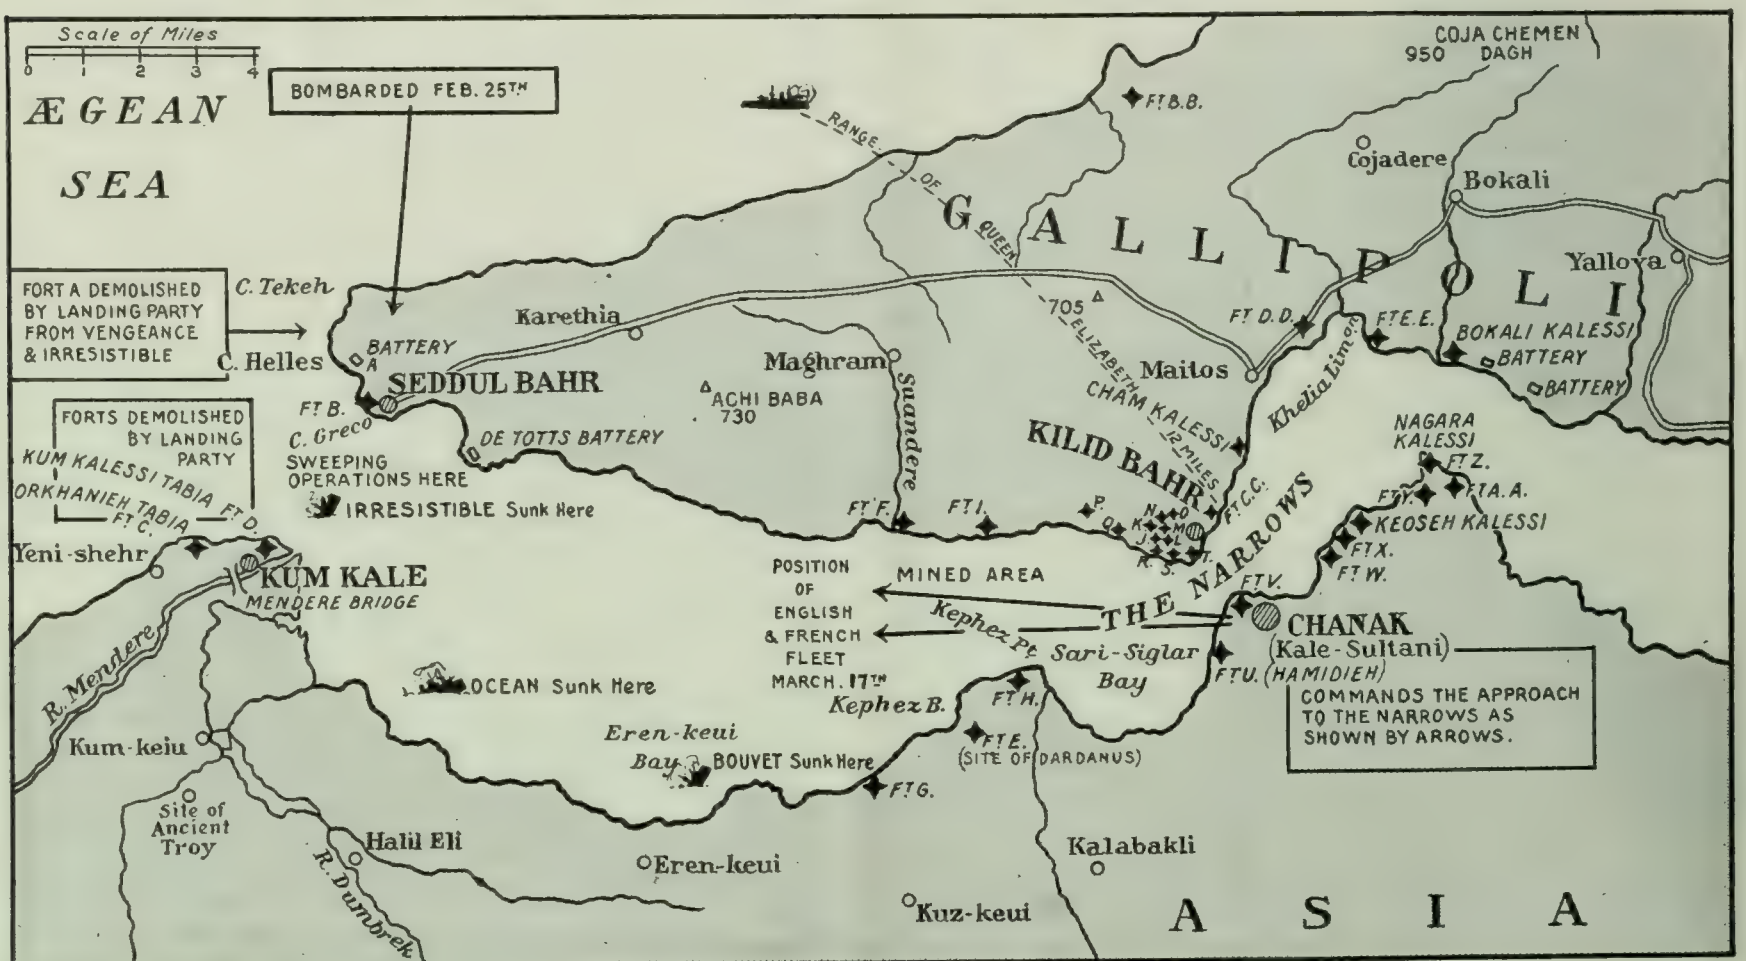

putting out of action a single shore battery. Doubtless we shall have to wait till another attempt is made to force the Dardanelles before we find out which report is correct, if either.

The Allied fleet has been reinforced during the week by ten more warships, tho what they are is not stated. Possibly one or more of the new superdreadnoughts, sisters of "Queen Elizabeth," may be among

them. Since the penetration of the Dardanelles has proved so dangerous the 15-inch guns of these vessels, which can carry over the Gallipoli hills, are likely to be more in demand than ever. On Sunday, March 28, the "Queen Elizabeth" again tried indirect fire over the peninsula under the guidance of warships at the entrance to the Dardanelles. The forts about Kilid Bahr on the European and Chanak on the Asiatic side of the Narrows were reported hit.

Transports bringing British troops from Egypt are reported at Smyrna and a force is said to have been landed on the Gallipoli peninsula from the Gulf of Xeros. The upper end of the peninsula is said to be occupied by a large body of Turkish soldiers under German command protected by entrenchments across the neck of the peninsula at Bulair.

General von der Goltz, the German officer who organized the Ottoman army many years ago and now has charge of it, has left Constantinople for Sofia and Bucharest for the purpose of persuading Bulgaria and Rumania not to enter the war against the Turks. Bulgaria is said to have been offered all the territory she conquered in the first Balkan war of 1912.

THE FORCING OF THE DARDANELLES

This map, adapted from the London *Sphere*, shows that the Allied fleet has now before it the most difficult part of its task in reaching Constantinople, the Narrows where the channel is little more than a mile wide and both shores are lined with batteries. The new oil-driven superdreadnought, "Queen Elizabeth," has been bombarding these across the Gallipoli peninsula at a distance of twelve miles or more, and on March 18 the fleet steamed up the Dardanelles nearly as far as Kephez Point and attacked the forts by direct fire. But floating mines, sent down the straits with the current, struck and blew up the French warship, "Bouvet," and the British "Ocean" and "Irresistible"

**The Fall of Przemysl** On another page of this issue we tell the story of the long siege of the Galician fortress and discuss its strategic significance. The Austrians console themselves as best they can for its loss by the thought that it held out a month longer than the Russian fortress of Port Arthur and that the garrison was starved out, not conquered. When Port Arthur fell into the hands of the Japanese there was still a good stock of food and ammunition. At Przemysl, every domestic animal had been killed for food. Attempts had been made to bring in concentrated food by airships, but of course such a supply could not suffice for 120,000 soldiers and the civil population. According to the official Austrian report, there were 28,000 disabled from disease and wounds, and they were dying at the rate of 200 a day for lack of drugs and dressings. The troops had not had full rations since December and for the last week or so had been living on horsemeat and rice. The outer ring of fortifications had a circumference of twenty-five miles, too great to be adequately manned by the reduced and exhausted garrison.

Finally the capture by the Russians of a hill 400 feet high commanding the city brought matters to a crisis. A sortie was ordered to regain it, but few except the Honved or Hungarian militia responded to the call. They set out in the early morning singing, but after a few hours of hard marching and fighting returned to the shelter of the forts reduced in numbers but with sufficient spirit still to sing. On the 20th the Russians began a bombardment from this quarter and made an assault, which was repulsed.

Then General Kusmanek concluded that it was useless to hold out longer than two days more. The remaining rations were distributed and each man was given two cans of meat with orders to eat one each day. Driven by hunger many disobeyed, but this unaccustomed food was too much for their weakened stomachs and they became sick. Their surplus ammunition was used in a furious cannonading continued during two nights. Between four and six in the morning of the 22d 10,000 shells are said to have been fired, with little damage to the enemy. Then guns, with their muzzles filled with sand, were exploded in the midst of the magazines in order to demolish the forts.

At eight o'clock on the morning of March 22 the besiegers saw white flags hoisted to the top of the factory chimneys in the city and from each of the forts there emerged a group

## A SAMPLE OF WAR BREAD

Since the German empire has been isolated it is short on wheat and long on potatoes, so the Government has ordered that bread be made with ten or twenty per cent of mashed potatoes or potato flour. Every individual, high or low, is limited to a daily ration of 200 grams (seven ounces) of this *Kriegsbrot*, obtainable only by presentation of a non-transferable ticket good for a particular date

of officers and unarmed men who marched quietly forward under a flag of truce and saluted as they surrendered.

Four dirigibles and four aeroplanes carrying eighteen men and important papers were sent out from the city during the last few days, but some of them fell into the hands of the Russians. The victorious troops as they entered the city found 1350 Russian prisoners, mostly wounded. According to the Austrian version the Przemysl garrison consisted at the end of less than 40,000 soldiers instead of the 120,000 claimed by the Russians.

Przemysl was twice captured by the Russians in earlier wars; by Oleg in 907 and by Jaroslav in 1031, on their way to conquer Constantinople. In 1349 it was taken by Casimir the Great of Poland and remained in Polish hands until the partition of the Kingdom by Austria, Prussia and Russia.

#### The Capture of Carpathian Passes

The army which has been employed in the siege of Przemysl, and which is variously reported to number from less than 100,000 to more than 150,000, will probably be employed next in the direction of Hungary. There are said to be 750,000 Russian troops now assembled in Galicia for this purpose. All thru the winter the struggle for the possession of the passes has continued regardless of snow which filled the defiles and the

storms which swept over the mountains. The Austrians and Hungarians, aided by Germans, have been able to hold these gateways of the Carpathians and even at times to throw a sufficient force thru them into the lowlands of Galicia to threaten the relief of Przemysl. These efforts were, however, always frustrated, and now that their objective has been lost it is not likely that the offensive will be again attempted, for the Austro-Hungarian forces will have all they can do to prevent the invasion of Hungary. In fact, their ability to do even this seems doubtful now spring has come, for already the Austrians report the capture of Lupkow Pass, south of Przemysl.

Dukla Pass, to the westward of Lupkow, is also in the possession of the Russians, and thru these two passes they have penetrated some ten miles into Hungary. The passes further to the east, Uzsok and Beskid, are apparently not yet forced. The utmost ingenuity has been used in protecting these mountain ravines. Concealed batteries and mines, barbed wire entanglements and wolf-traps, ditches and palisades are so placed among the rocks and trees as to make every movement dangerous.

Bartfa or Bartfeld, the first Hungarian town to be occupied by the Russians, is about ten miles south of the watershed which separates Galicia from Hungary. It is an ancient town, now a watering place, with an

altitude of 910 feet, and stands at the head of the railroad leading down the Theiss Valley toward Budapest.

The efforts of the Russians to regain Czernowitz, the capital of Bukovina, seems not to have been so successful as was at first claimed to be the case.

#### The Fighting in the Vosges

The French began the war in August by an attempt to regain the lost provinces of Alsace and Lorraine, and an expedition sent across the border from Belfort succeeded without much difficulty in taking Mülhausen and advancing as far north as Colmar. This movement, dictated by politics rather than strategy, had no other result than to set the French heart to premature rejoicing and to give the Alsatian society of Paris an excuse for removing the mourning which had draped the statue of Strassburg in the Place de la Concorde since 1871. If the Germans had attacked France from the eastern side then the French invasion of Alsace would have threatened their left flank. But when, instead of this, they invaded France from the north thru Belgium the French army in Alsace was worse than useless and had to be withdrawn.

After the German advance had been checked and the opposing armies settled in the entrenched lines which they have maintained for the last six months, the French renewed their attempt to conquer Upper Alsace. This time they did not find it so easy, for the Germans were prepared for them and have contested

#### VILLAGE ENTRENCHMENTS FROM AN AEROPLANE

A Russian village in which the Austrian trenches (indicated by crosses) run from house to house and make the soldiers' quarters safely accessible

every foot of the ground, so that, after fighting all winter, the French have only been able to get possession of a strip of territory from five to ten miles wide along the border north of Switzerland.

Now, however, an advance may be expected, for there are indications that the French intend to open the spring campaign in this region, leaving to Kitchener's new army the attack on the German lines in the west. For such a movement the French have the best possible base of operations in the Vosges Mountains, of which they have secured a strong hold in the course of the winter. This little knot of tangled mountain peaks and ridges dominates the Rhine Valley, which lies to the east of it. It has been called "the Key to France," and might as well be used as "the Key to Germany." That is why Moltke insisted in 1871 on its being ceded to Germany, for he insisted that it was necessary for the defense of the Rhine.

The part of the Vosges which the French have been able to regain is the southern. Thann they took some time ago, but the Germans have been able to bombard it from the mountains to the north and east. Many buildings in the town have been demolished by their shells, but they have avoided hitting the cathedral of St. Thiébaud, which ranks next to Strassburg as the finest Gothic church in Germany, so this is undamaged except by the smashing of the stained glass windows from the concussion.

About five miles northeast of Thann stands Hartmannsweilerkopf, a steep and rocky peak of 3000 feet

in height. For over a month the French have been trying to capture this position and on the evening of the 26th they succeeded. Alpine Chasseurs, commonly known as "the blue devils of France" from their blue bonnets, carried the summit in a daring charge, altho the Germans defended their trenches with hand grenades and streams of blazing oil. The importance of this achievement lies in the fact that this mountain stands isolated on the eastern edge of the Vosges and overlooks the Rhine twenty miles beyond. A further advance in this direction as the coming spring again makes marching possible would force the Germans to evacuate Mülhausen and Upper Alsace or run the risk of being cut off from Strassburg and Germany.

#### Memel Regained

On March 18, Memel, the most northern of Prussian seaports, was captured by a force of 6000 to 10,000 Russians. The town was defended by a small force of the Landsturm or militia, with the assistance, according to the Russian account, of civilians. Four days later, on the approach of a land force of German troops from the south and the arrival of German warships in the harbor, the Russians retired, taking with them the mayor of Memel and three other prominent citizens whom they had seized as hostages. But the car carrying the hostages broke down, their escort fled and the prisoners escaped. The raid on Memel was, according to the Russian version, for the purpose of breaking up the contraband trade which has been

## DESOLATED BY WAR AND WINTER

Gerdaun, an East Prussian town, after the Russian invasion had rolled over it and the snow had added to its dreary loneliness

passing thru that place. The Russians seized large quantities of goods stored here and burned what they could not carry away.

The Germans accuse them of burning fifteen villages in the vicinity and wilful destruction of private property. As reprisals for the sacking of Memel the Germans have imposed an indemnity of \$250,000 on the city of Lodz, Poland, and \$25,000 on the town of Suwalki.

A similar raid was attempted on Tilsit, but was not successful. Along the Niemen, in the forest of Augustowo and on the eastern frontier of East Prussia there are rumors of fighting, but their significance is obscure.

The German bombardment of the Polish fortress of Osowiec (Ossowetz) seems to make little progress. Their big siege guns were brought up to within three miles of the fortifications, but were obliged to withdraw. The new 42-centimeter howitzers were used at long range, but, according to the Russian account, did not make a single hit, and the 28-centimeter howitzers did little damage to the concrete casements when they struck.

The largest of the Christian villages, Geogtopa, five miles east of Urumiah, defended itself against the hordes for three days with arms left by the Russians, but was finally captured and burned. The men were then put to death and the young women carried away as slaves by the tribesmen.

Some of the Christians were saved by the bravery of Dr. Harry Packard, of the Presbyterian mission, who unfurled the American flag and, advancing between the lines, took them under its protection. Fifteen thousand Christian refugees are now sheltered in the American Presbyterian mission at Urumiah and 2000 at the French Catholic. But they are not safe, for the Turks invaded the French mission, set up a gallows in the yard and hanged sixty of the men who had sought protection there. Five who were taken from the American mission were also hanged there. The Rev. Dr. E. T. Allen, of Portland, Oregon, was beaten by the Turks. There are fourteen American missionaries in Urumiah besides their children, and the danger of a general massacre is great.

fused to give them to her. Whereupon her captain ordered a customs inspector, who was on board, to leave the ship. After he had declined to go he was forcibly placed in a boat and carried to the shore. As the ship was going out her attention was called to the violation of neutrality by a shot from the Morro fort. When she ignored this reminder, it was followed by shots from a machine gun, and, finally, by a shot fired across her bows from a 5-inch gun. Then she thought better of her rash intention and dropt anchor.

It is suspected that, in obedience to orders from somewhere, she had set out to carry coal and other supplies to the "Kronprinz Wilhelm," the last survivor on the seas of Germany's group of roving auxiliary cruisers, which had recently been seen in West Indian waters. Our Government sent two destroyers to be on guard if she should again attempt to go out. It also proceeded against her in the courts by libel, or attachment, and has asked, it is reported, for confiscation. A law recently passed provides for the forfeiture of an interned ship that attempts to leave port without clearance papers, if there is reason to believe that she intends to carry supplies to a warship.

As there were indications that the German rover, "Prinz Eitel Friedrich," was preparing to go to sea from Newport News, our Government sent a battleship to those waters and held other battleships in readiness to prevent an attack upon her within the three-mile limit. There were three British cruisers in the vicinity, waiting for her. Germany will be asked to pay for the American ship "William P. Frye," destroyed by this rover in the Pacific while carrying a cargo of grain from Seattle to Queenstown, and for her cargo.

It is understood that Major George T. Langhorne, recently our military attaché at Berlin, was recalled, not for any misconduct on his part, but because persons unknown had been sending, over his forged signature, dispatches and reports designed to mislead those into whose hands they might fall, and to excite controversy between the United States and the Allies. These dispatches, like his own, were forwarded by wireless under the control of the German Government. They were picked up at Paris, as doubtless had been foreseen, and thus they became known to the French and the British Governments. Major Langhorne was recalled from the post, it is understood, in order that disagreeable complications might be avoided.

#### Christians Massacred at Urumiah

The withdrawal of the Russian

troops from the northwestern corner of Persia, which they had occupied before the war, left this region without protection, and it has been ravaged by the Kurds and Persian Moslems. Seventy of the villages about Urumiah have been burned and thousands of men, women and children are said to have been killed.

#### War Cases Here

The Hamburg-American Company's steamship "Odenwald" attempted to leave the harbor of San Juan, Porto Rico, on the 21st without clearance papers. She had been interned in that harbor since August 6. A few days before her attempt to go out she began to take on coal and provisions, and large quantities of both were on board when she asked for clearance papers. The authorities re-

## A PROSPEROUS-LOOKING CORNER OF BELGIUM

While hundreds of thousands are suffering it must not be supposed that Belgium is entirely prostrate. This is a recent photograph of a shopping street in Brussels, where a "White Sale" is in progress and there are plenty of people who look busy

## The Condition of Mexico

Reports from parts of Mexico not directly involved in the war between Carranza and Villa show disheartening conditions. There is anarchy in Oaxaca and Chiapas. In Sonora, General Maytorena, sometimes a follower of Villa, has been overcome by a revolt of his Yaqui Indian troops and placed in prison. The Yaqui leader, Chief Uberlejo, rules in Hermosillo, where there have been many executions. He is collecting heavy taxes. His men have looted several American ranches in Sonora. Independent groups of soldiers or bandits are robbing and killing the people in several other states. Refugees from the capital who arrived in this country last week tell appalling stories of the outrages committed by Zapata's men and of the sufferings of residents.

Roque Gonzales Garza, the latest Provisional President, who was said to have been killed by Zapata, is now

in the city, and there have been sessions of the convention. Villa, who proclaimed himself President, does not question Garza's title. Obregon says that Villa plans to put Angeles in Garza's place. Villa insists, it is said, that Garza shall take into his Cabinet the three Ministers appointed by himself when he recently took the office. Zapata objects because in this way Villa would have a majority. Zapata and Villa are not in agreement, but the condition of the country does not permit them to meet in the capital.

When McManus was killed by Zapata's soldiers they tore down the American flag that was over his door, shot it full of holes, and dragged it in the dirt. This was reported to our Government by the Brazilian Minister. It is understood that an apology has been demanded. Zapata has formally expressed regret for the murder of McManus, and negotiations for indemnity are in progress.

Villa explains that the tax levied by him recently in Monterey was for the benefit of the poor, and says that no American resident was asked to pay. Americans were excepted on account of the work done there by the American Red Cross.

Villa was at Monterey last week, directing a Campaign movement of his forces against Matamoras and Nuevo Laredo. Control of these points and ports of entry on the northern border would leave little or nothing along the line in the hands of his enemies. Carranza had in Matamoras a garrison of 3000 men, and the place was strongly fortified. The attack upon it began on the 27th, Villa using 5500 cavalry and also machine guns. His artillery had not arrived. Matamoras is only a mile and a half from Brownsville, Texas, and our Government warned Villa that he must not shoot across the Rio Grande into that town.

He was represented in the movement against Tampico by General Chao, as to whose course there were conflicting reports. It was said that he had been defeated at Ebano, but later dispatches asserted that he had captured the place. It is difficult now to ascertain just what is going on in Mexico. One report says that Chao has been victorious in twelve battles and has lost 8000 men, while the losses of his foes have been larger. Obregon, Carranza's military chief, made a quick passage from the capital 435 miles to the vicinity of San Luis Potosi. He had 30,000 men, and it was his purpose to check Villa's movement against Tampico by separating him from his bases at Torreon and in Chihuahua. But he does not appear to have been successful. He does not forget that when he attempted to bring Villa and Carranza together, in September last, Villa twice ordered that he should be put to death.

It is now known that Gen. Lucio

## THE WEARY WAY TO BATTLE

Austrians advancing to Siljak, Serbia, after a roadside skirmish with Serb outposts. The Austrian dead are left in the snow, for the regiment cannot stop to bury them

Blanco was shot, by Villa's order, at Aguascalientes in January. Blanco, a cavalry commander, whom some called the Phil Sheridan of the revolution, was Minister of the Interior under Gutierrez, whom he accompanied when the latter fled from the capital. Villa found him guilty of treason. It was reported last week that Gutierrez, who recently sent an envoy to Washington, had been killed near San Luis Potosi.

**An American Submarine Lost** The United States submarine "F-4," carrying a crew of twenty-one men and commanded by Lieutenant Alfred L. Ede, was submerged while engaged in target practice on the 25th, two miles from the harbor of Honolulu. As she did not rise again, attempts were made to bring her up by grappling hooks. She was found at a depth of 300 feet. On the 27th, after the grappling chains had been placed, and the vessel had been lifted fifty feet, they slipped and she fell back. Efforts to raise her were renewed, but all hope of saving the lives of the men on board was given up.

The submarine had all the known devices for safeguarding the men. As no signals came from her on the first day, it is thought that she struck a rock and that those on board were drowned. She could remain submerged for twenty-four hours, when in good condition, without inconvenience to her crew. This is the first accident of the kind in the history of American submarines. But the rest of the world has been so fortunate, as there have been sixteen similar disasters in the submarine fleets of other countries, with the loss of 225 lives.

**The Sisal of Yucatan** After Carranza had opened the port of Progreso, in Yucatan, in response to the demand of our Government, it was decided at Washington that ships of the navy should be used in procuring the sisal which is needed for the manufacture of binding twine. The battleship "Georgia" was sent to Progreso, and she carried \$625,000 contributed by our manufacturers. This was to be paid to the Yucatan Government, upon delivery of the sisal, 200,000 bales of which were ready to be sold. But Carranza controlled the port and had taken possession of the Yucatan railroads. Therefore it was foreseen that the money would fall into his hands. He had already sought to increase his Government's revenues by trebling the tax on sisal.

There was fighting in some parts of Yucatan, but Progreso was temporarily at peace. At the end of last week three ships were loading there

with sisal for the International Harvester Company. To hasten the shipment of this product the naval collier "Brutus" was made a carrier of freight, and on the 27th she started for the north with a cargo of the sisal, or hemp. It is expected that the wants of our grain growers will be supplied. This is of vital interest to every one, for there is the most direct possible connection between the farmer's supply of binding twine and the country's loaf of bread.

(See editorial, "The Infernal Trentino," on another page)

# KITCHENER'S ARMY IN THE MAKING

WRITTEN BY AUTHORITY OF LORD KITCHENER

BY HENRY BEACH NEEDHAM

IN the hall of the White Horse Inn the proprietress is mothering four kilted Highlanders, subalterns of a new battalion of an historic regiment, who have tramped from miry Bramshott Camp in quest of bath and refreshment. From the sitting-room, commandeered for officers, come the strains of "Who Paid the Rent for Mrs. Rip Van Winkle?" mechanically rendered. In the upstairs sitting-room the bride of the day before is being told by her young husband, a lieutenant in the Royal Navy, that by telegraph he has been ordered to rejoin his ship at Portsmouth, which means that their wartime honeymoon is to be cut from ninety-six to seventy-two hours. Outside, the regimental fife-and-drum corps, blatant rather than melodious artists, are wholeheartedly interpreting "John Brown's Body." Before the Town Hall, now the guard-room, a sentry is doing a lion-in-a-cage act, but with soldierly angularity. At the corner shop, where not long since one of the local butchers had to sell out his fixtures, and which is now the adjutant's office, red-coated young men are lined up to receive their weekly army pay at the rate of a "bob" a day. Everywhere are soldiers—at least, soldiers in the making.

At six every morning save Sunday a bugler who is learning to "bugle" wakes us up—not once, but four times! For réveillée must be sounded in every nook in the neighborhood to rouse the most persistent sleeper of the eighty-five houses in which the battalion is "billeted" or boarded. We have about 1500 of the New Army right in our midst. Within a radius of fifteen miles of Haslemere a quarter-million of the New Army are fortifying themselves to fight the Germans. Increase the radius to fifty miles and the circle will envelop a million, at least, of Kitchener's Army.

According to a story printed in the London papers, Earl Kitchener, who is the War Lord of Great Britain, was asked by some one when the war would end. He was said to have replied that he didn't know when it would end—but

*This article, based on personal observation and prepared with the aid of letters of introduction furnished by Lord Kitchener, is the second that Mr. Needham has written for The Independent on England's share in the Great War. To the issue of January 11 he contributed a vivid sketch of an English air-raid, under the title "The Zeppelin That Never Flew."—THE EDITOR.*

that the war would begin in May. Certainly the second and greater stage of the mighty struggle, so far as the French and British fighting line is concerned, will begin in April or May—that is to say, when the first million of Kitchener's Army takes the field. And upon this army will depend, in very large measure, whether the war is to be short or long, whether victory is to rest with the Allies or the struggle is to remain as at present, a stalemate or draw. Kitchener's Army is a mighty important factor.

In raising this army the War Office has had to rely so far on volun-

tary service. For years a fight for and against conscription has been going on in Great Britain. The Conservatives, with the late Lord Roberts as their great advocate, have urged what they called National Service; the Liberals and the Labor Party have held out against any form of conscription—and are still holding out. There is now a truce of parties: no controversial questions are allowed, by mutual consent, to come before the House of Commons. But were the question of conscription to be raised, this truce in all probability would be broken.

By announcement of the War Office in September "several additions to the army will be known as" the First New Army, Second New Army, Third New Army and Fourth New Army, each to consist of six divisions, and army troops (battalions which protect the lines of communication). Here, then, are half a million men—additional troops, reinforcements. We also know that the Prime Minister has signified that an army of 3,000,000, all told, must be provided for by Parliament.

We know, further, that something over a quarter of a million have signified their willingness to answer the call of King and country the moment they are needed. But of the precise number of enlistments the War Office very wisely keeps its own counsel. This is information which Germany would like to have. From what I can learn, well over a million men—probably a million and a half—in the first half year of the war were raised by voluntary enlistment for Kitchener's Army. In addition, about 400,000, forming new battalions, were added to the Territorials (comparable to our National Guard). Certainly men have come forward voluntarily in as great numbers as could be provided with shelter, food and warm clothing, and could be drilled. As it looks at this writing Britain will raise all the fighting men necessary without having recourse to conscription. I make this statement, not only because of the confidence in the voluntary system expressed to me by Cabinet Ministers, but based

Paul Thompson

EXERCIZE, ENFORCED AND VOLUNTARY,  
MAKES THE RECRUIT A NEW MAN.

upon talks I have had with leaders of the Opposition, who desire to see conscription, perhaps by a softer name, come out of the war.

Personally, I was very much disappointed with the results of British recruiting in the early days of the war. It took three weeks to raise one hundred thousand men. Insularity due to a safeguarding moat—otherwise the English Channel—and absolute confidence in the “sure shield” of the Great Fleet, made Englanders a bit too complacent. They were a nation half asleep. They woke up on a Sunday in August, when many of them were seeking pleasure and recreation, giving little thought of war. The *London Times*, sometimes regarded as the most reliable newspaper in the world, published a story from a correspondent in France the burden of which was that the British arms had not only been defeated but routed! Remnants of what once had been great regiments, the correspondent wrote, were staggering into little towns in France, telling one and all a story of complete disaster. This was printed in a special Sunday edition, and as no other papers issued “specials,” the report went undenied until Monday. The report galvanized the youth of England, Scotland, Wales and Ireland into activity—they began to seek out the nearest recruiting station and enlist. Since then members of the Cabinet, aided by leaders of the Opposition and of the

Labor and Nationalist parties, have eloquently asked for volunteers. The War Office has advertised for recruits, and advertised very effectively.

In August and September, indeed well into October, most of the volunteers were under canvas. I visited Frensham Ponds, where about 20,000 raw recruits were in training. And this is a good place to call attention to one great point about the New Army, wherein it conforms to the best traditions of the British military. I mean the notable cleanliness of the men. It was a chill autumn day when I visited Frensham, but immediately the day's drill was over hundreds upon hundreds of men made a rush for the ponds. A surprisingly large number got down to nature's uniform and dove in; all the others stripped to the waist; lathered, and scrubbed head, face and body, not forgetting to brush their teeth. Since then I have seen thousands of Kitchener's Army. I have observed them after a long route march in the mud. They were dirty—if you take the adjective as a derivative of dirt—but not grimy, never grubby. And every man shaved! That is a *sine qua non* every day of service in the British Army, unless fighting interferes. No other excuse is tolerated.

Next to cleanliness comes physical fitness. The gymnasium instructor is as important in the scheme of mili-

tary things as the drill sergeant or the musketry instructor. Swedish drill in the open—that is as necessary to the Kitchener Army recruit as rope-skipping is to the boxer training for a hard bout.

The Army Orders prescribe three-quarters of an hour of physical drill the first and second days of recruit training, and then on during the ten weeks of preparation an hour a day, every day except Sunday. By this time, with the other strenuous exercise of drilling and marching, the recruit finds himself a new man. Some one said to me, and very truly, that if the war could end now, Britain would be a great gainer, if for no other reason thru the physical regeneration of very many of her youth.

As provided in the Army Orders, squad drill occupies five weeks, after which the men drill in platoons. Musketry begins the first week—and never ends; route-marching the fourth week and continues. Then there is extended order drill, night work, outposts, entrenching, and in the ninth and tenth weeks bayonet-fighting. During the period of recruit training forty-eight hours of hard, gruelling work—eight hours a day for six days a week—is required, with lectures in addition.

On the completion of recruit training begins the collective training of the men. As a company, the young soldiers are put thru a five-weeks'

course of company training under its own officers and non-commissioned officers. After that follow battalion and brigade training. Finally, the division is brought together for a week before taking the field.

The interesting thing about preparation for war is that it can be so interesting! This crossed my mind numerous times in the course of my observations at Aldershot. Here one sees every variety of war game in progress, every stage of the training and schooling of soldiers. In front of the General Staff Headquarters were the raw recruit and the man about ready for company drill. The raw recruit was in citizen's clothes. He wore a soft hat, a bowler (derby) or a golf cap. He was either neatly dressed, warmly clothed, but out of fashion, or somewhat seedy in appearance. Either quick to learn, or slow to acquire the primary elements of soldiering. But he was alert, eager—not one going thru it merely to get done with it! And what he had to learn at first was far from an exciting pastime.

"Attention!"—which meant heels together and in line. Feet turned out at an angle of forty-five degrees. Knees straight. Body erect and carried evenly over thighs. Shoulders level and square to the front. Chest in its natural position—no pouter-pigeon-ing. Arms hanging easily, as straight as their natural bend will allow; thumbs immediately behind seams of trousers. Hands partially closed, and backs of fingers touching thumbs lightly, thumb close to forefinger. Head balanced evenly on neck, and eyes looking straight to the front, on their own level.

It doesn't sound difficult, but try it!

Drill, so opined a sergeant-instructor, is intended to make men "nippy," and they should never allow themselves to go to sleep over it, or wander thru the various formations. Keen men drill better than "slackers"

of course, but, other things being equal, the quality of the drill depends on the way in which commands are given. "Indistinct and slovenly commands," says *Infantry Training*, "beget slovenly movements and must be avoided." Much depends on the "bite" the instructor puts into his command.

Trust the non-commissioned officer for that. Wellington described the British non-commissioned officer as the "backbone of the army." He is certainly the "live wire" of the New Army. Britain has canvassed the British Isles for non-coms, retired into civil life, and has induced many of these efficient patriots to lend a hand in the making of Kitchener's Army. Until the volunteers pass the stage of recruit training and take up company drill, the non-com. is the whole show. Watch him in squad or platoon drill and your admiration grows. With his swagger-stick he is like the leader of an orchestra rehearsing his men in "God Save the King." He orders "Form—Fours—March!" The recruits get under way and the man with the *bâton* supplies the fife and drums with "Left . . . Left . . . Left . . . Right . . . Left!" And dissatisfied with the high-stepping qualities of the squad, he growls: "Pick 'em up! Pick 'em up!"

After *Right Wheel*, then *Left Wheel*, the recruits are brought to *Attention* in two supposedly straight lines. But instead of being straight the lines sag in the middle. The non-com. deserts the manual and speaks from the shoulder: "Look, you! in the center—you're all over the blooming shop!" There is a faint smile on some of the faces at "shop"—whence these recruits came!

Two things above all else impress me about squad and platoon drill. The first was the clear indication that the men were eager to learn—that they weren't going thru the motions to get the drill over. The second was

a degree of wonder that they could throw so much zest into it without music. In front of headquarters there was precisely one drum! And the drummer used only one stick! By his side on a chair was one of those tick-tocking metronomes, which gave him the time, and he was transmitting the correct step to an awkward squad. Otherwise, in a long day at Aldershot I heard just two sets of bagpipes—the Scotch will have their pipes, 'tis said—but not a band of music. The reason? Bandsmen of the British Army are stretcher-bearers in war time, so the army bandsmen are at the front ministering to the wounded.

In June, on the King's birthday, at the gorgeous spectacle, "The Trooping of the Colors" at the Horse Guards' Parade, there was martial music—music by combined bands without cessation. But after war began there was no music at the Horse Guards' Parade, altho here is one of the principal recruiting centers. The windows of the Prime Minister's residence look out upon the parade, and Mrs. Asquith, realizing and feeling the lack of martial music, saw to it that a band was provided. Now there is a movement to supply bandsmen and music to the New Army. Rudyard Kipling is the honorary recruiting sergeant.

Longmoor is another of England's permanent military camps. I journeyed there to learn something of musketry practise, having heard that Kitchener's Army was showing up remarkably well. Great Britain's Army, heretofore, being small in comparison with Continental armies, had to be good. The military authorities of Great Britain have devoted themselves to the production of rifle shots who can make *at least three hits to the enemy's two*. In the first instance the recruit is taught accurate aiming to a standard scarcely known on the Continent. He is ex-

"LOOK, YOU! IN THE CENTER—YOU'RE ALL OVER THE BLOOMING SHOP!"

THE BRITISH SLOGAN

pected to put *every shot* into an eight-inch ring at 100 yards. The Territorials, even, have a qualifying standard of eighty per cent of shots in a twelve-inch ring, whereas in France a recruit is passed into his company if he can put fifty per cent of his shots in an eighteen-inch ring at that range.

The day I visited Longmoor a lot of recruits were shooting on the range for the first time in their lives. They had been taught to handle and sight their rifles. On a miniature range they had reached the required standard at twenty-five yards with a small-bore cartridge. Now they were to show what they could do in the

sixteen-inch circle and then clustered within an eight-inch inner circle. It is not essential, at this first trial, to plug the bull's-eye; for if the recruit can cluster his shots in an eight-inch circle, provided this inner imaginary ring lies within the sixteen-inch circle, then it is merely a question of correcting his aim and perhaps altering the sights of his rifle, to enable him to plunk all of his five shots into the "bull."

To report: Accompanied by the musketry staff officer, I entered the concrete butts. Above my head I could see the paper targets, thru which the rifle balls sped to the earth embankment beyond. I could

open at 100 yards. This was the game:

The "bull," as they call the black center, is eight inches in diameter. Then comes an outer circle of twelve inches, and then one of sixteen inches in diameter. The recruit aims at "six o'clock—that is, at what would be the numeral 6 if the bull's-eye were a clock face. He has five shots in succession, and his problem is to get all of the shots within the sixteen-inch circle, at least, and, *most important*, to cluster these shots within as small a space as possible—say, five shots within a

walk along and watch the scores in the making. And what I witnessed was amazing.

First, it was the uncommon exception when shots went wide of the sixteen-inch circle. Second, it was usual for the recruit's five shots to be clustered in an imaginary twelve-inch circle (within the sixteen-inch of course). Third, it was most surprising to see the number of the men who, shooting on the open range and at 100 yards for the first time, clustered their five shots in an eight-inch circle.

My belief is that the rifle-shooting of Kitchener's Army is destined to be especially deadly. If the Germans were astonished at Mons—as they were—by the accurate rapid-fire of the British, delivered in sudden powerful bursts, they are certain to be dismayed at the rifle-fire of the New Army. As man-killers Kitchener's volunteers will hold their own with the dogged sharpshooting Regulars.

Having talked with friendly officers at the War Office and at General Staff Headquarters, Aldershot, I conclude that the two qualities the development of which is sought in the making of the New Army are physical fitness and tenacity. When men accustomed to the creature comforts of life, if not to its luxuries, can undergo the trials of the wettest and muddiest December in half a century, sleeping in damp huts, with clothes never dry, and *not complain*, but enter into each day's severe training as if it were rare sport, such men have in them the roots of tenacity. And when, after a morning's route-marching of fifteen miles, burdened with sixty-one pounds of equipment, these men enthusiastically compete in a cross-country run, thru slush and mud, of seven miles, every man, whether commissioned officer or private, finishing strong, they must indeed be physically fit. All this can be

THE ALDERSHOT CHAMPIONSHIPS AT CROSS COUNTRY—PROVING THAT 880 MEN ARE FIT

said of Kitchener's Army—and then one has not begun to characterize its remarkable spirit.

My friend the Major, whose home is two miles out of town and who habitually made the round trip three times daily, gave me my first lesson in British spirit. Five years he had been on the retired list, and his one regret appeared to be that retirement had come before he was promoted to the rank of lieutenant-colonel. He never missed playing with the Haslemere cricket team and was accounted one of its best batsmen. Well, the day war broke the Major wrote to the War Office, offering his services to King and country. Politely the War Office placed his name on the waiting list, nothing more. Again he wrote, begging for a chance. Unappeasingly the War Office offered to make him an *honorary* recruiting officer. The Major declined, not without some show of righteous indignation. Privately he growled: "If my services are worth anything—and I've seen eight campaigns—they are worth paying for." He didn't stop with

growling, either. Another broadside he directed at the War Office. This consisted of a recital of his activities since retirement, a newspaper summary of his cricket record, a certificate of health and physical fitness from a physician, and a more earnest plea to be returned to the active list. The Major's request was granted and he was assigned, at his old rank, to a raw battalion of the New Army. Now a lieutenant-colonel, he is in command. If denied the right to take the field on the Continent he will raise a howl that will resound along Whitehall from Trafalgar Square to the Houses of Parliament.

Then there is the case of the solicitor who, before the war, was content with a growing practise and never gave a thought to taking up arms. Five months later and, his face browned and hardened by wind and weather, in the mud-stained khaki of an ordinary Tommy, he meets a particularly smart-looking lieutenant—and neglects to salute according to regulations. Follows this explanation from the new-made Tommy:

"Look here, old chap, I'm fed up with saluting officers. I seem to have met most of the commissioned ranks of His Majesty's forces in the last half-hour. Of course, you can make a fuss if you like, but after this show is over I'll never send you another brief if you do."

Explanation? The officer was an old university friend who had gone to the Bar. Having fought thru the South African "picnic" (as now called), he was given a commission for the world war. In peace time he had been favored with many a remunerative brief from the solicitor—the Tommy who now good-naturedly "grouched" about saluting. One of the many illustrations of the topsyturvy jumbling of former relationships—one of the delicious incidents characterizing Field Marshal Earl Kitchener's democratic army.

In Kitchener's Army caste, class and mass are tumbled helter-skelter into the melting-pot. The result is that man is made master and master made man.

*Haslemere, England*

## YOUR COUNTRY'S CALL

*By an Australian Mother*

*On sending her boy of nineteen into training for the Great War*

*That prize you wrung from life, with pain and tears,  
Mother, your country claims. It is not yours.  
Be silent. Yes, I know you bartered health,  
All maiden's vanity, all woman's wealth,  
Wove in one strand each asset you have won,  
Laid at the feet of God, and bought—your son,  
Deeming yourself made rich. To build him fair,  
Then toiled and anguished, selfless, in his care,  
Joyed in your sacrifice, that he might grow.  
That thing of pride, your son. Now he must go.  
With all those hopes, that help to make his worth,  
Crowned with your highest self, he must go forth.  
Where? Why? Don't think. Just smother up the pain.  
Give him up quickly, for his country's gain.  
Give, give those strong young limbs, those merry smiles,  
That voice that thrills you, all those tender wiles  
With which he wins you, and delights you so.  
Tradition calls him, and his country's wo.  
Give him up proudly. You have done your share.  
There may be recompense—somewhere.*

### A SOLDIER DIPLOMAT

BRIGADIER GENERAL HUGH L. SCOTT, CHIEF OF THE GENERAL STAFF OF THE UNITED STATES ARMY, KNOWS HOW TO WIN VICTORIES WITHOUT FIGHTING. HE HAS JUST PUT AN END TO AN UPRISING AMONG THE PIUTE INDIANS IN UTAH BY THE SIMPLE PROCESS OF GOING OUT AND TALKING THINGS OVER WITH THEM. NOT LONG AGO HE ELIMINATED ONE POSSIBILITY OF FRICTION BETWEEN THE UNITED STATES AND MEXICO BY PERSUADING THE VILLA FORCES NOT TO FIGHT TOO CLOSE TO THE AMERICAN BORDER. HE IS PROBABLY NONE THE WORSE DIPLOMAT FOR BEING A THORO SOLDIER

## THE TREATY AND THE CANAL

THE FINAL ARTICLE OF A SERIES OF EIGHT  
BY PRESTON WILLIAM SLOSSON

ON THE HUNDRED YEARS OF PEACE AMONG ENGLISH SPEAKING PEOPLES

THE history of the Panama Canal really begins with Christopher Columbus. Columbus was not seeking for a new world when he crossed the Atlantic; he was looking for a new route to eastern Asia which should be entirely by water. In fact, Columbus skirted along the coast of Panama on his fourth voyage to America, altho it was left for the Spanish explorer Balboa to cross the isthmus. Even after it was generally known in Europe that the lands which Columbus had discovered were no part of Asia but a great barrier of land between the Atlantic and the Pacific Oceans, explorers searched the coast from the Arctic Ocean to the southern tip of South America for a waterway. Hudson sailed far up the great river which bears his name today, hoping that it might turn out to be the "Northwest-Passage" for which all the nations of western Europe were looking. But nowhere from the Straits of Magellan in the far south to the ice-choked seas north of Canada could an opening for commerce be found. All merchants trading with China, Japan or India had to send their goods thousands of miles out of their way around Africa or South America or else unship them, send them by land and then load them again onto ships. There were no railroads in those days and the Suez Canal which now joins the Mediterranean Sea with the Red Sea had not yet been dug. It is small wonder that many persons spoke of cutting a waterway from ocean to ocean themselves since Nature forgot to supply one.

If you look at a map of all America you will see several places where the two great oceans come so closely together that a canal could be dug to connect them. Alexander von Humboldt, the German scientist, mentioned nine possible routes. Some of these possible canals would have cost far too much for the advantages to be gained from them; but at least two routes, one by way of Lake Nicaragua and one by way of the Isthmus of Panama, were of practical value. The first of these two routes was in the territory of the Republic of Nicaragua, the second in

that of the Republic of Colombia. Both of these nations were small, very poor and suffered from constant revolution. Neither, therefore, was in a position to build a canal. No European government could build one for its own advantage because the United States would have considered it a violation of the Monroe Doctrine for a foreign power to seize American land; even enough for a canal strip. There were three other ways in which the Canal might be built: by the United States Government, by a private American company, or by a private company and controlled by no nation. We have built the Canal by the first method, but we could not do this so long as the Clayton-Bulwer treaty with Great Britain was in force.

In 1846 the United States got the right to build a railroad across the Isthmus of Panama and to control and protect it. We tried to make a treaty of the same sort with Nicaragua which would allow us to build a line of transit, railroad or canal, across the country. But, while Nicaragua was willing, Great Britain objected most strongly. The British had a claim, dating back to the days

when Spain owned all of Central America, to "protect" a tribe of Indians on the coast of Nicaragua, known as the Mosquito Indians. This strip of land, the "Mosquito coast," which was under the power of the British Empire, lay right across the path of the proposed canal. The British were not willing to let a purely American railroad or canal cross territory they controlled, and the United States was not willing to go to war about the matter. So the British minister to Washington, Sir Henry Bulwer, and the American Secretary of State, Mr. Clayton, arranged a treaty in 1850 to settle once for all the relations of the United States and of Great Britain in Central America. This treaty provided that neither country should own or control any part of Central America; that neither country should control the Nicaragua route or any other that might be used; that both countries should support any private company which was able to dig a canal. This treaty was very popular at the time because it averted the war with England that would probably have come had we insisted upon enforcing our agreement with Nica-

SOME CANALS THAT WERE NEVER BUILT

This map, from Johnson's *Four Centuries of the Panama Canal*, shows all of the routes for an interoceanic passage which were advocated during the nineteenth century. The choice finally narrowed down to the Nicaragua and Panama, and both Congress and the consulting board were divided on the question when Mr. Roosevelt decided in favor of the latter. The Tehuantepec route is now utilized by the British Interoceanic Railroad. Colombia recently refused an offer of many millions from the United States for the Atrato route. Nicaragua in 1849 ceded to the United States the exclusive right to construct a canal across the Isthmus of Nicaragua, but the occupation of Fonseca Bay by a British fleet put a stop to the project and led to the Clayton-Bulwer treaty

ragua, because it seemed to check the growth of British possessions which had been carried on under the name of "protecting" the Mosquito Indians, and because it was believed that some private company would take advantage of the terms of the treaty to dig the long wished for canal.

But as matters turned out, the Clayton-Bulwer treaty became one of the most unpopular agreements that our Government ever made. In the first place, the British insisted that they had a right to keep all of the land they owned when the treaty was made; including, of course, the Mosquito coast. Then, the terms of the treaty made it impossible for the United States to begin a canal on its own account, not only at Nicaragua but anywhere else. And yet, as the nation grew and the Pacific coast became settled, Americans were less and less willing to see any waterway between the oceans which was not under their control. This meant that the United States would rather wait for many years in the hope of getting an American canal at last than to have a canal built at once under European ownership or control. The United States Government demanded that a new treaty be made on the ground that the Clayton-Bulwer treaty applied only to the special plans on foot at the time the treaty was made. Great Britain replied that the treaty had no time limit and certainly could not be ended merely because the United States was not satisfied with its terms.

The French engineer De Lesseps, who had become famous for constructing the Suez Canal, took advantage of the deadlock at Nicaragua to start a company for work at Panama. This was a private concern, but most of those who held stock in it were Frenchmen, and France hoped much from the undertaking. A great deal of digging was done but at a cost several times as great as De Lesseps had hoped it would be. Vast sums were wasted or misspent, the laborers died by thousands and in 1888 the company went into bankruptcy. It must be remembered, when we compare our success with the French failure, that we had two great advantages at Panama that they did not. We know that mosquitoes are the cause of malaria and yellow fever and so we have been able to keep the workmen healthy by killing the insects. When the De Lesseps company worked on the canal no one knew the causes of the fevers that made it so difficult for white men to work in the tropics. Our other great advantage was in having political control over the canal route,

THE OFFICIAL CANAL ZONE SEAL

whereas the French were subject to the government of Colombia.

While work was still going on at Panama, a private American company started work at Nicaragua, but it failed in the panic of 1893 and nothing more was done on that route. The United States was willing to continue work at Nicaragua or buy out the rights of the company at Panama, but it could do neither so long as the Clayton-Bulwer treaty stood in the way. Great Britain consented at last to end the deadlock and permit the United States to construct, operate and regulate a canal. John Hay, President McKinley's great Secretary of State, and the British Ambassador, Lord Pauncefoot, made a treaty which provided for an American canal but did not allow the United States to fortify it or close it in time of war. The Senate objected to this, and another treaty, made in 1901, gave the United States practically a free hand in managing and protecting the canal. One clause provided that toll rates should be equal to the ships of every country. This treaty made it possible for us to go ahead and dig a canal, but it left open the question of route. At first Nicaragua was favored, but the Panama Canal Company offered to sell its rights to the United States for forty million dollars and it was decided to try the Panama route. But the Republic of Colombia was badly in need of money at the time and demanded more and more money for permission to make use of Colom-

bian territory. The owners of the private company were much afraid that their contract to build the canal would come to an end before Colombia would come to terms and all their property become worthless, or else that the American Government would turn to the Nicaragua route in the hope of a cheaper cost. Suddenly the problem was solved by a revolution in the state of Panama, where revolutions were no new thing, for the American consuls reported fifty-three outbreaks in fifty-seven years. The state of Panama declared itself an independent nation and was almost at once recognized by the United States. We then bought from the Republic of Panama for ten million dollars the right to control a strip of land ten miles wide across the country and within it to construct a canal. Here we have been at work ever since, and our success is due in equal measure to the engineers under Colonel Goethals who solved the material difficulties which barred the way to trade for the centuries since the Spanish adventurer Balboa first saw the Pacific from the hills of Panama; to the medical men under Colonel Gorgas who solved the difficulties of dirt and disease and tropical climate which had wrecked the French attempt; to the wisdom of the statesmen, British and American, who solved the diplomatic difficulties which had barred us ever since 1850 from digging a purely American canal.

The Hay-Pauncefoot treaty, like all treaties, could be read in more than one way. President Taft and a large section of the American people in all parties thought that it was no "discrimination" against British or any other shipping to exempt our coastwise shipping from paying tolls because our coastwise trade was carried by American ships and so did not compete with foreign steamship lines. The British insisted that this was a very strange way of reading the plain words of the treaty, which would certainly have been a poor bargain for England if it meant that a ship going from Boston to San Francisco could pass thru the Panama Canal free of charge while a British ship going from Jamaica to Vancouver would have to pay tolls. President Wilson rightly regarded our friendship with Great Britain as more important than an extreme insistence upon American "rights" which might turn out not to be rights at all. A crown of honor was set upon a great enterprize when, on June 15, 1914, the President signed a bill repealing the special privilege of freedom from tolls granted to American coastwise ships.

#### REFERENCES

There are very many interesting books on the Panama Canal and all of them will mention something of the contest between ourselves and the British for its control. For a description of the Panama Canal region and an account of its history, there is certainly no better work than *Four Centuries of the Panama Canal*, by Willis Fletcher Johnson. For the diplomatic history alone C. H. Huberich's *The Trans-Isthmian Canal* may also be recommended. For a shorter account the student may read W. A. Dunning's *The British Empire and the United States*, pages 154-65; 330-32.

## A REVIEW OF NEW AND IMPORTANT MOTION PICTURES

### THE PROGRESS OF THE MOTION PICTURE

A year ago this week, when we started this department for the criticism of motion pictures, we expressed the opinion in an editorial on "The Birth of a New Art" that the motion picture already ranked with printing in the scope of its influence and that it possessed possibilities of artistic development which would enable it in some respects to surpass painting and stage drama. Some of our readers were inclined to scoff at the mere suggestion that the new art could in any way rival the older. But during the past year the motion picture has developed so rapidly in beauty and freedom as to leave no room for doubt of its artistic capabilities.

The crude test of the box office is alone sufficient to show that. A few years ago the moving-picture show was thought of as something to while away a half hour of spare time. It was a scientific curiosity and well worth a nickel, even a dime, to see a diver jumping off a spring-board, a train rushing by, a fire-engine dashing forward or a lot of funny folk chasing a small boy. But this winter we have seen a line of people stretching from the box office into the street waiting for a chance to pay one or two dollars for a modern photo drama, while Broadway stars in the theater next door were playing to half-empty houses at the same price. These crowds are not drawn by novelty or by scientific interest, they are not tricked into coming by advertising; they have compared the motion picture with the melodrama, the problem play or the musical comedy as an evening's entertainment and prefer it.

The reason for their preference is obvious and not unreasonable. The film play, compared with its rival, the stage play, has certain serious defects, notably the absence of sound and color. But, on the other hand, it has certain compensating qualities of its own and producers are very wisely laying more stress on these instead of imitating what the stage can always do better. For instance, the film playwright can use all outdoors for his background instead of a painted and rumpled backdrop. He can change the scene oftener than the Elizabethan dramatist. He can dip into the future or the past as though he were in Wells's time-machine. He can use literally an army of supernumeraries in place of a dozen attendants with spears. He can reveal the mind of his characters in two ways, neither of them possible on the stage, first by bringing the actor so close that the spectator can read his facial expression, and, second, by visualizing his memories or imaginings. He can, if he so desires, wreck a train, burn a house, sink a ship or blow up a fort, since he

does not have to repeat the expense every night.

It is natural that the new art should tend to run to excess in those things which it can do best. The film artist is so tickled at the idea that he can portray motion that he is apt to put in too much motion. He keeps his actors on the jump and the projector makes it worse by turning the crank so fast that the characters flicker past like fence posts seen from a trolley car. He crowds in masses of people in meaningless movement. He flashes back and forward and all about until the spectator does not know "where he is at." He employs a sensational catastrophe as a substitute for a logical plot.

But these are the inevitable extravagances of youth and are already being eliminated in the best of the feature films. The motion picture has established itself and in some form or other will become a permanent part of the intellectual and esthetic life of the nation.

### DRAMATIZED RACE PREJUDICE

It is a great pity that good photography and fine mass action should be wasted and worse than wasted on such a theme as that of *The Birth of a Nation*. Mr. D. W. Griffith has surpassed himself as a producer and some of the scenes are as striking as any that have ever been filmed. Sherman's march to the sea and Pickett's charge at Gettysburg are shown "as large as life" and the assassination of Lincoln is presented with a careful attention to detail that gives it a real historic interest.

But all this is subordinated to the immoral lesson which the play is designed to teach, that the negro is ever a savage and must not under any circumstances be allowed to vote or to rise from a servile or subordinate position. The Rev. Thomas Dixon's *Clansman* supplies the plot, but the filmed play is much worse than the book because seeing a thing is more impressive than being told about it. The grotesque excesses of the Reconstruction Period are made the most of and twice in the course of the evening the struggles of a white girl to escape from a black brute are presented at agonizing length. By an ingenious sequence of scenes the audience is led to applaud the Ku Klux Klan whenever it appears, even where it drives the negroes from the polls. Music lends insidious aid to emphasize the teaching of the screen, for the tom-tom beats from time to time to convince us that the colored man, well dressed and educated though he may be, came from Africa. Why is not some Asiatic instrument used to remind us that the Aryan came from the wrong side of the Caucasus?

Such a play, insulting as it is to a

large part of our population and arousing the worst sentiments in the rest, is, in our opinion, vastly more dangerous in its influence than the obscenity or lessons in practical burglary which are now quite rightly ruled out. Still we do not hold with those who are trying to get it suppressed by law or the censorship. We do not see by what reason the voluntary Board of Censorship required the elimination of the legend: "Having profited by the trade and having no use for slaves themselves, the traders of the Seventeenth Century became the Abolitionists of the Nineteenth." This is a monstrous perversion of history, but supposing it is, Mr. Dixon and Mr. Griffith apparently believe it, and if so we cannot deny them the right to express their opinion in their own impressive way, as we express ours in the feebler medium of cold type. Still more dangerous than such a play would be to have the American people put into the hands of any officials the power to decide what is good history and bad, and to suppress any films that they regard as likely to have an injurious influence on public sentiment. Before long perhaps some reformer will write a scenario attacking some established institution of the modern world, as *Uncle Tom's Cabin* attacked slavery and it would be unfortunate then to have the suppression of *The Birth of a Nation* to appeal to as a precedent for similar action.

### THE FILM KAISER

The *Biography of the Kaiser* shows intimate views of the German Emperor at various public functions partly of civil and partly of military character. They give a very graphic portrayal of military maneuvers and show in great detail the visit of the Emperor to the Swiss Republic. The visit of the Emperor to the Krupp factories at Essen, the opening of a new harbor in Frankfurt by the Emperor, the crossing of a river on a pontoon bridge constructed under the eyes of the Emperor, the visit of the Emperor and Empress to the lectures of the American Exchange Professors and various other similar scenes make up this biographic film. (*Kaiser Film Company, New York.*)

### THE FLYING MACHINE

The building of an aeroplane from the putting together of the first skeleton to the insertion of the propeller is visualized in this picture. One is struck by the ease and rapidity with which the work is done, but it is easy to follow every stage of the progress and the interest is indeed well sustained. (*Vero Educational Society, New York.*)

*Peter A. Juley*

#### B E T A L O

This portrait by Eugene Speicher, shown at the ninetieth annual exhibition of the National Academy of Design at New York, was awarded the First Hallgarten Prize, one of three offered for "the best three pictures in oil colors painted in the United States by American citizens under thirty-five years of age." The third Hallgarten Prize was taken by Mr. Speicher at last year's exhibition. For the first time the galleries are open to the public without charge for admission every day in the week. The officers of the Academy felt that the public was not so interested as it should be in contemporary art and took this step toward a better state of things

# THE SIX MONTHS SIEGE

HOW THE FALL OF PRZEMYSL AFFECTS THE STRATEGY OF THE GREAT WAR

**T**HE story of the siege of the fortress of Przemyśl will occupy a large and honorable place in the annals of both Russia and Austria. The Germans entered Liège four days after they crossed the Belgian border and within a month a dozen strongholds of France and Flanders had fallen into their hands. On the eastern frontier the course of events has been very different. Nearly eight months have passed since the war began and the Germans have not yet taken any one of the Russian fortresses. Nor have the Russians had any better success—up to now. Przemyśl is the first foreign fortress they have captured.

The defeat of the Austrian army in East Galicia the last of August put the Russians in possession of the capital of the province, Lemberg, since called by its Russian name of Lvov. The Austrians attempted to make a stand on the highlands behind Lemberg, but their rout at Ravaruska to the north on September 9 compelled them to retire behind the San River. Here they evidently had intended to make a stand, for Jaroslavl, the railroad town eighteen miles to the north of Przemyśl on the San, was also fortified and supplied with ammunition and food for a siege. But two days after the Russians arrived at the river Jaroslavl was evacuated so hastily that its stores fell into the hands of the Russians.

This enabled the Russians to surround Przemyśl, and since September 22 the city and its circle of fortifications have been completely invested except for the interval be-

tween October 22 and November 5, when the siege was relieved by the advance of the Austro-German army from Cracow coincident with Hindenburg's dash for Warsaw. This gave the Austrians a few days during which they might have replenished the fortress with food and ammunition and withdrawn part of the non-combatant population, but apparently they left it worse off, for part of the provisions were withdrawn for the

field troops and hundreds of wounded left in the city when the Russians came back and again shut off the beleaguered fortress from its friends, altho, owing to the twin miracles of modern science, it was in constant communication with them. By wireless the garrison knew when to make a sortie coincide with an advance of the expedition coming to their rescue, and aeroplanes carried mails and even passengers to and fro over the Russian lines. This possibility of passage thru the third dimension was first employed in the former Franco-German war when Gambetta escaped from besieged Paris in a balloon to organize an army in the southern provinces.

The city of Przemyśl had before the war nearly sixty thousand inhabitants. How many of these stayed in during the first or second siege we do not know, but the garrison originally numbered 170,000 and the food supply ran short two months ago. The garrison was reduced from full rations to half and finally even these failed and the soldiers chewed leather straps to assuage the craving of their hunger. Recently they were surprised at receiving an abundance of food and new clothing and boots, but the reason appeared a few days later when the commandant, General von Kusmanek, called upon them to make a sortie in mass and cut their way thru to freedom. His proclamation was as follows:

Soldiers: For half a year we children of almost all nationalities of the beloved Fatherland have been incessantly opposing the enemy. With the help of God and your bravery we have successfully

Underwood & Underwood

## THE DEFENDER OF PRZEMYSL

General von Kusmanek, who held the fortress for six months and did not surrender until his last desperate appeal to his men to make a sortie had been followed by failure

## THE FALL OF PRZEMYSL

The capture of the fortress of Przemyśl after a siege of six months has given the Russians possession of the whole of Galicia north of the Carpathian highlands and east of Tarnow. They are now trying to force their way thru the mountain passes leading into Hungary. The shaded area is that now held by the Russians and the arrows indicate their chief points of attack

# STEINWAY

THE purchase of a Steinway for the home means the selection of the ideal piano, tone and workmanship being of first importance.

It is the price of the Steinway which makes possible its supreme musical qualities, but you will find that the Steinway costs only a trifle more than many so-called "good" pianos.

Style V, the new Upright, and Style M, the smallest Steinway Grand, offer a special advantage in price. They embody all the distinct Steinway features, but, being of reduced size to meet the requirements of the modern home or apartment, are offered at very moderate prices.

*We shall be glad to send you, free, illustrated literature, with the name of the Steinway dealer nearest you.*

**STEINWAY & SONS, STEINWAY HALL**  
107-109 East Fourteenth Street, New York

defended the fortress against the enemy despite attacks, privations, and cold.

You already merit the highest gratitude of your commander in chief and country, and have won the admiration even of the enemy. In the beloved Fatherland thousands of hearts beat for you and millions wait with bated breath for news from you. Heroes, I announce to you my last summons. The honor of your country demands it. I shall lead you to pierce with your points of steel the iron circle of the enemy.

On, then, march on, ever further, unsparing in your efforts, until we rejoin the main army which, after a hard fight, now nears us. We are on the eve of a great battle, for the enemy will be reluctant to abandon a prize he has coveted so long. Know, then, true defenders of Przemyśl, each must have but one thought. That is, forward, ever forward. Smash everything that bars your path.

Soldiers, we have shared our last provisions. The honor of our country and ourselves forbids that after our glorious struggle we should fall an easy prey to the enemy. Be heroic, warriors, and we shall open the way.

But the wearied soldiers failed to respond to his eloquent appeal. Only the Twenty-third Honved Division (Hungarian reservists) and part of the Eighty-eighth Landwehr (Austrian reservists) and of the Fourth Hussars consented to sally forth and they were speedily driven back. If the Petrograd reports are correct in saying that the besieged outnumbered the besiegers, a determined effort on the part of the whole garrison to break thru the Russian lines toward the south might have been successful, tho doubtless at a terrible sacrifice. But the siege had sapped the strength of the soldiers and nearly a quarter of them had suffered from typhoid and scurvy. Many had gone insane from strain and privation. Out of 170,000 men 40,000 had been killed and 20,000 or more were laid up from wounds and disease and suffering for lack of medicine.

Last winter the Russian commander was asked to allow the passage of the half starved civilians, but he refused, and those who had been expelled from the besieged city were forced to stay, cold and famished, between the lines until the Austrians took pity on them and took them back to share what little food they had. If we may believe Petrograd, the Austrian commandant offered last December to surrender the fortress on condition that his troops be allowed to march out with their arms and baggage, but this was refused.

The real captor of Przemyśl was then the same irresistible conqueror who has reduced fortresses from the dawn of history, General Hunger. If there had been no failure of food, ammunition or courage, the garrison could apparently have held out for a long time yet, if not indefinitely. The Germans have been at Verdun as long as the Russians were at Przemyśl, but without success, for they have not been able to get their lines more than three-quarters of the way around it. On the southwest side there is still an open sector and a good road leading to Paris by which troops and people and provision trains are passing freely every day. The Polish fortress of Osowiec is now being bombarded by the Germans, but this, like Verdun, can receive reinforcements from the rear, so it is still untaken.

"BEGINNER'S."

## "THE BEGINNER'S BOX"

of Oil Colors and Materials

Polished Wood Box, size 10 inches long, 6 inches wide, 2 inches deep.—Containing 10 single Tubes of F. W. Devoe & Co.'s Prepared Artists' Oil Colors; Bottles Pale Drying Oil and Turpentine; Palette Cup, Mahogany Palette; Badger Blender, Palette Knife, 1 Sable and 2 Bristle Artists' Brushes. Complete, \$1.75.

*Catalogue on request.*

**F. W. DEVOE & C. T. RAYNOLDS CO.**  
101 Fulton Street, New York

It was not generally expected that Przemysl would hold out so long as it has. In fact the repeated reports of its capture have never been received with incredulity. From the standpoint of military science it is not to be compared for strength to Liège, Namur, Antwerp, or several of the French fortresses which succumbed speedily to the Germans. Of its thousand heavy guns only two batteries were of modern make. It owed its strength and strategic importance more to nature than to art, for its stands in the center of Galicia and right on the edge of the highlands. This plateau, or mesa as we should call it in America, stretches along the northern slope of the Carpathians for three hundred miles and ranges from 1200 to 3000 feet above the level of the sea. Thru this cuts the San on its way from the mountains to the Danube and just where the river debouches upon the plain Przemysl stands. The city is naturally down beside the river and the railroad station at an altitude of 690 feet, but it is almost encircled by hills rising five hundred feet or more above it. On one of these Casimir the Great of Poland built a castle and the modern strategist exprest his approval of the judgment of the fourteenth century king by putting a fort beside its ruins. There were, according to descriptions before the war, forty-one such forts about Przemysl, connected by a ring railroad with each other and the citadel. The fortifications on the eastern side of the river San were taken by the Russians in September and have apparently been held by them ever since. Altho the city has long been within gunshot, the Russians have refrained from bombarding it and no important buildings have been damaged.

The last desperate sortie was halted at the barbed wire entanglements of the Russian lines and those who survived the fire from the trenches returned disheartened to Przemysl. At five o'clock the next morning, Monday, March 22, loud explosions and clouds of smoke from the hills showed that the Austrians were blowing up their forts, magazines and guns preparatory to surrender. Such few horses as had not been eaten during the siege were killed and the wireless station demolished after a farewell message had been sent to Vienna. At seven o'clock the capitulation was concluded. The Russian commander conceded generous terms; the officers to be paroled, no prisoners to be sent to Siberia, complete liberty to the civil population, permission to send dead and wounded to Austria. The garrison was allowed to march out of the fortress under arms and with colors flying. Crossing the river on a pontoon bridge they paraded in front of the Russian army and stacked their arms, whereupon the Russians cheered them and then came forward to share their rations and blankets with their captives. The number surrendered was nine generals, 93 officers of the general staff, 2500 other officers and officials and 117,000 men.

This is the largest number of prisoners that has been taken at any one time

## FOR THE BOYS AND GIRLS

"I consider The Independent one of the best sources of reliable information concerning current events. Its position as a weekly enables it to see things in a proper perspective. It eliminates the trivial and the transitory. It sifts out the essential incidents of the week, puts them in concise form, and disseminates information to its patrons before it becomes stale. I value it most highly not as a news gatherer, but as a sane interpreter of the vital movements of American life. As an educator, it is leading the people to understand more fully their social relations, to feel their obligations, and to see how present conditions may be improved. The material which it contains is essentially appropriate for the instruction of boys and girls in respect to their civic duties and responsibilities."

by either side. In magnitude the capture of Przemyśl may be compared with the great victories of 1870-71; Sedan, when the Germans took 102,000 French prisoners, or with Metz, when they took 179,000. But its importance is by no means so great as the number implies. With the fall of Metz and Sedan the French lost their emperor, their leading generals and their only effective armies. On the other hand the Austrians by the fall of Przemyśl are no weaker than they have been for the last six months during which this force has been immured in the fortress. In fact as it turns out it might have been better policy to have abandoned Przemyśl when the Russians first attacked it and so kept these 170,000 troops for active service in the field as well as saved the tens of thousands who have been sacrificed in the vain attempt to raise the siege. The troops of the garrison have simply exchanged prisons and are now a burden upon the Russian commissary instead of the Austrian.

The gain to the Russian side consists, first, in the prestige and encouragement given by the capture of the stronghold and the army. Second, it releases the investing army for service elsewhere, and third, it puts the Russians in possession of the missing link in the trunk line of railroad connecting Lemberg or Lvov with their front at Tarnow and their objective, Cracow.

But the capture of Przemyśl does not make so great a change in the strategic situation as at first appears. The force which has been occupied in the investment of the city and is now released consists, according to Petrograd, of only about one hundred thousand men and these mostly middle-aged reservists. Przemyśl has been called the "Key to Hungary." So it may be, but the Russians did not wait for it but went on to smash in the door.

The real defense of Hungary is no fortress, but the ridge of the Carpathians, seven or eight thousand feet high, which curves about the Hungarian plain on the north and east. The Russians have been for months doing their best to force their way thru its narrow and snow-filled passes, and the capture of Przemyśl will not greatly strengthen the efforts they are now making to invade the plains beyond.

Nor has their advance upon Cracow been materially hindered by the delay in taking Przemyśl. In spite of the break in the railroad line at this point they passed on without stopping and were almost within gunshot of its outer fortifications in October when the counter attack of the Austro-German forces drove them back. During the winter the Russians have kept the position they now hold about forty miles east of Cracow without attempting to come nearer. Now that spring has come they may be expected to make another effort to reach Cracow, which bars the way to Germany and Austria. Cracow is a fortress of the first class and should be able to stand a longer siege than Przemyśl, altho its larger population would be a source of weakness if the city is closely invested.

## Spring Gladness at Eighty

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," "HOW TO  
LIVE IN THE COUNTRY"

**W**HAT have you got to be glad about at eighty? Well, in the first place, about life itself. I do not mean the mere ability to go thru with a process of functioning that passes for living. He is a big blunderer who has lived half my years and has not found out that the whole universe is alive and that everything in it is alive. The joy that wraps me around is something very different. It is that I have a share in that great deliberative and determinative part of life which some way has developed out of the business of mere existence; that has placed me in such a relation to all the rest of the universe that I am a God-child. Call it evolution, or call it creation, it is evidently a part of that divine-willing that is lifting us into higher stages of being.

I am supremely happy today in this, then: that I can repeat the Lord's Prayer without lying. How it sweeps the skies; how it glorifies Jesus, and with Him the rest of us: "Our Father who art in heaven." What has one to grumble about if this prayer really belongs to him? He does not stoop under the command of ordinary laws.

Who are you and what are you; how long would you like to live? Is it a real truth that one could endure eternity? Would it weigh too heavily on us, to meet its mighty questionings; or is there that in evolution which constantly enlarges our grip and our capacity for hoping and willing? I am not sure, and that is the best of it. Any man who has assurance has got to the end of everything. I would rather live in the region of hope and the region of love. Incipently these things belong to all life, but they are rarely developed. This is manhood—to have this capacity for eternal foresight; as the Bible has it, "With his brains in his forehead."

### LESSONS FROM BIRDS AND BEES

I sit down among my birds, bees and fowls, and I find that I can waken in animal life around me a certain amount of intelligence, and not a little of the prophetic. I am not impatient, therefore, of those who tell me that all life will be perpetuated. I can understand a little the part which the Divine One is taking in the world; that of Fatherhood; making children for Himself; infusing into them a capacity for comprehending the true, the beautiful and the good. As I get older the part assigned to me grows more acceptable as well as more comprehensible: to help God. The boy only hears the call; at middle age we respond doubtfully; in old age we are assured of "Him in whom we live and move and have our being."

And yet all this while, and all the

## Power with Economy

Unquestionably, if all Regal owners could give expression to their opinion of the dominant feature of Regal cars—the one outstanding fact would be their unlimited power.

They are always hungry for the hills, and at a touch of the throttle leap forward as only an engine, with surplus power, and perfect balance can. Yet this power is secured with the greatest economy.

Now, there are Three Regals, all of the same rugged design and construction, which has characterized Regals for eight years. Surely among them is one, suited to your needs—and your pocket book.

"Your Day's Work"—a book we should like to send you.

more, I am thankful for my relation to this little world around me, made up of matter, but charged with purpose. It is something that one may be grateful for every moment, if he has escaped that dusty education (which was all dust); and instead of a memory full of uselessness, has acquired or even blundered into a knowledge of the life-full things around him. My neighbor, who parses Latin verbs far better than I can, laughs at me because I like to sit down among my hens, while they learn to jump on my knee and talk with me; inquiring a little of the real meaning of life. What might we not learn if we only could live to be one hundred and fifty years old? That answers the question. If you really know what to do and have learned how to do it, you will gladly stay in the working world to finish up your job.

So far, it seems to me that we have been putterers. We have not lived long enough to get a job finished. What is death, except it be the result of an infinite number of blunders about living? But there is another think about it. You can constantly learn of Nature about you, and never get anywhere near a satisfactory conclusion. You become conscious of how little you know and how much you might know. Ah! if only the schools would take hold at the right end! I ought to have known the songs of the common birds at ten years of age. As a farmer I ought to be able to raise two hundred bushels of corn to the acre. As a preacher I ought to know better than to place emphasis on the supernatural. Let science take care of some of those problems. Ah, here it is! What I am really thankful for is that the whole affair is a part of eternal evolution. I wonder—or, rather, I do not wonder—that there was so much religion of misery before Darwin's day. It is this magnificent thought of eternal progress that captures life; swallows up the whole future, and in the one thought of *betterment* makes everything right.

### THE GLADNESS OF FRIENDSHIP

For friends also I am supremely *glad* today. For eighty years they have been going on ahead, somewhere. It is about the only distressing thought connected with human life. Only this I am sure of, that not one in twenty of them need to have gone so soon. I am vexed at these unnecessary good-byes. But then there is this about it: if one lives right he will face that beautiful procession of young souls that comes toward him from the somewhere, dancing and tripping their way, some of them; but most of them making outrageous blunders, without his help.

It is to my young friends that I owe most, and it is the capacity to win the younger that most pleases me. You see, it keeps one from ever getting out of touch with humanity; it keeps one from getting lonesome. Old age of the right sort does not leave you in a corner. It never ought to do anything of the kind. The boys ought to prattle around you and tell you their troubles. Nobody is ever fit to be a father who cannot find

Jack London says:

"My 'Kit' of Shumate Razors is my constant companion in all my travels, and I find it indispensable, the razors being the best I ever used."

Jack London

### Young Man

Your beard is soft now and any sort of razor may do, but later on you will realize the necessity of a regular razor. Form the right shaving habit now.

During the entire year of 1884 we made just 2,432 razors. During 1914 our average daily production was 4,691 razors.

## Shave the *right* way

Use the *best* razor—and the best *type* of razor—the kind *real* men use—the only kind you would permit a barber to put on your face—the only kind that will give a close, and yet "smartless" shave.

# Shumate

Razors Guaranteed for Life

Made of the finest 6-temper steel. Full concaved, hand ground, honed and stropped ready for use. There is no risk in buying a Shumate razor. Any time it fails to give perfect satisfaction—the user to be the sole judge—we will exchange it without a word. Sold by over 40,000 dealers under this guarantee. If your dealer can't supply you we will send you this No. 850 Shumate Razor *postpaid*.

Price, \$1.50

DEALERS who do not sell Shumates should write us for particulars regarding the complete line.

Shumate Razor Co. (Est. 1884) 619 Locust St., St. Louis, U.S.A.

## You Can Weigh Exactly What You Should

You can—I know you can, because I have reduced 32,000 women and have

built up that many more—scientifically, naturally, without drugs, in the privacy of their own rooms.

### You Can Be So Well!

—If you only knew how well! I build up your vitality—at the same time I strengthen your heart action; teach you how to breathe, to stand, walk and relieve such ailments as

**Nervousness, Torpid Liver, Constipation, Indigestion, Etc.**

One pupil writes: "I weigh 83 pounds less, and I have gained wonderfully in strength."

Another says: "Last May I weighed 100 pounds, this May I weigh 126 and oh! I feel SO WELL."

Won't you sit down and write now for my interesting booklet? You are welcome to it. It is FREE. Don't wait, you may forget it. I have had a wonderful experience and I should like to tell you about it.

**Susanna Cocroft**

Dept. 19. 624 Michigan Boulevard, Chicago

Miss Cocroft is a college bred woman. She is the recognized authority on the scientific care of the health and figure of women.

## Sex Hygiene

Are you fully informed upon vital matters—the proper functions of your body and relations between the sexes?

If not, the very most important part of your education has been neglected for, on your knowledge of self-care, depends the whole virtue of your existence. Unless you have such knowledge, you are in constant danger. Your first duty to yourself—to your family—to your friends—and to society—is to get first-hand knowledge of these most vital and important matters and you can best do this only from a complete work upon the subject of Sex Hygiene. This you find in Dr. John Harvey Kellogg's—

## "Plain Facts for Both Sexes"

Doctor Kellogg is a recognized leader in the science of "Preventive Medicine," a most eminent surgeon and Superintendent of the great Battle Creek Sanitarium where, for nearly forty years, he has had opportunity to observe, treat and prescribe for thousands of patients suffering from irregularities of habit which might easily have been avoided had the sufferers been properly informed in early life.

In his book, Doctor Kellogg handles the subject of Sex Hygiene with such delicacy that not even the most sensitive will be offended yet—he puts the case so plainly that all who read may understand. The book contains nearly 800 pages, including many illustrations, and colored charts of the human body and its parts. The price of the book in library cloth binding is \$3—in half leather, \$4. Send your order today. You take no risk because, if you are not entirely satisfied with the book, it may be returned for prompt refund. Get this book and learn from it to live. Address—

**GOOD HEALTH PUBLISHING CO.**

304 West Main St. Battle Creek, Michigan.

Are you using the

## Efficiency Question Box

in which Mr. Purinton answers questions of health, work, business, and everyday life?

out the inside of a boy's heart. Yes, today I am most of all grateful for the boys and girls that are filling the world with questions. The multiplication table is an old thing, but it does not cover all the multiples and problems. Get a handful of boys about you and find out. What are you good for if you have thrown away all of your experience, and cannot make yourself of any use to some one born one or two hundred years after yourself?

Friendships rarely blossom for fifty years; what of it? They go on bearing fruit all the same. Kissing is in the flower; in the fruit is power, altho there may be less of sentiment. Remoteness is hard to bridge with memory. All the same I have those boy loves and brother loves yet; and always will have them. We may not touch hands again, and it may be that many of our visions of eternal cordiality may not be demonstrated; all the same, we have been men by virtue of our good will. This good will remains with us, in our character, forever. There are some, yet unborn, on the way to my heart. They will need time and thought; others will need that helpfulness which has been my own share at times along the road. This shifting and reshifting of the scenes is after all the glory of human progress. We do not want any one thing to remain. We do not grow fruit trees for this year's crop only.

### A JOYFUL RELIGION

Have I no religion? I don't suppose I have much of that religion which grew up all around my feet in my boyhood. The religion which blossoms today over my head and in my heart is the magnificent thought that if I will, I may be almost anything that can be conceived. It is dreadful to know that any one can will himself into the form and the life of a devil; but what is it when you look the other way? I don't wonder that the ancients divided people into "upward lookers" and just "common folk." It is this looking up, and seeing what we can see in and thru things; reading between the lines of inspiration, that is what we want. No one can fail to make a satisfactory book of the Bible if he can read between the lines; the trouble is too much line reading. Think of anybody sitting down in the middle of such a world as this and cursing his neighbor because he does not believe that Eve was made of a rib. I don't care whether she was or not; I do know that some people never get over being ribs. What seems to me glorious is that one may go up on the mountain top, quit business for awhile, and learn a direct lesson from the invisible.

I rejoice furthermore that I can still talk. I feel to the fullest what Stephenson said, that he would like to rise from the dead, only that he "might preach." I would reverse the old proverb and say, Silence is barely silver; but it is speech that is golden. The press has become the new pulpit. Today there are one hundred writers and authors to one in 1860. The people are crying for a voice. The whole country has become a debating club. It was essential to democracy;

## Turn Your Spare Time into Money

Your spare time is worth exactly what you make it worth. Turn it into money.

The International Correspondence Schools will help you to make every hour worth dollars. They will give you in your spare time the training that will enable you to get and hold a better job.

If you are really ambitious, find out what the I. C. S. can do for you.

It makes no difference who you are, where you are, or what your handicaps may have been, the I. C. S. can help you.

Every year more than 5000 persons of all ages and occupations voluntarily report increased wages and better positions, due solely to I. C. S. training.

### Mark the Coupon

YOU can do what others do. YOU can qualify for the position that you want. Learn how you can make your spare time worth the MOST money. Mark the occupation you prefer in the coupon below and mail it today. This is YOUR opportunity—don't let it go by.

supplementary to free schools and free thought. At last we are getting free speech. Talk it is that is the glory of humanity.

But better yet do I rejoice in the great unrevealed; in the vastness of the untold. One can never exhaust such an eternity. It gives us an eternal storehouse to investigate; but with infinite newness and freshness of life. It is what we cannot bear now; that is, our real relation to the whole and the eternal. So far as we have gone, we find that two meals a day of intellectual information is quite enough. Indeed, we have made a bad muddle of the world and the knowledge of it so far as we have gone; what would we have done had we been directed to dip into infinity? What a terrible thing, if some one, or The One, should throw all eternity open to us! This world is already more than enough. "I have many things to say to you, but ye cannot bear them now." Bear them; I should think not. We can hardly endure the little scraps of daily information; that is Nature-illuminated mortality.

We cannot endure, nor even comprehend the motion pictures that the Great Lord of Life runs before our eyes for forty or fifty years. We have science, but of nothing else are we more afraid. Instead of its daily unfoldings of new discoveries and new thoughts we cling with all our might to old material, that at best has been dead for five thousand years. We set up in our pulpits mere lads to preach immortality and expound eternity. What do they know about it? They have not yet studied spectrum analysis, nor yet have they even any knowledge of the bees that feed them with honey, and the trees that drop plums at their feet. Let us trust God with his own secrets. Yes, it is indeed true, that above all things, this day, I rejoice that I have scarcely touched the revealable truths of the Almighty. I am willing to live eighty years more, just to find out what a fool I am; or, rather, what a babe, and then to be lifted up into the family of God's children, and be taught, as I "can bear it." When one has learned that he never can hold all truth, but that he can forever be adding to the scraps of his wisdom, then living is worth the while. Life then has a meaning of its own.

#### TODAY BETTER THAN YESTERDAY

And now there are some readers of The Independent who will grip hands with me when I say that I am grateful to have lived long enough to have outlived the days of slavery. I do not refer to negro slavery, but to that slavery which bonded the whole of us with narrow creeds in church, in school and in state; with old traditions that were stronger than the withes that taxed the strength of Samson. Those were days, and not so long ago, when one's soul was not his own. If anybody enjoys looking back to them as days when reason was despised and faith was interpreted as belief, let him look. I rejoice that I have been running away from them. I do not dread the great period of doubt thru which we have all waded.

## THE MADISON SQUARE

37 MADISON AVENUE

To those seeking a quiet and comfortable home, amid dignified and refined surroundings, at moderate cost, the Madison Square, corner of Madison Avenue and 26th Street, offers many unusual inducements.

Pleasant outlook over the Park; homelike surroundings; sunny rooms.

Housekeeping and hotel apartments, furnished and unfurnished; leases and transient.

Well-trained, cheerful service.

No tips allowed or expected.

Open for inspection day and evening.

F. R. GOING  
Resident Manager

Phelps Stokes Estates, Owners  
100 William Street, N. Y. C.

I remember well the strong breaths of spiritual oxygen which we had to breathe, when The Independent came to us for the first time. The glory of old age is in keeping up with the age, and not getting tired under the lilac bushes. These are great days that belong to us. It is impossible to measure them with too great gratitude.

Theodore Parker was shut out of every pulpit in New England but one; but today he preaches his magnificent humanity in every one of them. Not so far back Darwin and Spencer were denounced as infidels; but today the New Testament of Evolution opens the golden gate of human love and progress. The Independent stood for liberty from its foundation; it is of the same mind still; but the crowd was not with it then, as it is today. Somewhere along back science and theology joined hands; and while a good deal has been left out that had been highly approved, whole chapters, that can be summed up in "Now remain faith, hope and love," have been added. What weakness it is that teaches a child to name the Apocalypse as the closing book of Revelation. Revelation never will be closed; if I thought otherwise I would despise the world and life, and be glad to go. Here is the real joy, that one can never get to the end of this truth telling.

Education has broadened with religion, and common life has broadened with education. In 1833 not one woman in America had ever entered or could enter a college or university. If some one does not soon erect a monument to Asa Mahan, who, as first president of Oberlin, opened the doors to both sexes, it will be a shame to America. Not only have these institutions thrown open their doors, but all the professions are as free to the woman as to the man. The school is broader in all other ways, and now is taking its baptism of industrialism. An old man cannot look back without clapping his hands, not over the big schoolhouses, but over the ideas that crowd their halls, and beckon us to a nobler life, based on common sense.

In state we have gained even more than in school or church. Bryan's statesmanship is a rifle's range ahead of that of Seward, because his ethics grip hands with his civics. President Wilson is a sort of Thomas Jefferson born over again. The people love him for his temperance and justice, and the old men rejoice to see his day. In other words, the state has gone over to the common folk; the schoolhouse has forgotten all about sexes, and the church belongs to the sinners in these days, rather than to the saints. I think that before long we shall have one international day for thanksgiving, in which all nations of the globe shall sing together "Praise God! from whom all blessings flow"; for really it is a divine power that has penetrated the ages and is working out God's own good will for all of us. It is this unity of humanity that is speeding thru the years and demonstrating the divineness of the times. How can an old man fail to enter into the gladness of the spring time?

Sorrento, Florida

Choose a man to paint your house who will use

# Zinc

in his paint. If he uses Zinc, it means that he is wide-awake and up-to-date in his trade. If he uses Zinc, it means that your house will get painted so that it will stay painted.

(Established 1868) Sta. 27C, Lockland, O.

"Using about one-third the ice the others did." T. G. Mackie, New Orleans.

"Cut ice bills from \$26 to \$8." T. W. Williams, Milwaukee.

"Reduced ice bills nearly 40 per cent." Dr. B. H. Wells, Southport, Conn.

"Much more economical than any other of several I have had." Dr. O. B. Shreve, Salem, Mass.

"Saved about 50 lbs. of ice per day over another make of same size." W. M. Rieke, Paducah, Ky.

"An ice saver, a germ preventer, hence a health preserver to any family." Dr. Chas. Hape, Lafayette, Ind.

"Economical in use of ice and preserving in best manner articles placed in it." Dr. R. B. Starkweather, Evanston, Ills.

Send for Free Book about refrigerators

It tells you how to select the best refrigerator—how to keep food longer without spoiling—how to cut down ice bills—how to guard against sickness—door for skills.

# SCRIBNER BOOKS

**John Galsworthy** in *THE LITTLE MAN AND OTHER SATIRES* has probably achieved the most popular book of sketches, essays, etc., that he has ever written, as the various types he depicts and satirizes have a universal appeal.  
\$1.30 net; postage extra.

**James Huneker** in *NEW COSMOPOLIS* writes of New York as it strikes the artist and the critic—the fabulous “East Side,” which Mr. Huneker contends is mythical, the parks, the waterways, restaurants, theatres, museums, the types of the people. He also tells of Newport, Atlantic City, Coney Island, and then of some foreign cities.  
\$1.50 net; postage extra.

**F. Hopkinson Smith** in *OUTDOOR SKETCHING* has written and illustrated a book overflowing with suggestion and one which really covers a much wider field than that indicated by the title.  
The London Athenæum says Mr. Smith is “able to write and to draw with equal facility.”  
\$1.00 net; postage extra.

**Maurice Hewlett** in *A LOVERS' TALE* writes of love in old, rough, simple times: to say so much implies that it shows Hewlett at his best. It is a romance of Iceland in Viking days, full of the strife of might and cunning; glowing with human nature at its utmost.  
\$1.25 net; postage extra.

**John Finley** in *THE FRENCH IN THE HEART OF AMERICA* tells the romantic story of those picturesque scouts of civilization who penetrated the Canadian wilderness; and of their followers who opened the Mississippi Valley, voyaged the Great Lakes, and built frontier forts, now great cities; of the descendants of the colonists they brought, Frenchmen in temperament and custom, who have become a part of the United States.  
\$2.50 net; postage extra.

**Gouverneur Morris** in *THE SEVEN DARLINGS* writes of six girls and their brother left of a sudden penniless with but one asset—a luxurious Adirondack camp. They advertised for boarders, and the peculiar nature of the advertisement brought a throng of eligible young men—with romantic results. Very attractively illustrated by Howard Chandler Christy.  
\$1.35 net; postage extra.

**Robert W. Neeser** in *OUR NAVY AND THE NEXT WAR* has written a book of which J. Bernard Walker, editor of the Scientific American, says: “It is the most clear, conservative, forceful and judicial presentation of the needs of our Navy that I have ever seen. . . . It should take its place in the curriculum of Annapolis and the Naval War College.”  
\$1.00 net; postage extra.

## The New Books

### KITCHENER OF KHARTUM

To the fact that the hero-worship of Earl Kitchener began long ago we have the attestation of O. Henry's finest tale, *The Unfinished Story*, where the lonely and loveless working-girl sets up his portrait on the bureau of her hall-bedroom as her ideal of manhood. How the British look upon him now may be best expressed in the words of one of their most popular authors, Harold Begbie:

Seldom has any one man stood for a multitudinous and highly complex nation with so tremendous and complete an emphasis as Lord Kitchener stood at the beginning of the war for the British nation. He was not an incarnation of the people, he did not express the total character of the nation; but with a force hardly ever equaled in our history he became the Mood of the British people, the living expression of the Will of the entire British Empire.

In “K. of K.” the nation saw not only a great organizer of victory, but its own fierce mood, its own tenacious will, its own enduring strength, its own multiplied, world-flung, and historic spirit. By one of those mysterious intuitions of democracy, which sweep like lightning thru myriads of people, and which are sometimes, not always, more to be trusted than the nice and careful judgments of discriminating intelligence, Kitchener stood in the confidence of the nation as the one absolute unchallengeable man for the storm which had broken with such bewildering suddenness upon the drowsiness of its domestic life.

But till Kitchener cries “Enough!” the British Empire—so slow to anger, so unswaggering, so peace-loving, and so un-Prussian—must strike till the dust is red. When Kitchener relaxes the grip of his clenched hands the neck of the Prussian eagle will be broken, and only then will the great nations and the small nations be able to advance into the Promised Land of which Lord Kitchener perhaps has not even permitted himself to dream. One sees in him, then, not only the expression of England looking cruel, but the strength, the determination, and the practical wisdom of those great and glorious nations with whom it is the honor of Great Britain to be allied.

Mr. Begbie, however, is no blind idolator. He recognizes the limitations, even the faults, of his hero and so his little volume, *Kitchener, Organizer of Victory*, is a real character sketch. The dominant element of his success, according to Mr. Begbie, is tenacity, “and this tenacity is little more than the obstinacy of a very slow and laborious mind. All of the qualities which go to the making of a brilliant intelligence are so entirely lacking in him that he is said to be “unconscious of his own dullness.” This reads like some of the contemporary estimates of General Grant.

It was, as Mr. Begbie says, the late G. W. Stevens who created “the Kitchener legend” by his brilliant account of the Sudan campaign, *With Kitchener to Khartum*. The Sirdar, who then required an introduction to English readers is now at the head of the greatest army that Great Britain ever had, so

it is very appropriate that a new edition of Mr. Steevens' book, prefaced by a new biographical sketch, should be brought out.

*Kitchener: Organizer of Victory*, by Harold Begbie. Houghton Mifflin. \$1.25.  
*With Kitchener to Khartum*, by G. W. Steevens. Dodd, Mead. \$1.50.

## A NEW BELOVED VAGABOND

Because Brien O'Brien was a bad man, they sent him to Hell, where he so disturbed the slumbers of the Chief Tormentor that they shipped him back to Heaven. But Rhadamanthus would not endure him there, and threw him out, whereupon he landed in Ireland as the only neutral place left. Thus runs the Celtic fantasy, *The Demi-Gods*, James Stephens' latest book.

Patsy and his daughter Mary, a pair of Irish gypsies, wander cheerfully with their jackass over the hills and dales of Kerry, their one aim being food, tobacco and greatest ease. They meet three angels who prove to be uncommonly Celtic in habit. A reformed miser joins them and Pat meets the jilt who has been the bane of his life. He fights for her and wins her. When the journey is done the angels resume their wings, but the youngest destroys his pinions, preferring Mary and Ireland to Heaven. *The Demi-Gods* is even better than the James Stephens of yore—and that says much.

*The Demi-Gods*, by James Stephens. New York: Macmillan Co. \$1.30.

## SCANDINAVIAN CLASSICS

The two little volumes, *Comedies by Holberg* and *Poems by Tegner*, are a notice to the world at large that the American-Scandinavian Foundation has taken up its appointed task of promoting a mutual exchange of culture between the United States and the Scandinavian countries.

Almost from the first the idea of publishing a series of Scandinavian Classics has been in the minds of the trustees. Professor W. H. Schofield of Yale and Dr. Leach have directed this phase of the general work. Of the first two volumes, recently issued, one is devoted to the father of the Scandinavian drama, Holberg, who was a Norwegian by birth and a Dane by education and life-long resident of Copenhagen. A more fortunate choice could hardly be imagined, for Holberg was more than "the Molière of the North": he was the first great modern in all Scandinavian literature, while his work has had a tremendous influence on Ibsen.

The three plays selected for this volume are thoroughly representative, and one of them, "Jeppe of the Hill," is to Holberg's art what "Hamlet" is to Shakespeare's. It might have been desirable, however, to let the place of "Erasmus Montanus" be taken by some play like "The Lying-in Room" (*Barselstuen*), where Holberg's realistic portrayal of contemporary manners appears at its very best. The translations are far in advance of what we have been accustomed to in the past and could, with but a little tinkering, be used on the stage. It is to be regretted

# The New Macmillan Publications

## Fiction, Poetry, Drama and Essays

### Bealby

By H. G. WELLS. Mr. Wells's new story of an ambitious boy, as delightful and humorous as his previous novel, "The Wife of Sir Isaac Harman." **\$1.35**

### The Harbor

By ERNEST POOLE. "One of the ablest novels added to American fiction in many a year."—*N. Y. Tribune*. **\$1.40**

### Brunel's Tower

By EDEN PHILLPOTTS. The interesting story of a regenerated character. Probably the most notable novel of the author of "Faith Tresilion," etc. **\$1.50**

# COTTAGE COLONY

Practically the whole south or ocean shore of Long Island is one vast summer cottage colony. Every enjoyment that summer affords is here to be found at its best.

## White Sandy Beaches—Fine Surf Bathing

Elbert Hubbard has said:

"If you want to find the Spring of Perpetual Youth go to the seashore and dig in the sand with the children."

A hundred seashore places on Long Island welcome you, all within easy access of the Theatrical, Business and Social centers of New York, yet far enough removed to be exclusive.

Long Island is cooler in summer, and has more sunshiny days, than any other place on the nearby coast.

For full information and many pictures of Long Island resorts, send six cents postage to the Gen'l Pass'r Agent, Long Island R.R., Pennsylvania Station, New York City.

DUCKS, 22 TO 120 INCHES. DIFFERENT WEIGHTS

that the translators at times have been lured into error by clinging too closely to the letter of the original text—as when they translate *skabhals* as "scurvy-neck" and not as "loafer."

The second volume, *Poems by Tegner*, is less successful. Of course, Longfellow's translation of "The Children of the Lord's Supper" could hardly be improved upon. It is indeed what all translation should be: a recreation in a new medium. But the work itself is insignificant when compared with "Frithiof's Saga," which has long been recognized as one of the foremost products of modern Scandinavian poetry and a work that has impressed itself deeply on the national consciousness of Sweden in particular. Unfortunately the Rev. Mr. Blackley's version, to put it mildly, is rather inadequate. For that matter, it is an open question whether the "Saga" could be made available and appreciable by English-speaking readers except in a prose like that of the Homeric translations made by Andrew Lang and his associates.

*Comedies by Holberg*. Translated from the Danish by Oscar James Campbell, Jr. and Frederick Schenck. \$1.25.

*Poems by Tegner*. Translated by Henry Wadsworth Longfellow and Rev. W. Lowry Blackley. New York: The American Scandinavian Foundation. \$1.50.

### UNKNOWN ARGENTINE

In striking contrast with the numerous "write ups" of tourists on time-allowance is the study of *North-ern Patagonia*. Its nucleus is the bare data furnished by the expert survey of a scientific commission, but the lucid organization and presentation, for which Mr. Willis is presumably responsible, plus the efforts of the printers and engravers have combined to save from the tomb of government archives a valuable contribution to the study of the economic resources and potentialities of the southern portion of the Argentine Republic.

In these piping times of war in Europe, American capital has the wanderlust, and El Dorado must still be sought in South America. That American capital has not heretofore been more invested in South America is due largely to a scarcity of accurate economic information.

This work meets this need as respects Argentina. In the introduction, Mr. Willis has made a careful study of the problems of the conservation and exploitation of natural resources in the whole republic. Here he is dealing with the bottom facts indispensable to the would-be investor.

The two following sections are devoted to a study of the topographic and hydrographic features of the Pampas and the Cordillera, or Andean region of northern Patagonia. The former must become a great grazing country, while the latter, with the more than two million horse power of its mountain streams, must furnish the energy for industrial enterprise in a country almost without coal deposits.

To the scientific student of South America the book will be of obvious in-

terest, while the general reader will be attracted by the descriptive parts of the work, its excellent photogravures and above all the picturesque project, already begun, for the opening of a great National Park, in the region of Lake Nahuel Huapi.

From the work as a whole two general facts stand out in bold relief. One is the vigor with which Argentina, and this is also true of other South American nations, is attacking the problem of the development of her resources, now regarded as national assets. The other is the part which the United States is silently playing in this great enterprise, for Mr. Willis, who, in common with many other American experts in South America, is a member of the United States Geological Survey, and is in Argentina "with the official approval of the United States Government."

*Northern Patagonia.* Report of the Comisión de Estudios Hidrológicos, Bailey Willis, director. Charles Scribner's Sons. \$6.

### NEW BROWNING POETRY

The lovers of the Brownings—and very many they are—will be interested in the appearance of *New Poems* and of poems hitherto unpublished or generally inaccessible, twenty-nine of Robert Browning's and six by his wife. They are genuine, but for various reasons were not thought suitable for admission by their authors in their collected works. Some of his are slight, or were *tours de force*, or unfinished. Of the latter is "*Aeschylus's Soliloquy*," published by The Independent, October 30, 1913, the longest and best poem in the volume. Some are very short, and are particularly like "Ben Karshook's Wisdom," of which we give two of the four verses:

"Would a man 'scape the rod?"  
Rabbi Ben-Karshook saith,  
"See that he turn to God  
The day before his death."

"Aye, could a man enquire  
When it shall come," I say.  
The Rabbi's eye shoots fire—  
"Then let him turn today."

A couple of the longer poems are specimens of Robert's youthful genius, written when but fourteen, and are most promising. He prudently destroyed his manuscripts of them all, but these escaped because an admiring neighbor had made copies of them. The six poems by Mrs. Browning are fairly long, but not of unusual mark, while the really interesting portion of the space given to her is taken up with her letters before marriage to her future husband with frank, yet very respectful, criticisms of his poems sent to her for the purpose. Her criticisms are good, and probably did good. They deal especially with obscurities and inversions, and will attract the study of those addicted to poetics. Of course those who possess the series of volumes by either Browning will need this volume for completeness.

*New Poems*, by Robert Browning and Elizabeth Barrett Browning. Edited by Sir Frederic G. Kenyon. Macmillan. \$1.25.

## For Easter—The First Peace Book The Peace and America

By Hugo Münsterberg

Author of "The War and America"

The air is filled with rumors of, and hopes for peace. The daily papers repeatedly hint at its early possibility. Professor Münsterberg who, perhaps more than anyone else in America is able to speak authoritatively on the subject, offers this new book as a sequel to "The War and America," and in it sanely and hopefully discusses the future in the same broad spirit of fairness which characterized his earlier work. The first book for Peace, it should be read by every thinking person in America.

Ready April 5. \$1.00 net

### Other New Books of Timely Interest

#### Woman's Work in Municipalities

By Mary Ritter Beard

An able and comprehensive review of what the women of America are accomplishing in the various departments of municipal activity and social betterment.

12mo, cloth, \$1.50 net

#### Lower Living Costs in Cities

By Clyde Lyndon King, Ph.D., Professor of Political Science, University of Pennsylvania.

A timely volume on living costs, purchasing and distribution for the domestic as well as the municipal housekeeper.

12mo, cloth, \$1.50 net

#### The City Manager

By Harry Aubrey Toulmin, Jr.

A complete study of the new form of municipal government in charge of one city manager, which has been adopted in many cities of the South and West.

12mo, cloth, \$1.50 net

#### Citizens in Industry

By Charles Richmond Henderson, Professor of Sociology, University of Chicago

A discussion of industrial conditions in their relations both to employer and employee, proving the benefits of co-operation for each through a better understanding of existing needs on the part of the employer, and a higher standard of efficiency in the employee.

Ready in May. \$1.50 net

#### Bodily Changes in Pain, Hunger, Fear and Rage

By Walter B. Cannon, A.M., M.D., Professor of Physiology, Harvard University

A remarkable volume written in popular style aiming to show the actual physical changes which take place in the body under the influence of strong emotional conditions. The subject is treated in a very unique manner, and from a philosophical rather than from a medical or technical viewpoint. A most readable and informing volume for the general reader. Illustrated with charts and diagrams.

Ready in April. \$2.00 net

#### Money and Banking

By John Thom Holdsworth, Dean of the School of Economics and Professor of Economics and Finance, University of Pittsburgh

Covering the origin and development of banking in the United States from 1792 to the present day. The new currency legislation and its effect on banking and credit systems is also discussed.

\$2.00 net

#### Rural Credits

By Myron T. Herrick, Formerly Ambassador to France

The author has made an exhaustive study of credit conditions among farmers in this country and abroad and this authoritative account, written without bias, furnishes a clear and comprehensive review of the subject from every possible viewpoint.

\$2.00 net

#### Fundamentals of Plant Breeding

By John M. Coulter, Head of the Department of Botany, University of Chicago

A popular work written to show how new and desirable plants are developed. It gives the latest information on plant breeding, making it invaluable to farmers, florists, gardeners, teachers and everyone concerned in raising plants of any kind.

Illustrated, \$1.50 net

#### Through Central Africa—From Coast to Coast

James Barnes, Author of "The Great War Trek," etc.

A graphic description of an African hunting expedition taken by the author and a companion as photographer, following the same trail taken by Stanley on the Emin Pasha Relief Expedition. The illustrations are remarkably interesting and show specimens of nearly every kind of animal found in that region.

Ready in May. Profusely illustrated, \$4.00 net

## MYSTIFIED MEN

WHO HONESTLY QUESTION THE FEMINIST MOVEMENT SHOULD READ

# THE AWAKENING OF WOMAN

Suggestions from the Psychic Side of Feminism

By FLORENCE GUERTIN TUTTLE

For a clear interpretation of a much misunderstood question.

**JUST OUT—but already "A Best Seller"**

And commanding the admiring attention of distinguished thinkers of our day.

"Gives a broader view of life." "Every page thrilling with interest." "An eloquent presentation of the upward stride of women." "The reading of the book should awaken many voters to their sense of responsibility in the matter of the enfranchisement of women."

It will help women to understand themselves.

FOR SALE AT ALL THE BETTER BOOK SHOPS

House of GOOD Books

**THE ABINGDON PRESS**

New York Boston Cincinnati Pittsburgh Chicago Detroit Kansas City San Francisco

### MONTESSORI AGAIN

*The Manual of Play* is a remarkable book with an idea, but badly misnamed. William Byron Forbush makes concrete for the home many theories of Montessori and other child educators, and shows how a mother may become the companion and leader of her child.

Jacobs. \$1.50.

### RUSSIAN LITERATURE IN A NUTSHELL

Maurice Baring, author of *Russian Literature*, is favorably known by his earlier books on Russia. Russian letters, with their short life, beginning, one might almost say, with the nineteenth century, lend themselves to panoramic treatment better than would an older literature. As a rapid survey, this little work would seem to perform its functions competently, and should be welcomed as a help to the enjoyment and appreciation of such works of Russian genius as are within our ken.

Henry Holt. 50 cents.

### A FORETASTE OF SUMMER FICTION

Left by an improvident father to face the cold world with nothing but an Adirondack "camp" of about the dimensions of a Newport "cottage," *The Seven Darlings*, six of whom embody the last word in feminine charm, set to work to turn their heritage into an expensive inn for the epicurean idle. But of course the Darlings didn't count on the first six guests being rich and attractive eligibles, and that changed all the plans. Ephemeral, but one of the most entertaining of the Gouverneur Morris stories.

Scribner's. \$1.35.

### WHENCE SPRING ALL BOOKS

A panacea for all ills of ignorance—such is the listing of the dictionary in the literary pharmacopoeia of Frank H. Vizetelly, managing editor of the New Standard Dictionary, his *Essentials of English Speech and Literature* calls all to purity of word and understanding of new words. Including an outline of the origin and growth of the language and its literature, and it is the dictionary—as book of knowledge and pleasure, as source book and final book—with which the author's own book most concerns itself.

Funk & Wagnalls. \$1.50.

### BYZANTINE ART

The *East Christian Paintings in the Freer Collection* were found by Mr. Freer in an old monastery in Egypt, and they represent a Byzantine period of Christian art and learning. C. R. Morey's volume is devoted to the miniatures contained in the manuscripts. From manuscripts of the Gospels we have eight colored plates, such as portraits of Mark and John, the Descent from the Cross and the Doubting Thomas. The work is done with scholarship, and the numerous engravings in the text from other manuscripts give it much value for the student of Christian art.

Macmillan. \$2.

### CHANSONS POPULAIRES

The artist who arranges folksongs is confronted with a difficult task, that of catching in the accompaniment the spirit of songs which "persisted only by oral tradition." But it is just herein that Jules Tiersot succeeds. In *Sixty Folksongs of France* he has avoided the mistake of trying to conjure from the piano that quality which belongs only to the simple instruments of a simple art. So deftly has he caught the spirit of the folksong that the essentially modern music of the piano not only harmonizes with the quaint airs, but aids in their interpretation.

Oliver Ditson. Paper, \$1.50; cloth, \$2.50.

### WOMAN, TODAY

Here is a broad and sane treatment of a topic that often calls forth more enthusiasm or disapproval than discrimination. The doctrine of Florence Guertin Tuttle's little book, *The Awakening of Woman*, is that the changes in life and thought so noticeable today are but a natural evolution, that neither sex is to blame for the past, that both are the gainers in the swiftly coming future and that for sex an-

## The Truth About Poultry

Get the Facts by Reading **The One-Man Poultry Plant**

Successful Methods of Men on Farms or Small Acreage. Complete in twelve parts; printed in one volume.

By **DR. N. W. SANBORN**

REAL work, with real poultry, on a real New England Farm. This is a simple story of what has been done by a man, at forty-five years of age, town bred and city educated, getting out of practice of medicine, buying a small farm in the hill country, and making a success of the venture. Not only is the rearing of chicks and the management of adult fowl completely covered, but the interesting side issues of fruit growing, grain raising and the production of milk, that cannot be escaped on a real farm. You get rugged facts—rarely found in print. The truth about poultry as found in actual life on a one-man poultry farm.

**You Can Do the Same, Book Tells How**

**OUR SPECIAL OFFER**—The One-Man Poultry Plant, in twelve parts (book form), and the American Poultry Advocate, one year for only 50 cts., book and Advocate, three years, for only \$1.00, if order is sent at once.

Our paper is handsomely illustrated, practical, progressive, and up-to-date on poultry matters. Established 1892. 44 to 132 pages monthly. 50 cts. a year. 3 months' trial 10 cts. Sample copy free. Catalogue of poultry literature free. Address **AMERICAN POULTRY ADVOCATE, 517 Hodgkins Bldg., Syracuse, N.Y.**

## Boston Garter

"Everybody in the world wears 'em"

From *Cohan & Harris's successful play*

## THE TELL-TALE CARD

If you ever saw a man (he was a REAL salesman) take from his pocket a case containing

### Peerless Patent Book Form Cards

and detach a beautifully engraved, scrupulously clean, perfectly plain business card, you were amazed at the absolutely smooth edges of the card. There wasn't the slightest indication of its detachment. No man ever witnessed such an act without a stirring of his curiosity. Most men test the credibility of their sense by feeling the edge of the card or ask how such a thing is possible. The card marks the man. It tells the tale you can't tell yourself.

Peerless Patent Book Form Card is the best thing in cards. It doesn't appear to NEAR Salesmen. You can differentiate yourself. Send for a sample tab. See for yourself. Send now.

Appearance of tab of cards in case.

**THE JOHN B. WIGGINS COMPANY**  
Engravers, Die Embossers, Plate Printers  
97-99 Adams St., CHICAGO

## Romeike's Press Clippings

are used nowadays by every modern up-to-date business man; they bring you in constant touch with all public and private wants, and supply you with news bearing upon any line of business. We read for our subscribers all the important papers published in the United States and abroad. If you have never used press clippings, drop us a postal and we will show how they can be of advantage to you. Write for booklet and terms.

**ROMEIKE, INC.** 106-110 Seventh Ave., New York City

tagonisms, "we might as well talk of antagonisms between moon and tide, or moon and star."

Abingdon Press. \$1.

#### AMONG THE TELEGUS

The autobiographical story of the life of John E. Clough is well styled *Social Christianity in the Orient*, for when his strong individualism came into contact with the ancient civilization of India, this great missionary to the Telegus caught visions of a new social program. The mass movement of thirty years ago toward Christianity is well described by this veteran who was one of its principal leaders and promoters.

Macmillan. \$1.50.

#### A PLAY FOR PEACE

The Junior Lieutenant, embodiment of a present-day attitude of acquiescence in war, as necessary to advance race interests, is carried *Across the Border* of life in a dream. There he meets innocent victims of his orders to burn and slay, sees the barbarity of it all, and waking on the verge of death vainly tries to show this to others. Beulah Marie Dix has dramatized this powerfully, with deep allegorical significance.

Henry Holt. 80 cents.

#### THE FUNDAMENTAL PROFESSION

Dr. Wiley treats of the profession of farming, of its rewards, its possibilities, its importance in no romantic fashion, such as might be suggested by *The Lure of the Land*. On the ignorant and often piteous notion that any one can be a farmer, that farming is unskilled labor, his words are refreshingly strong. Valuable chapters are those that deal with the rising price of land, the economy of large establishments, and the danger of driving out the independent small owner.

Century. \$1.40.

#### THE PASSING STORM

*The Good Shepherd*, by John Rolland, is a masterful story of the struggle of a young American physician to get out of the shadow that darkens his life. Victim of his imaginings, the deprent doctor seeks a new life in the Tyrol. Vividly the little village near the Alps, with its old customs and its Passion Play, is depicted, but the high light of the book is the portrayal of characters: the jovial priest, the simple peasants, the high strung schoolmaster, the strong woman who dispels the doctor's melancholy.

Stokes. \$1.25.

#### TWENTY PLAYS

Those who have tried to study the modern drama in class or club have found it difficult and expensive to get the material. But in *Chief Contemporary Dramatists* Prof. Thomas H. Dickinson of Wisconsin has provided just what is needed for this purpose. In this single volume are complete plays by Wilde, Pinero, Jones, Galsworthy, Barker, Yeats, Synge, Gregory, Fitch, Moody, Thomas, MacKaye, Hauptmann, Sudermann, Brieux, Hervieu, Maeterlinck, Björnson, Strindberg and Tchekhov, as well as book lists.

Houghton Mifflin. \$2.75.

#### MORE WAR POEMS

In *The Silk-Hat Soldier*, Richard Le Gallienne has assembled a little sheaf of poems expressing his pity for Belgium's tragedy, for the war's victims and for those at home who mourn their loss. From the contemplation of the wrecks and ruins of this ghastly conflict springs a hope of a lasting peace. The fine art of Mr. Le Gallienne has not failed him here, and this slender volume should be welcome for its own sake, and because all the royalties and profits that accrue from it are to go to the Belgian Relief Fund.

John Lane. 50 cents.

#### CHILDREN AND THE TOWN

From the Juvenile Court records Ruth S. True draws the material for a scientific study of the problems of *Boyhood* and *Lawlessness* and *The Neglected Girl*, is-

"Weighs only 7 lbs."

## The INDIA-PAPER Edition of Webster's New International The *Merriam* Webster

It is a real pleasure to use The Supreme Authority in this new and convenient edition. A delighted purchaser writes: "The volume is so flexible, so portable, so agreeable, so readable that looking up a word has lost all its terror." 2½ inches of shelf room hold this wonderfully compact storehouse of authentic information. Only half as thick, only half as heavy as the Regular Edition. Printed on expensive, thin, strong, opaque India Paper.

#### Puzzling War Words

as Landsturm, Contraband, Belligerent, Batum, Blockade, Flanders, Moratorium, Transylvania, and thousands of others are clearly defined or located in the Webster's New International.

#### The One Standard Authority

It is the standard of the Federal and State Courts. The standard of the Government Printing Office. The standard of nearly all the schoolbooks. Indorsed by every State School Superintendent. Universally recommended by Statesmen, College Presidents, Educators, and Authors. Adhered to as standard by over 99% of the newspapers. The above cannot be said of any other dictionary.

400,000 Vocabulary Terms.  
30,000 Geographical Subjects.  
12,000 Biographical Entries.  
Thousands of other References.  
Hundreds of NEW Words not given in any other dictionary.  
6,000 Illustrations, 2,700 Pages.

Colored Plates and Half-Tone Engravings.

The only dictionary with the new divided page, characterized "A Stroke of Genius." Type matter is equivalent to that of a 15-volume encyclopedia.

G. & C. Merriam Company, Springfield, Mass.

More Scholarly, Accurate, Convenient, and Authoritative than any other English Dictionary. Critical comparison with all other dictionaries is invited.

WRITE for specimen pages of both India-Paper and Regular Editions.

**FREE** Catalogs of all Boarding Schools (or camps) in U. S. Expert advice free. Want for girls or boys? Maintained for all schools. Write AMERICAN SCHOOLS' ASSOCIATION 1042 Times Bldg., New York, or 1542 Masonic Temple, Chicago

## WRITING THE PHOTOPLAY

A practical course of twenty lessons in the technique of the photoplay, taught by Arthur Leeds, Editor, THE PHOTOPLAY AUTHOR. 25-page catalogue free.

THE HOME CORRESPONDENCE SCHOOL  
Department 103, Springfield, Mass.

## Tusculum College

Beautifully and healthfully located in full view of the great Smokies of East Tennessee. Founded in 1794, Tusculum is true to the ideals of its founders. The influence of the College has always been Christian. In scholarship Tusculum ranks with the best colleges in the country. Six college buildings, four dwellings, campus of 75 acres and endowment of approximately \$180,000. Electric light, steam heat and all modern conveniences.

Write personally to the President, C. O. GRAY  
Greeneville, Tennessee

## Gluten Flour

is prescribed by physicians as a diet for diabetics and cases of Kidney and Liver troubles, Rheumatism, Obesity, etc. The U. S. Pure Food Laws require that Gluten Flour must contain at least 35% of gluten or protein. Our Gluten Flour contains about 40% (a recent analysis showed 42%) and must not be confused with "40 Standard Gluten Flours" which contain 20% only. To be safe insist on getting Farwell & Rhines cross cross brand of Gluten Flour and other cereal specialties. For booklet or samples address:

FARWELL & RHINES, Watertown, N. Y., U. S. A.

sued by the Russell Sage Foundation. Here is proof hardly to be gainsaid that home conditions drive the children into that dangerous playground, the street. The teaching of the street bears its natural fruit in minor offenses and finally in grave misdemeanors, while the children are the victims of conditions that makes right thinking and right living well nigh impossible.

Survey Associates. \$2.

## FORWARD TO THE FARM

Here is a new edition of L. H. Bailey's invaluable *Principles of Fruit Growing*. In the eighteen years since its publication we have gained in knowledge of the pests to which fruit is subject, and the fertilizers to which it responds, but the main lines of treatment then laid down have proven the right methods. The prime value of all that Mr. Bailey writes on agriculture is that he rides no hobbies, and is always the patient and intelligent investigator.

Macmillan. \$1.75.

## CHOLERA'S CHECK-MATE

Quarantine four people—a woman, the man she loves, the man she has loved and her husband, under one roof and the drama is bound to be intense. Limited in action and replete with probings of mind and heart, the possibilities of monotony and artificiality in such a story as *The Chalk-Line* are great, but Anne Warwick proves herself a deft manipulator of this familiar device of plot, in the gradual unveiling of character and the striking contrast of personality.

John Lane. \$1.25.

## A HANDY FOOD MANUAL

*Food: What It Is and Does*, by Edith Greer, avoids the common fault of such books, that of being over the heads of the readers it is intended to reach. The language is exceedingly simple, the sentences short and the variety of information on cooking, choice of foods, dietaries, etc., is astonishingly large. Some of the statements made in the name of science are too positive and unqualified, but the teaching is on the whole sound and free from crankiness.

Ginn. \$1.

## GIVING VOICES TO THE DUMB

In these simple, incisive *Tales of Two Countries*, Maxim Gorky strikes deep into the life of the commonfolk of Italy and Russia, made familiar in many of his other stories and novels. Little more than snapshots, their economy makes for an almost brutal disregard of non-essentials, which gives to the search after life and character something of a harsh, tho kindly character. Half mystic, half realist, they show Gorky's blend of the Russian and the western European, which is a combination truly fascinating.

Huebsch. \$1.25.

## A LEGEND FROM ITALY

Mrs. Velma Swanston Howard, to whose faithful translations Selma Lagerlöf's fame among English readers is due, has just Englished *The Legend of the Sacred Image*, one result of her Sicilian and Italian sojourns. It is a little apolog justifying the ways of God to man in a simple, homely tale, and, more specifically, presenting faith as the greatest of God's blessings. An old peasant couple sell their goods and lay all they received at the feet of a sacred image. Their reward and its conditions make the point of this gracefully told fable.

Henry Holt. 50 cents.

## THE WOMAN IN THE ALCOVE

Jennette Lee has before this produced some real characters—notably Uncle William, and Mother, in "The Smell of Apples." She has now written a real story. It is short and slight, but none the less real. She has taken an all too common situation,—a man absorbed in business and letting it drive his family into a narrow corner of his life, while his wife, overwhelmed with the need for making the family ends meet, longs for what he does not give her,—and developed it to an unexpected but thoroly satisfactory conclusion.

Scribner's. \$1.

# SCIENCE AND MORALS: ANTAGONISTS OR ALLIES?

BY HENRI POINCARÉ

No one is better qualified to discuss the vexed question of the effect of scientific thought upon our ethical standards than the late Professor Poincaré of the Institute of France. He was renowned thruout the world for his brilliant and original researches in mathematics, physics and astronomy, but notwithstanding his absorption in these abstruse studies he did not disdain to devote his literary talent to explaining to the layman the philosophical principles of modern science in such works as "Science and Hypothesis," "The Value of Science" and "Science and Method." After his death, July 19, 1912, a fourth volume was issued, "Dernières Pensées" (copyright 1913), and from this, with the kind permission of the publisher, Ernest Flammarion, Paris, we print the paper having the most popular interest because it deals with a subject with which every one is concerned. The article is translated for us by Professor George Bruce Halsted, who has put into English Poincaré's earlier works. A sketch of Poincaré was published in *The Independent* of October 5, 1911, forming the third of the "Twelve Major Prophets of Today" Series, by Edwin E. Slosson. Professor Poincaré's cousin is now President of France; his sister is the wife of Professor Boutroux, of the Sorbonne, who has lectured in American universities.—THE EDITOR.

IN the latter half of the nineteenth century one often dreamed of creating a scientific morality. We were not content with vaunting the educative virtue of science, the advantages the soul of man gets for its own perfecting from association with the truth looked at face to face. It was expected that science would put the moral verities beyond all peradventure, as it has the theorems of mathematics and the laws enunciated by the physicists.

Religions may exercise great power over believing souls, but not all the world believes; faith takes hold only of a few, reason would coerce all. We must appeal to reason, and this does not mean to the reason of the metaphysician, whose constructions are brilliant but ephemeral, like the soap bubbles which amuse us a moment and then burst. Science alone builds solidly; it has built astronomy and physics; today it builds biology; by the same procedures tomorrow it will build ethics. Its rules hold undivided sway, no one can murmur against them; and a man will no more think of rebelling against the moral law than he thinks today of rebelling against the theorem of the three perpendiculars or the law of gravitation.

And on the other hand, there were people who attributed to science all possible evil; who saw in it a school of immorality. It is not only that science accords too great a place to matter; that it takes away from us the sense of respect since we respect only the things

we fear to look at; but will not its conclusions be the negation of ethics? As a famous author says, it puts out the lights of heaven, or at least deprives them of all mystery, to reduce them to the state of vulgar gas lights. Science unveils before us the craft of the Creator, who thus will lose something of his prestige; it is not well to let children look behind the scenes; that might lead them to doubt the existence of the dragon. If the scientists are allowed to go on, there will soon be no more morals.

How should we regard the hopes of the expectant ones and the fears of the others? Unhesitatingly I answer: the hopes are as vain as the fears. There can be no scientific morality; but no more can there be immoral science. And the reason is simple; it is a reason—how shall I say it?—purely grammatical.

## SCIENCE CANNOT GIVE THE MORAL IMPERATIVE

If the premises of a syllogism are both in the indicative, the conclusion likewise will be in the indicative. For the conclusion to be put in the imperative, it would be necessary that at least one of the premises should itself be in the imperative. Now, the principles of science, the postulates of geometry are and can be only in the indicative; still in this same mood are the experimental verities, and at the foundation of the sciences there is, there can be, nothing else. Hence, the most subtle dialectician may juggle with these principles as he will, combine them, frame them up one upon another; all he will get from them will be in the indicative. He will never obtain a proposition which shall say: do this, or don't do that; that is to say, a proposition which confirms or contradicts morality.

This is a difficulty long encountered by the moralists. They strive to demonstrate the moral law; this must be forgiven them, since it is their business. They try to support morality upon something, as if it could be supported upon anything other than itself. Science shows us that man can only degrade himself by living in such and such a way; and what if I care little about degrading myself, if what you call "degradation" I baptize "progress"? Metaphysics urges us to conform to the general law of being, which it pretends to have discovered. "I prefer," one may answer, "to obey my own particular law." I know not what it will reply, but I can assure you it will not have the last word.

Will religious morality be more fortunate than science or metaphysics? Obey because God orders it, and He is a Master who can crush all resistance. Is this a demonstration, and cannot one maintain that it is splendid to stand up against omnipotence, and that in the duel between Jupiter and Prometheus, it is tortured Prometheus who is the true conqueror? And then to yield to

## Longmans' New Books

### Allan and the Holy Flower

By Sir Rider Haggard, Author of "Allan Quatermain," "The Wanderer's Necklace," etc. \$1.35 net.

Sir Rider Haggard's new story is concerned with the further fortunes of that famous character in fiction, Allan Quatermain.

His strange adventure chronicled in this highly imaginative story has to do with his search, in company with an American physician, for a unique flower of marvellous beauty and priceless value, presided over in the wilds of South Africa by a "white goddess" and guarded by a monstrous ape, revered by the natives as a god.

### Railroads: Finance and Organization

By William Z. Ripley, Ph.D., Harvard University. With 29 Maps and Diagrams. 8vo. \$3.00 net.

This treatise (the first volume published two years ago under the title, *Railroads: Rates and Regulation*, \$3.00 net) is more detailed and elaborate than a mere text-book. It aims to set forth the nature of the railroad problems of the time, commercial, fiscal, and political, while at the same time avoiding the extreme technicalities of the narrow specialist.

### The Graves at Kilmorna

A Story of '67

By Canon P. A. Sheehan, Author of "My New Curate," "Luke Delmege," etc. \$1.35 net.

"The Irish history of about fifty years ago woven into an entertaining romance."—*Boston Transcript*.

### Footfalls of Indian History

By the Sister Nivedita (Margaret E. Noble) 6 Colored Plates and 22 other Illustrations. \$2.00 net.

Deals with the re-interpretation of the great ages of Indian History, in relation especially to the social and religious consciousness of the Indian people. It includes reproductions in color from water colors by Tagore, the first of living Indian artists, and others.

### Child Study

With Special Application to the Teaching of Religion.

By the Rev. G. H. Dix, M.A. Preface by the Rev. H. A. Lester, M.A., Director of Sunday School Work in the Diocese of London. \$0.50 net.

The author has had a wide experience in the problems of child study with which he deals and is an eminently practical teacher whose practice is based on sound scientific principles.

force is not to obey; the obedience of the heart cannot be forced.

No more can we found a morality upon the interest of the community, upon the notion of country, upon altruism, since it would remain to show that we should, if need be, sacrifice ourselves for the city to which we belong, or again for the happiness of others; and this demonstration no logic, no science can furnish us. And more than that, the morality of self-interest itself, that of egoism, would be powerless, since after all it is not certain that it is proper to be an egoist, and there are people who are not.

#### MORALITY NOT DEMONSTRABLE

All dogmatic morality, all demonstrative morality, is therefore doomed in advance to certain checkmate; it is like a machine having only transmitters of motion and no motive force. The moral motor, able to put in swing all the apparatus of connecting rods and gearings, can only be emotion. It cannot be proved to us that we should pity the unfortunate, but put us in the presence of undeserved misery—a sight, alas! only too frequent—and we shall feel ourselves overcome by an emotion of revolt; an energy will arise in us, which will listen to no reason and which will bear us along irresistibly and as if in spite of ourselves.

It cannot be proved that we should obey a god, even if it could be proved to us that he is all-powerful and able to crush us; even if it could be proved to us that he is good and that we owe him gratitude; there are people who believe that the right of ingratitude is the most precious of all liberties. But if we love this God, all proof will become needless, and obedience will seem to us wholly natural; and that is why religions are powerful while metaphysics is not.

When we are asked to justify our love of country by arguments we may be very much embarrassed; but picture in thought our armies vanquished, our country invaded, our whole heart will rise, tears will rush to our eyes, and we will hearken to nothing more. And if certain people today pile up so many sophisms, it doubtless is because they lack imagination. They cannot picture to themselves all these ills, and if ill chance or some punishment of heaven should make them see them with their eyes, their soul would revolt like ours.

#### SCIENCE CAN INFLUENCE MORALITY

Science cannot therefore by itself create a morality; no more can it by itself and directly vitalize or destroy the traditional morals. But can it not exert an indirect influence? What I have just said indicates how this could happen. Science may bring to birth new emotions. Not that emotions can be objects of demonstration, but that every form of human activity reacts upon the man himself and makes him a new soul.

On the other hand, science may bring into activity emotions which exist naturally in men. To use again our former comparison, tho we construct complicated assemblages of connecting rods and cranks, the machine will not go if

## A WORD TO READERS

If you are seeking a private school or camp for your boy or girl. If you wish to sell or rent your country place. If you wish information about Resorts and Travel. Read carefully the advertising columns of

THE INDEPENDENT

there be no steam in the boiler. But if the steam is there, the work the steam will do will not be always the same; it will depend upon the mechanism to which the steam is applied. In the same way, it may be said that emotion alone furnishes us a general motive power; emotion will give us the major of our syllogism, which will be, as it should be, in the imperative. On its part science will furnish us the minor, which will be in the indicative, and the conclusion will follow, which may be in the imperative. Let us examine in succession these two points of view.

And first, can science create or inspire emotions? What science cannot do, can the love of science do?

### THE INSPIRATION OF SCIENCE

Science puts us in constant relation with something greater than ourselves; it presents to us a spectacle always renewed and always more vast. Behind what it shows us so grand, it makes us divine something still more grand; this spectacle is a joy for us, but it is a joy in which we forget ourselves, and in this it is morally healthful.

He who shall have had this delight, who shall have seen, if only from afar, the splendid harmony of the natural laws, will be better disposed than another to make light of his petty, selfish interests; he will have an ideal which he will love better than himself, and this is the sole ground upon which a morality can be built. For this ideal he will work without sparing his toil and without expecting any of those gross recompenses which are everything to certain men; and when he has thus formed the habit of disinterestedness, this habit will follow him everywhere; his whole life will remain as if perfumed by it.

The greater the passion it inspires, the greater the love of truth, and is not such a love an entire morality? There is nothing which it is more important to combat than lying, because this is one of the most common vices among primitive people and one of the most degrading. When we shall have formed the habit of scientific methods, of their scrupulous exactitude, the horror of any doctoring of experiment, when we have accustomed ourselves to fear as the height of dishonor the reproach of having even innocently faked our results, when that shall have become for us an indelible professional bent, a second nature, shall we not carry into all our actions this desire for absolute sincerity, to the point of not being able to understand what makes others lie? And is this not the best way of acquiring the rarest, the most difficult of all sincerities, which consists in not deceiving one's self?

In our failures, the grandeur of our ideal will sustain us; one may prefer another to it, but, after all, is not the God of the scientist the grander as he withdraws farther and farther from us? It is true he is inflexible, and many souls will regret it; but at least he does not share our littlenesses and our paltry rancors, as does too often the God of the theologians. This idea of a power stronger than ourselves, from which we

cannot escape, and to which we must accommodate ourselves at whatever cost, may also have a salutary effect; at least this may be maintained. Would it not be better if our peasants believed that the law can never bend, in place of believing that the Government will bend it in their favor, if only they invoke the intercession of a sufficiently powerful deputy?

Science, as Aristotle says, has as object the universal; in presence of a particular fact it will wish to know the general law, it will aspire to a generalization more and more extended. By looking from afar, we become far-sighted, so to say; we no longer see the little, and no longer seeing it, we are not in danger of making it the aim of our life. So we shall find ourselves naturally inclined to subordinate particular interests to general interests, and this again is a kind of morality.

### THE SERVICE OF SCIENCE

And then science renders us another service. It is a collective work and cannot be otherwise. It is like a monument whose construction demands ages and where each must add a stone; and sometimes this stone costs him his whole life. It gives us, therefore, the feeling of necessary coöperation, of the solidarity of our efforts and those of our contemporaries, and even of those of our predecessors and our successors. We feel we are working for humanity and so humanity becomes to us more dear.

So much for one side, now for the other. If science no longer seems to us powerless to influence the heart, indifferent as to morals, may it not have an evil influence as well as good? And first, since every passion is exclusive, will it not make us lose sight of everything but itself? The love of truth is doubtless a grand thing, but what if, to follow it, we sacrifice things infinitely more precious, such as goodness, pity, love of our neighbor? At the news of any catastrophe, of an earthquake, we shall forget the suffering of the victims to think only of the direction and amplitude of the shocks; we shall see in it almost a piece of good fortune if it has brought to light some unknown law of seismology.

### THE VIVISECTION QUESTION

Here is an impressive example. The physiologists practise vivisection without scruple, and this is a crime which, in the eyes of many old ladies, no past or future benefits of science can ever atone for. According to them, biologists, in showing themselves pitiless toward animals, must become savage toward mankind. Beyond doubt, they are mistaken; I have known biologists who are most gentle.

The question of vivisection merits a moment's consideration, tho it leads me a little away from my subject. We have here one of those conflicts of duty which constantly occur in practical life. Man cannot renounce knowledge without lowering himself; and this is why the interests of science are sacred, and also because of the ills it may cure or prevent, whose mass is incalculable. On the other hand, suffering is impious (I do

not say death, I say suffering). Altho the inferior animals are doubtless less sensitive than man, they deserve pity. It will only be by skew reckonings that one can escape this. Even in *anima vili*, the biologist should undertake only experiments really useful; very often also there are ways of reducing the pain to a minimum and these he should use. But in this regard each must rely on his conscience; all legal interference would be inopportune and somewhat ridiculous. Parliament, they say in England, can do anything - except change a man into a woman; it can do anything, I shall say, except render a competent judgment in a scientific matter. There is no authority which can lay down rules to decide whether an experiment is useful.

#### SCIENCE NOT THE ONLY MEANS

What ought we to conclude? Science, understood broadly, taught by masters who know and who love it, may play a very useful and very important part in moral education. But it would be wrong to wish to give science an exclusive rôle. It may bring to birth beneficent emotions, which may serve as moral motor; but other disciplines can do the same. It would be stupid to deprive ourselves of any aid; with all their united forces we shall not have too much. There are those who do not comprehend scientific matters. It is a fact of common observation that in all classes there are scholars who are "strong" in literature and who are not "strong" in the sciences. What an illusion to believe that if science does not speak to their intellect it can appeal to their heart!

I arrive at the second point. Not only may science, like every mode of activity, engender new emotions, but it can erect a new structure upon those which spontaneously take birth in the heart of man. We cannot conceive a syllogism with the two premises in the indicative and the conclusion in the imperative; but we can conceive them built upon the following plan: Do this; now, if one does not do that, one cannot do this, therefore do that. And such arguments are not beyond the range of science.

The emotions upon which morals may rest are of very diverse nature; they are not all met to the same degree in all souls. With some people certain emotions predominate, and others there are with whom other cords are always ready to vibrate. Some will be above all sensitive to pity; they will be moved by the sufferings of others. Others subordinate everything to the social harmony, to the general prosperity; or still again, they desire the grandeur of their country. Others perhaps will have an ideal of beauty, or they will believe our first duty is to perfect ourselves, to seek to become stronger, to render ourselves superior to things, indifferent to fortune, and not to lose rank in our own eyes.

All these tendencies are laudable, but they are different; perhaps thence will arise a conflict. If science shows us this conflict is not to be feared, if it proves that we cannot attain one of these aims without indorsing the other (and that

## Boston Safe Deposit & Trust Co.

*In Active Business since 1875*

¶ Assumes the care of property of those going abroad, collecting coupons, dividends, interest and rents.

¶ Pays interest on deposits subject to check.

is within its province), it will have accomplished a useful work; it will have borne precious aid to the moralists. These troops which before fought in dispersed order, and where each soldier marched toward a particular objective, will now come to close ranks, because they will have been shown that the victory of each is the victory of all. Their efforts will be coördinated, and the unconscious crowd will become a disciplined army.

#### THE HARMONY OF THE UNIVERSE

Is it in this direction that science is advancing? It is permissible to hope so. Science tends more and more to show us the solidarity of the different parts of the universe, to unveil for us its harmony. Is this because the harmony is real, or because it is a need of our intellect, and consequently a postulate of science? This is a question I shall not attempt to decide. Always science goes on toward unity and makes us go toward unity. Just as it coördinates particular laws and subordinates them to a more general law, will it not also reduce to unity the intimate aspirations of our hearts, in appearance so divergent, so capricious, such strangers one to another?

But if it fails in this task, what danger, what disillusion! May it not do as much harm as it could have done good? These affections, these sentiments, so frail, so delicate, will they bear analysis? Will not the least light show us their vanity and shall we not run against the eternal what is the use? What is the use of pity, since the more we do for people the more they demand, and consequently the more unhappy they are with their lot; since pity not merely can make only ingrates—that matters little—but since it can only make embittered souls? What is the good of love of country, since its grandeur is most often only a brilliant misery? What is the use of seeking to perfect ourselves, since we live only a day? What if, by ill chance, science should throw the weight of its authority on the side of these sophisms!

And then our souls are a complex tissue where the threads formed by the associations of our ideas cross and tangle in every direction; to cut one of these threads is to run the risk of making vast lacerations, which no one could foresee. It is not we who have made this tissue, it is a legacy from the past. Often our most noble aspirations thus find themselves bound, without our knowing it, to the most superannuated and the most ridiculous prejudices. Science goes to destroy these prejudices; this is its natural task, this is its duty. Will not the noble tendencies which old habits had bound up with them suffer from this?

In strong souls, doubtless no! But there are not only heroic souls, clairvoyant spirits; there are also simple souls who are in danger of not standing the test.

#### WILL SCIENCE INJURE MORALS?

Some therefore think that science will be destructive; they fear the ruin it will make and dread lest, where it shall

have passed, society can no longer survive.

Is there not in these fears a sort of internal contradiction? If it is scientifically proved that such or such a custom, regarded as indispensable to the very existence of human society, had not in reality the importance attributed to it and deceived us only by its venerable antiquity, if that be proved, admitting this proof to be possible, will the moral life of humanity be shaken? One of two things, either this custom is useful, and then a reasonable science cannot prove that it is not; or else it is useless and we should not regret it. From the moment that we place at the foundation of our syllogisms one of those generous emotions which engender morality, it is still this emotion, and consequently it is still morality which we must find at the end of our whole chain of reasonings, if this has been conducted in accordance with the rules of logic. What is in danger of perishing is the non-essential, that which was merely an accident in our moral life; the sole important thing cannot fail to be found in the conclusions since it is in the premises.

We should only dread incomplete science, that which deceives itself; that which lures us with vain appearances and thus induces us to destroy what we would afterward gladly reconstruct when we are better informed and when it is too late. There are people who are infatuated with an idea, not because it is right, but because it is new, because it is the fashion. These are terrible destroyers, but they are not—I was about to say they are not scientists, but I recognize that many of them have rendered great services to science. They are therefore scientists, only it is not because of this fact, but in spite of it.

#### THE DANGERS OF SEMI-SCIENCE

True science dreads hasty generalizations, theoretical deductions. If the physicist distrusts them, even tho those with which he has to do are coherent and solid, what should the moralist, the sociologist do, when the so-called theories he finds before him reduce to raw comparisons like that of societies with organisms! Science, on the contrary, is and can be only experimental and experiment in sociology is the history of the past. This is tradition, which we doubtless should criticize, but of which we must not make *tabula rasa*.

From a science animated by the true experimental spirit, morality has nothing to fear. Such science respects the past. It is opposed to that scientific snobbery, so easily duped by novelties; it advances only step by step, but always in the same direction and always with good sense. The best remedy for a semi-science is more science.

There is still another way of conceiving the relations of science and morality; there is no phenomenon which may not be the object of science, since there is none which cannot be observed. The moral phenomena are no more exempt than others. The naturalist studies the communities of ants and of bees and studies them with serenity. Just so the scientist seeks to judge of men as

if he were not a man; to put himself in the place of some distant inhabitant of Sirius, so that villages will be only ant hills. This is his right, this is his business as scientist.

#### THE SCIENCE OF MORALS

The science of morals will be first purely descriptive. It will teach us the manners of men, and we shall say what they are without speaking of what they should be. It next will be comparative; it will take us about in space to make us compare the morals of different peoples, those of the savage and of the civilized man, and also in time, to make us compare those of yesterday and those of today. It will seek finally to become explanatory, and this is the natural evolution of every science.

The Darwinists will try to explain to us why all the known peoples submit to a moral law, by telling us that natural selection has long ago caused those to disappear who were so maladroit as to seek to escape it.

The psychologists will explain to us why the precepts of morality are not always in accord with the general interest. They will tell us that man, carried along by the whirlwind of life, has not the time to reflect upon all the consequences of his acts; that he can only obey general commandments; that the simpler these are the less they will be discussed, and that, for their rôle to be useful, and consequently for selection to create them, it suffices that they accord *most often* with the general interest.

The historians will explain to us how, of the two moralities, that which subordinates the individual to society and that which pities the individual and proposes to us as aim the happiness of others, this second it is which incessantly progresses as societies become vaster, more complex, and, all things considered, less exposed to catastrophes.

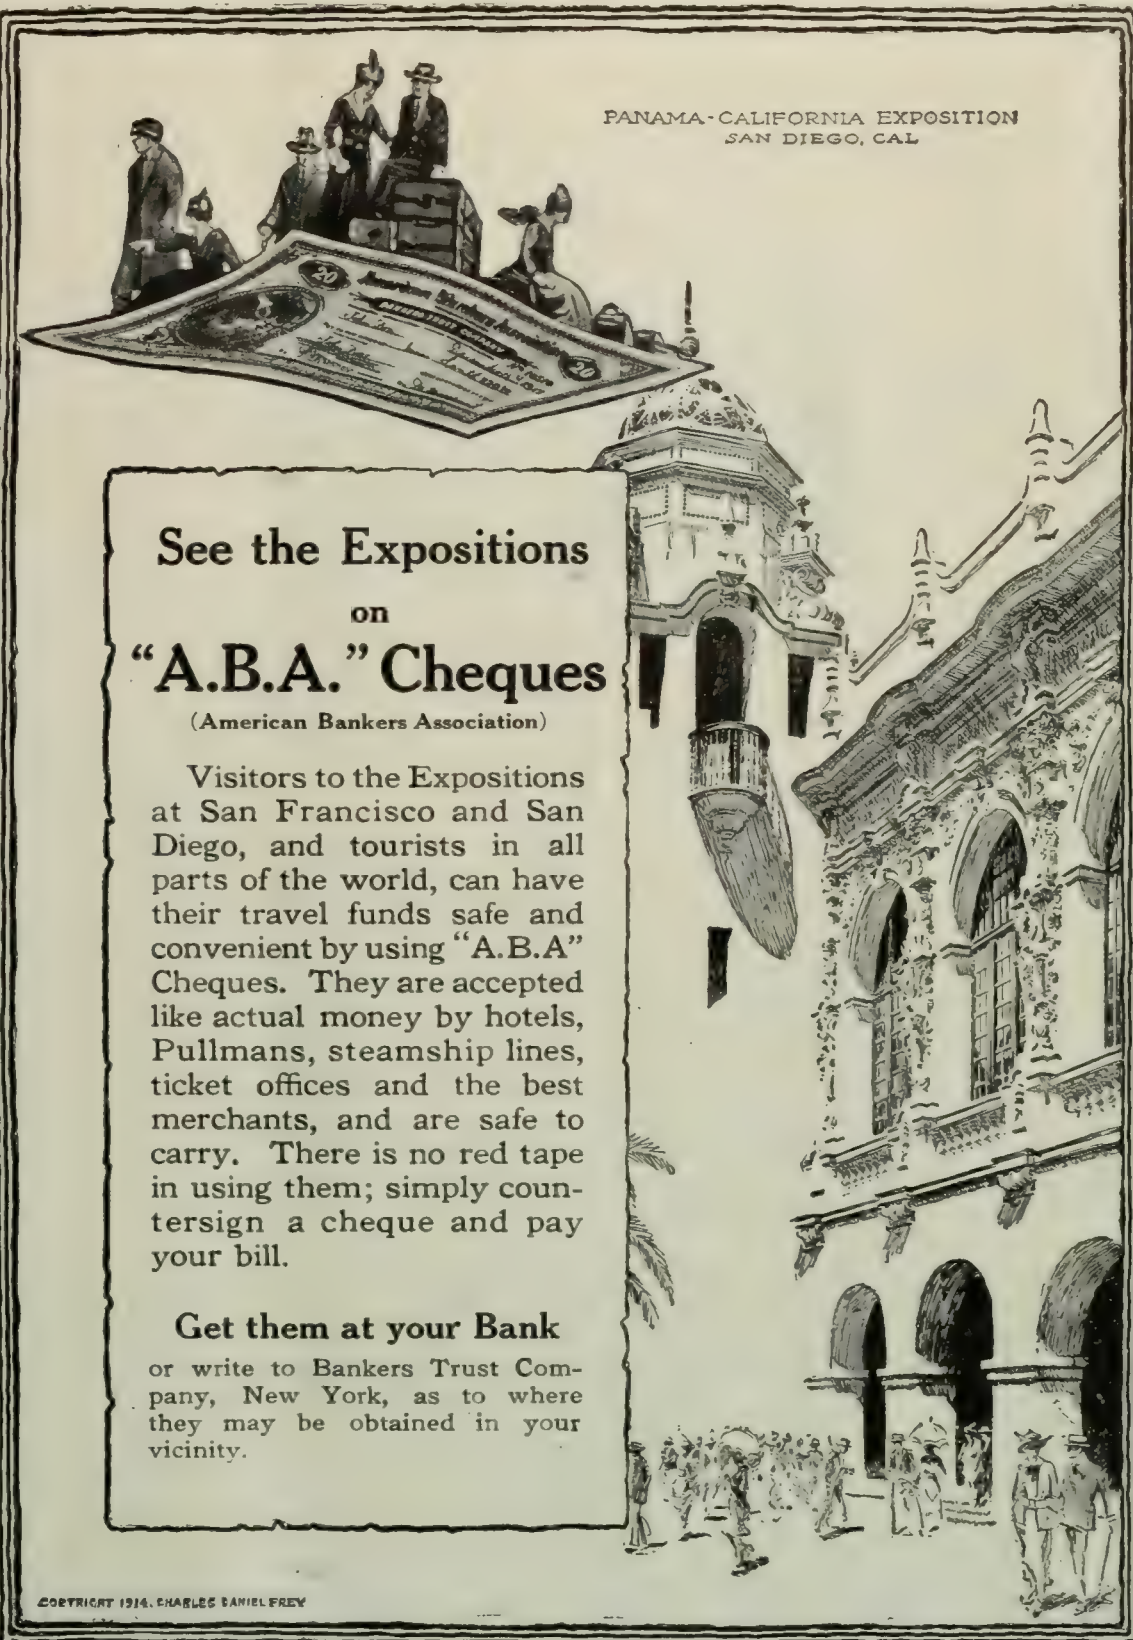

This science of morals is not morality; it never will be. It can no more replace morality than a treatise on the physiology of digestion can replace a good dinner.

But that is not the question. It is not morality, but can it be advantageous, can it be dangerous to morality? Some will say that to explain is always in a certain measure to justify, and this may be readily sustained. Others will say, on the contrary, that it is dangerous to show us morals differing according to races and latitudes; that this may teach us to discuss what should be blindly accepted, to habituate us to perceive contingency where it is important that we see only necessity. And they as well are not altogether wrong. But frankly, is this not to exaggerate the influence upon men of theories only skin deep, of abstractions which always remain exterior to them?

#### SCIENCE IS DETERMINISTIC

I cannot, however, pass over in silence an important point, despite the brief time remaining to discuss it. Science is deterministic; it is so *a priori*; it postulates determinism, since otherwise it could not exist. Moreover, it is deterministic *a posteriori*; if it began

by postulating determinism as an indispensable condition for its existence, it proves it afterward just by existing, and each of its conquests is a victory for determinism. Perhaps a reconciliation is possible. Can we admit that this forward march of determinism will be continued without stop and without recoil, without knowing any insuperable obstacle, and that yet we have not the right to pass to the limit, as we mathematicians say, and to infer absolute determinism, since at the limit determinism would vanish into a tautology or a contradiction? This is a question studied for ages without hope of solving it, and I cannot even dip into it here. But we are facing a fact; science, right or wrong, is deterministic; everywhere it penetrates it introduces determinism. So long as it is only a question of physics or even of biology, this is unimportant. The domain of conscience remains inviolate. What will happen when morality in turn shall become the object of science? Science will necessarily imbue morality with determinism, and this beyond doubt will be its ruin.

Is all despair, or if some day morality should accommodate itself to determinism, could it so adapt itself without dying from the effects? So profound a metaphysical revolution would doubtless have much less influence upon morals than we think. It is of course understood that penal repression is not in question. What is called crime or punishment, would be called sickness or prophylaxis, but society would retain intact its right, which is not to punish, but simply the right of self-defense. What is more serious is that the idea of merit or demerit would have to disappear or be transformed. But we should continue to love the good man, as we love all that is beautiful; we should no longer have the right to hate the vicious man, who would then inspire only disgust; but is hate necessary? Enough that we do not cease to hate vice.

Apart from that, all would go on as in the past. Instinct is stronger than all metaphysics, and even tho one should have laid it bare, even if one should understand the secret of its force, its power would not thereby be weakened. Is gravitation less irresistible since Newton? The moral forces which guide us would continue to guide us.

#### FREE WILL IN ACTION

And if the idea of liberty is itself a force, as Fouillée says, this force would hardly be lessened if ever the scientists should prove that it rests only upon an illusion. This illusion is too tenacious to be dissipated by any arguments. The most ultra determinist will long continue to say in everyday conversation "I will" and even "I ought," and likewise to think it with the most powerful part of his soul, that which is not conscious and which does not reason. It is just as impossible not to act as a free person when one acts, as it is not to reason as a determinist when one creates science.

The phantom is therefore not so redoubtable as was said, and there are perhaps other reasons also not to fear

it; it may be hoped that in the absolute all is reconciled and that to an infinite intelligence the two attitudes, that of the man who acts as if he were free and that of the man who thinks as if there were no freedom, would seem equally legitimate.

There is not and never will be scientific morality in the proper sense of the term, but science may be in an indirect way an auxiliary of morality. Science broadly understood can only be of service to it; semi-science is alone to be dreaded. On the other hand, science cannot suffice, because it sees only a part of man, or, if you prefer, it sees all, but it sees all with the same bias; and moreover, because it is needful to think of the minds which are not scientific. Again, the over-wrought fears, the over-great hopes, seem to me equally chimerical; morals and science, in proportion as they progress, will know how to adapt themselves one to the other.

PEBBLES

“What are they going to call their baby?”  
“I don’t know. They named it Reginald.”  
—Gargoyle.

“They are always bragging of their ancestors.”  
“Yes; from the way they talk you would almost imagine they had selected them themselves.”—Detroit Free Press.

Little Girl (who has been sitting very still with a seraphic expression)—“I wish I was an angel, mother!”  
Mother—“What makes you say that, darling?”  
Little Girl—“Because then I could drop bombs on the Germans!”—Punch.

“Your legal department must be very expensive.”  
“It is,” sighed the eminent trust magnate.  
“Still, I suppose you have to maintain it?”  
“Well, I don’t know. Sometimes I think it would be cheaper to obey the law.”—Birmingham Age-Herald.

The good people of the church gave the poor children of the parish a bountiful New Year’s dinner, and the delight of the youngsters was much more manifest than their table manners. One little fellow was discovered clutching a doughnut in one fist and a lump of steak in the other. He was reproved for his breach of etiquette and took the reproach very meekly. But a moment later he turned to the diner next him and remarked regretfully: “The trouble about these here table manners is that they was invented by somebody who wasn’t never really hungry!”—Argonaut.

Supper was in progress, and the father was telling about a row which took place in front of his store that morning:  
“The first thing I saw was one man deal the other a sounding blow, and then a crowd gathered. The man who was struck ran and grabbed a large shovel he had been using on the street, and rushed back, his eyes blazing fiercely. I thought he’d surely knock the other man’s brains out, and I stepped right in between them.”  
The young son of the family had become so hugely interested in the narrative as it proceeded that he had stopped eating his pudding. So proud was he of his father’s valor, his eyes fairly shone, and he cried:  
“He couldn’t knock any brains out of you, could he, father?”  
Father looked at him long and earnestly, but the lad’s countenance was frank and open.  
Father gasped slightly, and resumed his supper.—Philadelphia Public Ledger.

# THE MARKET PLACE

## WAR EXPORTS AND CREDITS

In an active stock market, with rising prices, last week, the course of Bethlehem Steel Company shares was the subject of much comment and some speculation. The week's business was 2,635,243 shares (of all securities), against only 1,085,000 in the preceding week, and the net gain for the most prominent issues was in the neighborhood of four points. But the advance for Bethlehem shares was 8%. This is the company whose president is Charles M. Schwab, and everybody knows that his factories have been at work for months on large foreign orders for war supplies. The company's report for the year 1914, published last week, showed that the net earnings had been large enough to permit a dividend of thirty per cent on the common stock; that at the end of the year the orders on hand amounted to \$46,000,000, and that in no preceding year had so many men been employed or so large a sum in wages been paid. It was the Bethlehem Company's best year. The report was in sharp contrast with that of the Steel Corporation.

By such orders as the Bethlehem Company has received, and the large purchases of the belligerents in the open market, our exports have been so increased that in February they exceeded imports by \$173,604,366. To this great sum the excess has risen from only \$17,000,000 in September. Some expected that January's favorable balance of \$145,000,000 would not be surpassed, but February, altho a short month, has shown an addition of \$23,000,000. The total for the war months, up to March 1, has been \$577,000,000, but \$450,000,000 of it must be assigned to the three months of December, January and February. This great excess of exports is not due wholly, of course, to war material. Exports of agricultural products in February were larger by 110 per cent than those of February a year ago.

The largest war order reported last week was one for \$80,000,000 worth of shrapnel shells, given by Russia to the Canadian Car and Foundry Company. Much of the work will be done in this country, where, as we said last week, an air-brake company has taken \$30,000,000 of the total. An advance in the price of the Du Pont Powder Company shares (which are not bought and sold on the New York Stock Exchange) was connected with a report that the company had undertaken to make, for a high price, 100,000,000 pounds of smokeless powder for the British Government. On the steamship "Gascogne," 1438 horses were shipped from New York for Bordeaux. For some time past one firm has been exporting horses at the rate of about 5000 a week. At Vancouver eighteen long-range guns made here were awaiting shipment to Russia by way of

Vladivostok. These are like the guns used at the siege of Przemyśl. After inquiry our Government expressed the opinion that Mr. Schwab, of the Bethlehem Company, had kept his word about the shipment of submarines. It was admitted, however, that he was at liberty to ship engines and other parts of such vessels.

The pressure for payment of the foreign debt increased and the volume of bills offered for negotiation depressed exchange on London to 4.78½. Various projects for meeting the growing obligations without shipping gold were under consideration. Mr. J. P. Morgan, in London, was conferring with Sir George Paish and other representatives of the British Government. It was understood that arrangements would be made for a British credit here of \$100,000,000, and probably for a French credit of \$50,000,000. But gold continued to come in, mainly from the Bank of England's reserve in Canada. In all, nearly \$45,000,000 in gold has been received since January 1. It is said that three-quarters of the notes representing the German loan of \$10,000,000 were marketed in Philadelphia, with an understanding that the money was to be expended only for non-contraband goods, but it does not yet appear that they can be transported safely. The loan sought here by Argentina is one of \$50,000,000.

## THE RAILROADS

Several of the leading business men of Pennsylvania appeared and testified before a joint legislative committee at Harrisburg last week in support of the bill to repeal the railroad full crew law, the enforcement of which has cost the railroad companies \$4,878,764, or about \$1,400,000 a year. These gentlemen presented for the consideration of the committee resolutions (favoring repeal) adopted by 146 organizations—boards of trade, chambers of commerce, grange associations, town councils, etc.—and pointed to the attitude of the newspapers of the state. These, with few exceptions, ask for repeal, and for the proposed accompanying legislation which is designed to empower the state's Public Service Commission to decide how many men shall be employed on each train. There are indications that the repeal bill will be passed.

On the day preceding this hearing there was one of the same kind at the New Jersey capital, where a joint committee of the Legislature listened to arguments for and against repeal of that state's full crew law. At both hearings it was pointed out that the statutes required the same number of extra men on thru passenger or freight trains, making only one stop, or two stops, in the state, as must be used on trains that stop at every station. At Trenton,

as a result of the hearing, it was virtually agreed that for the pending repeal bill there should be substituted one which gives to the Public Utility Commission power to say how many men there must be in each train crew. Such a bill ought to be passed at Trenton and at Harrisburg.

There are signs of a change in public opinion with respect to the railroads. One sign was the repeal, at the polls, in November, of Missouri's full crew law. The Supreme Court at Washington, three weeks ago, announced two decisions annulling state legislation which was supported by public opinion at the time of its enactment, but the rejection of which now excites no protest. One of the annulled laws was West Virginia's statute, eight years old, making the passenger rate two cents a mile. The other was the law of North Dakota, making a maximum rate for coal in carload lots. In each case there was convincing evidence that the restriction either caused the business to be done at a loss or permitted only a small and inadequate profit.

Those who promoted the passage of the full crew laws, which now appear to be doomed, are now, in several states, supporting a movement for legislation that will limit the length of trains. Obviously the purpose is to increase the number of trains and, necessarily, the number of men employed. But the railroad companies have expended large sums in reducing grades and modifying curves in order that longer and heavier trains could be hauled. The power of locomotives, and the cost of them, have been increased to take advantage of these improvements. If it be desirable, in the public interest, that the companies should be subjected to official regulation with respect to the length of trains, there should be no limiting statute, but supervisory power should be given to public service commissions. We are inclined to think that interference with the companies concerning this matter is not required. And we are confident that public opinion will not support interference by statute.

The following dividend is announced:  
Standard Milling Company, preferred, 2½ per cent, payable April 15.

An engineer says that the usual life of a locomotive is thirty years. Perhaps it would live longer if it didn't smoke so much.—*Boston Transcript*.

"I wonder what has become of the old-fashioned dime novel?" remarked the old fogey.

"It has gone up to a dollar and a half," replied the grouch.—*Cincinnati Enquirer*.

Wesley Kading, who is employed in a moving-picture theater in Sioux Falls, arrived Saturday to spend a two weeks' vacation shooting and visiting his parents and friends.—*Webster Reporter*.

Ejaculation of a Vacationist: Oh, Lord! I have left behind all the things I ought to have taken and I have taken all of the things I really didn't want, and there is not much health in me.—*Life*.

"We are going to give up having Johnny get an education."

"For what reason?"

"Well, we can't get him sterilized every morning in time to go to school."—*Southern Woman's Magazine*.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....\$27,964,578,109.00

Received premiums thereon to the extent of.....287,324,890.99

Paid losses during that period 143,820,874.99

Issued certificates of profits to dealers.....90,801,110.00

Of which there have been redeemed.....83,811,450.00

Leaving outstanding at present time.....6,989,660.00

Interest paid on certificates amounts to.....23,020,223.85

On December 31, 1914, the assets of the company amounted to.....14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

# Insurance

Conducted by  
**W. E. UNDERWOOD**

## EFFECTS AND CAUSES

There are certain classes of practical business men who, by reason of the special duties they are called upon to perform—duties requiring expert knowledge and ripe experience—are in a favorable position to consider impartially the apparently difficult questions which make up the body of controversies too continuously subsisting between the fire insurance companies and a small but very audible and influential portion of the public. These men are very intimate with, but wholly disconnected from, the fire insurance business. They are represented by such persons as Mr. Arthur Hawxhurst, insurance manager for Marshall Field & Co., the members of the American Credit Men's Association, a few of the state fire marshals and the commissioners of insurance, particularly of the important industrial states of New York, Pennsylvania, Massachusetts and Connecticut.

Mr. Hawxhurst and the members of the Credit Men's Association know precisely the value of every fire insurance policy for sale in the United States. They know to a fraction what service any given company can render, and what that service is worth. Nor are they inclined to overvalue the one or the other. Insurance is one of the instrumentalities they utilize in the prosecution of their business, and for which they are willing to pay a just price. As practical men, they have no prejudices for or against it, and desire that it shall be neither overpaid nor underpaid. If they were compelled to make a choice here, they would probably lean to a larger rather than to a smaller price for the service, on the theory that it is better to pay too much than too little in the interest of security. They understand that unquestioned solvency in the insurer depends upon adequate compensation for the service he renders, and that without this there can be no permanent security.

The thoughtful contingent among the membership of the Fire Marshals' Association of North America gather at first hand the statistics which represent to our minds the original value of our disgracefully large annual ash heap. They know in detail how it was produced and how much of it is due to preventable causes. They have some knowledge of the relations of the fire insurance companies to this subject and of the innumerable difficulties they experience in connection with it.

The commissioners of insurance are in constant touch with every phase of the financial end of the fire insurance problem, and are as familiar with every item of the companies' accounts as if they were their official bookkeepers. The

## DIVIDENDS

## American Telephone and Telegraph Co.

A dividend of Two Dollars per share will be paid on Thursday, April 15, 1915, to stockholders of record at the close of business on Wednesday, March 31, 1915.  
 G. D. MILNE, Treasurer.

**D. C. HEATH & COMPANY**  
 BOSTON  
 Preferred Stock

The regular quarterly dividend of one and three-quarters per cent. has been declared by the Directors of this Corporation, payable April 1, 1915, to preferred stockholders of record March 25, 1915. Checks will be mailed.

WINFIELD S. SMYTH, Treasurer.

commissioners know to a penny what is taken in and its source; what is paid out and why. They are the guardians of corporate solvency. The proficient among them know, and do not hesitate to proclaim, that the guaranty of security rests on adequate rates.

All the classes here described agree that the cost of fire insurance cannot, in the plain nature of things, be lowered until the waste by fire is reduced. Except as indicated, none of them has any interest whatever in the fire insurance business. They should be, and are, unbiased and dispassionate observers and judges. Except an occasional criticism of the companies' expense accounts, due principally to the compensation paid for agents' services and the taxation of premiums, there is but little fault found with the manner in which the business is conducted. That rates are too high everywhere, is admitted by all who possess any information on the subject, but that they can be reduced by legislation restrictive of the operations of the insurers is as fallacious as would be the attempt to add a cubit to one's stature by merely taking thought. The legislation that will achieve this object will be of that constructive character which results in surely conserving against the attacks of fire the material wealth of the country.

A. D. W., Agricultural College, N. D.—Suggest that you write Franklin H. Wentworth, secretary, National Fire Protection Association, 87 Milk street, Boston, Mass.

I. C. P., Monmouth, Ore.—The company you inquire about is financially sound and capably managed. Their methods of securing business are not superior, nor, in my opinion, less expensive than those of other companies.

According to figures made public by the Texas State Fire Insurance Commission, from December 10, 1910, to March 12, 1915, there were some 48,000 fires in the state, of which 28,016, or fifty-eight per cent, were from preventable causes.

J. R. M., Cedar Falls, Ia.—The company you name is small but sound actuarially and financially. Your present policy ought to show good average results. You are in error in believing you can secure \$2000 20-payment life at about the same cost as \$1000 ordinary life. The rates per \$1000 in your company, age twenty-five (I haven't the figures at age twenty-two), are: ordinary life, \$19.18; 20-payment life, \$28.30. When you say 20-payment life you probably mean 20-year term, a form of policy inadvisable for a young man.

M. R. B., Hermansville, Mich.—The company you mention is entitled to your confidence and you will make no mistake in accepting its policies. It is a stock company, with \$1,000,000 capital, issuing participating and non-participating policies. The fundamental difference between mutual and stock life insurance companies lies in the fact that the former are or can be controlled by the policyholders, while the latter are controlled by their stockholders. Again, all savings made by mutual companies revert, in the form of dividends, so-called, to the policyholders, while on the non-participating contracts of stock companies they belong to the stockholders. These non-participating policies, however, are issued at lower premium rates than are those charged on the same forms of participating policies. Most of the stock companies write participating policies all the savings on which go to the holders.

## GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

## THE SOLDIER SOUL

BY MARGUERITE O. B. WILKINSON

A clarion call had wakened me  
When day broke,  
And the wind spoke,  
Had wakened me and summoned me  
To the hillside and the climb;  
And I made answer gaily,  
When day smiled,  
Sun-beguiled,  
That I would follow jauntily  
The flaunting flags of Time.  
I followed up the hill-path  
Cheerily fighting,  
And heard, o'er stormy cañons  
The morning fanfaron.  
I was glad with my comrades,  
Veterans battle-marred,  
Young souls yet unscarred;  
Ah, but my colors soon were struck  
And now my mates are gone!

Life smote me sore and challenged me  
When day burned,  
And the wind turned.  
But I had dreamed all night  
Of banners buoyant in the sun;  
Wherefore with tireless heart I kept  
The path that ran before me,  
The stubborn path,  
The stony path,  
Of mighty works begun.  
Long and long I followed it,  
Doggedly fighting,  
My wounds bled,  
My heart bled,  
Upon the rugged hight—  
My wounds bled,  
My heart shed  
Tears of blood and waning hope,  
Of large loss and little gain  
Upon that desperate hight.  
When the souls shine out to meet Him,  
Burn with joy and glow to greet Him,  
Will God have room for failures  
In His everlasting light?  
I wonder; for the fanfaron  
Was muted with the day;  
And I, who once was prone to sing,  
Have need of breath to pray!

Yet I, who chose the hill-path,  
When day broke  
And the wind spoke,  
When the sun shone fair  
On my gold hair,  
I will not yield my place!  
The embattled upland way is mine—  
No quarter and no grace!  
Day's lurid red  
Fades overhead—  
Faintly the winners sneer—  
My wounds are hot—  
It matters not—  
Unconquered I, who met defeat,  
Unconquered I am here!

And I shall keep the hill-path,  
While the wind sighs,  
And day dies.  
For well I know the climb was good;  
The fanfaron was brave.  
And, if I stumble into light,  
Or rest unconquered thru God's night,  
The Banner of Eternity  
Shall halt beside my grave!

## INDEPENDENT OPINIONS

Our more or less serious contem-  
porary, *Life*, does not believe in viceless  
efficiency:

A small cup of black coffee, without cream  
or sugar, sipped after the heavy meal of the  
day, perhaps will not seriously harm a person of  
robust constitution. — *Edward Earle Purinton,*  
*efficiency expert, in The Independent.*

No, not fatally. "However, we do not be-  
lieve in taking even this," says The Inde-  
pendent's expert, and goes on to recom-  
mend four kinds of denatured coffee, doc-  
tored milk and grape juice.

It was the lawyer-humorist of Third Ave-  
nue who said as the Best Man in Town  
came into his club: "Here comes Thomas  
Best, sodden with virtue and without one  
redeeming vice."

Lord save you, Edward Purinton, from  
becoming sodden with efficiency! Being  
drowned in Malmsey is nothing to it. Strug-  
gle, poor victim, while you can, and if you  
can acquire a redeeming vice, oh, trot it  
out!

From the response of our readers to  
the editorial of March 22 we infer that  
we were not mistaken in believing that  
in spite of appearances a faith in re-  
publicanism is still deeply imbedded in  
the hearts of the American people. That  
the expressions of appreciation come  
from the West does not warrant one in  
assuming that the East is recreant to  
the fundamental principle upon which  
our nation was established. We select  
for quotation letters from a professor  
of history, a railroad official and a real  
estate dealer:

I wish to thank you for the very fine  
article of the current issue. It seems to me  
to be the best statement of what the real  
American attitude toward European na-  
tions should be that has appeared since  
the present terrible struggle began. It  
ought to make Americans take stock of  
their Americanism and inquire whether  
they have been drawing too heavily on  
their sympathy for this or that power. I  
am sure this article will make us all revise  
our estimate of our own country.

ELLIS H. ROGERS  
*Tacoma, Washington*

Permit me to say that "And There Shall  
Be No More Kings" is one of the most con-  
vincing, most consistent articles it has been  
my pleasure to read in your publication.  
You have left no opportunity to speculate  
as to your contention in the matter. When  
the moment of opportunity comes in war-  
stricken Europe if you could place a copy  
of that article in the hands of those who  
are fortunate enough to survive it might  
stimulate them to action sufficiently to  
bring about without bloodshed that which  
we hold so dear, republicanism.

R. T. WILLIAMS  
*Ashton, South Dakota*

I am so pleased with your editorial that  
I want to tell you so. "And There Shall Be  
No More Kings" and then must follow the  
sequel; And there shall be less sorrow and  
more happiness for the people in general.  
I have long felt just as you have said  
that a king is a "tyrant" in spite of any  
semblance of showing to the contrary. I  
have no tolerance for any form of title as  
claimed by snobbish nobility—no sir! Sure-  
ly there is a God in heaven and things will  
be leveled "down" and "up."

*Council Bluffs, Iowa* J. M. OURSLER

In a recent editorial we called at-  
tention to the use of the phrase "go-  
ing west" for "dying" among the Brit-  
ish troops in France, and we referred  
to the last lines of *Hiawatha* as evidence  
of the employment of the same meta-  
phor among the Indians. More to the  
point is the first hand evidence of  
Judge A. McG. Beede of North Dakota,  
who has lived for thirty-eight years in  
the Sioux country, and sends us the  
following:

Many American Indian tribes wholly  
dissimilar in many respects have this idea.  
To an Arikara the "Spirit Village" is "in  
the west" and always on the west side of  
a river. Sioux heroes "went west" after  
the battle. They were still "tenting by  
western rivers."

Many philosophical suggestions as to the  
origin of such an idea independently in  
diversified parts of the world have been  
suggested. My old Greek professor thought  
it came from the fact that the sun sinks  
in the west. But so far as concerns Indians  
at least, I have caught the idea in its  
origin at first hand. The idea comes from  
the evening twilight mirage. Two years  
ago I wrote for the *Lewiston (Me.) Sun*  
a careful description of an evening twilight  
mirage which occurred right here where I  
am writing this letter (Hekton). In the  
west, after sunset, there were boundless  
wooded lands with tall and pleasing moun-  
tains, while a golden or soft saffron sea  
divided between here and this land. Indians  
were delighted to see once more the Makoce  
Waste (Good-Land) where people go when  
they leave this life and "this island," as  
they call America. . . . Some claimed to  
see their departed loved ones there. After  
about a half hour this view passed away.  
Old Indians told how it used to become  
visible often before the white men came  
and changed everything.

Judge Beede has translated an old  
song of the Hunk-pa-ti, or River Sioux,  
on the "land of the Evening Mirage":

There's a beautiful Island away in the west,  
It's the land of the Evening Mirage,  
And the stars and the spirits of dead men  
have rest

In the land of the Evening Mirage.

*Refrain.*

Speed away, speed away to the Island so  
blest,  
Where the spirits of dead men forever have  
rest

In the land of the Evening Mirage.

The big Man-in-the-Moonbeams is peeping  
for us.

In the land of the Evening Mirage,  
And the Grandmother-spirits are weeping  
for us,

In the land of the Evening Mirage.

*Refrain.*

# The Well-Balanced Boy

Maintaining a nice balance between Brain and Brawn in the building of a Boy calls for intelligent caution and care. Boys are not built with books or base-ball alone. They are the product of intelligent feeding combined with rational outdoor exercise. The best food for growing boys and girls is

## Shredded Wheat

It has all the tissue-forming, bone-making, brain-building material in the whole wheat grain prepared in a digestible form. The crisp shreds encourage thorough mastication which aids digestion and develops sound teeth and good gums.

Shredded Wheat is made in two forms—BISCUIT and TRISCUIT—the biscuit for breakfast with hot milk or cream, or with sliced bananas, stewed prunes, baked apples or other fruits. TRISCUIT is a Shredded Whole Wheat Wafer, eaten as a toast with butter or soft cheese—a delicious substitute for white flour bread or crackers.

## JAPAN'S PURPOSE TOWARD CHINA

A MESSAGE TO THE AMERICAN PEOPLE FROM COUNT  
OKUMA, PREMIER OF JAPAN

[ By Cable to The Independent ]

THE uneasiness and suspicion in the United States in connection with Japan's negotiations at Peking are based on misunderstanding and misinformation scattered broadcast by interested mischief makers.

When the negotiations are disclosed it will be found:

That Japan has not infringed the rights of other nations.

That Japan has adhered strictly to the principle of equal opportunity.

That Japan is not attempting to secure a monopoly in China.

That Japan is not attempting to create a protectorate over China.

That Japan is not seeking to secure in China any advantage which does not accord with the Anglo-Japanese alliance or with any treaties or undertakings with the United States.

We have fully informed the United States and the other interested Powers as to Japan's purposes.

We believe that they are satisfied.

The negotiations between Japan and China are nearing a satisfactory conclusion.

I am now willing to state publicly thru The Independent that Japan is quite confident of the rectitude and good faith of her position.

Japan is merely seeking to settle outstanding troublesome questions in a way looking toward permanent peace and good understanding.

Tokyo, April 3, 1915

## REASSURANCE FROM COUNT OKUMA

THE cablegram from the Premier of Japan which we have just received comes at the most opportune time to relieve the growing anxiety of the American people over the future of the Chinese republic. Last August when Japan entered the war and apprehension was being expressed in certain American papers over her intentions Premier Okuma sent a message thru The Independent to the American people in which he gave emphatic assurance "that Japan has no ulterior motive, no desire to secure more territory, no thought of depriving China or any other peoples of anything they now possess."

Since then momentous events have occurred. The Japanese under the leadership of Count Okuma have waged a victorious war. They have swept the Pacific free of German ships. They have besieged and captured Tsingtau, a feat only second to their capture of Port Arthur from the Russians. They have occupied certain of the German islands in the Pacific, as well as the territory of Kiao-chau in China, which had been held by Germany. The German prisoners taken at Tsingtau have been treated with a kindness and courtesy which the European belligerents are far from emulating. And finally the policy of Count Okuma, challenged by his opponents in the recent parliament, has received the endorsement of his people by a large majority in the general election of March 24.

In regard to the negotiations which have been carried on in Peking between the representatives of Japan and China since the fall of Tsingtau little is known to the public and consequently much has been surmised. According to the rumors from Chinese sources the demands of Japan involve little less than a protectorate over the whole of China, and call for the acquisition not only of extensive territory in Manchuria and Mongolia and Shantung but also for the commercial monopoly of the province of Fukien and the rich iron and coal region of the Yangtse valley, the control by Japanese advisers of Chinese finances and development and even the policing of the principal Chinese cities.

Against these rumors, circulated, it is claimed, by German agents and exaggerated by the fears of patriotic Chinese students, we can now set the authoritative statement made by the Premier.

No voice from Japan will command more respect and confidence than that of Count Shigenobu Okuma. He is the last of that remarkable group known as the Elder Statesmen who effected in 1868 the change from the old régime to the new and trained up their people in the unaccustomed ways of Western civilization and constitutional government. In 1898 he retired from office to devote himself to educational work as president of Waseda University, of which he was the founder. But a year ago, when the disclosure of the bribery of Japanese naval contractors by German armament contractors overthrew the military ministry and none of the younger statesmen were able to meet the crisis, the country turned to "the Grand Old Man of Japan" and called him from his retirement. As founder and leader of the Progressive Party and an earnest advocate of international arbitration and comity he was felt to be the best possible man to be at the helm during this worldwide storm.

The statement of Count Okuma meets squarely and

explicitly the objections which have been voiced in this country. He assures us that Japan will adhere strictly to the principle of equal opportunity, and will not attempt to establish a protectorate or secure a monopoly or obtain any advantage incompatible with our treaties.

The interests of the United States in China are twofold. First and most important is our human interest in the first Asiatic republic and our desire that it may have an opportunity to work out its own destiny in its own way without outside interference as Japan has been able to do. Second, there are our commercial interests in China, which are very great. We desire that the door be kept open for the introduction of our goods and equal opportunities afforded for Americans to assist in the industrial development of the country. In education we would do what we have done for Japan, educate the Chinese young men and women in our schools both in America and China. If Japan does not interfere with China's freedom of self-development or with the equal opportunities of other nations in China, then we have no quarrel with Japan over this question and there is no reason why the friendly relations which have always prevailed between the two countries should be impaired. We will go further and say that America ought to recognize that Japan, by reason of her geographical situation and her ethnic and linguistic affiliations with China, is especially adapted to assist in the development of China as no Western nation can. Japan stands toward China somewhat as the United States stands toward the younger and weaker republics to the south. A Japanese "Monroe doctrine" which would preserve the integrity of the Chinese republic in the way that our Monroe doctrine has preserved the republics of America against the aggression of European powers would be a great thing for the world and ought to be welcomed by Americans.

## WARRING ON NON-COMBATANTS

THE German navy has made good the scarcely veiled threat of the German Government against the lives of peaceful citizens venturing within the arbitrary "war zone" about the British Isles. Two merchant ships, the "Falaba" and the "Aguila," have been torpedoed, destroying the lives of one hundred and fifty non-combatants, not only men but women.

The act is totally without justification. It offends against international law and custom. It offends against fundamental principles of civilization. It violates the instincts of right-minded men.

The commander of the German submarine "U-16" is reported, in describing his attack on the French steamship "Ville de Lille" earlier in the war, as saying, "I saw two women and children on the deck. Of course, we couldn't torpedo a ship with women and children aboard." The commanders of two other German submarines had no such scruples. They could and did torpedo two ships with women—if not children—aboard. For these two commanders were more faithful subordinates. They knew what their Government wanted; and they put obedience to orders above every consideration of mere humanity.

The German nation is drawing a dreadful indictment against itself before the high court of civilization. Whatever its responsibility for the beginning of the Great War, since its beginning it has, by its own do

liberate act, earned the severe reprobation of the civilized world.

Germany violated the neutrality of Belgium.

It sacked Louvain.

It bombarded the Cathedral of Rheims.

It attacked unprotected towns on the British sea-coast, killing men, women and children.

It destroyed unoffending merchant ships, again killing unresisting men and women.

For these brutal acts Germany has already paid a price in the loss of the respect and sympathy of the neutral world. It deserves to pay a heavier price. No nation, no people should be able wantonly to affront civilization without reaping universal condemnation.

It is time that the neutral nations lodged with the German Government a formal protest on behalf of humanity. The nations of the world, gathered in conference at The Hague, wrote into formal agreements the best opinion of modern civilization on the rights and duties of both belligerents and neutrals in time of war. Every peaceful nation should hold it to be its high duty to demand of every nation at war the strictest observance of the rules thus adopted.

The United States, the greatest of the neutrals, has the first responsibility. We have protested already on behalf of our own material interests. We should protest with even greater vigor and solemnity on behalf of humanity and civilization.

## URUMIAH

IT might seem strange that the fate of a little city in the north of Persia, nestled on the shore of a little lake of the same name, should have so much interested the people of this country that President Wilson should have sent a special demand to the Turkish Government that American interests there should not be endangered. But it is not strange; Americans have reason to be interested in Urumiah.

It is a place of ancient fame, and the records of Assyrian wars call it Urmi. There is in the Metropolitan Museum in New York City a pyx of alabaster from a mound near Urumiah, all figured over with a scene of the worship of the sun-god, which is supposed to belong to a period of 2500 B. C. But the plains of Urumiah are famous in Christian history, for there live in the town and the villages adjacent the dying remnant of a famous Christian sect, the Nestorians, named after a Patriarch of Constantinople who was excommunicated for a heresy the very definition of which we find it difficult to understand. It had to do with the two natures in Christ, whether to be called "persons" or something else; but this was clear, that he objected to the name *Theotokos*, Mother of God, given by Cyril, of Alexandria, to the Virgin Mary. Over eighty years ago some travelers directed attention to this remnant of 70,000 "Protestants of the East," as they were called, who have no images, whose priests marry, and who add only ordination to the two sacraments. The supporters of the American Board were so much interested that in 1834 Dr. Perkins established a mission there, and the name of Miss Fidelia Fisk, who was head of the college for girls, is dear in missionary circles. The great quarto Bible which the missionaries printed there from the old Syriac manuscripts used in the churches, is now one of the rare biblical treasures. In their earlier history the Nestorians

sent missionaries to India, where they still have a remnant of churches, and to China, of which the only memorial is a famous monument inscribed in the Nestorian Syriac and the Chinese languages.

The mission of the American Board was welcomed, and was followed considerably later by a Bishops' mission from England. When the Presbyterians separated from the Congregational supporters of the American Board the mission in Syria, with headquarters in Beirut, and the Nestorian mission were taken over by the Presbyterian Board, and a strong staff of missionaries, physicians, teachers and printers has been kept there, and a special sentiment has gathered about the mission.

This is in part due to the sufferings of the people from the raids of the Kurds who have come over from the Turkish border and ravaged the villages, and, by the last accounts have even attacked Urumiah, so that 10,000, or even 15,000, Nestorians have gathered for protection crowded in the buildings of the American mission. The attacks began before the war, but this last violence has been intensified, we may suppose, from the fact that Urumiah is in Northern Persia, which by agreement with England is under Russian influence, while the Kurds are in Turkey, which is at war with Russia. It was the Turkish consul who led the latest attack, and the people have appealed to Russia for protection. Here Turkey is still filling up the measure of its iniquity, attacking the neutral state of Persia, if neutral states have any longer rights in time of war. We seem to be learning that they have none.

We cannot send a ship of war to protect our citizens in Persia, nor will we send soldiers. We send a request to the Porte by our Ambassador, asking the Turkish Government to give protection, and we hope it will be done—still Constantinople has troubles of its own just now, and we fear its arm does not reach over into Persia; and what care the Kurds for any but the robbers' law?

## THE WAR AND STRONG DRINK

THE King of England has stopped the use of strong drink by himself and the royal household as an example to the British people. Earl Kitchener has followed his example. The British Chancellor of the Exchequer has proposed national prohibition. In one morning's mail, after inviting the British people to write him their views on the subject, Mr. Lloyd George received fifteen thousand letters. England is thoroly wrought up over the subject.

The movement for prohibition in England is not primarily a moral one. It has its roots in economic conditions. With millions of its best men in the field and in the training camps, England is feeling the disastrous effects of British drinking habits as never before. The big manufacturers, especially of munitions and supplies of war, are finding their output and the efficiency of their establishments seriously reduced. Lloyd George, with characteristic exuberance, has declared that drink is a deadlier foe of the empire than Germany or Austria.

It is a phenomenon of surpassing interest. Russia as a war measure cut off at a stroke the sale of vodka. It is almost certain that in England drastic modifications in the conditions of the sale of liquor will be brought about. National prohibition, even, is not beyond the bounds of possibility. The liquor dealers, anyhow, seem to be con-

cerned over the prospect. A poster exhibited in the windows of public houses in a British town bears the following appeal, referring to the new tax imposed at the beginning of the war: "War Tax. Every half pint that has been purchased here contributes one halfpenny to the national war chest. Be patriotic and assist your country by drinking the national beverage as before." If it is to become a contest between different brands of patriotism, it is to be hoped that the appeal of the King, the Chancellor of the Exchequer and the Secretary of State for War will overbear that of the liquor sellers.

### AN APPRECIATION

IT was no mistake that made Woodrow Wilson, college president and Governor of New Jersey, the Democratic candidate for the Presidency of the United States; and there are few of any party who do not accord to him the fullest credit for the dignity and faithfulness, the independence and the general prudence and wisdom, with which he has performed its duties in a most critical period in the history of our own country and the world.

The burden resting on his shoulders has been extraordinarily heavy, heavier, says Speaker Clark, than any other President has had to carry since Abraham Lincoln; and he has borne it with sturdy strength and not with heedless ease. He has had to suffer the greatest personal loss that befalls a good man, but the country has observed no relaxation of that unflagging care which in such a position requires one to forget himself in his duty to his country. For his country he has had unusual anxiety. We refer not to our domestic politics, for that is normal, and he has carried no more such burdens than fall on any President in a time of peace; and we are glad to say that the party in opposition has treated him with critical respect. It is the international conditions that might burden and almost break the shoulders of Atlas.

It is a simple thing to declare war, and when war comes the way is straight forward to carry it on. It is harder to keep out of war with Mexico, when Mexico is a welter of anarchy, its people not only fighting with each other, but robbing and killing our own citizens and those of other nations whom we are bound equally to protect. Mexico is our next neighbor, and a suspicious neighbor, and her disturbances disturb us and provoke our people, and it is a most difficult question to decide when intervention might become a duty. President Wilson has kept us out of war. He has sought for peace. He has withstood provocation and endured wrong with patience and hope; and he has resisted the urgency of not a few of our own people who have suffered with no little indignation. This is a very weighty burden he has had to carry. His one noble resolve has been to avoid war, and this he has achieved by all the arts of peaceful diplomacy, protesting, threatening, even holding for a while a Mexican port. He has not sought aggrandizement for us, but to protect our neighbor land from wrong and loss.

It was his lot to be President during the period of the most monstrous war the world has ever seen or will see. Ours is the one greatest country in the world that has kept out of it, and it would not have been difficult to get into it. It has been President Wilson's determination

to save us from that horror. The war has been carried on with new weapons, with new measures, against all precedents of rightful war, with scant regard for the rights of neutral nations, with the destruction of our own vessels and the effort on both sides to shut out our commerce. All this is an enormous loss to our own people, and very provoking. The President has been obliged to make his unavailing protests to both camps, but he has been careful to preserve for us the blessings of peace. He cannot leave his post for vacation or for other service, but must stand close held by the duties of diplomacy, to settle every new and nice question of difficulty; and under his pilotage the ship of state has escaped the rocks and only scraped the shoals of war. We say not that every act of his has been what the future historian will applaud, but it is right that the country should recognize the unusual burdens he has carried, as it is grateful to him for the resolute wisdom which in this desperate crisis of the nations has saved for us peace.

### HOW DID WITTE DIE?

IT is being whispered about in various circles that Sergius Witte did not die a natural death but was put out of the way with the connivance of the Russian Government. As the story goes, Count Witte went to Berlin incognito about a month before his death to sound the Kaiser on the possibility of concluding a peace between Germany and Russia without regard to the other Allies and that he returned with terms so favorable as to greatly encourage the peace party in Russia of which he was the leader. Quite probably this rumor of secret assassination has no foundation whatever, but arose naturally out of the fact that his death was sudden and unexpected, since he was only sixty-six and in good health, and that it occurred at a peculiarly opportune time to the party in power. Count Witte has always been hated by the military and nobility because of his humble birth, his American ideas and his friendliness to the Jews. It was he who developed the new railroad system of Russia, he who introduced the system of governmental control of liquor which has resulted in prohibition, he who secured the constitution of 1905 and made peace with Japan at the Portsmouth conference. This made him many enemies and his life was more than once attempted. In the *Jewish Weekly* of March 26, 1915, Herman Bernstein, who was his friend for years, publishes evidence going to show that Premier Stolypin and Dr. Dubrovin, a friend of the Czar, were concerned in these plots for his assassination.

It is rumored also that about three months ago Count Witte was summoned by the Czar and asked as to the advisability of starting a campaign to gain favorable public opinion for Russia for the purpose of securing loans in Europe and America. Count Witte said that he could not undertake such a mission with any hope of success unless assurances were given to the world that the Jewish question would be settled at the close of the war. To this the Czar is supposed to have replied: "Under these circumstances I do not think we can do anything."

The peace party had gained considerable influence a few months ago when Hindenburg's hammer was striking hard blows and Turkey had bottled up the Black Sea. The Czarina, who was a German princess, is said to

have favored a speedy conclusion of the war. But now the aspect of affairs has been changed. The British Government has made a loan which guarantees Russian credit and has promised Russia Constantinople or some other southern port. So the Opposition in the Duma has collapsed and the militarists remain in power.

LATIN OR SCIENCE

THERE has been a great deal of talk about why students *should* study Latin or science but little attention has been paid to the equally interesting question of why they *do*. But the admirable study of the Dansville, New York, High School, just published, throws some new light on this question. A questionnaire was circulated among the graduates of the school asking them what they found of value in their study of Latin and whether, in the light of their present experience, they would take Latin if they had the high school course to do over again. The same questions were asked in regard to the sciences. Of those who took Latin, fifteen per cent say they would not take it again. Of those who took science, two per cent say they would not take it again. From this it appears that most of the graduates are well satisfied with the course they took, but the reasons they give are strangely different from those usually alleged by the advocates of classical or scientific training. Those who advise Latin are apt to lay stress upon its value for culture and mental discipline, while the sciences are recommended usually because of their usefulness in after life. But if we classify in this way the benefits which the Dansville graduates say they actually derived from their studies, we get this surprising result:

	LATIN	SCIENCE
Cultural value.....	10 per cent	55 per cent
Practical value.....	86 " "	36 " "
Disciplinary value.....	4 " "	9 " "

The men and women who studied Latin mostly give among its advantages its help in the study of English and foreign languages, and in understanding the technical vocabulary of medicine, music, church liturgy, business, etc. Not one of them specifies any delight in the language or literature or any broadening of outlook. On the other hand the majority of those who studied the sciences speak of their intrinsic interest in the information received, the pleasure of understanding the phenomena of nature and their broader appreciation of it. Should one infer from these figures that the science as taught is less practical than Latin? Or that the classicists and scientists have been using the wrong arguments and might better exchange weapons?

A CENTER PARTY

DOES the Catholic Church in America need a Center Party to defend Catholic rights against aggression? That is a question which is now being raised in Catholic journals, suggested by the Social Service Commission of the Federation of Catholic Societies. A Center Party, such as has existed in Germany, implies the presence of a Kulturkampf warring against the Catholic Church. Now there is no Kulturkampf in this country which rises above the political horizon, nothing more annoying than a few pestilent sheets which hardly deserve the honor of mention or attention, altho one or

two of them boast a considerable circulation. It was a very foolish proposal by several Catholic members of the late Congress to enact a special law to suppress them. They are not worth the suppressing. When they publish slanders against Catholics or print forged documents and "oaths" of Catholic societies, the present laws are sufficient to punish the editors. They can do no political damage, and this is a land of free speech. There is no Kulturkampf in sight.

Yet there is no reason why the multitude of Catholic societies led by the popular Knights of Columbus should not federate. Father Dietz, an editor from the German diocese of Milwaukee, distributes to the Catholic press a weekly succession of editorial matter which they find of use. He seems to be enamored of the German Center Party, but the responses he has received seem to approve his spirit and zeal, but to question much whether there is any need as yet of a political Catholic party. Indeed, such a party, if organized, might stir up hostility to the Catholic Church and do its cause more hurt than good. Surely our politics is not in any way disregardful of the rights or feelings of Catholics. We advise that the young men who constitute these federated societies wait for their wiser archbishops to take the lead in protecting Catholic interests, or that they ask that the bureau acting in Washington which so effectively cares for the Catholic Indian schools supported by our Government should enlarge its duties to watch against any possible unfair religious discrimination.

Three years ago when Dr. Duisberg exhibited to the Congress of Industrial Chemists in New York City two automobile tires "made in Germany" from caout-chouc which had never been milked from a rubber tree, it was regarded more as a curiosity than a business proposition because of the cost of the crude material. But now comes a report from Russia that the Baku petroleum may be used in obtaining the products from which synthetic rubber is made. It seems then that about everything necessary for running an automobile may be derived from petroleum—except the chauffeur.

Ben Franklin is vindicated. The lightning rod that he forced upon a skeptical world works. Professor Warren Smith of the Weather Bureau finds that out of 1845 farm buildings struck by lightning in 1912-3 only sixty-seven had rods and these very likely were not properly bedded. Since thirty-one per cent of the buildings insured were rodless the loss should have been 572 instead of sixty-seven if the rods had afforded no protection.

Mrs. Bridget Peixotto received from the city of New York the other day the tidy sum of \$4194. It was back pay for the time since she was discharged from her position as teacher in the public schools for the heinous crime of becoming a mother. For this sum the city has received no equivalent. Such is the price of reactionary administration. The cost of Bourbonism is not always so readily calculable in dollars and cents; but it is always as surely paid.

Next New Year's Day it will be possible for a man to walk on dry land all the way from the state of Washington to the state of Georgia. The chain of prohibition states, Washington, Idaho, Colorado, Kansas, Oklahoma, Arkansas, Tennessee, Georgia, extends from the northwest corner to the southeast and the corner of Wyoming that intervenes is so nearly dry that the most sensitive teetotaler could walk across it without being offended by sight of a rum-shop.

THE WOMEN WHO ENLIST ARE TAUGHT SIGNALLING, DISPATCH RIDING, TELEGRAPHING, MOTORING AND CAMP COOKING. FOUR COMPANIES HAVE ALREADY BEEN FORMED UNDER COMMAND OF LADY LONDONDERRY AS COLONEL

# THE STORY OF THE WEEK

## The Struggle Over the Carpathians

The storm center is now fixed upon the crest of the Carpathians, where the Russians are exerting every effort to gain a sufficient number of the mountain passes to make it safe for them to invade in force the Hungarian plains beyond. The activity of the Germans in Poland has slackened, partly, it is presumed, because a considerable force has been drawn off for the defense of Hungary. Four army corps, or about 160,000 men, chiefly Bavarians and Saxons, are said to have been brought around by way of Budapest and sent north by rail to Ungvar, which stands opposite Uzsok Pass. This is now the chief point of attack, and fighting of the most desperate character has been going on in this region during the past fortnight. The Russians report that in storming one of the fortified heights on March 28 and 29 they captured seventy-six officers, 5384 men and five guns, twenty-one machine guns and one trench mortar. The official Petrograd statement reports almost the same number of officers, men and guns captured on the 30th, and a total of 33,000 Austrians taken during the last week in March. On the other hand, the Austrian War Office announces that the Russian attacks have been repulsed and that during the month of March the Austrian troops captured 183 officers, 39,042 men and sixty-eight machine guns.

If the Russians gain Uzsok in addition to the Dukla and Lupkow Passes, which they now control, they will have possession of the Carpathian ridge for over twenty miles, which will be a sufficient base for the projection of a triangle of invasion into Hungary. From these three passes three railroads lead down the valley to the Theiss River in the direction of the Hungarian capital, Budapest, less than a hundred miles to the southwest.

It was reported from Petrograd a few weeks ago that the Russian troops had again invaded Bukovina and were about to retake the capital, Czernowitz. These sanguine expectations were disappointed, for the Austrians, reinforced by the Germans, took the offensive and not only repulsed the Russians between the Dniester and the Pruth Rivers but carried the war into the enemy's country. A band of Jaeger cavalry under the German general Pilsner crossed the border from Bukovina just

## THE GREAT WAR

*March 29*—Germans invade Bessarabia from Bukovina. Russian Black Sea fleet bombards forts at entrance of Bosphorus.

*March 30*—Germans take Tauroggen, north of the Niemen. Austrians lose 18,000 men in defending Carpathian passes.

*March 31*—Germans repulse Russians in Augustowo forest and on the Vistula. Defeat of Turks in north-western Persia with loss of 12,000 reported from Petrograd.

*April 1*—Russians gain Beskid heights in Carpathians and take 7000 prisoners. King George and Earl Kitchener propose abstinence from liquor during the war.

*April 2*—American steamer "Sweetbriar" sunk by mine in North Sea. French gain in the Woëvre.

*April 3*—Bulgarian irregulars invade Serbian territory. Turkish cruiser "Medjidieh" sunk by mine in Black Sea.

*April 4*—Austria asks Italy why more troops have been called to colors and Italy replies that it is a necessary precaution for national defense. Germans take village west of Yser.

north of Rumania and penetrated about a dozen miles into the Russian province of Bessarabia. The object of the raid was doubtless to deter Rumania from entering the war on the side of the Allies, as she seemed likely to do in the winter, when the Russians occupied Bukovina. The Russians claim that the German cavalry was routed and the Austrians who attempted to entrench at Chotin, a Russian town on the Dniester, were forced to evacuate.

## Operations in Poland

To speak of German activity in Poland as slackening shows how enormous are the battles to which we have become accustomed, for, according to the statement of the Headquarters Staff at Berlin, the German eastern army took 55,800 Russian prisoners during the month of March besides nine cannon and sixty-one machine guns. Nevertheless, there are no important changes in the situation reported. The attack on the

Russian fortress of Osowiec seems to have been abandoned and the big guns withdrawn.

In the extreme north the Germans attempted a drive eastward up the Niemen River in the direction of Kovno, but this, according to Russian accounts, was a failure. It appears, however, that they succeeded at least in dislodging the Russians from Tauroggen, a Russian town just across the border from Tilsit. The Petrograd version of the affair is that a whole army corps pushed across the thin and melting ice of Lake Dusa with the object of taking the Russians in the rear, but that the Germans, finding themselves outnumbered, tried in vain to retreat across the lake and suffered heavy losses.

From Petrograd it is reported that a flock of fifteen German aeroplanes flew over Ostrolenka, a fortified town on the Narew River, and dropt a hundred bombs at an isolated house which they mistook for Russian headquarters, but did not hit it once.

Taking advantage of the weakening of the German lines in central Poland, the Russians have attacked at several points, especially on the Ravka River nearest Warsaw, and on the Pilica River further south. None of these attacks seem to have made any progress and are doubtless intended merely to prevent the concentration of German forces elsewhere.

On Easter the Czar issued a ukase calling to the colors a year in advance of the due time all the young men of twenty. This will increase the Russian army by 585,000 men.

Palm Sunday was celebrated by the Russians in shelling the Turkish forts at the entrance of the Bosphorus. This is not much more than fifteen miles from Constantinople, so if the "Queen Elizabeth" with her 15-inch guns had been in the Black Sea with the Russians instead of in the Aegean with the French, she might have dropt shells into the city itself. But of course no bombardment of Constantinople is contemplated, for it would be unnecessary if either the Bosphorus or Dardanelles is forced and objectless if they are not. The Russian fleet at the mouth of the Bosphorus is said to be composed of eleven warships, of which the most important are the three new dreadnoughts, completed since the war began, the "Ekaterina II," "Imperatriza Maria" and "Alexander III." These are of 22,500 tons displacement.

ment and carry 12-inch guns. The Russian Black Sea fleet numbers eighty-seven all told.

The Turkish fleet defending Constantinople is small, old and inefficient, not more than thirty-four vessels altogether, of which the strongest are the German battleship "Goeben" and light cruiser "Breslau," which were caught in the Mediterranean by the outbreak of the war and sold to the Turkish Government to escape capture. Both these are reported to be disabled; the "Goeben" completely out of commission months ago and the "Breslau" recently disabled by striking a Turkish mine in the Bosphorus while returning from the Black Sea. The Turkish cruiser "Medjidieh" was sunk by a mine in the Black Sea near the Russian coast.

The Russian fleet is said to have completely cleared the Black Sea of Turkish naval and commercial vessels, and the shipping in the Turkish ports has been destroyed by shelling them from the sea. Since there are no railroads in the northern part of

Asiatic Turkey this cuts off Constantinople from easy communication with Trebizond and Erzerum, against which the Russians from the Caucasus are now directing their attack. Neither can the capital get coal or food stuffs from the Black Sea ports. On the other side Rumania has refused to allow German troops and armament to be shipped across her territory to Constantinople.

The forts at the entrance to the Bosphorus, like those at the entrance of the Dardanelles, are weakly fortified and poorly armed, and they may be as readily reduced. But about five miles down, at the narrows, there are some twenty-five guns on each side near Rumili and Anatoli Kavak.

On the other side of Constantinople there has been no action except a desultory bombardment of the Dardanelles forts. It was confidently prophesied in England that the Anglo-French fleet would reach Constantinople by Easter, but that goal seems further off than ever, for no progress has been made since the

disastrous attempt to force the strait on March 18.

**Bulgars Invade Serbia** A band of Bulgarian irregulars, but said to be in uniform and under the command of regular officers, crossed the border into Serbian territory at two o'clock on Saturday morning and attacked the Serbian outposts at Valandovo. The Serbians, taken by surprise, were driven out and the Bulgars occupied the heights on both banks of the Vardar River. Capturing two of the Serbian guns, they turned them on the railroad station at Strumnitza. They then cut the telegraph and telephone lines which connect Nish, the temporary capital of Serbia, with Salonika, the Greek seaport. According to the Serbian account, the Bulgars were later driven back to their own territory, with a loss of eighty killed, and communication with Salonika reestablished. The Serbian loss was sixty. The Bulgarian force is said to have numbered 3000.

Raids like this are not uncommon among the Balkan states even in time of peace, but coming just when it does it seems to be significant of a hostile movement, and unless promptly disavowed by the Bulgarian Government it is likely to draw all the Balkan states into the war. The attack was directed toward the Macedonian territory which Serbia acquired by the last Balkan war. When Serbia, Bulgaria and Greece formed their secret alliance for the joint attack on Turkey it was agreed that Bulgaria should get, as her share of the spoils, that part of Macedonia inhabited chiefly by Bulgars, but when Serbia got possession of it she refused to give it up. Bulgaria then attempted to take the disputed territory by force, but Serbia and Greece joined together to defeat her. Attacked at once on every side by Rumania, Turkey, Greece and Serbia, Bulgaria was forced to cede territory to all of them.

The outbreak of the Great War gave Bulgaria a chance to regain some of her losses, either by taking advantage of the attack of the Allies on Constantinople to regain Adrianople, which she took in the first Balkan war and lost in the second, or by invading Serbia from the east at the same time that Austria is invading from the north. In order to secure Bulgaria's neutrality or to induce her to enter the war on the side of the Allies, various offers of compensation in land and loans have been made, but none of them were high enough, and now the announcement that Bulgaria has secured a loan from Germany implies that Bulgaria will take that side if any. It appears now that the recent fall of Venizelos as Premier of Greece was due either to his failure to make a bargain with Bulgaria, or, according to his suc-

A German Red Cross nurse who has been decorated with the Iron Cross, the German Government's coveted reward for bravery in action

cessor, Premier Gounaris, to his having offered her too generous an allowance of Macedonian territory.

While the Bulgars are raiding Serbian territory from the eastern side the Albanians are raiding it from the western. They have the same reason for hating the Serbs as the Bulgars have, for the treaty of Bucharest gave to Serbia many villages of Albanians. This territory has now been invaded by bands of Al-

banians said to have been armed at the Austrian embassy at Skutari. Apparently in coöperation with this is a movement of Austrian troops into the Sanjak of Novibazar. This will cut off Montenegro from Serbia and leave Montenegro encompassed with enemies on every side and an easy prey, if that term can be applied to a people which have never yet been conquered.

Hard Fighting  
in France

Because the lines remain immobile on the map we are apt to think that neither side is making any strong efforts, whereas in fact the fighting is almost continuous and involves sacrifices greater than many historic battles. For instance, it is reported that during twenty days of fighting in the Champagne country last month 11,000 German dead have been found in the trenches taken and the total German loss there is estimated at 50,000. The French loss is said to be about half that. The French have during the twenty days fired 1,500,000 projectiles at the German lines. The French are on the whole advancing, yet their net gain ranges from 200 yards to 1400 yards at the most. It is in fact siege work on a grand scale, and the gains are made by trenches advanced by angling and by tunneling. Often mining is met by countermining, each trying to dig below and blow the other up. Sometimes the heads of the two opposing tunnels meet and the fighting goes on underground as well as on the surface of the earth and in the air above. The French report announced one day that three German aeroplanes had been brought down within twenty-four hours.

It will be remembered that the Germans, in their effort to complete the circumvallation of Verdun,

## TURNING THEIR BAYONETS INTO PLOWSHARES

With their farm animals commandeered by the French military authorities at the outbreak of war the French peasants are unable to put in their crops, so in order to prevent widespread destitution next fall the German soldiers have been set to preparing the land in those parts of France and Belgium in German possession. The Department of *Landwirtschaft* or Agriculture is a regular branch of the Germany Army under the command of officers who have been managers of large estates. They have introduced modern machinery and are instructing the peasants in scientific methods. The photograph shows a gang of fifty-two plows at work near Chauny, France. For plowing and planting a nominal charge of \$1.50 an acre is imposed

## MORE ROOM FOR GOTHAM'S SUBWAY TRAVELLERS

An improved new type of car, planned for use in the new B. R. T. subways now building in New York City. It seats forty more passengers than the car now in use

pushed westward thru the Woevre and managed to gain a foothold on the left bank of the Meuse River at St. Mihiel. They could not get any further, but have managed to retain this one point in the line of barrier forts in spite of the continuous efforts of the French to dislodge them. Now, however, the French are trying harder than ever to cut the slender line of communication between this solitary outpost of St. Mihiel and the German base at Metz. The French have at last taken some trenches near Pont-à-Mousson on the south side of the German wedge, which has so long been directed at the heart of France. This may force the withdrawal of the Germans from the Meuse, for the capture of the village of Regnieville by the French advances them over a mile and puts them on the macadamized road leading across the German lines.

**The War on Commerce** That passenger steamers are not immune from attack by the German submarines was proved by the sinking of the African liner "Falaba," on March 28, in St. George's Channel, off Mitford Haven. The submarine as she came within sight signalled to the steamer to stop, but instead of obeying the "Falaba" tried to escape by putting on full speed. The submarine pursued and overtook the "Falaba" in three-quarters of an hour. Drawing up alongside, the captain of the submarine called out that the vessel would be sunk in five minutes. The boats were lowered as quickly as

possible, but ten minutes later, when a torpedo fired from the submarine struck the vessel, one of the boats was being lowered from the davits and many of the passengers were still on the steamer. The "Falaba" carried a crew of ninety and 160 passengers. Of these 111 lost their lives either by the capsizing of the boats or the sinking of the steamer. Among the passengers was an American citizen, Leon Chester Thrasher, an engineer of the West African Gold Coast. In

view of the note of protest and warning address by the United States Government to Germany against endangering the lives of our citizens, this action raises a question even more serious than the sinking of the American vessel "William P. Frye" in the Pacific by the German cruiser "Prinz Eitel Friedrich."

Three American ships have been sunk in the North Sea—the "Evelyn" on February 21, the "Carib" on February 23 and the "Greenbriar" on April 2. The "Greenbriar" was owned by the British Tropical Fruit Company before the war, but was bought by Americans and in December was dispatched to Bremen with a load of cotton. She was held up by the British cruiser "Cedric," which fired a solid shot across her bow. The boarding party hauled down the American flag, raised the British and took her into a Scottish port. Finally she was allowed to proceed to Bremen with her cargo, and she was leaving that port on her home voyage when she struck a mine and was sunk.

The British steamer "Vosges" was attacked off the Cornish coast by a German submarine. She ran and dodged so the submarine could not use her torpedoes, but a shell from the submarine struck the smokestack and halted the "Vosges." The submarine continued firing while boats were being lowered, killing five of the crew and wounding one woman passenger.

The British steamer "Aquila" was fired upon by the submarine "U-28"

(See editorial, "War and Strong Drink," on another page)

because she refused to halt when hailed, and shells killed three of the crew and a woman passenger. A trawler sent to the rescue by the submarine arrived in time to save part of the crew.

Other vessels sunk during the week were the French steamer "Emma," loss nineteen; the British steamer "Seven Seas," loss eleven; the British steamer "Eston," the French fishing vessel "Paquerette," the Dutch steamer "Amstel," the British steamer "Flaminian," the British steamer "Crown of Castile" and the British steamer "Lockwood."

Three Tyne trawlers, the "Gloxiana," "Jason" and "Nellie," were blown up by the "U-10" after the crews had taken to the boats. The submarine then took the boats in tow until they came to other fishing vessels. The commander of the submarine treated his captives to hot coffee and tobacco and explained to them: "We have orders to sink everything. It is war and England started it."

In defense of Germany's tactics it is argued by Dr. Dernburg and others that fair warning was given to neutrals of their risk in embarking on British ships, and that if a vessel refuses to stop when hailed or if she uses her wireless to summon aid a submarine has a perfect right to sink her.

**War Cases Here** Our Government has asked Germany to pay to the owners of the ship "William P. Frye," destroyed by the German auxiliary cruiser, "Prinz Eitel Friedrich," the full value of the vessel. It makes no claim for the cargo of wheat, as this had been sold en route and was owned by British citizens. The ship, our Government holds, could not have been condemned as a prize if it had been taken to a prize court. A settlement in response to the request is expected. The cruiser was at Newport News at the beginning of the present week. The time allowed for repairs was about to expire, and it was thought at Washington that she would be interned, altho she had taken on coal and provisions. In the sea outside seven cruisers, six British and one French, were waiting for her, and within the three-mile limit two of our battleships were on guard.

Our Government is making inquiry concerning the death of Leon C. Thresher, an American mining engineer, born at Hardwick, Massachusetts, who went down with the British steamship "Falaba" when she was sunk by a German submarine. He was on his way to South Africa. The prosecution of Dr. Muller, German Consul at Seattle, accused of

bribing the clerk of a construction company to obtain its record of shipments, will be discontinued by the local authorities, at the desire of the Government at Washington.

**Trust Cases** Some time ago the Federal Circuit Court in Minnesota ordered, one judge dissenting, a dissolution of the International Harvester Company, on the ground that it had been formed, and had continued to exist, in violation of the Sherman Anti-Trust law. An appeal was taken, and the Government last week laid before the Supreme Court its arguments against a reversal of the decision. The Government holds that the company has existed in violation of the statute even if it can be shown that it has not abused its power, raised prices, limited output, decreased wages or used unfair methods in competition. Congress did not propose, it is said, to wait for the evils which could accompany concentration, but sought to prevent them by striking at the power to concentrate. "Where the necessary effect of the combination is unduly to restrict competitive

conditions, the purpose or intention of the parties is immaterial. Were the good intentions claimed in this case conceded, it would make no difference." If corporate combinations are held to be violators of the law only when they abuse their power, the Government says, there will be a great rush toward concentration, and combinations may obtain control of all the necessities of life.

The Government will ask the Supreme Court to review the recent decision of the Circuit Court which reversed the conviction of the Cash Register Company defendants and ordered a new trial. In the zinc mining district of Missouri the Department of Justice is making an inquiry as to an alleged combination of smelters which depresses the price of zinc ore and raises the price of spelter. In Chicago the Government's suit against the Bill Posters' Association will go to trial three weeks hence. It is alleged that the defendants control all the billboard advertising in this country and Canada. Complaint is made to the Government by independent dealers in tobacco that the American Tobacco Company is disobeying the

court's dissolution order by oppressive methods. Texas has sued the beef companies of Chicago for violation of the State's Anti-Trust law by suppressing competition in the purchase of cottonseed oil. It asks for the forfeiture of oil mills and other property.

**A Riot in Panama** In a riot at Colon, on the Panama Isthmus, last week, Corporal Langdon, of the United States Coast Artillery, was shot and killed by a lieutenant of the Panama police force. There was a baseball game in the city between nines of American soldiers, and a special train brought many comrades of the players to the place. The riot occurred after the game. General Edwards, commander of the American forces, says in his report that the shooting was unprovoked. Langdon and others in the Coast Artillery had been directed to preserve order. The police were clubbing and shooting unarmed soldiers. He protested, and was shot down. Three other soldiers were mortally wounded. The report says the controversy was like others that have preceded it in Colon and Panama. It appears that the local police are always at variance with American soldiers or sailors.

This affair deserves some attention because it may lead to action in accord with recommendations from Colonel Goethals and General Edwards that the United States take over the policing of Panama and Colon, under authority granted by treaty. Such action may lead to sharp controversy, owing to the attitude of the Panama Government. Dispatches from the Isthmus say that President Porras denounced our Government's investigation as an attempt to assume police jurisdiction, adding that the people of Panama would oppose this "until they had shed the last drop of their blood."

**No Protectorate for Hayti** The unexpected action of the French, German and Italian Governments has prevented the establishment in Hayti, by the United States, of a fiscal protectorate like that which has existed in Santo Domingo for several years past. Our Government withheld recognition from the new Government of General Guillaume Sam, Hayti's latest successful revolutionist leader, hoping that he would accept the proposed protectorate. The project involved use by the United States of Mole St. Nicholas as a naval station. It is said that four-fifths of the Panama Canal traffic passes within a short distance of this port. Hayti was bankrupt and

provision had been made for assisting her in negotiating a loan in New York. It was thought that European nations, being now engaged in war, would take no interest in Haytian affairs.

But France recognized General Sam's Government, and was followed in this by Germany and Italy. France also procured for Hayti a loan of \$1,000,000, with promise of more. The resident ministers of France and Germany are said to have acted in harmony. All this leaves no ground for hope that there will be an American fiscal protectorate. It is reported that opposition to the project was increased in Hayti by the publication of Secretary Bryan's letter to the American collector in Santo Domingo, seeking places for "deserving Democrats" in the customs service there.

There is great disappointment in Nicaragua because our Senate failed to ratify the treaty under the terms of which that country was to receive \$3,000,000. The American Collector-General of Customs, Mr. Ham, now in the United States, says that the money is sorely needed because Nicaragua is bankrupt. Her revenues have recently declined, and her interests have suffered by reason of the war.

**Unfortunate Mexico** President Garza and Zapata have paid \$20,000 indemnity to the widow of John B. McManus, the American resident of the capital who was murdered on March 11. This prompt response to our Government's demand was due largely to the efforts of the Brazilian Minister, Señor Cardoso, who has shown energy and good judgment in his management of American affairs. This is the first payment of the kind made since the beginning of the Madera revolution. It is now known that while Carranza's men held the capital, not long ago, they murdered Barron Smith, the American owner of a large ranch forty miles from the city, with four of his employees. The crimes were committed in order that the soldiers might steal Smith's cattle.

Official announcement is made by Garza, thru the agency of our Government, that the Carranza forces when they left the capital took from the Treasury vaults and carried away \$8,000,000 worth of securities which had been deposited there as guarantees in connection with contracts and concessions. These securities are owned by the foreigners who deposited them.

The Governor of Yucatan, General Argumedo, with nineteen other refugees, arrived at a Cuban port last

week on board a schooner. Argumedo, fleeing from the Carranza army, brought with him from the state Treasury \$2,000,000 in gold. His companions had \$4,000,000 more.

Reports, based upon many affidavits, concerning the outrages committed in the capital by the military forces were prepared by an international committee of foreign residents and sent to Washington. Mr. Bryan said that the President was of the opinion that publication of them would not contribute to the welfare of the complainants. Not liking this reply they sent a protest, with copies of the report, by an agent to this country. He has been giving the story to the public. It is a disheartening one. Mexico, he says, is drifting toward total destruction. The same committee has made a report showing that there may be famine in many parts of Mexico before July. The supply of corn is inadequate, and it is estimated that \$41,000,000 would be required for the purchase of what will be needed. But the people have no money. Ex-President Huerta sailed from Spain last week on a ship bound for the West Indies. It was reported that he was to enter the revolutionary field with the support of rich Mexican exiles.

**Villa and His Foes** Recent military operations in Mexico have been indecisive and desultory, pointing to no settlement by the victory of any faction. Villa's men, under the command of General Rodriguez, were repulsed, with heavy losses, when they attacked Matamoros. It is admitted that 300 were killed, and probably the number was larger. Brownsville, near at hand, received 210 of Villa's wounded.

The reverse at Matamoros caused a suspension of the Villa movement against Tampico. Villa himself was at Torreon, and Obregon, coming up from the south, was preparing to attack that place. His base was at Queretaro, eighty miles north of the capital.

Villa spared the life of General Robles, when the latter surrendered to him at Torreon. Robles is one of those who fled from the capital with President Gutierrez. Two of the party, General Blanco and General Almanza, Villa put to death as traitors. General Benavides escaped to Texas, and Vasconcelos made his way to Washington as an envoy for Gutierrez. The latter is dead or in hiding. His successor, President Garza now at the capital with Zapata, has formed a new Cabinet, which includes the three men appointed by Villa when he temporarily assumed the presidency.

## OUR BIG BUSINESS BLUNDER

IGNORING FUNDAMENTALS IN LEGISLATING ABOUT MODERN BUSINESS

BY GEORGE W. PERKINS

**T**HE first mistake, the great fundamental mistake in our dealings with big business was made when we passed the Sherman law. It was made because our statesmen and legislators utterly failed to understand what was happening. They saw the country threatened with the menace of large business units in the hands of unscrupulous men. They saw growing up at that time business practises that were immoral and decidedly detrimental to the interests of the country as a whole. They felt that these practises, if allowed to grow in number and magnitude, would work serious injury to the commercial interests of our people.

### THE EFFECT OF ELECTRICITY

We can now clearly see that the legislators of that day did not realize that a mighty and rapid transformation was taking place in the methods of doing business. The Sherman law was passed in 1890, fourteen years after the telephone was first used, for it was in 1876 that Bell first talked over a telephone wire at Boston, and that wire was only a few miles long. About 1890 the telephone had become recognized as a practical means of intercommunication; it was being used in business, and its very use annihilated distance and made centralization in business a practical thing. This placed in the hands of men of unusual ability a weapon that they had never had before—a mighty

and powerful weapon—for the first time since man was created he found himself able to talk to people who were many miles away from where his body was located. He found himself able by the use of the telephone to send his mind, thru his voice, to a distant point, talk and do business with a man at that distant point, exactly as tho that man were sitting beside him in his own office. He found he could do this many times in one day without leaving his office chair. This meant centralization, meant expanded opportunities for the man of unusual ability, and of course the opportunity was taken advantage of.

### SHALL WE STOP PROGRESS OR CHECK EVILS?

Now, our legislators failed utterly to grasp this great significant fact. They simply saw the evil that was coming out of the new order of things and they struck at it with a law that they thought would compel men to continue doing business as they had been doing it in the past. They seemed utterly to overlook the fact that the great new instruments which electricity had placed in the hands of business men were the cause, the fundamental cause of the great change, and that there were only two possible ways to prevent the evils which they saw creeping into business. One was to eradicate the cause, viz., prevent the use of the new instruments of intercommunication, and the other was to enact laws that would minimize the evils result-

ing from the use of these new instruments and preserve the good that might come from their use. They did not realize, apparently, that the use of electricity was bound to expand and enlarge the opportunities for trade, and so they passed a law directly aimed at the restraint of trade.

### WHAT MIGHT HAVE BEEN DONE

Therefore, our fundamental mistake was made in the failure of our legislators to understand the fundamental thing that was happening. If, in place of passing the Sherman law they had passed a law first requiring that a group of men wanting to organize an interstate business must go to Washington and get a federal license or charter requiring that capitalization under such charter should be fully paid in in cash, making it a crime to issue any watered stock, and, second, requiring full publicity of any such company's affairs, so that the public might know just how such a group of men were conducting their business, nearly all the ills which we have suffered since the Sherman law was passed would have been obviated and our business in place of being hamstrung by laws and continuous attacks would have been by this time far along the road to international commercial conquest.

Is it not high time that we realized the fundamental mistake that was made in 1890 and the succeeding mistakes that have been made in trying to uphold that original mistake?

# THE FRANKENSTEINS OF KANSAS

BY H. J. HASKELL

IT is assumed in the office of the *Kansas City Star*, which claims a sort of newspaper jurisdiction over the state of Kansas, that it ought to be no trick at all to get out a column of clever Kansas notes from the Kansas papers every day. For only see, say the wise ones, who the Kansas editors are.

There is "Bill" White of Emporia and the *Emporia Gazette*, author of *A Certain Rich Man* and numerous other things; "Ed" Howe of *The Story of a Country Town*, whose tradition is still remarkably maintained on the *Atchison Globe*; Henry Allen of the *Wichita Beacon*, who acted as spokesman of the Roosevelt forces after the abdication of Governor Hadley at the Republican convention in Chicago; "Charley" Harger of the *Abilene Reflector*, indefatigable writer for the magazines; "Billy" Morgan of the *Hutchinson News*, a director of the Associated Press; and many others who are known thruout the length and breadth of that grassy quadrangle called Kansas.

The state itself presents an ideal field for the development of the small town paper. It has no big cities and the people are unusually homogeneous. Their social heredity makes them open minded, hospitable to new ideas and fond of discussion. Nowhere is there a more responsive newspaper audience. Reflecting the environment the newspapers are alert, enterprising, clever.

One of the distinctive features that have developed from these journalistic conditions, is the Frankenstein. It will be recalled that Frankenstein, in Mrs. Shelley's rather dull story of that name, was a young student who constructed a monster out of the remnants of the dissecting room and

graveyard. A dim recollection of this story resulted in applying the name in Kansas to the mythical character used by an editor to voice some particular point of view. A paper will frequently quote bits of wisdom—or folly—from such fictitious personages as Parson Twine, or Judge Adna P. Gristlebone, or Prof. Silas Pewter. These gentlemen then are known as the Frankensteins of their respective editors, altho there is nothing gruesome about them and altho in strictness the name belongs to the creator of the character and not to the character itself. The device has proved so useful that it has been quite widely adopted and no well-regulated Kansas newspaper office is complete without its Frankenstein.

Frequently the Frankenstein is a standpat politician whose frank expression of standpat views is used to make them seem ridiculous. The leader in this class is undoubtedly the Hon. "Ab" Handy of Sycamore Ridge, made famous by William Allen White in the *Emporia Gazette*. Incidentally it should be remarked that "Hon" in Kansas has become a word of itself, and is no longer a contraction for "Honorable." It is a derisive appellation, pronounced as it is spelled, with an aspirated "H."

Handy is the typical politician of the old school, who served in the commissary department from Spottsylvania Court House to Appomatox, and settled in Kansas after the war. He always was interested in politics and was candidate for sergeant-at-arms for the lower house of the Legislature in 1889. Later he became assistant doorkeeper in the house and he served with honor at the Chicago headquarters of the Republican National Committee back in 1896. For distinguished services he was appointed postmaster at Sycamore Ridge, but owing to irregularities of a deputy he was forced to retire. "Hon." Handy—they use "Hon" as a given name in Kansas—is of course a standpatter and he hopes eventually to come back. Incidentally, "Ab" attended the Republican national convention of 1908 with Mr. White and his comments on it were wired all over the country.

Another well-known Frankenstein politician is Judge Adna P. Gristlebone, head of the cinder beetle quarantine for Kansas, whose interviews in the *Coolidge Enterprise*, a mythical paper, are sometimes reprinted in the Kansas notes of the *Kansas City Star* by C. A. Blakesley, the judge's sponsor. The judge is much concerned over questions of patronage in connection with the quaran-

tine against the cinder beetles, which constantly threaten to invade the state in shipments from the Colorado Fuel and Iron Company. These destructive insects, be it known, live on iron. They will gnaw rails to a mere skeleton and many a farmer has been spilled on the road driving into Coolidge because all the king-bolts have been eaten off the wagon by cinder beetles. Judge Gristlebone is devoted to the G. O. P., and is involved in frequent controversies with his ancient enemy, Major Franklin Osgood of Amarillo, Texas, over the state of the nation. The judge got his title from having once been an unsuccessful candidate for coroner.

Many of the Frankensteins are homely philosophers. E. W. Howe in his long and brilliant connection with the *Atchison Globe* made famous the sayings of Parson Twine and Drake Watson. Parson Twine, for instance, remarks: "An elderly man I formerly met every day disappeared from the streets lately. When he returned I asked him how he was getting along. 'Oh, I'm well,' he replied, 'but my wife is ailing. I am compelled to spend a good deal of time with her.' Later I learned that the old gentleman's wife was well, but that the old gentleman himself had been ill and was failing rapidly. The fiction about his wife being ill was his way of whistling while passing thru the Dark Woods of old age."

Here are some observations of the parson and Drake Watson: An Atchison man who has trouble in getting first-class men sent to Chicago for one; but people generally believe he got a cull. I don't believe a man is smart just because he's from Chicago or New York either. . . . When a married woman has nothing else

CHARLES MOREAU HARGER  
Of the *Abilene Reflector*

ED HOWE  
Of the *Atchison Globe*

HENRY J. ALLEN  
Of the Wichita Beacon

to grumble about she expresses regret that she is not a school teacher and free."

Bill Sincaller of the *Vinland Vine*—both Frankensteins of J. L. Brady of the *Lawrence Journal*—makes such observations as this: "Mother, I heard a man say down the street that our object in giving Susie music lessons and having her practise so much was to annoy the neighbors whom we disliked. I'm afraid that has had something to do with it."

Herbert Cavaness of the *Chanute Tribune* has recently been turning the state upside down thru a controversy with William Allen White over the comparative failings and merits of the slim man and the fat man; Mr. White upholding the fat man's side, and referring to Mr. Cavaness as "a human devil's darning needle." Mr. Cavaness has a Frankenstein in Judge Pettingill, who remarks, for instance, that "the sheath gown was probably the invention of some man who didn't think the supply of rainy day and muddy crossing exhibitions equaled the demand."

These bits of wisdom are from Si Chestnut, who is quoted by M. P. Cretcher in the *Sedgwick Pantagraph*: "It pays always to tell your wife the truth. I make it a rule always to tell my wife the straight of it, so that if I have to tell her a fib once in a while I can make it stick. . . . I believe I will quit attending church. I don't go very often as it is, but every time I do go the minister always appears to get personal in his remarks."

Hanch Glover and Polk Daniels belong to Tom Thompson of the How-

ard *Courant*. Mr. Thompson has told how the girl he was interested in back at school in the Old Days, recited "Curfew Shall Not Ring Tonight," to his breathless admiration until she came to the end. Then: "'Go! Your liver loves,' said Cromwell"—oh, gee whiz!"

"The other day," Mr. Thompson quotes Hanch Glover as saying, "I heard a woman criticizing a girl for 'chasing the boys.' The woman said a girl should be reserved and modest and should 'lay back on her oars,' so to speak, till the boy came along and chose her. That sounds all right and old fashioned. But now, to be honest, isn't a girl just as rightly entitled to the boy she wants as the boy is to the girl he wants? Must a girl fold her hands and see a nice boy go by when by a little smile, perhaps a wink, and certainly by a little chin taffy, she can string him on her line and, if she doesn't want him for keeps, at least try him out and see what's in him?"

The viewpoint of Prof. Silas Pewter of Flint Hills may be gathered from this bit of a biographical sketch prepared of him by Clyde Knox, editor of the *Independence Reporter*: "The story of Prof. Silas Pewter of Hendricks Township, Chautauqua County, is but the story of a life of disappointment. Silas is but one of that innumerable army of men who believe they never have had a fair chance in life. In his earlier years he was a school teacher, but when times changed and brought new methods of teaching, Silas branded them as 'new fangled notions' and pointing proudly to his many years in the schoolroom, refused to adopt them. This resulted in the elimination of Silas from the ranks of teachers." Now past seventy, Professor Pewter still sits by the fire with his beard trimmed to a fine point as if it might be the index of a piercing intellect, and contends that all the world is wrong.

WILLIAM ALLEN WHITE  
Of the Emporia Gazette

CHARLES A. BLAKESLEY  
Of the Kansas City Star

Then there is Dodd Gaston, the Frankenstein of J. E. House in the *Topeka Capital*, who expresses regret that his lifelong war against the parsnip has proved unavailing. The parsnip is still accepted in some quarters, he declares, for food. He has long contended that the parsnip is not a food but an insult.

Cy Knocker and Bill Booster carry on controversies in Homer Hoch's *Marion Record*. Cy is the village leader against all such tomfoolery as foreign missions and the Santa Claus nonsense. He has been unable to head off the town's progress, but he has "busted many a pair of galluses a-tryin'." Bill, of course, his inveterate enemy, helped organize the Commercial Club and is always on the job to help the town.

M. M. Beck sets down in the *Holton Recorder* such pieces of philosophy from Adam Croaker as this: "I do not take very much interest in thunder and lightning, and even in cyclones and earthquakes. But when I am awakened in the still hours of night by bursting water pipes I am liable to sit up and take notice. . . ."

And finally, around the corner from Kansas, over in Missouri, may be cited Aunt Mandy of "Tom" Bodine's *Paris Mercury*. Aunt Mandy is the intelligent, shrewd, unlettered country woman, who observes the men and women about her and speaks her mind on their foibles. Says Aunt Mandy: "Jest about the time a man accumulates enough money to own an' operate an automobile, his wife gits fat an' the joy uv lookin' like the pictures in the *Saturday Evening Post* is gone."

# THE PASSING OF THE FRIENDLY ROAD

BY PHILIP PRESCOTT FROST

MY wife and I hereby cast two votes against "good" roads. If Ginger had a vote he would cast the third. We do not expect to outvote the motorists who cry aloud, and agitate, and write, and spare not in frantic advocacy of what are to them "good roads." We merely wish to be recorded as dissenting. We have found that "good roads" are not good for us.

Nor are we, my wife, myself or Ginger, rustics who by campaigns of education have been shown the undoubted economic value of good roads—built at our expense—only to learn that motor traffic, as the needle seeks the pole, seeks out the good road, that motor traffic having found the good road develops speed, and that as speed develops, the road disintegrates. We are in no way victims of this little financial confidence game, inherent in the "good roads movement" at its present stage. We just don't like the "good" road, and we do like the other sort.

My wife and I and Ginger prefer old, neglected dirt roads, narrow, winding, hedged-in wagon tracks which go from here to there by the shortest route thru woods and over hilltops. "Friendly" roads, we call them—just the good old country roads of New England. And because the motorist hates them they are doomed, passing, and in many places all but gone. The "good" roads of today are graded and ballasted rights of way for highway locomotives, laid out in prosaic cuts and fills and curves and tangents like a railway. No bush or tree is allowed to obstruct the all important view ahead, or cast a spot of shade along the dusty, blistering track. They built swift cars to bring them to the beauties of Nature, then they destroyed the beauties of Nature to build speedways for their cars, and now they sit, straight as ramrods, tossing about in their tonneaus, staring straight at the road ahead, eating the dust of the cars that have gone before, watching the trembling hands of their speedometers. The finest scenery in the United States may hang in the sky above them, but they never by any chance look up. As good a speedway anywhere would be just as good for them. Speed is the one essential thing.

A poor road, on the other hand, has individuality. It is useless to try to describe it, because it is always changing. It holds surprises for you, unpremeditated beauty spots, gifts of fruit and flowers, cool seclusions. It is a "slow" road—in miles per hour—but when the heat of the day

*In The Independent recently we published an article by the president of the Lincoln Highway Association urging the necessity for improved highways. Here is the other side. People who have driven Ginger's tribe or who have trodden on foot the friendly road will agree that improvement sometimes spells ruination of a kindly byway. But the motorist cannot go everywhere, and progress is slow, and there will always be the longest way 'round where Ginger and two-legged plodders can be at peace.—THE EDITOR.*

is past and the grades are in his favor and Ginger swings away at a smart trot down the short pitches and around the curves, a motor car traveling twice as fast would seem three times as slow. Give the motors their dusty speedways along water-level routes—they will stay there all right—but give us the lonely hilltops, the dirt, tender to a horse's foot, soft under our tires.

Then, too, there are the roads over which the automobiles dare not go, over which it is an adventure to travel even with so good a horse as Ginger and a well tried buggy. We halted one morning last summer at the highest point of such a road—that between Warren and North Woodstock in the White Mountains of New Hampshire, miles from an inhabited dwelling, half a mile high in air, close under the peaks of Mt. Cushman and Waternomee, buried in ancient forest. For thirty miles north and south this rough trail was the only highway across the mountain wall.

Ginger, being unable to consult maps, and therefore unable to meditate upon such matters, and being also the member of the party with the real work to do, appeared to be interested only in the road before us. When you consider how much there is of him, emotionally and physically, a horse is singularly lacking in expression, but all that ears and neck could show of interest Ginger was concentrating upon that road. His interest was contagious, and when we had looked a little ourselves we were interested too. Something was moving down there, something large, swaying from side to side and coming toward us. In a hurry I got out the thirty-eight—and then we saw it fairly. It was farther away than it had at first seemed, and larger, and it was a buggy top.

We pulled out as far as we could into the bushes on our right, and they came slowly up and turned out

to pass us, halting for a friendly chat. There are no such meetings on the automobile roads. We exchanged notes on the condition of the road, agreed that we fairly divided the honor of taking the first buggy of the season across the range, and parted like old acquaintances, pulling ahead to plunge down on our respective sides.

It was appallingly steep, was that road. Ginger sat back in the breeching and slid and hopped and slid and eased us down, and when the descent became too vertical the wife got out and walked, picking berries and woods posies by the way. When she dared she rode, and so, at last, we rode down together into a lumberman's slash.

Twenty odd years ago a man who had driven much thru this region published a very charming little book under the title, *Along New England Roads*. Ten times as many people tour these roads today, but none of them are moved to write. Picturesque pot-holes and rock formations which were charming and wonderful come upon unexpectedly in deep woods now smell of gasoline and echo to the squawk of automobile horns, are covered with signboards and board walks, and—they are a failure. Even the wonders of Nature cease to be wonders when they cease to be Nature. The charm is utterly gone. "Motor Flights" between "points of interest" are all we have to show for our macadam.

"If you love your horses as I love mine, you will need no such advice," says our author of yesterday. "Talk a little while with the horses before you start, chat with them once in a while along the road . . . and always make sure to speak with them when the day's work is done." Fancy such advice on a motor road! The language addrest to a gasoline engine (three speeds forward and one reverse) is invariably unfit for publication. Yet our protest is not against the motor. It is against the destruction of the friendly country road in an effort to favor the present limitations of the motor. The perfection of the motor in flexibility and ease of control will some day bring the pleasures of the friendly road within the reach of all, if it has not been done to death before that time shall come. My wife and I and Ginger begin to have our misgivings. It grows harder year by year to find the kindly, comfortable ways which cost so little, and in pleasure are worth so much, which, foolishly perhaps, we have learned to love.

*Evanston, Illinois*

# THE STRATEGY OF THE GREAT WAR

BY THE INDEPENDENT'S WAR EDITOR AND NAVAL EXPERT

## BYZANTIUM, CONSTANTINOPLE, STAMBUL OR TSARGRAD?

**L**IKE a picture flashed upon a screen, the center of interest in the Great War has shifted suddenly to a distant scene. We forget for the moment the entrenched lines in France and the swift marches in Poland while we turn our eyes to the point where East meets West, to that Imperial City which for twenty-five centuries has been the desire of many nations and the prize of the strongest. Tho the rise of younger and richer cities have robbed Constantinople of its former preëminence in wealth and luxury, it retains the strength and beauty with which it was endowed by nature. "At the meeting of two seas and two continents, like a diamond set between sapphires and emeralds," the City of Constantine occupies a unique situation which enables it to command the water traffic north and south and the land traffic east and west.

Napoleon's aphorism, "Who holds Constantinople rules the world," expresses well the importance which has always attached to the strategic value of that city. Since Constantinople has been held for centuries at a time by two of the weakest and most inefficient nations in the world, the later Byzantine and later Ottoman empires, it is evident that its ownership does not necessarily carry with it the lordship of the world. But the fact that these two decadent powers were able by the mere possession of this point to exert an influence over world politics to which their inherent strength in no wise entitled them, proves its importance and the question of its future ownership is one of the most momentous and difficult of the problems the Great War has to solve. The Allies are rivals when it comes to the question of Constantinople. During the nineteenth century it was the fixed belief of the British that the acquisition of the city by a European power would put the empire in peril. Every time that Russia reached out to grasp the prize Great Britain interposed by arms or diplomacy to protect the Turks. In the Crimean War, British, French, Turkish and Italian troops joined in the attack upon Russia. Now the Russian, French and British fleets are joining in the effort to take Constantinople from the Turks. What will become of it later nobody knows but the diplomats, and perhaps not they. That Russia's attitude

has not changed is shown by the declaration of Foreign Minister Sazonoff in the Duma and the following resolution passed unanimously by the congress of representatives of the nobility now in session at Petrograd:

The vital interests of Russia require full possession of Constantinople and both shores of the Bosphorus and the Dardanelles and the adjacent islands.

The British Foreign Minister, Sir Edward Grey, stated to Parliament a few weeks ago that Great Britain approved of Russia's desire for a southern port tho he avoided specifying Constantinople, a wise reticence in view of the many claimants. Greece, assuming to be the inheritor of the Greek empire, aspires to its capital. The Bulgars might have taken it three years ago if the interposition of the powers had not checked their victorious advance at the Chataldja line. Italy's interests are so greatly involved that she is likely to enter the war. Austria's policy has always had as its goal the acquisition of the Balkan peninsula. Germany had looked on Asia Minor as the most favorable opening for its colonial development and has gradually replaced England as the friend and "protector" of the Ottoman empire.

"The way to Constantinople lies thru Vienna" is an old Russian

maxim. But the Russians now are taking a shorter cut to the goal of their long desire. Their fleet has skirted the western shore of the Black Sea and is now striving to enter the Bosphorus. It is an old route to them. Over a thousand years ago they took it first, and would, according to the legend, have reached the city if it had not been for the personal intervention of the Virgin Mary. In those days there was a distinction between the Russian and Slavic races. The Slavs were a simple, unorganized people, barbarous but not warlike, and the frequency of their appearance as captives in the market made their name the generic term for slaves. The Rus were of that energetic race of Scandinavian origin which invaded France under Rollo, England under William, Italy under Robert and Russia under Rurik, in every country becoming the dominant element in the population, which can still be discerned in spite of a thousand years of intermarriage.

Russian history dates from the time when these Vikings of Kiev, under the leadership of Askold and Dir, set out to conquer Constantinople, for, says the Byzantine historian Photius, the men of Rus hitherto "unknown and of no account" became by that act "most renowned and glorious" and "boundlessly bold and proud." Yet their first attempt was a failure, for as their two hundred galleys swept down the Bosphorus the Byzantine Emperor and Patriarch knelt in prayer before the sacred shrine. At daybreak the Patriarch took the wonder-working robe of the Virgin and marching with a procession of priests and choir boys to the shore, dipped it into the Bosphorus. Let Nestor, the chronicler, tell the story in his own words:

Instantly the waves, which before were smooth and still, arose in anger and began to roar, and the ships of the idolatrous Russians were dispersed, dashed upon the shore and broken in pieces so that few escaped the disaster or chanced to reach their own land again.

But the next Russian expedition against Constantinople, that of 906, avoided the perils of the Bosphorus, both natural and miraculous, for we are told that Oleg put wheels on his boats and sailed overland to the city wall. This kind of vehicle, the land yacht, used to be seen upon our western plains, but has not been used in

## BYZANTIUM, CONSTANTINOPLE

IN THE MIDDLE OF THE PICTURE IS THE BAY OF THE SUBURB OF GALATA. BEYOND GALATA ARE THE PALACES, VILLAS AND GARDENS, BEHIND WHICH IS THE SEA. ON THE EXTREME RIGHT IS SERAGLIO OF THE EARLY SULTANS, AND BEYOND ACROSS THE BAY ARE THE MINARETS OF YENI VALIDEH JAMI OR MAY BE SEEN

the present war. The automobile has taken its place. But another engine of war, which the Byzantines, for some reason unexplained, used in preference to the Virgin's robe for warding off the later attacks of the Russians, has been revived by the Germans within the last few months. This was, in the words of the chronicler, "a kind of winged fire which leaped upon the Russians and made them take to the water to save themselves, but many were drowned by the weight of their helmets." The famous "Greek fire," which burned the wooden boats, was doubtless the stream of blazing petroleum with which the Germans have of late been spraying the French trenches.

Several times did the Northmen force the Imperial City to pay tribute but they never occupied it. The prophecy found inscribed upon the foot of the bronze statue of Bellerophon, which foretells the coming of the time when the Russians should take Constantinople still lacks fulfillment a thousand years after, tho now it looks as if the day is near. It was rather Constantinople which conquered Russia in the spiritual sense. When the Russians came to the choice of a religion they sent a commission about to compare the various faiths. The Mohammedan required the abandonment of pork and wine, so they would have none of it. The delegates visited the German Catholic churches, but reported that the service was barren and unbeautiful. But when they came to the Church of St. Sophia "it seemed as tho we were in Heaven, for in sooth on earth it is vain to find such magnificence." So the Russians became Greek instead of Latin Christians.

Altho they built a St. Sophia of their own at Kiev they have never ceased to long for the Mother Church. Their affections have always been fixed upon Tsargrad, the City

of the Czar, upon the sunny shores of the Bosphorus rather than upon Petrograd, the city which Peter the Great founded upon the ice-bound coast of the Baltic.

But first, the Russians have to force the Bosphorus which they are not likely to find easier than the Dardanelles. Tho short and French are finding the Dardanelles. Tho short Bosphorus is narrower and quite as crooked. At its narrowest point, where only 810 yards wide, stand the Bosphorus of Asia and the Castle of Europe, which have for years kept the commerce of the Black Sea at the mercy of the Turk. The first of these strongholds, Anadolu Hisari, was built by Sultan Bayezid I in 1393. The second, Rumeli Hisari, on the opposite or western shore, was built by Mohammed II in 1452 as a preliminary to his siege of Constantinople a few months later. It was from this promontory that Darius watched the crossing of the Persian army into Europe.

Between this point and the Sultan's palace of Topkapli Kiosk may be seen upon the hills of the western shore of the Bosphorus the handsome buildings of the two Ottoman colleges: Robert College, which has for fifty years been educating the young men of all the races of the Turkish empire and the Balkan states, and Constantinople College, for girls, which last year moved over to the Asiatic side. If Russia should gain Constantinople it would probably mean the suppression of these institutions unless special provision were made for them.

#### STAMBUL—OR TSARGRAD?

OVER THE GOLDEN HORN FROM STAMBUL TO  
Y BE SEEN THE HILLS, COVERED WITH PALM  
NS TO THE LEFT ON ITS WAY TO THE BLACK  
ANCIENT BYZANTIUM AND THE PALACE OF  
ASIATIC SHORE ABOVE SKUTARI. THE DOMES

OF THE BRIDGE

y, for the Czar allows no such educational or mis-  
ry enterprises in his dominions. Nor are Greece,  
a or Rumania so tolerant as the Turk. Bulgaria, on  
ther hand, welcomes foreign schools and has a spe-  
fondness for Robert College because many of the

men who are now leading Bulgaria into a higher civiliza-  
tion were educated there.

The proud city on the Bosphorus for which the powers  
are now struggling has had many masters and borne  
many names in its time. It was Byzantium from B. C. 658  
to A. D. 330; then Constantinople to 1453, when the last  
of the Constantines was killed in the breach thru which  
the Ottomans entered. Since then it has been known by  
those who possess it as Stambul, and it remains for the  
future to decide when, if ever, it shall become Tsargrad.

## THE IMPENETRABLE DARDANELLES AND THE INVISIBLE BLOCKADE

BY PARK BENJAMIN

NAVAL force attacks fortifications commanding  
narrow straits either to reduce or to capture them  
and so clear the way to a guarded objective, or to  
past them and so rapidly attain the goal, leaving the  
in the enemy's hands. In the first case the coöpera-  
of a land force is almost axiomatically necessary.  
Admiral Mahan puts it "a ship can no more stand up  
st a fort costing the same money than a fort could  
race with a ship! The quality of the one is ponder-  
ess enabling great passive strength: that of the other  
obility." After the bombardment of the forts at  
ndria, Egypt, in 1882, Admiral Seymour announced  
"vessels are not and never will be able to fight forts  
en terms," and Admiral Coulomb (in his lifetime  
of British strategists) commenting on this adds  
broad issue so put is equivalent to saying that all

the modern improvements in ships have been met by  
equivalent improvements in forts and unless the capacity  
for engaging at longer ranges be a change, there is  
none." Most purely naval attacks on coast forts, intended  
to destroy or capture or occupy them, have in the end  
failed.

Between capturing fortifications and passing them  
there is a wide difference, which hinges mainly upon the  
delay enforced upon the ships in the effort to run the  
gauntlet. Indeed, it is maintained by high authority that  
fortifications in and of themselves cannot prevent the  
passing of ships, but that they must be supplemented by  
obstructions in the channel. Such obstructions may be  
passive, as for example, fixed mines; or active, as for  
example, floating mines carried to the invader by the  
current or tide, submarines, fire rafts, the counter attack

of vessels or of mobile torpedoes launched from the shore, or even of dejectiles dropt from aeroplanes. It will be seen therefore that the successful prevention of fort running depends on two factors, the gunfire of the forts and the efficacy of the obstructions, paralleling in a sense, the two factors of the gunfire of the ships and the assault of the land force which determine the permanent reduction and capture of fortifications generally. In distant times before effective obstructions were known, or their importance understood, ships ran past harbor batteries successfully; but in later days the obstructions have played a prominent part. We jumped to the conclusion that the early monitors of the Civil War with their huge shell guns and heavy armor were practically invulnerable and could safely run the earthworks and old masonry forts at Charleston. Eight of them tried and encountered rope obstructions which delayed them, so that after only forty minutes, five were disabled, one went down at her anchor the next day and the effort ended in failure.

The great merit of Farragut's victories at Mobile and New Orleans lay in the fact that he gained his objective despite the worst obstructions that the times afforded. The forcing of the Dardanelles has been a naval crux for centuries. Admiral Elphinstone in command of a Russian fleet accomplished it in 1770. Admiral Duckworth with five wooden British line of battle ships did it in 1807. Admiral Hornby (British) started to do it in 1882, and unexpectedly met with no resistance, but his report states that it was very doubtful if his ships could have withstood the plunging fire from the forts on the lofty banks.

The defenses of the Dardanelles are now greatly different from those of twenty-five years ago. Not only have some thirty forts of the most modern type, mounting high power guns, replaced the masonry and earthwork batteries, but they have been arranged with great engineering skill to enfilade one another and to create a series of smothering cross fires in a waterway less than a mile in width. In this narrow channel are thickly planted mine fields. Near it lurk submarines reported to have been sent piecemeal overland from Germany, and means are provided for launching automobile torpedoes from the shores. Even more dangerous are the floating mines which can be set adrift anywhere to the eastward of the straits with the certainty that the strong prevailing current will ultimately sweep them down upon the invading vessels.

The question which has just been tried out was whether modern battleships can accomplish the task of passing modern forts while overcoming modern obstructions any better than their predecessors did in meeting the corresponding defenses of earlier days. The attempt was made by a great fleet. The "Queen Elizabeth," one of the newest and most powerful of British battleships, threw projectiles of nearly a ton weight each, into the forts, from a distance of twelve miles. The hail of shells was continuous. The entrance forts were quickly silenced, and within four days the path to the narrows was sufficiently clear to warrant direct attack by the "Agamemnon" and "Lord Nelson," covered by four French battleships, and firing at ranges of from 12,000 to 14,000 yards. But at the end of seven hours' engagement, one French and two British battleships were sunk and other vessels badly damaged. The casualties were at first attributed to floating mines, but later reports indicate that the fire of the forts was effective, and that the obstructions in the channel performed their usual part.

It is announced that an army is being prepared to assault the forts, which is the best proof that any attempt to run them has failed. The operation therefore becomes a military rather than a naval one, with the fleets acting as auxiliaries to the land forces. If the combined attack reduces the forts—and this may be a long and difficult proceeding, for they are armed with very heavy artillery, the road to Constantinople will be cleared; but that is a long way different from the brilliant dash of the battleships which it was hoped would bring them in a few days to the desired harbor of the Golden Horn.

When the invisible German blockade was established seven weeks ago, there was a sort of breathless awaiting of sinkings and explosions and of sudden paralysis of British commerce. Instead, hardly a baker's dozen of British merchantmen have been destroyed, and of these the cargoes have been more valuable than the ships themselves. All have been slow vessels which the submarines could overtake, or against which they could aim torpedoes with a good chance of hitting. On the other hand, where fast liners have been threatened the results have been nil. While the reports are contradictory as to numbers, probably four of the best German sea-going submarines have been sunk, together with some of the lighter or coast defense type. There

has been nothing resembling a stoppage of British commerce. Probably no one more than the German Admiralty would have been surprised if there had been, for despite the rapid building of submarines which has gone on in Germany since the war began, there is no evidence that she possesses anything approaching a sufficiency of these vessels capable of keeping the sea at the long distances from their bases of supply, which they must do in order effectively to blockade the British coast.

Like the preceding German naval raids, the present operation is largely experimental, besides being especially designed to exasperate and demoralize. The exasperation has reached the Admiralty as is shown by the denial of the usual privileges of prisoners of war to the crew of the "U-12" sunk by a British destroyer, and the intimation that they may hereafter be tried for "piracy." Piracy is authoritatively defined as "an act of real or threatened violence or threats of violence without proper authority committed by a privately owned vessel upon the high seas with intent to plunder." The German submarine was a regularly commissioned war ship, flying a recognized flag, operated by regularly commissioned officers and crew, and her acts were not for plunder. The Admiralty would probably, therefore, have much difficulty in getting a British court to accept its view of the offense alleged.

At the beginning of the Civil War the Government wished to hang Secessionists instant. But after we had specifically announced our intention of doing this in the case of some "pirates" taken on Confederate vessels, the reminder that quite a large number of Union officers imprisoned in Richmond would instantly meet the same fate, caused speedy reconsideration.

Demoralization is a perfectly well settled naval end, and in fact is one of the three cardinal objects, of which destruction and disorganization are the other two. In other words, you try (1) to destroy the enemy's ships; (2) to disorganize their crews, so that discipline breaks down, so that orders cannot be followed or transmitted, and team work, so to speak, is prevented, and (3) to demoralize the individuals so that by fear or undue nervous strain all the fight is taken out of them. Even a naval crew expressly drilled for months or years to endure this nervous strain, cannot stand it indefinitely. Its effect on a merchant crew is great, for there is the constant fear of the appearance of the dreaded periscope or of the little line of white water which it makes even

Any Cottage Shown Above For Less Than \$500

# HERE'S GOOD NEWS FOR OUTDOOR LOVERS

Vacation days are coming! Let's fill them with the finest of summer pleasures—a cottage on the shore.

And best of all, let's build our own cottage, fashion it with our own hands. A week will do it—complete it—a Sovereign Read-Cut Summer Cottage. It's the very best of fun; the work is easy and the cost so small.

## Aladdin Read-Cut Houses

The fame of ALADDIN Read-Cut Houses has spread to every hamlet in this broad country. The word ALADDIN has come to mean Quality Homes, Economy Homes—and Happy Homes. Wherever you live, some neighbor is now living happily in his ALADDIN. Let us direct you to him. Talk with him. Ask him how he enjoyed the winter in his ALADDIN—the below zero weather that tests the warmth of construction. Ask him about ALADDIN Golden Rule Service. Ask him about ALADDIN money saving prices. These tests lift ALADDIN out of the experiment class. You are as safe in your dealings with ALADDIN as you are with your own bank.

## Sovereign Summer Cottages

Sovereign Read-Cut Summer Cottages are built on the same system as our famous ALADDIN homes. They're built of the same wonderful material, too—the lumber that has made ALADDIN famous over the world. The sawing, measuring and fitting is all done in our famous mills—by experts. Your "work" is but to put the material in place and drive the nails. And how fast it grows under your hands! You alone can equal

the work of three carpenters—and without any previous experience. We'll guarantee this statement. And you will have the strongest, sturdiest and tightest cottage on the shore—and the handsomest.

## Sovereign Cottages from \$100 Up—Complete

Put one year's rental into a Sovereign Cottage and it's yours for all the summers that follow.

Send for the big catalog today and see for yourself how cheaply you can own your own summer cottage. You receive it at the station complete. All lumber is shipped cut to fit, together with all doors, windows, glass, shingles, hardware, locks, nails, paint and trim—everything. No delay waiting for materials—and you'll save one-third at least. Hunter's Lodges, \$100; four-room cottages with porch, \$198; seven-room cottages with 36x8 ft. porch, \$443. Whatever price, size or design you want, you'll find in the splendid Sovereign line of cottages. Shall we send you the catalog at once?

## What You Get

ALADDIN houses are complete. You get material absolutely guaranteed to be sufficient for the completion of your house, as follows: Sills, cut to fit; joists, cut to fit; studding, cut to fit; building paper; subfloor, cut to fit; rafters, cut to fit; roof sheathing, cut to fit; siding, cut to fit; outside finish; knotless flooring, cut to fit; lath and plaster or plaster board; knotless inside finish, knotless doors, knotless casings, knotless base board, windows, sash, glass, nails of all sizes, locks, hinges, tin flashing, paints, oils, varnishes, stains, putty and shellac, with complete drawings, illustrations and instructions for erection—*The Complete House*. The big ALADDIN Catalog No. 1330 tells all the interesting facts.

## Famous Dollar-a-Knot Guarantee

The ALADDIN Dollar-a-Knot Guarantee is a clear expression and a concrete example of our confidence in our lumber. It is your protection, over our signature, of Highest Quality. Aladdin prices speak for themselves—and never fail to astonish home builders. Aladdin customers save as high as \$1000 on their homes. The great catalog—the original Read-Cut catalog—will interest and please you. It is sent free, for the asking.

Ask about the complete 5 room ALADDIN house for \$298

# See Chautauqua First

(Midway between New York and Chicago)

**During two months every year, Chautauqua is the greatest center for popular education in the world**

¶ The slogan, "See America First," expressive of a great deal of wisdom in the past, now takes the imperative mood. German baths, old castles on the Rhine, the genius and effervescence of Paris, the wealth of great galleries, are not for this summer's enjoyment. The charm of delightful little inns, the challenge of the Alps, and the warm wooing of the Riviera have all alike withdrawn themselves. The blue Atlantic invites no pleasure bark anywhere to set sail. In 1915 Americans are counseled by grim and lamentable facts to do their travelling at home.

¶ We must have vacations; where in America shall we resort? Extravagance and heedless adventure will have less appeal; sobriety, wholesomeness, a sane quest of what is truly recreative and enlarging to the individual will prevail as never before.

## RECREATION

education and inspiration in the best sense are all found in the community life of Chautauqua. It may be declared without boasting to have ministered pre-eminently to these rational demands in the days of its founders and now after forty years of growth it still follows the same ideals. Young men play baseball here before crowded bleachers. There is a rowing crew whose personnel varies so much that some of its performances have been an astonishment for moderation and some of them have won quite opposite praise. There is twenty miles of as pretty water for sailing as a skipper's heart could desire, and a half dozen to a dozen smart little craft enter every year for the cup. The muscallonge which was "taken out" by the Indians here long ago and so gave the name, "Chautauqua," still rewards the patient angler, occasionally with forty pounds of gaminess, often with half that weight, and some men pay little direct attention all season to anything but the fishing. Golf, and roque, and tennis have each its enthusiasts. The roads are good for motoring, the lake for launching, and the climate for all outdoor activities.

## THE PHYSICAL LIFE

of the place is healthful. Many a man who attends consciously to nothing else, however, nevertheless chooses Chautauqua for his vacation because its life is not solely on the physical plane. During its two months every year, it is the greatest center for popular education in the world.

¶ Thought, idealism, sincerity without solemnity, pervade it like an atmosphere; and though he sits through

no lectures, the kind of visitor we have suggested enjoys collateral benefits from this higher side of Chautauqua life. He values it too for his sister or his wife, the women folk being more implicit in such things, or he thinks it beneficial for the children.

¶ If one of the liveliest and largest figures in America comes to speak with authority on some subject of vital public interest, this fellow citizen of ours may content himself with echoes of it at the dinner table; but in any case it reaches him and he counts it a by-product. Nor are the platform addresses left wholly to women. Eight thousand persons may be gathered in and around the Amphitheater while a baseball game proceeds at the other end of the grounds.

## MAKING VACATIONS PROFITABLE

¶ Everything at Chautauqua is designed or has evolved without design to make the vacation of some fifty thousand Americans each year profitable. If they hope to go abroad by and by, here are studies in art, literature, history, and—yes, with a larger meaning of course, in geography. If they expect to engage in effort to improve some of our cities at home, here are lectures and conferences and classes dealing with the social problems of the time.

¶ If the kitchen or the nursery or the school room is their domain here its possibilities are considered. If expression, or folk dancing, or parliamentary law, or music, or the tooling of leather is a favorite subject, it can here be cultivated. The Chautauqua Summer Schools offer instruction in fourteen departments, and have more than 3000 enrolments annually. As the inveterate fisherman gets echoes of the lecture and the

classroom, so the devotee of these other pursuits draws in the vigor of the outdoor life. All the lectures are in "halls without walls." The lecturer breathes outdoor air. As he speaks, birds fly and fuss above him, and he looks around at trees and other objects of a natural world. Distortion and hatred vanish. Speaker and listener alike are kept in mind of larger things.

¶ Music, the drama, readings, moving pictures, entertainments, etc., etc.

¶ Program announcements made thus early are only a foretaste of what may be hoped for when plans are complete. Authorization has been given for the following:

Preliminary List

Mr. Sanford Griffith, Lieut., special investigator, Belgian Staff.....	July 1
Chancellor Samuel B. McCormick, University of Pittsburgh.....	July 4-9
Mr. E. J. Ward, author of "The Social Center".....	July 5-6
Mr. and Mrs. Charles Rann Kennedy, playwright, actress.....	July 19-23
Mr. Henry Turner Bailey, editor School Arts Magazine.....	July 8, 26-30, August 11
Bishop Francis J. McConnell, Methodist Episcopal.....	July 11-16
Dr. Mitchell Carroll, George Washington University.....	July 13
Mr. O. H. Benson, Boys' and Girls' Clubs, U. S. Dept. of Agriculture.....	July 15
Rev. Chas. W. Gilkey, Baptist, Chicago.....	July 18-23
Prof. Scott Nearing, University of Pennsylvania.....	July 19-24
Supt. William M. Davidson, Pittsburgh Schools.....	July 24
Bishop Charles D. Williams, Protestant Episcopal.....	August 1-6
Dr. Samuel C. Schmucker, West Chester State Normal School.....	August 2-6
Dean Shailer Mathews, President Federal Council of Churches.....	August 8-13
Mrs. Carrie Jacobs Bond, author, composer, musician.....	August 9-13
Mr. Earl Barnes, author, lecturer, Philadelphia.....	August 9-14
Mrs. Percy V. Pennybacker, President General Federation Women's Clubs.....	August 14, 17
Bishop John H. Vincent, Chancellor Chautauqua Institution.....	August 15-17
Dr. Frank W. Gunsaulus, Armour Institute, Chicago.....	August 22-27
Hon. John Lind, special investigator in Mexico.....	Date not fixed
Dr. Katherine B. Davis, Dept. of Correction, New York.....	Date not fixed
Mr. Melville E. Stone, Manager Associated Press.....	Date not fixed

Special Weeks

Community Affairs.....	July 5-10
Temperance.....	July 12-17
Remaking of Contemporary Europe.....	July 26-31
Justice and the Courts.....	August 2-7
Music (Russian Symphony Orchestra).....	August 9-14
Recognition (Home Missions Institute).....	August 16-21
Internationalism and Christianity (Foreign Missions Institute).....	August 23-28

¶ There are hotels and boarding houses to meet the most exacting requirement or suited to the most modest purse.

CHAUTAUQUA INSTITUTION  
Chautauqua, N. Y.

when it itself cannot be clearly seen and the knowledge that at any instant day or night an explosion may rip the vessel which supports you to fragments. Add to this the presence on board of passengers whose ignorance of the danger redoubles its terrors, and who now know that the Germans propose to carry their offensive warfare to the destruction without warning of non-combatants.

The sinking of the British passenger steamer "Falaba" with 140 passengers, has focussed public attention upon this phase of the submarine's work. It is not necessary to go into the details of this proceeding in order to emphasize the main question involved, which is really not how humanely or inhumanely the submarine is to be used, but whether it is a legitimate weapon at all. There are plenty of people, like the present first Lord of the Admiralty, who do not hesitate to advocate its prohibition by international agreement. Nevertheless, all naval nations are building submarines, and we ourselves have just undertaken one which is to be the most murderous yet conceived.

Now the uses of any new weapon are developed not alone by the conditions of the weapon itself, but also by the conditions under which it may be compelled to operate. And in the case of the submarine, these latter conditions are of the most recent evolution and have come into being since the doctrines of international law relative to the conduct of war and of blockades were established. Generally development of the submarine has outstripped the development of defense against it; it is nevertheless true that when the submarine is turned into a blockading vessel, the defense, at least, may be such as greatly to hamper its activities and compel it to meet the new conditions in new ways. The submarine must come up from time to time in order to relieve her crew, and always in order to make a capture. In the latter case, she is liable not only to be destroyed by a watching vessel, but even by her own quarry, which may be armed for that express purpose. The only alternative, if the merchant vessel is to be stopped, or if capture cannot be made because of such reasons as the fore-

going, is to torpedo her at once. The German submarine commanders at the beginning of the blockade came to the surface and gave to the crews of vessels to be sunk a brief period to escape in boats, and have argued that in view of the dangers above noted this was really an act of grace.

Since, however, it has been strongly advocated in England that merchant vessels should be converted practically into warships to an extent sufficient to sink submarines, even this consideration may perhaps be withdrawn, for since the sinking of the "Falaba," two British merchantmen have been destroyed by submarines without warning of any sort. The personal equation of the submarine commander will probably control. He may send helpless passengers to the bottom—as the captain of the "Falaba's" destroyer seems to have done—or may be "quite genial" and not only give his enemies ample time to escape in small boats, but like the captain of the "U-10" the other day, supply them with "hot coffee and tobacco."

## MEDIATION, ATHLETICS AND THE GREAT PEACE

BY CHARLES H. SHERRILL

WHEN the present European war closes, what value if any will there prove to be in the lesson we have recently learned from the success of the Argentine-Brazilian-Chilean mediation in averting war with Mexico, or what useful hint can we draw from the lesson in internationalism afforded by the worldwide and constantly increasing interest in the Olympic Games, whose international regulations for athletic contests have taught millions of young men the practical value of such regulations? Certainly these are two factors of potential usefulness—two viewpoints that deserve consideration.

Public opinion has failed to prevent war in Europe, or to stop its spread into Africa and Asia. The opposite is true on our side of the ocean. Organized public opinion, taking shape in the A B C Mediation, has triumphantly succeeded in averting the possibility of war in this hemisphere. This successful outcome of what some thought mere visionary sentimentalism has had a great effect thruout the New World—much greater than many today realize, for thanks to this transmutation into golden fact of what some called Pan-American Idealism, the people of the United States, so recently become a

*Mr. Sherrill has achieved pre-eminent distinction in at least two diverse fields. As United States Minister to Argentina he rendered signal services to the good relations of North and South America. And it was he who first suggested that the United States invite Argentina, Brazil and Chile to help in solving the Mexican problem. As an undergraduate at Yale, Mr. Sherrill was the captain of the track team and the "crack" runner of his time, holding the record for the hundred yard dash. Ever since he has played an important part in the promotion of collegiate and international athletics. It is quite natural, therefore, that he should draw his two most interesting conclusions as to what should be done at the end of the war to preserve lasting peace from the recent A B C Mediation at Niagara Falls and the Olympic Games.—THE EDITOR.*

world power, have received an invaluable education in how practical can be the results of an organized public opinion when judiciously used in international affairs at the psychological moment. For this useful lesson we as a nation are indebted to our Latin American cousins, and we owe it to them to employ what they have

taught us in as temperate and timely a fashion as they did. How, if at all, should we employ this lesson in connection with the great problem of the present European war? When can American public opinion become useful in meeting that terrible problem, and, per contra, at what time would it be impractical to attempt exerting it?

### THE TRIAL OF MILITARISM

To intervene before intervention is timely would but jeopardize or ruin all hope of ultimate success. The worst enemy of that peace for which we neutrals so devoutly pray is he who attempts to urge a premature peace before the arbitrament of battle shall have been decided. Not until victory has been won by one side or the other, or until an obvious exhaustion of the attacking powers of both sides have resulted in a drawn game, a stalemate, can neutrals intervene with any hope of success, and without such hope they should not attempt to intervene. Much is involved in this struggle, much more than the mere clash of nations. There are many who believe that it will prove the crucial test as to whether rampant militarism shall be checked, or shall spread over the whole world, involving us in its growth. We don't

want it on this side of the water; militarism decrees that a young man in uniform walking with his grandmother must make her carry the bundles, because bundles degrade a uniform! Such a system is out of place in a nation where the men of state after state are voting to give women an equal suffrage! Militarism teaches that uniformed officers are a caste above uniformed privates, and that they in turn are privileged above citizens without uniforms—a system that does not suit a nation whose fight for liberty was begun by the "embattled farmers of Lexington," the "Minute Men," whose only uniform was a uniform patriotism—a nation whose liberties are based on the Declaration of Independence declaring all men equal under the law. Nor are our young men disposed to surrender three of their best young years to being molded into an engine of destruction, ready to the hand of some bellicose demagog. And right after the signing of the peace treaty thousands of Europeans freed from the thralldom of militarism and knowing by bitter experience of its blighting horrors will crowd to our shores and make us even more than ever determined that militarism shall never cross the ocean to desolate our homes.

#### A UNIQUE OPPORTUNITY

When the time for peace negotiations arrives, what then? Never before has there arisen such an opportunity for the stable adjustment of international relations as will then arise! For the first time in centuries there will be represented around the same council table almost all the fighting force of the world, a force that will then be wearied by exerting its savage energies in three vast continents and on all the great oceans—a force that has brought desolation and wo to so many homes as to make Humanity shudder, and Pity cover her face in anguish. And the most wonderful feature of the opportunity will be that all these warring forces will be assembled not to fight, but desirable—nay, anxious—to arrange a lasting peace. May the God of mercy direct their deliberations! The whole world will wait with bated breath to hear what is decided at that fateful board. Will the great opportunity be grasped, or will it be wasted? Will the basis for a lasting peace be found, or will they be contented with a mere truce, permitting the fearful scourge of war soon again to walk the earth?

At this great council of the nations the negotiations will naturally fall into two sections—the fixing of new territorial lines, indemnities, etc., and, secondly, the expedients agreed upon to prolong the period of

peace. In this latter division will be found the limitation of armament, the agreements covering arbitration, etc. Let us consider these two divisions separately with an eye to the possible utilization of American public opinion as a force to securely establish a lasting peace.

The readjustment of territory by the treaty of peace concerns only the powers interested in that treaty—it is none of our business. It would be presumptuous of us to make any suggestions, and yet because obvious attempts are now being made by at least four of the belligerent countries to gain the favorable attention of American public opinion, this seems a proper time to note that the American press generally favors the preservation of lines of nationalities and, if the Allies be victorious our press indicates that a decision to wantonly dismember the German-speaking people would be regarded as adversely as is at present the violation of Belgium's neutrality—it would seem to us as provocative of future outbreaks as the taking of Alsace-Lorraine in 1870 seemed to Bismarck. Whatever surgery is necessary, let it be done so as to leave no sore spots.

#### OUR RIGHT TO BE HEARD

But after the readjustment of territory is arranged by the interested parties—immediately after that is decided, then we and all other countries interested in the preservation of peace and the repression of aggressive militarism, have every right at once to take a pronounced interest in the deliberations of the peace negotiators upon how future disputes are to be treated and how armaments are to be regulated.

And we have a right to be heard in that regard, if for no other reason than that thanks to the practical results of the mediation of Argentine, Brazil and Chile in averting a possible armed conflict between the United States and Mexico—thanks to this splendid achievement we of the western hemisphere, coming into court with clean hands, are entitled to offer suggestions to the powers which, unable to avert war, have been battling in Europe, Asia and Africa. But, to turn again to American newspapers, those great voices of public opinion, it is clear that our people believe that this great opportunity now at hand to formulate a world-wide peace plan, should be met in a spirit that demands practical results. Let the treaty be drawn so that it will last at least a generation, or let it contain an abrogating clause so that no excuse will exist for breaking it without notice. Let us have no more treaties like those of Napoleon

—meant to be torn up when the army is ready for the next campaign, nor like the treaty of Berlin in regard to the Balkans, certain sooner or later to be destroyed.

#### TREATIES TO BE KEPT

Let us look the facts squarely in the face. Too many countries have proved that for them treaties were not contracts, but only written memoranda reciting the *status quo* existing at the date of signature, subject to later modification, or as contracts which could on occasion be cancelled by the higher law of necessity. The present possession of Bosnia and Herzegovina by Austria shows that, and so does the violation of Belgium's neutrality in the present war. Our record in regard to the keeping of treaties is good, even in the face of the fact that we are notoriously bad bargainers when drawing treaties, so eager have many of our Secretaries of State been to perpetuate their names as treaty signers: witness the series of two dozen treaties which have gradually strangled our merchant marine, and concerning which "jug-handled" bargains every European chancellery chuckles with amused contempt. But it is easier for us to understand the foreign chancellor's frame of mind when he breaks or ignores a treaty if we look at our own record regarding promises in party platforms, for such platforms are offers, which, when accepted by a majority or plurality vote of the people, become a contract with the people. Common sense dictates that treaties would receive more honest respect if each treaty frankly recognized the past history of treaties, and therefore contained a clause permitting its abrogation by either signer on due notice—this notice would give time for mediation, a cooling-off period, so necessary for international peace. For example, there is no danger of our ever going to war with any foreign nation over any one of the two dozen treaties that so grievously hamper our merchant marine, because each of them contains such an abrogation clause—a clause under which a courageous Secretary of State will some day act. If in the future a country deems it necessary to break or modify this great new treaty, leave her a way to do so, but only on proper notice to the other powers involved.

#### THE INTERNATIONAL COURT

As to the second great point, the necessary tribunal where future disputes can be discussed and decisions thereon impartially reached—on this point little need be said, so wide is the acceptance of arbitration as a

principle. The details of how this court should be established could be worked out with small difficulty, so many are the precedents already established. We Americans believe that it could take no better form than the Court of Arbitral Justice which Elihu Root, then Secretary of State, instructed our delegates to propose at the Second Hague Conference—a purely judicial court, leading to judicial decisions and not compromises, thus escaping the objections which some litigating nations have raised to the give-and-take adjustments necessitated by the nature of the Hague Tribunal as at present constituted.

But on the third point—the police power to enforce the decisions of that Court of Arbitration, here comes the difficulty, and a great difficulty it is, because it at once introduces the question of armament, or rather, of disarmament. The ideal police power for a court of international jurisdiction is of course public opinion, but because public opinion in Europe was powerless to prevent a war, it would not suffice to enforce arbitral decisions. Policemen must be provided, but no one nation should have too many such policemen, a danger which can be avoided by forbidding the maintaining under arms by any nation of more than a certain proportion of its males, agreed to and specified in the treaty.

#### THE ANALOGY FROM SPORT

And why not? International sport has taken such a hold on the young men of all nations as to gain world-wide interest in the successful revival of Olympic athletic competitions now held every four years in different national capitals, that it is quite feasible to ask those young men why the game of war should not be played according to rules as well as their athletic battles of peace. And those young men of today will be the governments of tomorrow. If all the nations of the world can and do agree that in those Olympic Games the shot shall be limited to sixteen pounds in weight, why cannot those same nations similarly limit the shot to be fired from their cannons, or regulate the caliber of those cannons? If the game of war must be played, let it be played fairly. These athletic competitions provide another useful analog which answers the question of how penalties shall be imposed in the war game. If charges are made and proved before the Arbitral Court that any one nation is exceeding its war equipment, how shall that be punished? In athletic games, if an athlete tries to start before the signal is given he is set back behind the others for such an attempt. So in the

war game, if any would-be competitor is caught trying to take an advantage, set him back behind the other nations, that is to say, reduce by an agreed proportion, and for a given time his war equipment below his original proportion. In the same way the nations can be relieved of the intolerable burden of their constantly increasing naval equipment, for ships of war can at once be greatly reduced in size (and therefore in cost) to a standardized tonnage, and then limited in number by some formula to be settled by the peace negotiators based on population, length of seacoast and total foreign trade of each nation. With the cost of standing armies and naval equipment thus reduced how differently the budgets of Europe would look, how greatly their taxes would be reduced, and how remote would war become when the loaded pistol is taken away from the military dictators who ought never to have been entrusted with it!

We of this hemisphere know that a limitation of armament can be arranged that will prove effective, and we know it because, thanks to the Rush-Bagot treaty, our great lakes have for over a hundred years been free from the incentives to misunderstandings between Canada and ourselves, which competition in increasing naval preparations on those waters would inevitably have produced. If we can live and prosper under such an arrangement between ourselves and our great neighbor to the north, why may we not suggest that Europe give a fair trial to a similar arrangement? The constantly increasing success of the Olympic Games show that our young men have confidence in the practical efficiency of international regulations—let their elders learn from them, and produce equally respectable international regulations for arbitration and armament.

The A B C Mediation was successful in the Mexican crisis because it was a timely and practical expression of educated public opinion. How better can American public opinion employ the lesson it learned from that successful mediation than to reserve its expression in this new crisis until that expression can be both timely and practical?—until the war shall have been fought out and its readjustment of territory decided. Then let its suggestions be as practical in form as were those of Argentina, Brazil and Chile last year, and we may confidently hope that American public opinion backed by the proved integrity of our international purposes, will prove a highly useful factor in shaping the basis for a lasting peace.

## Suits, Waists, Dresses at McCutcheon's

*New Spring Suits*—Women's and Misses' Suits of Wool, Poplin, Gabardine and Men's Wear Serges. \$25.00, \$28.00 and \$29.50.

## TRAVELLER'S COMPANION

A FIVE-POUND PRIVATE SECRETARY

**BUILT OF ALUMINUM  
AND STEEL**

High Grade Low Price

There is no substitute for the "BLICK" in preparing your manuscript, reports or correspondence. For Library and Home use it cannot be excelled. Carbon copies can be kept for future reference without extra labor.

### THE NEW NO. 6 ALUMINUM BLICKENS DERFER

Weights only 5 pounds, is so strong and durable it can be easily carried anywhere. It has Roller Bearings, Automatic Pointer, Paper Release, Adjustable Margin, Tabulator and Interchangeable Type, and is in every way a HIGH CLASS MACHINE.

Either Blickensderfer Scientific or Universal Keyboard.

Write for Catalog A-114.

**THE BLICKENS DERFER MFG. COMPANY, - Stamford, Connecticut**

**His Coal Bill  
Cut Two-Thirds**

Saving of  $\frac{1}{2}$   
to  $\frac{2}{3}$  Guaranteed the  
**New-Feed UNDERFEED way**

Stop! Read this. It means money saved to you. It means better, cleaner heat. And please remember that all this comfort and saving is guaranteed—guaranteed the Williamson New-Feed UNDERFEED way. It is but one instance among thousands of such others that we can show you:

"The year before my UNDERFEED was installed, my house was heated with an Overfed Furnace of so-called 'standard' make. My coal, year before last, cost me from \$3.00 to \$3.25 a ton; the bill for the winter ran almost \$90.00, and during that winter only about half of my house was heated as a house should be.

"Last winter the same house was heated with one of your UNDERFEED Furnaces. The coal used was 'Slack,' which cost me \$1.50 per ton; the bill for the entire winter ran about \$35.00. The house was comfortably heated every day of the winter, including windy days.

"A comparison of those two years has convinced me of the superiority of your UNDERFEED Furnace."

Yours respectfully, (signed) H. Ernest Hutton,  
401 Baum Bldg., Danville, Ill.

**WILLIAMSON CUT  
NEW-FEED COAL  
UNDERFEED BILLS  
Furnaces and Boilers  $\frac{1}{2}$  to  $\frac{2}{3}$**

#### The "Candle" Principle

The New-Feed UNDERFEED operates on the "candle" principle. Coal is fed from below. Hot, clean coals and flame are always on top in direct contact with most effective radiating surfaces. In passing up through the live fire, all smoke, gases and dirt are consumed and utilized in the form of clean heat. They can't go up the chimney and be wasted as in top-fed heaters.

#### Burns Cheaper Grades of Coal

And the New-Feed UNDERFEED burns the cheaper grades of coal—a first great tangible saving. And the New-Feed is so simple that a boy of 12 can operate it with as good results as when the fire is in charge of a professional "furnace tender." Adapted to warm air, steam or hot water.

#### Learn More About It

Send the attached coupon. Remember the 50 per cent saving in coal bills is guaranteed where the New-Feed is properly installed and operated. The coupon brings you, free, the interesting book "From Overfed to Underfed" which describes the New-Feed's simple operation. Sending the coupon costs you nothing—places you under no obligation. Send it NOW!

# The New Books

## THE NOVELS OF WALPOLE

Most of the fiction of today could have been written by pagans, or atheists. There is a distinct relief in finding a series of novels by a man who believes in God. Shaw and Chesterton do; and Hugh Walpole, author of *Fortitude*, puts into his books, a robust faith, as well as a poetic diction and a haunting sense of the wonder and mystery of the smallest life, even that of an obscure and awkward schoolmaster. The gray glooms of the sea and of the Druid cromlechs of Cornwall pervade two of the tales: *The Wooden Horse* and *Maradick at Forty*. In the latter, there is a touch of the supernatural reminiscent of Algernon Blackwood in the Pan-like figure of Morelli, who is, very likely, the Evil One in person, haunting the misty Cornish shore to tempt the man of forty into trying to re-live the life of romance, and leading him into a strange adventure. *The Wooden Horse* is less remarkable, but it also has the charm of magical landscapes and the pathos of the return of a father from twenty years of loneliness in Australia to find the heart of his only son estranged and unresponsive.

In *The Gods and Mr. Perrin* the background is a boys' school and the story slight enough, but the psychological crisis in the life of a schoolmaster, uncouth, unhappy and unloved, is keenly analyzed by the hand of a master. Everybody knows that teaching is a nerve-destroying profession, but the hysteria that attacks the faculty of a boys' school at examination time has never been so well described as in the moving chronicle of the "Battle of the Umbrella," which proves Mr. Walpole to have the crowning gift of humor. Poor Mr. Perrin will never know how funny he is with his: "It shall be all right *this* term," at the beginning of every term and the slow running down of his good resolutions like an unwound clock. The author has discovered the secret, known also to Arnold Bennett, that the most uninteresting people are intensely and dramatically interesting to themselves. That they cannot be so to others, makes their tragedy.

*The Prelude to Adventure* is a powerful novel of Cambridge life, or, rather, the story of a Cambridge student with the university sketched in with rapid and sure strokes, as a place thru which Dune's tragic and lonely figure moves. At a moment of crime he feels the presence of God; and the pursuit of God, tender, yet relentless, the "love which will not let me go," of Francis Thompson's strange and exquisite poem, *The Hound of Heaven*, following

the soul with unfaltering and flying feet to win it at last to Him, is the argument of the novel. The sentiment is not in the least mawkish, but manly and lofty. We see the care-free life of undergraduate Cambridge thru Dune's pain-haunted eyes, but it is a memorable picture of joyous and innocent young manhood. Whether in Cornwall or in Cambridge, Hugh Walpole walks with a sure and firm tread toward a definite goal. If he does not always quite equal our expectation, if the initial impulse flags a little from its first impetuous onrush, if we feel a wearied pen as he ends his stories, there is still much to praise for noble purpose and notable achievement.

*The Wooden Horse, Maradick at Forty, The Gods and Mr. Perrin, The Prelude to Adventure*, by Hugh Walpole. New York: George H. Doran Company. \$1.25 each.

### CONFESSIONS OF A PSYCHICAL RESEARCHER

The two big volumes bearing the title *On the Cosmic Relations* look portentous and if on opening them one chances upon an arid page of seance notes filled with fumbles after unimportant events in the lives of unknown persons he is likely to be discouraged from the reading of them. But if, on the other hand, the peeper into the volumes has the luck to happen upon those pages where the author casts aside his documentation and reveals his own experiences, hopes, doubts and guesses in his own whimsical way, the book will not be quickly laid aside. For certainly Mr. Henry Holt is the most engaging of the many who have attempted to persuade a skeptical and indifferent generation of the genuineness of spiritistic phenomena. For one thing he has a sense of humor—not a common virtue among the ghost-seekers—and what's more, he does not repel us by adopting the cocksure manner of one who has settled the problem of the cosmos for himself and looks with contempt upon those who haven't. For all that he is on speaking terms with such a lot of departed spirits as discarnate personalities, he is never overawed by them, but criticizes or pokes fun at them as tho they were earthly friends. One of the readers of the "MS. (or rather TS.)" of the book asks whether in treating them in a spirit of levity he does not show less confidence in them than he really feels. At which Mr. Holt remarks:

I wish somebody would tell me how much I really feel. And if he tells me on Sunday, I wish he would tell me again at the end of the week. Sometimes I feel a good deal, and sometimes I don't.

Then again he introduces a fragment from the preposterous "Sir Walter Scott" sittings in this ingenuous way:

Here is a suggestive episode, or a "put-up job," as you please to look at it. Or you needn't look at it at all as explaining anything. I don't.

The most original, and therefore the most valuable part of the work, is the author's theory of the development of personality. "Dr. Phinuit" has become to him, and indeed to any one who reads the S. P. R. reports, a very real

## The Agency of a United People

A striking comparison between a homogeneous country and a heterogeneous group of countries is obtained by placing over the map of the United States the map of Europe. These represent the same area—about 3,000,000 square miles—if a few of the remote provinces of Russia are omitted.

Europe has the advantage in population, with more than four times as many people as the United States; in the number of large cities, with two and a half times as many cities of over 100,000 population.

Yet the United States, a comparatively young country, has outstripped Europe in the diffusion of civilization, because of its wonderfully greater means of communication between all parts of its area. The United States not only excels in transportation facilities, but it has nearly three times as many telephones as Europe, or about eleven times as many in relation to population.

By the completion of the Transcontinental Line we now talk from one end of this country to the other, while in Europe the longest conversation 'is no farther than from New York to Atlanta, and even that depends on the imperfect co-operation of unrelated systems.

Europe, with twenty-five countries and many different languages, serves as an illuminating contrast to the United States, with one language and a homogeneous people, despite the fact that our population has been derived from all parts of the world.

During the last forty years the steadily extending lines of the Bell System have contributed in no small measure to this amalgamating of different races.

The latest achievement—the linking of coast to coast—has given greater force to the national motto, "E Pluribus Unum."

and lively personality, as real and lively as Falstaff for instance, and yet he originated—in the reviewer's reading of the minutes—in the clumsy attempts of Mrs. Piper to invent a doctor to prescribe for the patients who sought her for advice. "All this provokes the fantastic speculation whether a genius cannot generate an actual psychic personality as he can a physical one." All personalities, including the subliminal and the artificial, Mr. Holt regards as more or less distinct streams from the universal consciousness. But on such a difficult point, where indeed we are not sure we altogether understand his meaning, it is necessary to quote the author's own words:

This much of it at least seems unescapable fact—the fact that is constantly impressed upon us, of the universal mind, the element which offsets universal motion (including its manifestation as matter), the two together making the universe possible and worth while—back of all phenomena the Cosmic Soul, which is sometimes called God, which generates and includes and manifests and intercommunicates all personalities that are or have been or are to be, and which, with them, dies not.

When we remember that Mr. Holt was one of the earliest Spencerians in this country, in the days when it cost something to be an evolutionist, we see that he has gone a long way in the course of his thinking, and altho we cannot follow him into these shadowy realms of experimental supernaturalism, yet it is interesting to observe by what steps he has attained his present position.

*On the Cosmic Relations*, by Henry Holt. Boston: Houghton Mifflin Company. \$5.

#### THE BIBLE TODAY

*The Bible and Modern Life* is a notable essay. In it, Joseph S. Auerbach sets forth, impressively and with stimulating force, the literary and spiritual treasures of Scripture.

Harpers. 75 cents.

#### CALIFORNIA. SCENERY AND PEOPLE

Clifton Johnson knows how to choose interesting scenes and how to present them attractively, both in words and photographs. *Highways and Byways of California*, lead him into all the surrounding states, and this exposition edition will prove a useful and enjoyable companion for travellers to the Panama fair.

Macmillan. \$1.50.

#### ON THE PACIFIC SLOPES

One of the most attractive of the many books on the far West, now coming from the presses to meet the travellers to the San Francisco fair, is *In the Oregon Country*, by George Palmer Putnam. He knows and loves the Oregon of today and of its not distant but very different yesterday. His descriptions are interesting, his incidents of earlier days have the pathos of frontier life, and the bits of Indian folklore are quite uncommon.

Putnam. \$1.75.

#### FATHER TIERNEY

Father Tierney is the Poet Priest of Missouri, and among the short *Poems*, grave and gay, some religious and many secular or drawn from the Gaelic, are several that first appeared in *The Independent*. We are glad to see Father Tierney's name added to the list of American Catholic poets, with those of Father Tabb, Father Ryan, Miss Guiney and others that might be mentioned. The volume is very attractively issued.

Neale. \$1.

## SEA

## PINES

### Home School for Girls

Rev. Thomas Bickford, Miss Faith Bickford, Prins., P. O. Box P, Brewster, Cape Cod, Mass.

#### Distinctively Devoted to Developing Personality

Genuine happy home life; personal attention and care. Growing girls inspired by wholesome and beautiful ideals of useful womanhood. The Cape climate is **exceptionally favorable for an outdoor life**, which we make attractive and refining. One hundred acres; pine groves, 1000 feet of seashore, ponies, horseback riding. Hygiene and morals observed especially for results in health, character and education. Gymnastics, Music, Handiwork, Domestic Arts. French, German, Spanish—native teachers. All branches of study under patient and enthusiastic instructors. Address

### Emerson College of Oratory

HENRY LAWRENCE SOUTHWICK, President

Largest school of expression in the U. S. The demand for our graduates as teachers in colleges, normal and high schools is greater than we can fill. Courses in Belles-lettres, oratory, pedagogy, physical culture, voice, dramatic art, etc. 35th year opens Sept. 28th.

HARRY SEYMOUR ROSS, Dean  
Huntington Chambers Boston, Mass.

### SCHOOL OF EXPRESSION

Mind—body—voice. Leader for 30 years. Write for Dr. Curry's new books, "Smile," "Morning League," "Expression." Summer terms. Boston, Asheville, Atlanta. University of Vermont, Chicago. S. S. Curry, Ph.D., Litt.D., Pres., Copley Sq., Boston, Mass.

## EFFICIENCY QUESTION BOX

CONDUCTED BY

EDWARD EARLE PURINTON

DIRECTOR OF THE

INDEPENDENT EFFICIENCY SERVICE

Questions on health, work, business, home and everyday life will be answered by Mr. Purinton, in so far as may be possible, thru the Question Box or by personal letter. Please confine questions to one sheet. When books, institutions, manufactures, and other aids to efficiency are mentioned, they are not necessarily endorsed. The Service, being a clearing-house of information, assumes no responsibility for others.

59. Mr. H. C., New York City. "I am employed by the Government, and regret to state that I cannot feel that a man has much to look forward to in the public service. The efficient man has no assurance that promotion will be his portion. Still, I want to leave no stone unturned in the line of advancement, and shall appreciate your suggestions."

In these times, be glad you have a steady position, and a paymaster that never fails. A Government job, tho a hindrance in many ways, carries usually a fair salary, short hours, and personal freedom outside of business hours. Your first duty is to be the finest possible worker in your present situation. Are you that? Have you exhausted its possibilities for advancement on efficiency lines independent of politics?

Whatever your training has been, some business or profession outside the Government can utilize it. Get a book on Vocational Guidance, or one containing a list of principal occupations with requirements for each, then figure out what you do best in consequence of your present work and past experience. Then take special instructions, or plan for actual effort in the new field, outside of office hours. A good correspondence course should be of great value—and yours is one of the few cases where I believe a course in the technical branch of efficiency would be more immediately beneficial than one devoted to the personal phase.

When you are qualified to take up independent work, an advertisement in the trade journals of your craft should find an opening for you in a more congenial place.

60. Mr. E. W. R., New York City. "I am looking for a true, cheerful woman, who can appreciate the society of an optimist like myself. My work so takes my time that I don't have any opportunity to meet desirable people. I suppose you will say that you are not running a matrimonial bureau; well, I am adhering to your offer and am telling you my problem—this will certainly add to my usefulness."

I hope that none of our readers will be tempted to laugh at this man's honest request. Human life divides itself into three epochs—birth, death, and marriage. We cannot as yet individually control birth and death; hence our entire responsibility focuses in marriage. It is the most serious thing in the world. Not solemn, or painful, or sad, as ignorant jokesmiths would have us imagine; but so fraught with meaning that nothing else begins to compare with it.

Your view of marriage is selfish. The first duty of a wife is not to "appreciate your society." This antiquated idea, proudly held for ages by the bogus lords of creation, is fast being exploded—thanks to the education and ambition of the modern woman. You cannot marry for pleasure, you cannot marry for business, you must not marry for anything but love. And love means worship before it means want. Marriage as a business fails; marriage as a

pleasure turns to grief; marriage as a religion becomes a business that succeeds, and a pleasure that deepens with the years. What is your motive?

You cannot select a wife as you would pick a dainty shell, or pluck a sweet flower, from the shores and dells of experience where you wander. Mates are born—not sought and chosen arbitrarily. If you could make a hundred new women friends every day, that wouldn't solve your problem. For the One Woman might be on the other side of the globe. She will come, when you are ready. Your anxiety should be not possession, but preparation. Do you know how to treat a wife? Have you mastered the laws of physiology and psychology that underlie a happy marriage? What sort of father will you be? Are you reverent, fine, immaculate, in thought as well as deed? Could you fulfil the utmost ideal of the kind of woman you are looking for? Study your own life, the map will take care of itself.

61. Mr. B. I. B., Minnesota. "I am interested in consulting a good vocational expert in regard to my adaptabilities along certain lines. Is there an expert in Minnesota whom you could recommend?"

We cannot recommend such authorities on hearsay only; we must know the man, or know some one who knows him. You will find that the best vocational teachers and trainers are located in the large cities, principally in the East. A fairly good test of your powers and traits may be had by correspondence, being based on your photograph, handwriting, and other points of equal value with a personal interview. Consult back numbers of The Independent containing the Efficiency Question Box, then apply to the various experts for details of their methods.

62. Mr. H. G. C., New York. "In The Independent of January 4th, a reader wishes statistics on inefficiency caused by the use of alcohol. Besides your references, which are excellent, he could find splendid material in *Alcohol and the Human Body*, by Horsley and Sturge, Macmillan & Co.; *World Book of Temperance*, by Dr. and Mrs. Wilbur F. Crafts, International Reform Bureau, Washington, D. C.; *Handbook of Modern Facts about Alcohol*, Scientific Temperance Federation, Boston. I should be glad if these additional references might be of help to your correspondent."

We are most grateful, not only for your thoughtful act, but for your clear understanding of our aims in regard to the Efficiency Service. We want this to become a feature of such interest and value that readers will voluntarily send facts and opinions and experiences, as you have done; and that, sooner or later, every reader of The Independent may come to feel an active share and responsibility in the Service. Has anybody or anything helped you do more and better work? Have you proved the worth of any special aid to physical, mental or moral hygiene? Can you suggest a way whereby your friends may be reached more widely and helped more fully by the Efficiency Service? Any thought of this kind will be heartily welcomed, and published when space permits.

63. Mr. V. C. F., Colorado. "I am very desirous of obtaining copies of the Efficiency addresses delivered recently at the National Headquarters of the Y. M. C. A. Is it possible for you to forward these?"

They were given from notes, by the different speakers, and have not appeared in print. The substance, however, of one of the addresses will soon be available in book form. Announcement will be made when the volume is ready.

64. Mrs. H. C. R., Connecticut. "The recent pure food agitation thruout the country has appealed to me strongly. I am anxious to obtain a list of foods and beverages known to be chemically pure, and guaranteed by reliable food experts. Can you refer me to such a list?"

The Board of Health of Westfield, Massachusetts, provides such a catalog, in its *Pure Food Book*, based on the researches and experiments of the noted chemist, Lewis B. Allyn.

### Powder Point School for Boys

**By the Sea 96 King Caesar Road, Duxbury, Mass.**

Modern buildings. New concrete residence. New gymnasium. Extensive grounds. Large athletic fields. Cinder track. Safe boating and swimming in land-locked Plymouth Harbor, bordering on school grounds. Total .....\$76,841,108.58

## THE MARKET PLACE

### WAR CREDIT LOANS

Not long after the beginning of the war, the French Government sought to negotiate a loan in this country. Mr. J. P. Morgan, representing the banking syndicate to which application had been made, undertook to ascertain the attitude of our Government at Washington, and was told that the floating of the proposed loan was disapproved because it would be a violation of neutrality. Therefore the project was dropt.

Since that time the Allies and two or three neutral nations which may be drawn into the great conflict have bought very large quantities of supplies here. These include foodstuffs. Payment has not been made in gold, but there has been provision for payment by credit. Large sums are still due. It is said that Great Britain and France are to settle within the next two weeks obligations amounting to \$60,000,000. Russia procured a credit for \$25,000,000 some time ago. Credits to France amount to \$26,000,000. Germany has recently sold \$10,000,000 of notes here, probably on account of indebtedness contracted before the war. The credits we have mentioned are arrangements with American bankers, who sometimes invite the public to take part by purchasing notes. Mr. Morgan is now in London, conferring with representatives of the British Government concerning a proposed British credit here of \$100,000,000. His banking house announced last week that, in company with the National City Bank and the First National Bank, it was offering to the public one-year five per cent Treasury notes or bonds of the French Government at 99½. This offer relates to a new French credit of \$50,000,000.

The attention of our Government was directed to this method of paying the debts of France, and Secretary Bryan gave to the public the following statement:

The State Department has from time to time received information directly or indirectly to the effect that belligerent nations had arranged with banks in the United States for credits for various sums. While loans to belligerents have been disapproved, this Government has not felt that it was justified in interposing objection to the credit arrangements which have been brought to its attention. It has neither approved these nor disapproved. It has simply taken no action in the premises and express no opinion.

There is not much difference between a loan of \$50,000,000, secured by notes, to a belligerent nation, and a credit, also secured by notes, to the same nation, altho it is understood that the money obtained by the credit is to be expended here for supplies. But the indebtedness for supplies did not exist when the loan was proposed. Moreover, the situation at that time called for caution. We owed large sums abroad

and were adopting various plans for meeting the debt. International trade was partly paralyzed. Now the debt has been shifted to the other side. And, if we strive to promote the safe transportation of supplies which belligerents are permitted to buy here, we may reasonably promote payment for these supplies. The credit loans are negotiated in order that payment may be made.

### CONFIDENCE AND A FREE MARKET

The removal, on March 31, of all restrictions upon trading in stocks and bonds on the New York Stock Exchange must be regarded as an event of much importance. It is an expression of the American financial world's confidence in the strength of financial and industrial conditions here. The New York Exchange was the last of the great markets of its kind to close its doors, and now it is the first to make trading free. It virtually says to the world that this country is strong enough to take, and to pay for, all the securities which foreign holders may desire to sell.

When the Exchange was closed the action was taken to prevent such a great depression of market values as might have been caused if great quantities of stocks held abroad had been forced to sale here. At that time this was the only large exchange remaining open. It has been estimated that foreign holdings of American stocks and bonds amount to a par value of \$5,000,000,000. When the Exchange was opened again, on December 12, the controlling authorities guarded against a great and disastrous decline by establishing minimum prices for the stocks. That is to say, it was provided that sales should not be made below a certain price that was named. As time passed, it became necessary or expedient, in a few instances, to reduce the minimum. This action was taken with respect to Steel Corporation shares. There were sales of foreign holdings of our securities, but no general or menacing movement of the kind was seen. During the past two or three weeks there has been a notable revival of activity in trading, with a considerable advance of prices. Demand has increased, and the field has broadened. Three or four stocks, for a long time the favorites of speculation, no longer supply forty or fifty per cent of the week's business. There has been activity in almost the entire list. Prices have risen so far above the minimums that these are no longer taken into consideration.

The restrictions were removed by unanimous vote of the Exchange's Board of Governors, and in response to the recommendation of the special committee which fixed the minimum

## CAMP YUKON

Lake Cobbosseecontee, Maine

FOR BOYS AND YOUNG MEN

July 1st to September 7th

A fully equipped boys' camp with buildings and tents and every facility for sport on land and water

FRANK D. SMITH, Director

Director Riverside Outing Club, N. Y. City  
203 West One Hundred and Second Street  
Telephone 2453 Riverside

Camp Address, Winthrop, Maine  
Telephone 132-12 Winthrop

prices. We quote the reasons given for the decision:

First, that in most cases the ruling prices are far above the minimum prices, and hence the latter are practically useless.

Second, that financial affairs thruout the country and our foreign trade situation have so improved as to remove the danger existing at the time of the reopening of the Exchange.

The confidence indicated by the Exchange's action—confidence which is felt and exprest thruout the country, as well as in the market for securities—is due largely to the great excess of our exports over our imports, an excess which amounted, for the period from the beginning of the war to March 1, to \$577,000,000. Additions for March have made the total more than \$700,000,000. The warring nations that have bought great quantities of war supplies here are negotiating loans or credits in New York for the settlement of their debts. Neutral countries accustomed to look to Europe for money are borrowing here at high rates. Our stock of gold is large. What may be called financial sentiment is affected by a belief that the war will end within a few months. As to our great market for securities there is no longer any fear. It says to the world that we can buy and carry all that war necessities may compel foreign holders to sell.

### PHILIPPINE TRADE

At the beginning of last year there were indications that the foreign trade of the Philippine Islands would be much increased, and there were large gains in the first six months—\$6,500,000 in exports and \$2,500,000 in imports. But conditions were changed by the war. For the full year the imports show a loss of \$4,724,133, and the increase of exports is only \$916,670. Philippine exports in recent years have been nearly equal to the imports, and the total has been about \$100,000,000.

After the war began, there was a notable decline of the imports of cotton goods and of machinery to be used in the sugar industry. Hemp exports were decreased, and those of copra were reduced by \$6,000,000. But there were large shipments of sugar. The foreign trade of the islands has suffered on account of a lack of ships.

The value of the exports of horses and mules for the belligerents in February was \$10,505,375.

James J. Hill, the veteran railroad man of the Northwest, predicts that the war will end before October 1.

There is still \$15,181,955 of of the emergency currency outstanding. It is held in Texas, North Carolina, California, Pennsylvania, Louisiana, Alabama, Florida, Virginia, Kentucky, Iowa, Oklahoma, Tennessee and Kansas.

The Oregon & California Railroad Company asks the Supreme Court to reverse the decision of the Federal District Court in Oregon forfeiting the company's title to 2,300,000 acres of land estimated to be worth \$50,000,000. Forfeiture was claimed on account of failure to obey a clause in the grant which required the company to sell the land to actual settlers at not more than \$2.50 per acre.

The following dividends are announced: Westinghouse Electric and Manufacturing Company, preferred, quarterly, 1 1/4 per cent, payable April 15; common, quarterly, 1 per cent, payable April 30.

## Don't Risk Accidents or Arrest

KLEARGLOW will prevent accidents and arrests caused by glaring headlights, or by lack of light, the result of using "dimmers."

KLEARGLOW is not a dimmer—does not cut down the light, but does do away with the glare. "Dimmers" are dangerous—KLEARGLOW is safe.

### KLEARGLOW

The Auto Light Diffuser

conforms to all laws covering automobile headlights. Goes in place of present headlight glass. Put on in ten minutes. Travel anywhere without removing it. Made of scientifically designed glass surfaces in one piece.

## The Science of Digestion

More people die from overeating than from any other cause. This fact is proved by scientific medical investigation. Constipation kills more people than war, pestilence and famine combined. It begins subtly. If neglected, it often leads to Colitis, Appendicitis, Bright's Disease or Cancer. Cathartics afford only temporary relief. Dependence upon drugs is dangerous. Their action weakens the intestines—reduces your resisting power. The scientific way to control and permanently relieve Constipation is through steady attention to daily habits, diet and exercise. This is the easiest way—the only safe way. How to get rid of Constipation is told in a new book by Dr. John Harvey Kellogg, who gives you results of his observations and treatment of thousands of cases during the nearly forty years he has been Superintendent of the great Battle Creek Sanitarium. Dr. Kellogg is the great authority on this subject. He is a world leader in "Preventive Medicine," an eminent surgeon, a profound scholar and most convincing writer. He teaches you how to avoid sickness and keep well. Dr. Kellogg's book on Constipation is intensely interesting and easily understood. If you follow his teachings, you may be permanently rid of Constipation. The book is not large—only a little over 125 pages—but its contents are worth many times the price. In board covers, the price is \$1.50 but, to give the work widespread distribution, Dr. Kellogg permits an edition bound in library paper to sell at only \$1.00 postpaid. Order at once. If you are not entirely satisfied, you may return the book for prompt refund. Order today. Get relief from Constipation. Address GOOD HEALTH PUBLISHING Co., 304 W. Main St., Battle Creek, Mich.

Estimated unearned discounts..	81,681.82
<b>Total .....</b>	<b>\$41,626,235.81</b>

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

# INSURANCE

CONDUCTED BY W. E. UNDERWOOD

## THE VIRTUE OF ENDOWMENT INSURANCE

On various occasions we have discussed the question of life insurance policy forms and have emphasized the desirability of proper selection on the part of insureds. In formulating their policies, the companies endeavor to provide for every condition of life—for the man of small, of medium and of large income; for those of few, none or many dependents; for the young, the middle-aged and the elders. It is essential that every producing human creature should have the protection against death provided by this beneficence, and it is equally desirable that each should be equipped with that form of it best suited to his needs.

In connection with this matter we have pointed out the usefulness, in its proper place, of the endowment policy. We are aware from letters received from our readers now and then, that objections, founded on the comparatively heavier premiums for this form of policy, are made by a large number of people. Arguments are advanced in favor of Term or Ordinary Life forms in combination with savings bank deposits. It is conceded that, faithfully persisted in, these are good; but they are too easily discontinued, particularly the savings bank end of them. As nearly as we can, there are some inherent privileges we should, for our future benefit, entirely alienate.

There has lately come to our attention, thru a statement appearing in the *Brooklyn Eagle*, the case of a person, not yet fifty years old, who got the capital upon which his present business prosperity rests thru the investments he made in endowment policies. In the early part of his business career he spent his salary almost as fast as it was earned. We are specifically informed that he attempted to maintain a savings bank account, but could never seem to deposit money regularly. He was persuaded by a friend at last to try a ten-payment endowment. This venture involved no little self-denial, for the premium on a ten-payment endowment is large. But he went thru with it. At the end of the period he withdrew the \$10,000 with which, plus the ripe experience gained in his line of work, he established himself and, as runs the report, "is now more than ordinarily successful."

Similar results have been achieved by other wise young men. Unless we greatly err, the business success of Francis Wilson, the actor-manager, was built upon the capital accruing from some \$70,000 or \$80,000 secured thru the maintenance of endowment insurance during the years when he was a salaried member of theatrical companies.

Every young man who can spare \$50

from his yearly earnings should commence his business career by owning \$1000 of endowment insurance. In the majority of cases it will prove to be the proverbial "friend indeed."

## CANCELLATIONS AT "SHORT RATES"

For more than a quarter of a century the western and southern states have industriously legislated on fire insurance, and it had become an accepted fact among managers in that business that no phase or feature of it had escaped regulation of some sort. But this idea must now be abandoned as an error. Some member of the Minnesota House has discovered a long neglected defect and has secured the support of his colleagues in an effort to remedy it. That branch of the Minnesota Legislature has just passed a bill annulling the provision in fire policies which gives the insurers the right to exact what are known as "short rates" when cancellations of policies are demanded by insureds. This statement may not be clear to many readers and a brief explanation may be desirable.

A fire insurance policy contract provides that it may be cancelled by either party, the insurer or the insured, on the following terms: if cancelled by the insurer, the amount of the unearned premiums due the insured must be calculated pro rata for the unexpired term; if cancelled at the request of the insured the calculation is to be made according to the factors found in the "short rate table." Example: Take a premium of \$100 on a policy running a calendar year, to be cancelled at the end of six months. If cancellation is to be made pro rata, the return premium will be \$50; if made at "short rates," the table provides that the insurer may retain seventy per cent of the annual premium, thus making the refund to the insured \$30.

As a matter of course, this arrangement exists for the protection of the insurer on business it desires to retain, and on which it has paid all the overhead expenses which, first and last, run from thirty-five per cent to forty per cent of premiums. True, when return premiums are paid on cancelled policies, agents, whose commissions average about twenty-two per cent, must stand their equitable share of the refund made by the company to the insured, who is the agent's or broker's customer. The "short rate" also prevents raiding of one company's business by the agents of other companies. The system is of immemorial custom and the principle is accepted by the legislators of those states who drew the standard forms of policies adopted by various states. As a matter of fact, the standard policies are parts of the laws of the states adopting them.

1915

## Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....\$27,964,578,109.00  
Received premiums thereon to the extent of.....287,324,890.99  
Paid losses during that period 143,820,874.99  
Issued certificates of profits to dealers.....90,801,110.00  
Of which there have been redeemed.....83,811,450.00  
Leaving outstanding at present time.....6,989,660.00  
Interest paid on certificates amounts to.....23,020,223.85  
On December 31, 1914, the assets of the company amounted to.....14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

## BEAUTIFUL HOME AND DAIRY FARM

133 acres fertile land can show best yield of ALFALFA IN OHIO. Located on MAIN MARKET MACADAMIZED STATE ROAD. By auto or electric line only 3 minutes from OBERLIN COLLEGE. WITH ITS NEW \$3,000,000.00 ENDOWMENT, FINE CHURCHES, PUBLIC SCHOOLS, ETC., and 45 minutes from CLEVELAND. Complete equipment of modern buildings. ABUNDANCE OF ARTESIAN WATER AND NATURAL GAS piped everywhere. Bath and 3 toilets connected by PRIVATE SEWER WITH OBERLIN TRUNK LINE SEWER. Abundance of fruit and shade trees and shrubbery. An opportunity to secure the HIGHEST TYPE OF ADVANTAGES OF EVERY DESCRIPTION all for the low price of \$33,000.00, of which \$15,000 can remain on mortgage; discount for all cash. FOR FULL PARTICULARS address either E. A. SHERRILL, PROP'R. OR YOUR OWN BROKER.

**Every Home Needs this Great**

**Step-Saver - the Wheel Tray**

Makes housework easier. Carries full meal to table and clears it in one trip. Handy in kitchen, dining room, sun porch. Beautiful permanent finish. Two heavy oval trays giving double capacity. \$10 in black; \$12 in white. Express prepaid. Booklet free. Address WHEEL TRAY CO., 432 W. 61st Place, CHICAGO

**PATENT YOUR IDEAS**

\$9,000 offered for certain inventions. Book "How to Obtain a Patent" and "What to Invent" sent free. Send rough sketch for free report as to patentability. Patents advertised for sale at our expense in Manufacturers' Journals.

**CHANDLEE & CHANDLEE, Patent Attys**  
Est. 16 Years 1077 F. St., Washington, D. C.

## THE CHAUTAUQUA IDEA permeates the 15,000

Lyceum Courses and the 3,000 Chautauquas conducted in all parts of the United States during the year. The paid attendance in one year is said to have exceeded

### TEN MILLION PERSONS

The Lyceum and the Chautauqua in their broad aspects will be considered in the next installment of "The Chautauqua Idea," to appear in The Independent next week.

## PEBBLES

All those who think our jokes are poor  
Would straightway change their views  
Could they compare the ones we print  
With those that we refuse.—*Brumonian*.

### A REASONABLE THEORY?

Boss—No; we have all the men we need.  
Laborer—Seems like you could take one more, the little bit of work I'd do.—*Judge*.

Waiter—Will you have a fifteen-cent cigar, sir?

Guest (at New York hotel)—Yes, if it doesn't cost more than a quarter.—*Life*.

"Every man," said Uncle Eben, "thinks he's right mos' of de time. An' de res' of de time he thinks his mistakes is puffedly excusable."—*Washington Star*.

### THE WISDOM OF CHILDREN

Teacher—Well, children, what shall we give the Belgian sufferers?

Kid (in the rear)—I move that we give them three cheers!—*Widow*.

"I don't see why you call your place a bungalow," said Smith to his neighbor.

"Well, if it isn't a bungalow, what is it?" said the neighbor. "The job was a bungle and I still owe for it."—*Ladies' Home Journal*.

Chairman of the Committee—Is this the place where you are happy all the time?

St. Peter (proudly)—It is, sir.  
"Well, I represent the union, and if we come in we can only agree to be happy eight hours a day."

Ethel used to play a good deal in Sunday School, but one day she had been so good that the teacher said in praise:

"Ethel, my dear, you have been a very good girl today."

"Yeth'm," responded Ethel. "I couldn't help it. I dot a stiff neck."—*Pittsburgh Chronicle*.

### ONE OR THE OTHER

"Yis, sor, wur-rk is scarce," said Pat, "but Oi got a job lasht Sunday that brought me foive dollars."

"What?" said Mr. Goodman, much shocked. "You broke the Sabbath?"

"Well, sor," returned Pat apologetically, "it wuz me or the Sabbath. Wan of us had to be broke."—*Ladies' Home Journal*.

A lady of Somerset bewailed the loss of a somewhat ill-bred but extremely wealthy neighbor who had been very liberal in his help to her county charities.

"Mr. X—— is dead," said she. "He was so good and kind, and helpful to me in all sorts of ways. He was so vulgar, poor, dear fellow, we could not know him in London, but we shall meet in heaven."—*Tit-Bits*.

The office boy in a law office of this town himself hopes to be a lawyer some day. He has begun his studies already by asking questions of the clerks whenever he hears a legal term about which he desires information.

The other day he approached one of the clerks with this question:

"What do they mean by a contingent fee?"

"It's like this," explained the clerk. "If you lose the case your lawyer gets nothing; if you win you get nothing."—*New York Times*.

The way they do things in some of the odd corners of the British Empire, where they are comparatively free from wireless telegrams, is unique, if thoro. The officer in charge of a certain hinterland received from his superior officer at the base some time in August this message: "War has been declared. Arrest all enemy aliens in your district." With commendable promptitude the superior officer received this reply: "Have arrested seven Germans, four Russians, two Frenchmen, five Italians, two Rumanians and an American. Please say who we're at war with."—*Argonaut*.

*Belle Armstrong Whitney*

## Clothes Sense

Clothes sense doesn't mean knowledge limited to what are called (*often mistakenly*) "sensible clothes" any more than it is confined to a sense of merely fine clothes. Clothes sense—real clothes sense—comes from a combined knowledge of what is at once fashionable, suitable and in good taste. Inexpensive clothes needn't be "dowdy." And—healthful clothes needn't be ugly and shapeless any more than beautiful and stylish clothes need to be outrageously extravagant.

"The best dressed women in Europe—great ladies and fashion leaders who set the styles—dress economically." So says Mrs. Belle Armstrong Whitney in the April issue of *Good Health*. And—Mrs. Whitney knows because her home is in Paris, where she is prominent in the "American colony" and patronizes the great Parisian dress artists. In America, Mrs. Whitney is a leader in the social, literary and club life of New York city and her known acquaintance with fashions has enabled her to become "the highest paid Fashion Authority in the world." Mrs. Whitney is, therefore, thoroughly well equipped to tell you how clothes may be made stylish, attractive, healthful and economical; in other words, how you can wear pretty clothes without risking your health or exhausting your pocketbook. Mrs. Whitney's articles appear only in *Good Health*—the magazine that teaches *practical efficiency for the individual and the home*. Get Mrs. Whitney's first article by sending *ten 2c stamps* (20c) for the April *Good Health* or—get all Mrs. Whitney's articles by sending \$2 for *Good Health* for one year. Mail your subscription to

# BOTH SIDES

# A DEBATE

## MILITARY TRAINING FOR COLLEGE STUDENTS

**RESOLVED:** That military training should be given in American colleges and universities.

**T**HE United States Government first provided for military training in colleges and universities by passing the Morrill act of 1862, which created the land-grant colleges and which required that military science should be included in the curriculum. Up to the present time, fifty-two land-grant colleges, in addition to sixteen for colored people, have been created under this act. A later act provides that the President of the United States may detail an officer of the regular army to give military instruction in any school, college or university which will train one hundred and fifty cadets. The total number of officers who may be detailed at any time is one hundred. Their salaries are paid by the Government and arms, equipment and ammunition are also furnished to the schools. Additional officers, from the retired list, may be detailed to other institutions, but any salaries they receive, except their retired pay, must be paid by the institutions. During the recent discussions of national defense much attention has been given to the question of military training in colleges and universities. Many college presidents favor the plan, while others are strongly opposed to it. This debate was prepared by Mary Prescott Parsons.

### ARGUMENT FOR THE AFFIRMATIVE

I. Even if war were impossible, the training should be given because of its educational value.

A. It is valuable to the institution.

1. The natural interest in military training will increase the number of students and add to their interest in academic studies.

2. It will improve the physical condition of the entire student body, while athletics benefit only a few.

3. It will help in maintaining discipline.

B. It is valuable to the student.

1. The physical training insures health, erect bearing and grace.

2. The mental and moral training prove useful in business life.

C. It is valuable to the nation.

1. It quickens patriotism.

2. It makes better citizens.

II. The safety of the nation requires it.

A. National defenses must be strengthened.

1. The desire for peace cannot always prevent war.

2. The army is unprepared.

a. It is too small.

b. It has not enough officers.

c. There is no trained reserve.

d. The suddenness of modern wars makes training of volunteers impossible.

e. Reinforcement of the army by untrained men would make it inefficient.

B. Adoption of military training in colleges and universities is the best method of strengthening the army.

1. Other plans are unsatisfactory.

a. Enlarging the army is contrary to national traditions.

b. Maintenance of a paid reserve is impractical.

1. It is expensive.

2. It interferes with the economic pursuits of citizens.

3. It is difficult to secure men for a reserve.

2. This plan is practical.

a. It strengthens the army at its weakest point by providing trained officers and trained citizen soldiers.

b. It is not expensive since the number of men with the colors can be decreased.

3. It is in accordance with our national ideals.

a. It prevents compulsory service in time of peace and conscription in time of war.

b. It will make for peace.

1. Military drill provides a normal outlet for the boy's natural war instinct.

2. Men trained to know the dangers of war will try to maintain peace.

3. Preparedness discourages attack.

4. Training will tend to shorten any war which may come and to lessen its dangers and suffering.

### ARGUMENT FOR THE NEGATIVE

I. Military training in institutions of learning is not justified by its intrinsic worth.

A. It is a disadvantage to the institution.

1. Many parents oppose it.

2. Many students dislike it.

3. It is difficult to provide suitable buildings and grounds.

4. It is expensive.

5. The curriculum is now overburdened.

B. It does not repay the student for the time he spends.

1. It is not good exercise.

a. It brings few muscles into play.

b. It produces neither erectness nor grace.

c. In some cases it is distinctly harmful.

d. In all cases it must be supplemented by corrective gymnastics.

2. It gives good mental training only to the cadet officers.

3. Other methods of training give better moral discipline.

C. It is a disadvantage to the nation.

1. It decreases respect for civil authority.

2. It retards national progress.

II. The adoption of military training for the sake of strengthening national defenses would be unwise.

A. It is unnecessary.

1. War is extremely unlikely.

2. Our present defenses are adequate.

a. They have proved so in the past.

b. Our navy and coast defenses are strong.

c. Our army, tho small, is highly trained.

B. Even if we were to strengthen our national defenses military training in colleges and universities is not a good method.

1. It is impractical.

a. We should still have to rely on volunteers in time of war.

b. It lessens interest in the militia.

c. The training would be forgotten if not continued after college.

d. It is expensive to the government.

e. Even its advocates admit that poor results have been obtained from the training.

2. Other plans are more effective.

a. The same amount of money spent for a paid reserve would do more to strengthen the army.

b. Colleges and universities can best provide for national safety by creating public opinion against war.

3. It is contrary to American ideals.

a. It is a pretext for militarism.

b. It is likely to cause war. Training for war creates a desire to practise it.

c. American education should stand for world patriotism.

## J U S T A W O R D

The Hague will be the scene of an important international conference of women in the interests of peace, beginning on the twenty-eighth of this month. Miss Jane Addams, the national chairman of the Woman's Peace Party, sails on the thirteenth with a number of delegates from this country to take part in the Congress, which will be attended by more than four hundred women from all countries. These delegates expect, not to end the war, but to leave no further doubt as to what the women of the world think of war, and to work out a program for woman's share in the making of a permanent peace. Miss Addams will act as the representative of The Independent, and will send at the earliest moment one or more articles interpreting the spirit of the occasion.

Corra Harris has been three months in the war zone of Europe. Now, back in the corner of Georgia with which readers of The Independent are well acquainted, she writes her conclusions "From the Peace Zone in the Valley." "The only thing we can destroy in this world is ourselves. The only peace we can break is our own peace, not the peace of God," she declares, and she finds that perpetual peace at home. Her neighbor there, a genuine neutral, according to Mrs. Harris, remarks: "Well, I don't hold nothin' agin them heathens that's killin' one another. All I say is that it's less expensive to live accordin' to the Bible than accordin' to the world." The article will be published in an early issue.

In an article recently published in The Independent, Bronson Batchelor told how ingenious manufacturers were "Motorizing America." With the wreck of Europe's motor cars and motor car industry as text, a second article by

Mr. Batchelor on "Capturing the World's Motor Markets" will follow shortly.

The total amount contributed to the Red Cross Relief Fund thus far thru The Independent is \$5998.57.

The following list covers the contributions hitherto unreported:

W. H. Briggs, M.D., Ewing, Neb., \$2; Harry W. Bugbee, Monson, Mass., \$2; Rev. Geo. A. Bushel, Kings Mountain, N. C., \$9.50; F. E. Callister, Silverton, Ore., \$15; H. R. Easterly, Greenville, Tenn., \$5; Mrs. H. B. Fenn, Sitka, Alaska, \$10; Miss May Harvey, Yazoo City, Miss., \$2; J. E. Hazeltine, North Warren, Pa., \$11; Johanna C. Lind, Glasgow, Mont., \$6; R. E. McMillan, Darlington, Pa., \$6.70; J. Ardelle Mann, P. O. Box 170, Millville, Mass., \$3; Mr. James A. Moon, Albay Prov., P. I., \$5; Miss Grace Ott, Cary, Ind., \$5; F. A. Paddock, Rochester, N. Y., \$2; J. J. Siddall, Chicago, Ill., \$2; A. D. Slocum, Des Moines, Iowa, \$10; State Normal School, Kirksville, Mo., \$2; J. C. Watson, Parma, Idaho, \$8; W. C. Wilson, Pago Pago, American Samoa, \$5.

## P E B B L E S

Anyway, Przemyśl is evidently not to be pronounced impregnable.—*New York Evening Post*.

"They do things differently in Mexico."  
"How's that?"  
"The Presidents do most of their running after they're elected."

Mr. Haberdash (preparing an after-dinner speech)—Emily, who was it said "Give me liberty, or give me death!"?  
Mrs. Haberdash—Harry Thaw!

"Would you like to take a nice long walk?"  
"Why, I'd love to!"  
"Well, don't let me detain you."—*Columbia Jester*.

Bud—I see the Germans are spelling culture with a K.  
Weiser—What's the answer?  
Bud—England has control of the seas.—*Gargoyle*.

The New York Health Commissioner reports that germs in clothing are not killed in the laundry process, which shows that a germ has more vitality than a shirt.—*Boston Transcript*.

Mrs. Crawford—Are your husband's objections to female suffrage practical?  
Mrs. Crabshaw—Perfectly practical, my dear. He's afraid there wouldn't be enough political offices to go around.

## IN THE SUBWAY

Mr. Sh\*\*ts—The people up-state think this is the most carefully-run road in the country.

Mr. Ry\*n—How in the world do they get that idea?

Mr. Sh\*\*ts—I always tell them that we haven't killed a cow since it was built.

The other night at dinner in West Philadelphia a little girl surprized her mother by saying, "I'm not stuck on this bread." "Margie," said her mother, reprovingly, "you want to cut that slang out." "That's a peach of a way of correcting the child," remarked the father. "I know," replied the mother, "but I just wanted to put her wise."—*Fortnightly Review*.

Northerner—Has the European war affected you people down here?

Southern Negro—Yes, suh. Powerfully, suh! Dere's Cunnel Sharp, foh example, suh—him dat used to tell about de time in de Rebellion when he smit a thousand Yankees in one day. Dat was some rem'niscence, suh; but since August he dun mixt sech a lot of Turcos an' Belgians an' Cosacks in dat story dat yo' can hardly unfathom it. Ah tells yo' de wah hab sutinly 'dulterated our wah stories, suh.—*Puck*.

## PHYSICIAN TO A WHOLE NATION

MAJOR GENERAL WILLIAM C. GORGAS, WHO FREED HAVANA AND PANAMA FROM YELLOW FEVER, HAS BEEN ASKED BY THE ROCKEFELLER FOUNDATION TO STAMP OUT THE EPIDEMIC OF TYPHUS FEVER WHICH IS NOW CRIPPLING SERBIA AND THREATENING ALL SOUTHEASTERN EUROPE. AN EXPEDITION OF AMERICAN BACTERIOLOGISTS AND PHYSICIANS HAS ALREADY BEEN SENT BY THE FOUNDATION AND THE AMERICAN RED CROSS IN COÖPERATION, AND MAJOR GENERAL GORGAS HAS THE OPPORTUNITY OF DIRECTING THEIR WORK AND OF DEVOTING THE REST OF HIS LIFE, ON BEHALF OF THE FOUNDATION, TO EXPERT SERVICE IN FIGHTING GREAT EPIDEMICS WHEREVER THEY OCCUR. HE BELIEVES THAT YELLOW FEVER CAN BE COMPLETELY DRIVEN FROM THE EARTH

## WOMEN WHO WORK

**T**WO events of recent occurrence have brought once more vividly before the public mind the question of the protection of women in industry. The one event is as gratifying as the other is discouraging. In fact there is much larger room for gratification than for discouragement, since the one is nation-wide in effect while the other is circumscribed by the limits of a state.

The Supreme Court of the United States has sustained the law of the state of California establishing an eight-hour day for women in certain kinds of work. This is the most advanced law in the United States on the subject of hours of labor for women. It not only prescribes the shortest work-day yet made the subject of legislation, but includes a larger number of occupations than any similar statute.

The decision of the court reiterates with emphasis the interpretation of the Constitution already made in the Oregon, the Massachusetts and the Ohio cases. Since the law here in question is not only more drastic but more inclusive, the decision should settle once for all the question of the right of the state to regulate the condition of women's work in any reasonable way.

The court, as in the previous cases, thrusts aside with little ceremony the contention that such a law violates the freedom of contract made sacred by the Constitution. It declares once more that this guaranteed liberty of contract is freedom from arbitrary restraint and not immunity from reasonable regulation to safeguard the public interest. It asserts again the already well-established principle that it is the function and the duty of the legislature to determine the need, the expediency and the wisdom of the law as a protection of the public welfare. It makes clear that the function of the court is limited to the determination whether in view of the actual facts in each case the legislature acted arbitrarily.

Thus the cold actualities of fact, and not theoretical considerations or legal abstractions, are once more made the determining factors in the decision of these important questions. The factors in a case like this, says the court, are "considerations relating to woman's physical structure, her maternal functions, and the vital importance of her protection in order to preserve the strength and vigor of the race." Continuing, the court quotes with approval from the decision in the Oregon case:

She is properly placed in a class by herself, and legislation designed for her protection may be sustained, even when like legislation is not necessary for men and could not be sustained. . . . Even tho all restrictions on political, personal and contractual rights were taken away, and she stood, as far as statutes are concerned, upon an absolutely equal plane with him, it would still be true that she is so constituted that she will rest upon and look to him for protec-

tion; that her physical structure and a proper discharge of her maternal functions—having in view not merely her own health but the well-being of the race—justify legislation to protect her from the greed as well as the passion of man. The limitations which this statute places upon her contractual powers, upon her right to agree with her employer as to the time she shall labor, are not imposed solely for her benefit, but also largely for the benefit of all. Many words cannot make this plainer. The two sexes differ in structure of body, in the functions to be performed by each, in the amount of physical strength, in the capacity for long continued labor, particularly when done standing, the influence of vigorous health upon the future well-being of the race, the self-reliance which enables one to assert full rights, and in the capacity to maintain the struggle for subsistence.

In sharp contrast with this enlightened decision is the action just taken by the New York legislature permitting the owners of canneries to work women twelve hours a day. There is still the possibility that Governor Whitman may veto the bill. But nothing that he can do will take away from the members of the legislature the stigma and the reproach of their attempt thus to exploit womanhood on behalf of the greed of man. New York's lawmakers have waived aside as of no concern the considerations, esteemed of such vital importance by the Supreme Court, of woman's physical structure, her maternal functions, and the necessity of her protection in order to preserve the strength and vigor of the race. They have put property rights above human rights. They have preferred the increased profits of a business to the enhanced welfare of the state.

It is argued, of course, that the canning industry is one which can be carried on only during a short season; and that therefore not only the success of the business but the interests of the workers themselves demand longer hours of work than in other industries. But the good faith of the argument is seriously brought into question when it is realized that the chief sponsors of the bill in the legislature are themselves owners of canneries. It must also be remembered that the worker in a case of this sort is not free to choose. If a twelve-hour day prevails in the canning industry, the women must either work twelve hours a day or not work at all. It must also be remembered that it is in just such cases as this, where the economic pressure of special industrial conditions is enormous, that the workers need to be protected against themselves. It is not only their own well-being which is concerned. The general welfare of the community is at stake.

The decision of the Supreme Court is another long step along the road toward a full realization of the ideal of social justice. The action of the New York legislature, disappointing as it is, is only one of those sporadic reactions which retard progress for a while, but cannot permanently turn it back.

## THE MOBILIZATION OF BRITISH LABOR

**I**T is not sufficient to put soldiers into the field. They must be supplied with guns, ammunition and clothing. It is not sufficient to ask for bids and award the contract to the lowest. The factories must be under the direct control of the government. It is not sufficient to control such factories as wish to supply war material. The government must have power to take over and run any factories capable of supplying the needs of the army. It is not sufficient to seize the factories. The men

also must be made to work regularly and efficiently. This is the chain which has led the British Government, reluctantly but inexorably, to "the most drastic bill ever laid before Parliament," as Bonar Law, leader of the Opposition, called it. Nevertheless he voted for it. So did every other member, the Socialists chuckling over the fact that the bill conceded what they had long contended for in vain.

The output of war material in Great Britain is three

hundred times as great as before the war but, as Earl Kitchener frankly stated, it is still far from adequate and must be increased during the next few months. The chief difficulty is the labor question. The workingmen are as unwilling to give up their holidays as the upper classes are to give up the Ascot races. Ships to carry ammunition and food to the army in France stand empty at the dock because the stevedores are so selfish that they will not work unless they get two pence an hour more—or because the employers are so selfish as to refuse to give them the two pence more, whichever way you want to put it. American mechanics were introduced into the Glasgow shipyards, but the British workmen struck because the Americans “drest like swells do” and ran their machines too fast. Consequently armament orders had to be sent to America.

Finally Lloyd George called together the representatives of the trades unions and made a piteous appeal to them not to impede the manufacture of war materials, explaining that a deficiency of ammunition meant the needless sacrifice of thousands of lives. He promised them that the government would see to it that the manufacturers did not make excessive profits and he begged them to submit temporarily to three conditions: first that there be no strikes but that all disputes be settled by arbitration; second, that the restrictions of output be relieved by allowing a man to work as hard as he liked and women and unskilled labor to be employed, and, third, that the workmen stop getting drunk.

So far the laboring men have shown no disposition to respond to the appeal of the Chancellor of the Exchequer, and as a consequence England is likely to be greatly hampered in its endeavor to end the war quickly.

### A JAPANESE ANNIVERSARY

THERE was celebrated last month in Japan the fiftieth anniversary of one of the most interesting events in the history of the Christian Church. In the last decade of the sixteenth century it had been resolved that Christianity should be utterly exterminated in Japan; not one Christian should be left alive. Francis Xavier and his heroic Jesuit associates had gathered many thousands of converts in Japan as well as in China and India, and it seemed as if the whole East were likely to accept Christianity, but both China and Japan, in their fear of foreign influence, were resolved to abolish the faith. In 1597 twenty-six suffered martyrdom in Nagasaki, and in 1638 Christianity seemed to be extinct in the islands. Foreign priests were refused admission, and if they succeeded in entering, they were killed, and five Jesuits thus suffered martyrdom in 1642, and one other in 1715. That chapter in Christian missions seemed to have been closed.

In 1853 Commodore Perry opened Japan to foreign trade, but for twenty years after this the natives were forbidden to accept the foreign religion and no Christian services were allowed except for foreign residents. In 1862 Pius IX canonized the twenty-six protomartyrs of Japan, and a fine church was erected in Nagasaki in their honor, but solely for the use of foreign residents, for no Japanese Christians were known to exist.

On March 17, 1865, now fifty years ago, hardly a month after the church had been dedicated, fifteen Japanese came to the church and were admitted by Father

Petitjean. He had hardly time to repeat a Pater Noster when three women of the company knelt down beside him, laid their hands on their hearts and said in a low voice, “In our hearts all of us are the same as you.” In surprise he asked where they came from, and they named a village, saying, “At home nearly every one believes as we do.” He was overcome with joy, but they were careful to assure themselves that the new teacher was surely of their sort. They saw the statue of the Virgin and Child, and they were finally satisfied when told that the priests were not allowed to marry. They went back and reported, and a month later at Good Friday 1500 believers filled the church, and Father Petitjean learned in a few weeks of twenty-five communities of Christians, with 6000 or 8000 believers. For two and a half centuries they had held to their hidden faith, with no foreign teacher, no priest, and had maintained their own secret catechists.

Soon more believers appeared, and others joined them. But the old edicts were still in force, and new persecution arose against the “perverse religion.” From 1868 to 1873 over 6000 Christians were tortured or deported, and 2000 died in prison. The revolution of 1867 abolished the Shogunate, restored the Mikado and gave religious liberty. The Roman Catholic Church now has 70,000 adherents in Japan, with 150 European and thirty-three native priests. They have a Jesuit university at Tokyo and a multitude of lower schools, with all the organizations with which the Church is so well equipped.

In the Catholic Church of Japan a high place is given to the “Feast of the Finding of the Christians,” which has now celebrated its half century. Most wonderful would seem that miracle of the vitality of the Japanese Church during those centuries of perforced silence, if the amazing renaissance of Japan within these same fifty years were not more miraculous.

### SAVING THE TIME OF A SETTING HEN

THERE is an old farm saying—usually employed to ward off thanks for neighborly help—that “my time isn’t worth any more than a setting hen’s,” the inference intended by the speaker being that his time is of no value at all. But the scientific farmer of today knows better. He has figured to a nicety how much a hen’s time is worth per day and he finds that in many cases he cannot afford to keep her in the comparative idleness of the sedentary life. So he relieves her of domestic duties and sets a kerosene lamp or a handy water-fall to hatching the eggs for her. To hatch a batch of a dozen eggs or so requires three weeks and afterwards a hen of proper maternal instincts devotes at least six weeks to clucking and scratching and training up the chicks in the morals and manners of feathered bipeds. But if she is shut up in a lattice crate without even a china egg she will become discouraged in her ambition to raise a family and in about a week start to laying again. She will then produce some four and a half dozen eggs in the time she otherwise would have wasted sitting around.

Now an electric incubator has been constructed to handle six thousand eggs at once. This takes the place, then, of some five hundred hens and means the production of some 2200 dozen eggs. At fifty cents a dozen

that amounts to over a thousand dollars saved by substituting electricity for hen labor.

It might have been feared that the hens would take advantage of their new freedom to gad about and perhaps to try to crow, but so far no such evil effects have been reported. Nor did they attack the incubator in a flock and scratch the insulation off the wires, peck the eggs or perform other acts of sabotage. It seems the hens have too much sense for that. The introduction of this labor-saving machinery into the chicken yard has benefited the hens no less than their employers. There are now more hens employed in the United States and they are better fed and housed than ever before. We are beginning to understand that the time and labor of all living beings from hens up are too precious to be wasted when we can get a dynamo to take their place.

### “AS A MATTER OF COURSE”

IT is gratifying that the German Government has announced its intention of paying to the owners the full value of the “William P. Frye,” sunk by the now interned “Prinz Eitel Friedrich,” and of the vessel’s cargo. But the ground on which Germany predicates its decision to pay is surprising.

The German note asserts that the sinking of the “Frye” was justified under the Declaration of London and the German Prize Ordinance; but admits that reparation is due under the Prussian-American treaty of 1799 and the Prussian-American treaty of 1828.

For Germany to admit that a Prussian treaty is binding upon the German Empire is unexpected. It was not so in the case of Belgium. When Germany invaded Belgium, Sir Edward Grey and later the public opinion of the world accused Germany not only of violating Belgian neutrality but of tearing up a solemn treaty, the famous “scrap of paper.” The defense was promptly urged that the treaty of 1839, guaranteeing Belgium’s neutrality, was not a German treaty but a Prussian treaty. Since Prussia is not Germany, it was contended, the signature of Prussia to a treaty is not binding upon the German Empire.

It was an ingenious defense. But it has now been effectively rebutted by Germany itself. If Prussia’s treaties with the United States are binding upon Germany, Germany cannot escape responsibility for Prussia’s guarantee of the neutrality of Belgium.

Is it possible that in German eyes treaty obligations to a strong power are things which, to use the language of the German note, “as a matter of course are binding,” while treaty obligations to a weak nation are merely “scraps of paper”?

### THE SPREAD OF SIMPLIFIED SPELLING

EAST and West, and particularly in the West, the use of simplified spelling is growing. The following is one of the evidences of it.

The movement is spreading in the colleges and universities. We have before us a list of seventy such institutions which have passed resolutions indorsing the movement for the amelioration of English spelling, and adopting some of the simplified forms for use in official correspondence and publications, or officially permitting their use by students in their written work. In Illinois this includes the State University, the Northwestern

University, the State Normal University, Knox College, Illinois College, the Illinois Women’s College and thirteen other colleges. Thus supporting the movement are the very important State Universities of Minnesota, Missouri, Nebraska, North Dakota, South Dakota and Ohio. There are ten colleges and normal colleges in Missouri which endorse and adopt the better way, and seven each in Iowa, Kansas and Nebraska.

Thus the good work goes on in which The Independent took part from the beginning. In this the East is slower than the West, but is moving, as appears from the fact that in the list of seventy colleges we find the names of the University of Ohio and the University of Pittsburgh, while leading members of the faculties of Harvard, Yale, Columbia and Johns Hopkins Universities are among the most active officials of the Simplified Spelling Board. Very possibly to some of the many new subscribers to The Independent its use of the simpler spelling may seem strange, but the movement has the future with it, and it has with it also reason and common sense; and the children would cry for it if they knew enough about it. In the West not a few newspapers have begun to adopt it, and the movement is spreading, as did a similar movement in this country when Noah Webster was the Simplified Spelling Board of his day.

### FEDERATED THEOLOGY

AND why not federated theology as well as federated churches? Pretty much all the Protestant Churches in the land of any special account are salvaged into safe federation, leaving afloat the minor flotsam and jetsam yet to be searched out and gathered in. Then why not federate also the seminaries which teach theology and also religion to the teachers of the churches? Why should all these scores of sects maintain each from one to half a score of these schools of the prophets?

Indeed, they are already learning fellowship and federation, if not union, and the movement is extending from Boston to San Francisco. Harvard University has a divinity school of its own which used to be Unitarian, and is still often so reported, altho of its faculty three professors are Congregationalists, three Unitarians, two Episcopalians and one a Baptist. With it was federated a few years ago the Andover Theological Seminary, Congregational; and this year the Episcopal Divinity School and the Boston University School of Theology, Methodist, have also federated with it, so that the students of each can take the others’ courses of lectures and have them count as part of their work in their own school. A similar federation has been established between theological schools in San Francisco and Oakland; and much the same thing appears in Chicago; while Union Theological Seminary seeks the best men as professors whether Presbyterian, Congregational or Episcopal.

Of course there are those who anticipate danger in such affiliations. They fear that their students will cease to put high value on their divisive points of separation. But these students, now in their postgraduate course, are old enough to be safely allowed to think for themselves, or they never will be. This new fellowship of faith, this courage of investigation, is a fine sign and promise of the unity of the faith and the brotherhood of the churches which are passing thru federation into closer union, to the removal of the shame of our Protestant “subdichotomies of dissent.”

# THE STORY OF THE WEEK

## THE GREAT WAR

**April 5**—French attack Flirey in Woevre. Russians take 7500 prisoners in Carpathians.

**April 6**—Strong French attack near Pont-à-Mousson in Woevre. Belgians retake Drei Grachten on left bank of Yser Canal.

**April 7**—Russians gain Lupkow Pass in Carpathians. A French force under General d'Amade assembled in Egypt for attack on Constantinople.

**April 8**—German attack near Beausejour, Champagne, repulsed. Germans retake Drei Grachten.

**April 9**—Russians take summits of East Beskid range of Carpathians. French gain ground at Ailly, near St. Mihiel.

**April 10**—French storm heights of Les Eparges, north of St. Mihiel. German attack north of Albert.

**April 11**—German cruiser "Kronprinz Wilhelm" puts into Newport News. Pro-war mass meetings in Italy broken up by police.

The St. Mihiel In the battle line which curves thru northern France from Switzerland to Belgium most of the irregularities and sharp angles have been smoothed out in the course of seven months of conflict, but there is in it one point which always strikes the eye; that is, the wedge whose base is Metz and whose apex is St. Mihiel. On a plain map there is no apparent reason for this peculiar situation. But on a relief or contour map one can see at once why the Germans have been able to cut thru the French line of frontier fortifications here and nowhere else. It is because here occurs the only break in the ridge which protects the Meuse on its eastern side. Last October the Germans entered this gap and succeeded in capturing St. Mihiel and gaining a foothold on the plateau to the west of the Meuse. A few miles further and they might have been able to make connection with the army of the Argonne. Then Verdun would have been completely invested and would probably by this time have surrendered.

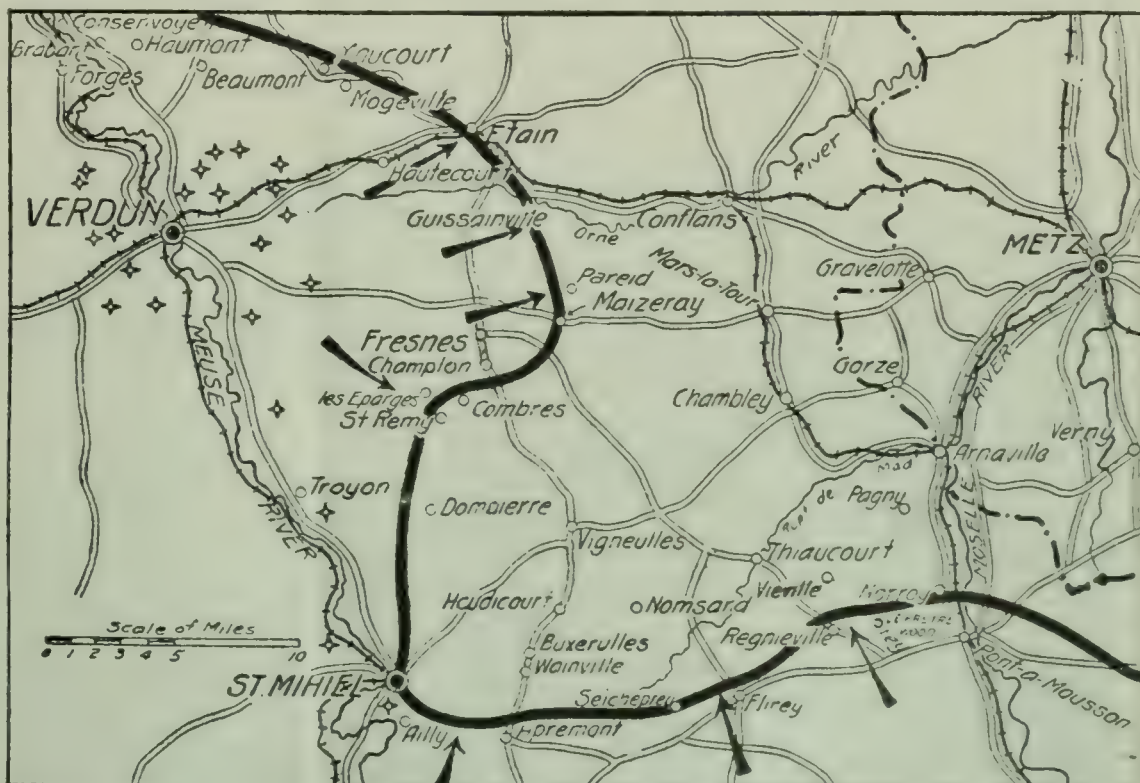

But the Germans could get no further, nor could the French dislodge them from St. Mihiel, altho their line of communication with Metz has been whittled down so thin that the French could easily have shot over the German territory into the French lines on the other side. The French strategists have devoted forty years to the study of the problem of the defense of the eastern frontier, and the war proves that they had solved it correctly. Not one of their four barrier fortresses along

the Meuse and Moselle, Verdun, Toul, Epinal and Belfort, has been touched by a German shell, nor has a single link in the chain of fortifications connecting them given way except St. Mihiel, and in spite of that break the chain has held. Rather than attempt to break thru this line the Germans chose to pass thru Belgium, altho they thereby encountered the Belgian and British armies as well as the French. Whether the Germans could have broken thru the eastern frontier if they had thrown their whole force against it in August is a question that will doubtless never be determined, but it is safe to assume that they would not at least have made so speedy a conquest of so large a part of France. Now the tide has turned and the first efforts of the French offensive are directed toward clearing the eastern frontier by expelling the Germans from St. Mihiel. This will enable General Joffre to begin his attack on Metz, the first German fortress.

The Battle of the Woevre The French are attacking the German wedge at St. Mihiel on both the south and the north sides simultaneously, but their most striking success has been obtained in the north, where they have dislodged the Germans from the woods of Les Eparges. This stands upon a spur of the plateau of Verdun and so dominates the Woevre, as the plain be-

tween the Meuse and Moselle is called. The unusually heavy rains of late had soaked the soil so that artillery was ineffective, but line after line of the German trenches were carried by bayonet charge. The Germans clung to these positions with desperate courage, sometimes literally to the last man, and put forth their strongest efforts to regain the lost ground. Fifteen successive charges were made by the Germans at a single point in the face of the terrible fire of the French machine guns. Of 300 who made one of the charges not a man escaped. According to the official French estimates the Germans lost 30,000 men in the defense of Les Eparges during the last two months. The French loss is not stated, but can hardly have been less, since the position they have carried had been fortified during the past winter by all the means that modern science could suggest in expectation of such an attack in the spring. As soon as the French captured a trench they reconstructed it so as to serve as a base of attack for the next.

The southern side of the wedge extends from Pont-à-Mousson on the Moselle to Ailly on the Meuse, a distance of about twenty miles. Along this line the French have attacked at several points and made slight but important gains. Their advances in the forest of La Prêtre on the western bank of the Moselle carry them

New York Sun

### THE ST. MIHIEL WEDGE

The French are devoting their strongest efforts toward driving the Germans from the foothold they have obtained on the Meuse at St. Mihiel. The stars show the forts about Verdun and along the river which defend the eastern frontier of France. From the names, Metz, Gravelotte and Mars-la-Tour, it will be seen that this was also the scene of the decisive battles of the war of 1870

#### WAR AGAINST A CHRISTMAS-TREE BACKGROUND

German reserves advancing en masse toward the Russian frontier of East Prussia. The value of the white uniforms being adopted for use in snow-covered territory is obvious

forward toward Metz and threaten the only railroad leading toward St. Mihiel.

At Flirey in the middle of the line the fighting has been hard but indecisive. Greater success has attended the efforts of the French in the forest of Aprémont, on the Meuse south of St. Mihiel. Here they have gained a few hundred yards by vigorous use of artillery and hand grenades. This brings them nearer the fort of the Roman Camp, which is the only one of the barrier fortifications captured by the Germans. It is this fort and not the neighboring village of St. Mihiel which forms the armed point of the German salient.

In the Argonne forest on the western side of Verdun the French have also assumed the offensive, but so far have made little progress. In that part of the line between Albert and La Bassée the Germans have delivered some strong blows. From the casualty lists still being published in England it appears that the British paid heavily for their success at Neuve Chapelle on March 10. Their gain of about two miles cost them so far as reported 7244 men, of whom 2074 were killed. According to some of the London papers, this surprising

loss was due in part to the fact that the British batteries continued to shell the German lines after they had been captured.

Over the Beskid Range The Russian troops have captured the crest of the Beskid Range of the Carpathian mountains for a distance of about seventy miles, but the actual invasion of Hungary in force is being held back until all the passes in this section are in their hands. Otherwise there would be danger that an Austrian force entering Galicia by one of the eastern passes might take the Russians in the rear. The Russian right got thru the mountains at Dukla Pass some weeks ago and got as far as Bartfeld, but it would be unsafe for it to proceed further until the left is in the possession of Uzsok Pass. A detachment of Cossacks made their way thru Dukla Pass as early as last November, but before the invasion could be followed up the Russians were driven out of that part of Galicia.

The Austrian troops are obstinately defending Uzsok Pass as they have the others, but evidently more for the purpose of causing delay and loss to the Russians than in the hope of

keeping them out. The real line of defense is being established in the valleys below the passes, probably along a line between Kassa and Munkacs. Here more than 1,000,000 men await them if it is true, as reported, that the army of defense is composed of twenty-four Austro-Hungarian and six German army corps.

This is historic ground, the scene of various conflicts between Austria and Hungary in past centuries. Munkacs is best known to Americans as the birthplace of Michael Lieb, who took the name Munkacsy and was the painter of "Christ Before Pilate" and "Milton Dictating Paradise Lost." But to Hungarians the town is famous for the siege terminating in 1688, when the garrison under the command of a woman, Helen Zrinyi, withstood the Austrians for three years. Kassa or Kaschau was an important town as early as the thirteenth century and was the center of the Hungarian war for freedom in 1849, when Kossuth was overthrown by the Austrians with the assistance of a Russian army.

So long as the war was confined to the trans-Carpathian region the Magyars were strongly in favor of the continuance of the conflict, but if Hungary is invaded their thoughts may turn toward peace, and since they now control the Austro-Hungarian Government there is likely to be a movement for negotiating a peace with Russia regardless of Germany's desires.

Since March 18, The Attack on Constantinople when the Allied fleet lost three warships in the Dardanelles, no further attempt to force the straits has been made. Apparently the military authorities have concluded that it would be too difficult and costly an undertaking to reach Constantinople by the navy alone, and so operations are being delayed until a combined attack can be made by land and sea. A French expeditionary force under the command of General d'Amade, said to number 50,000, was assembled at Bizerta and transported to Egypt, where they have been encamped near Alexandria, waiting till

© Brown Brothers

#### AN AUSTRIAN BATTERY IN THE BLEAK CARPATHIAN COUNTRY

the time came to bring them to the Dardanelles.

In the meantime the Allies have contented themselves with an occasional bombardment of the forts on the Dardanelles or on the outer side of the Gallipoli peninsula and with sweeping the mines out of the channel as far as Chanak, about twelve miles up. This delay has given the Turks time to make such repairs as they can to the fortifications, and they are reported to have received a new supply of munitions from Germany thru Rumania. The number of Ottoman troops in the vicinity of Constantinople is supposed to be about 200,000, and if they put up as stout a resistance as they have in former sieges, such, for instance, as Plevna and Adrianople. the attempt to take Constantinople by land is not likely to be any more successful than by sea.

**Labor and Drink in England** The frank statement of Lloyd George to the trade union leaders that

the drinking habits of the minority have the effect of seriously diminishing the output of war materials at a time when the success of the Allies depends entirely upon that material being largely increased

was not taken by them in a friendly spirit, and Kier Hardie has denounced the Chancellor of the Exchequer for "insulting and maligning the working classes." But Mr. George has stuck to his statement and brings forward abundant evidence to prove it. In one shipyard a battleship which had been brought in for immediate repairs was held up for a whole day because the riveters went on a drunk. It is impossible in some places to get the riveters to work more than thirty-six or forty hours a week no matter what the need. The loss of efficiency due to drink is on the average estimated at twenty per cent or more. This leads Lloyd George to say: "We are fight-

Underwood & Underwood  
A PATROL IN A SNOW-SWEPT PASS OF THE CARPATHIANS

ing Germany, Austria and drink, and so far as I can see the greatest of these three deadly foes is drink." The day after his announcement of a war against drink he received 15,000 letters commending his course.

The action of King George and Earl Kitchener in banishing liquor from their households during the war has been followed by many notables, and there is said to be a decline in drinking at the clubs and restaurants. The Archbishops of Canterbury and York, Cardinal Bourne and the president of the Free Church Council have united in an appeal to the nation to adopt total abstinence in this crisis.

But the liquor interests are so strong in British politics, especially in the House of Lords, and the British public is so sensitive on the point of governmental interference, that there is little likelihood that complete prohibition will be adopted, as in Russia. It is possible, however, that the sale of spirits and perhaps

also of wine may be suspended, or that a dry zone be declared about the armament works. Most of the employers and some of the men favor the latter remedy.

The dockers of Liverpool, who have been on a strike for six weeks because of their refusal to work Saturdays or overtime, have at last been induced to give in by threats of suspension by the executive of the union and of action by the military authorities. The docks are now being cleared of their congested freight.

The Independent Labor party, in convention at Norwich, declared by a large majority that the war was due to secret diplomacy and the duplicity of Foreign Secretary Grey, and that peace should be secured at the earliest possible moment.

**Persian Christians Endangered** From Petrograd we have a report of a defeat of the Turks in the province of Azerbaijan, Persia, northwest of Urumiah, with

Underwood & Underwood  
AT THEM WITH BUTT-ENDS!  
Dismounted Hussars rushing the Russian trenches in the Carpathians. One man has just been struck down

a loss of 12,000 men. Nevertheless, the Russians do not seem to have made much progress in the occupation of this region. If it be true, as is reported from Washington, that our Department of State cabled to the Russian Government asking that country to send a force into Azerbaijan for the protection of the Christians of Urumiah from massacre by the Kurds, the request must have amused the Russians, and we have no reason to question the sincerity of the regrets expressed by Ambassador Bakhmeteff at Washington that the Russian Government was not able to send troops to Urumiah. It will be remembered that only two years ago an American financier, Mr. Morgan Shuster, designated by our Government to take charge of the Persian treasury, was trying to rid Persia of the Russian troops in Azerbaijan. One of the first acts of the Turks on entering the war was to clean the Russians out of this province as far as Tabriz, and they have not, in spite of their reported victories, succeeded yet in getting back again. From Urumiah we have little information except that the 10,000 refugees in the Presbyterian mission are in dire need and the deaths have at times averaged forty a day. A general massacre of the native Christians in this vicinity is still feared, altho the Ottoman Government has assured Ambassador Morgenthau, in response to his urgent inquiries, that there is no danger.

#### War Cases Here

Evidence has been procured which indicates the existence of a plot to cause a controversy between our Government and Great Britain concerning the alleged delivery of supplies to British cruisers from the port of New York. An investigation was made by Collector Malone, who inspected the harbor waters at night, going about on a destroyer. So far as can be learned, he was at first inclined to believe that several tugboats and their crews had been hired to carry the supplies, and that the work was being done under the direction of agents of the British Government.

But the emphatic assertions of the British Consul General, Sir Courtenay Bennett, that not a pound of supplies had been procured from this port and that his Government was in no way connected with the situation discovered by Collector Malone, caused further inquiry, which tended to show that the project had been devised by Great Britain's enemies. The boats and men had been hired, and they were told that they were to carry supplies to the British cruisers, but then there was delay and steps were taken which could not fail to bring the plans to the knowledge of the authorities. The evidence is not complete, but it indicates that those who did the work were agents, not of Great Britain, but of her enemies.

Time for the completion of repairs

on the German auxiliary cruiser "Prinz Eitel Friedrich" expired on the 7th and she decided to remain at Newport News. She was formally interned there until the end of the war. Her commander professed to have been waiting for a German cruiser to come and attack the British cruisers lying in wait for him, and thus to help him to reach the open sea. This internment left only one German rover at large, the "Kronprinz Wilhelm," and she came into the harbor at Newport News on the 11th, needing coal and provisions. Her commander said she had captured and destroyed fourteen ships of the Allies and one Norwegian vessel. Probably she will be interned.

Germany has consented to pay for the American ship "William P. Frye," which was destroyed in January last by the "Prinz Eitel Friedrich." Such a settlement was expected.

Alaska's New Railroad . . . When Congress appropriated \$35,000,000 for the construction of a railroad in Alaska by the Government it made a broad grant of power to the President concerning the selection of the route and the control of the project. There are now two railroads going northward from the southern coast. One, 132 miles long, starts at Cordova and is used mainly in connection with the copper mines. It is owned by J. P. Morgan & Co. and the Guggenheim syndicate. The other, the Alaska Northern, seventy-one miles long, extends from Seward, on Resurrection Bay, to the head of Turnagain Bay. Some time ago it was sold in foreclosure proceedings and came under control of banking interests in Toronto. This road our Government has bought for \$1,150,000, and it will be the southern part of the Government's line. The President announced last week that the route had been selected. It includes the existing road from Seward to Turnagain Bay, and extends from that point northward to Fairbanks, on the Tanana River, the entire length of it being 471 miles. From Turnagain Bay a branch thirty-one miles long, to the Matanuska coal field, will be constructed. The cost of the project will be \$26,800,000.

It is expected that forty miles of the road will be constructed this year. The work is to be done under the direction of the Alaskan Engineering Commission, whose chairman is W. C. Edes. The road will be of standard gage. While it will serve two coal fields, it will also open large tracts of agricultural land to settlement and facilitate prospecting

#### MAKING SNOW HOUSES IN REAL EARNEST

The German "snow battalion" in the Vosges starting to build a shelter which will be used as temporary quarters

which will probably bring gold deposits to light. Eventually it will be extended to the Yukon. The coal of the Matanuska field is high-grade bituminous, acceptable to the navy. In the Navana field there is much lignite of high quality, which will be used in the territory. Townsites along the line have been withdrawn. The President has given orders that measures shall be taken to preserve the health of the workmen employed, with provision for compensation in case of accident.

**Chicago's Election** The city election in Chicago on the 6th excited much interest in other parts of the country because women were to vote there in a mayoralty election for the first time, and also for the reason that an appeal had been made to race feeling in its relation to the Great War. The Republican candidate, William Hale Thompson, was elected by a plurality exceeding 130,000, the largest ever known in a Chicago election. His opponent, Robert M. Sweitzer, suffered on account of the publication of a circular in which many prominent Germans and Austrians, over their signatures, urged Germans, Austrians and Hungarians to vote for him as an indorsement of Kaiser Wilhelm's war policies. On the circulars were pictures of the Kaiser and Emperor Francis Joseph. This was resented by many American voters.

Of the women registered, eighty-six per cent, or 234,309, went to the polls, and sixty-three per cent of this number voted for Thompson. Votes were cast by 426,347 men.

**Street Railway Strikes** Street car service in Auburn, New York, and on one or two interurban lines was discontinued last week owing to a strike of unusual character. It originated in a quarrel between two unions, the Amalgamated Association of Street and Electric Railway Employees and the Brotherhood of Electric Trainmen. The first of these began the strike to force recognition of the association by the Empire United Railways Company, which owns many city and interurban lines in Central and Western New York, and which has contracts with the Brotherhood. These contracts the Empire Company would not abrogate. There were complications, owing to the attitude of another company which controls street lines in several cities, a majority of the Empire Company's lines being interurban. With this other company the Empire has a traffic agreement permitting the Empire's cars to use the other company's

International News

#### STORING UP ENERGY FOR THE TABERNACLE

Billy Sunday and "Ma" throwing the medicine ball in the brief interval between the Philadelphia and Paterson campaigns. Sunday's constant care to keep in training has much to do with his effectiveness

tracks in certain cities. This company, the New York State Railways, appeared to be in sympathy with the strikers, and took measures to prevent use of its tracks by the Empire cars. Whereupon the courts granted an injunction against such action in Syracuse, and injunctions elsewhere were expected.

It was said at the end of the week that the injunctions would cause such an extension of the strike that street car service would be paralyzed in Buffalo, Rochester and several other cities. The State's Board of Mediation and Arbitration sought to promote conciliation, but there was a prospect that the strike would be effective thruout a large part of the state and involve many thousands.

A strike of the street railway men at Wilkesbarre, Pennsylvania, and thru the Wyoming Valley was in force for nine days. Then arbitration was accepted and the men returned to work. They ask for an increase of wages.

**Terre Haute Election Frauds** The long trial of a group of prominent men in Terre Haute, Indiana, for election frauds ended on the 6th, when all of the twenty-seven defendants, one of whom is Donn M. Roberts, mayor of the city, were found guilty. About two weeks after the November election, a Federal grand jury began an investigation. In the last week of December, 126 men were indicted, and 116 of these were arrested. The remaining ten have not been found. Of those arrested, eighty-nine pleaded guilty and twen-

ty-seven went to trial. Testimony disclosed bribery, perjury, false impersonation, repeating, falsification of the returns and other offenses. Those found guilty were the leaders of the Democratic party in the city and county.

Among them are Mayor Roberts, who was a candidate for the Democratic nomination for Governor; Eli H. Redman, declared elected circuit judge of the county; Elmer E. Talbott, city comptroller; Dennis Shea, sheriff of the county; Maurice Walsh, county sealer of weights and measures and treasurer of campaign funds; Harry S. Montgomery, president of the Board of Public Works; John M. Masselink, city inspector of weights and measures, and formerly a member of the legislature; Thomas B. Smith, city judge; George Ehrenhardt, member of the Board of Public Works; Edward R. Driscoll, secretary of the County Democratic Committee; William S. Crockett, superintendent of the city crematory; three gamblers, two saloon keepers and two bartenders. The jury was composed of ten farmers, an insurance agent and a druggist. The prosecutor was the Federal District Attorney, Frank C. Dailey. Jurisdiction was claimed by the Federal Government because the election was one at which votes were cast for a Senator of the United States and a member of Congress.

**The War in Mexico** For a time there were conflicting reports about a battle between the forces of General Obregon and those of General Villa in the vicinity

Alman and Company

#### THE NEW HOME OF THE RED CROSS

Facing the White House and in architectural harmony with it, is to stand the Red Cross Home, an \$800,000 building "built by the Government of the United States and patriotic citizens as a memorial to the women of the North and the women of the South, held in loving memory by a now united country, and that their labors to mitigate the sufferings of the sick and wounded in war may be forever perpetuated this memorial is dedicated to the service of the American Red Cross Society." At a time when war and the alleviation of its horrors claim an unusual share of our attention this tribute to the work of American women in our own great war and this aid to increased efficiency for the work of American men and women in the present war is of particular interest and importance. The cornerstone of the new Red Cross Home has just been laid by President Woodrow Wilson and an address on its significance given by Former President William Howard Taft. The idea of a Red Cross memorial was conceived by Captain James C. Scrymser, of New York, who made the first donation to the fund, and has been ably furthered by Miss Mabel T. Boardman, chairman of the national relief board and executive director of the American Red Cross, who was the moving spirit in bringing the matter to the attention of Congress, in choosing the site, and in supervising the designs and the arrangement of the interior

of Irapunto, which is half way between the Mexican capital and Guadalajara. Villa had failed to capture Matamoras, and had temporarily given up his movement against Tampico, because the advance of Obregon northward, with 20,000 men, must first be checked. There was a battle, but it appears that many lies about it were told. Carranza sent word to Washington that Villa had been whipped, that his cavalry had been "wiped out," and that he had lost 2000 men. Probably Carranza was misled by Obregon. The latter's telegram was published. In it he said that the battle line was nine miles long; that the fighting continued for twenty-seven hours; that he pursued Villa's retreating army thirty miles over fields covered by dead and wounded, and that Villa lost much ammunition.

A day or two later it was known that Obregon, and not Villa, had been defeated; that Obregon had retreated, and that his forces were in a perilous position. The true story came from Villa and was confirmed by George C. Carothers, the agent of our Government, who was with Villa. The latter said that the decisive battle had not yet been fought, and that

Obregon was striving to break the circle which he (Villa) had placed around him. Our Government said that Obregon had retreated. With his army he was in the city of Celaya on the 11th, and Villa was urging him to come out and fight, in order that the people of the city might not suffer from bombardment. Villa sent four foreign consuls to him with this message.

There was some fighting on the border last week. Bullets fell in the residential districts of Brownsville, but Carranza's men were not driven from Matamoras. In Sinaloa, south of Mazatlan, there was a two-days' battle between the Carranzistas and the Villistas, but the result was not reported.

Huerta and Others

Both the foreign and the American owners of mines in the Durango district complain that new rules made by Villa cannot be obeyed and that they are in danger of losing their property, because the penalty is confiscation. Our Government has sent a protest to Villa. Carranza has declined to assist in neutralizing the capital and the railroad to Vera Cruz, as suggested by our Govern-

ment, altho Villa and Zapata consented. Duval West, President Wilson's personal representative, has gone from Vera Cruz to the capital, intending to remain there ten days.

General Huerta sent by wireless to a New York newspaper the following message: "I have no plans. Only a pleasure trip. I greet your land of liberty." It was expected that he would go ashore at New York and would meet there Felix Diaz. Both Villa and Carranza asked our Government to prevent him from landing. They asserted that he was planning a new revolutionary movement, with the help of rich Mexican exiles.

Villa's agency in Washington has published a reply to the criticisms of Cardinal Gibbons and others concerning the treatment of Catholics and the Catholic Church by the revolutionists. The substance of it is that the Church will not be molested if it keeps out of politics. Merchants in Monterey protest against a second tax levied by Villa, asserting that the money is used for the army and not for the poor. But there is much suffering in the city, where hundreds are said to be starving, and it is reported that Villa has given aid to several thousand.

# WHEN INDIA FIGHTS FOR ENGLAND

BY BASANTA KOOMAR ROY

**A**FTER many centuries troops have come from Asia to fight in Europe; this time not to conquer, but to defend the homes and the hearths of the French, Belgians and British. About 100,000 of India's best soldiers are already in Europe fighting shoulder to shoulder with the Allies against the Germans and Austrians.

The Indian troops entered Europe thru Marseilles. There were stalwart Sikhs and ferocious Gurkhas, bold Pathans and handsome Rajputs—but mostly Sikhs and Gurkhas. The native Indian force at home has been considerably weakened; but it is significant that not a single British soldier has been taken out of India. The Indian princes have pledged men and money for the defense of the British Empire.

The Sikh is the flower of the British-Indian army and he is a follower of Guru Nanak. When Martin Luther was preaching the gospel of reformation in Germany, Guru Nanak was preaching another gospel of reformation in the Punjab, the land of the five rivers in northern India. Nanak's crusade was against the existing bigotry of caste, idolatry and other superstitions of Brahmanism. His message was one of harmony among all religions, especially between Hinduism and Mohammedanism. The Sikh was a peace-loving farmer or artizan, but the tyranny of the Moghuls under Aurangzeb, who executed Tegh Singh, a Sikh

*The mixing of the races which makes this war the most perplexingly cosmopolitan of all history is not the least significant phase of the Great War. The bringing to European soil of many troops from British India, bitterly resented by the Teutonic allies, has a double significance, for while they are doing good service in France they are still playing their part in England's troublesome Indian problem. Mr. Roy, a graduate of Calcutta University and a magazine writer of long standing, is in a position to treat both aspects of the Indian expedition.—THE EDITOR.*

Guru, converted this peaceful people into a military confederacy under Guru Govind Singh. And it gained so much in power that the British had to fight many battles before they could ultimately subdue the Sikhs, and that primarily by the treachery of a Sikh general.

The Punjab was annexed to the British Empire in 1849. Since that time the British have lavishly recruited from the Sikhs for India's army. Stout, stalwart and thick-boned, hardy, courageous and obedient, the Sikh makes the best soldier in the British army. He is steady in victory and in defeat. He would rather die at his post than yield an inch of ground. He is fond of colonizing; and it is mostly the Sikhs that have colonized in Canada—a colonization that has been a source of so

much trouble and imperial complications. Wherever he goes, a good Sikh never gives up his long hair, turban and iron bracelet. He would rather part with his head than with his hair, such is his faith in his Guru whose Sikh (the word means disciple) he is.

The Sikh soldier has proven to be a tried friend of the British in more wars than one, both at home and abroad. But indubitably the best service he rendered to the British was at the time of the Sepoy revolution of 1857-58. At a time when the British Empire and British prestige in the East was tottering to its very foundation, it was the Sikh soldier who saved the day and reconquered his own country for the British. Revolutionary India cursed the Sikh, but the Sikh felt satisfied in the thought that he had done his duty. But a change has come in the feeling of the Sikhs in general, owing to the short-sighted and suicidal policy of the British colonists, especially those of the Dominion of Canada. The retired Sikh soldier who has come home after being insulted in Canada has lost all faith in the British sense of justice; he now looks upon all the promises of citizenship in the empire as empty platitudes. So he has spread discontent in the British army thru his friends and relatives—so much so that the British thought it wise to take most of them out of India to be blown into eternity by the huge German cannons. At

THE FIRST DETACHMENT OF INDIAN TROOPS TO REACH THE FRANCO-BELGIAN BATTLE LINE

Paul Thompson

## THE GURKHA'S KURKI

The weapon with which he slits a tiger's throat or ends an enemy's life

least this is the version which the Indian nationalist wants us to believe.

The Gurkha soldier is of Mongolian type. He looks more like a Japanese than like a Hindustanee. His tenacity of purpose is like that of a bulldog. Short, chubby and sinewy, the Gurkha is strong and fearless. His racial weapon is *kurki*, a heavy curved knife. While in his mountainous home in Nepaul, he often encounters tigers in the jungles. But he would never run away from a tiger, no matter how large or how ferocious. He takes his stand with his *kurki* in hand, and when the tiger is about to pounce upon him he steps a few feet aside, and holds his weapon in such a way as to cut the tiger's throat in two. With such a spirit within him he makes a perfect soldier, but he is rather slow-witted.

The word Gurkha means protector of cows. The people that use the name claim descent from the Rajputs of Chitore, Rajputana. They were driven out of their native province by the Mohammedan conquerors, and settled in the mountainous districts around Kumaon. They soon assumed an aggressive attitude, and sought expansion of territory on all sides. They, too, clashed with the British and fought what is known in history as the Gurkha War of 1814. The Treaty of Segauli checked their territorial expansion. Nepaul, the kingdom of the Gurkhas, is still independent of the British Raj. But,

by a treaty, the British Government in India is allowed to recruit about 20,000 soldiers from among the Gurkhas.

The Gurkha soldier is still faithful to the British in spirit. Wherever there is an act of high-handedness that is to be done to suppress the spirit of new nationalism in India, the Gurkha is employed, and he acts like a veritable fanatic in his attacks on men, women and children.

The military organization that binds the Sikhs and the Gurkhas, the English, Highlanders and the Irish, the Mohammedans and the Mahrattas in one Indian army is noteworthy. It was over the reorganization of this army that Lord Curzon and Lord Kitchener fought. In the fight Curzon had to resign, and the military in India was freed from all control of the civil.

The entire military force in India is divided into a northern and a southern army. There are 76,000 British and 164,000 Indian soldiers and officers. Besides the regular army there are volunteers of European or Eurasian extraction. An educated man of India is not allowed to enlist as a volunteer or a soldier. He is not trusted. A Bengali can never enter the army as a soldier.

The relative status of the Indian and British troops in India is discussed by the Indian statesmen in season and out of season. A constant agitation is going on in India to raise the position of the Indian

troops. Ever since the days of the Sepoy mutiny of 1857-58, the lot of the Sepoy has been worse than before the revolution. He is looked upon with suspicion. His loyalty is doubted. He is made to feel that he is inferior to his British comrade. The proportionate numerical strength of the Sepoys has been diminished. More British soldiers have been imported into India to add to the burden of taxation of the over-taxed and poverty-stricken country.

Most of the "lines" in which the Sepoy is made to live are not fit for human habitation, and there is little or no provision for his entertainment; whereas the British soldier is quartered in comfortable "barracks" and ample provision is made for his playgrounds, gymnasiums and billiard rooms. The Sepoy is not entrusted with the rifles of latest model with which the British soldiers are armed. For the same service, and in many instances for better service, the Sepoy is paid much less than the British soldier. The Briton receives about \$25 to the Sepoy's \$4.

But the most objectionable feature of the military system in India lies in the fact that the Sepoy, no matter how long he has served in the army, no matter how marked may be his military capacity, no matter how many battles he has fought for England, both at home and abroad, no matter how many scars of wounds he bears, can never be a commissioned

London Sphere. © N. Y. H.

#### INDIAN TROOPS HAVE HARD WORK KEEPING WARM

Braziers in the trenches have been provided to keep these soldiers of a warmer country from frostbite

officer in the army. All his life he has to wear the badge of inferiority to much younger and inferior military men from England. In India today, out of 1500 commissioned officers, 1500 are British. Writing in the *London India* of November 20, 1914, Mr. Ashraf Ali, a Mohammedan, called this Anglo-Saxon anomaly "a festering sore that rankles in all Indian hearts."

The wonderful machinery of the British-Indian army that not only protects India from foreign invasions but is kept and freely used to defend the entire British Empire, is necessarily a costly thing. India's land, which is mostly owned by the Government, furnishes the bulk of India's revenue. The land revenue is about \$105,483,500, and the military expenditure is about \$98,230,000. Our leaders of thought have, for many years, been agitating against this exorbitant military charge. They demand money for the opening of free schools, as they also demanded it for more irrigation works for the prevention of recurring famines in India. And, again, they claim that when the Indian army is kept and used for the defense of the Empire thruout the world, it is meet that the British "home" Government should pay a part of its expenses. In its dispatch of March 25, 1890, the British-Indian Government itself thus confest: "Millions of money have been spent on increasing the

army in India, on armaments, and on fortifications to provide for the security of India, not against domestic enemies, or to prevent the invasions of the warlike peoples of adjoining countries, but to maintain the supremacy of British power in the East." To give a few specific instances, it was India—poor, starving India—that paid the expenses of England's first Afghan war of 1834-42, of the China war of 1839-40, of the Persian war of 1856, of the Abyssinian war of 1867-68, of the Perak expedition of 1875, of the second Afghan war of 1878-80, of the Egyptian war of 1882, and of the Soudan war of 1896. And it is certainly true that many millions are being and would be spent from India's exchequer to pay England's bills for the present European war.

In spite of all their grievances the Indian troops in Europe are fighting well, and the British Government and people are grateful to India for what she is now doing for England. But it is only fair that the British public should be allowed to know of the valor of the Indian troops that are fighting in the battlefields of Europe—troops that are giving their lives for England in this day of her dire national peril. It is indeed pathetic that the British censor does not allow the British press to publish anything about the Indian troops in Europe. "People at home," explains Mr. Robert Blatch-

ford, an English war correspondent in France, in the *Weekly Dispatch* of London, "are hungry for news of the Indian troops, but I was not so much as allowed to mention them."

There is a method in this madness of the British statesmen. Mr. A. J. Wilson, editor of the *London Investors' Review*, thus touches the problem to the very core when he writes in his paper: "The Indians are fighting with us loyally, with the bravery characteristic of their warlike races, and they look to get the credit for that loyalty as they will by and by look for the reward which is their due. India is fighting for home rule quite as much as for us; do not let us ignore the fact, or by our conduct make it harder to satisfy the legitimate demands of the Indian people when peace has been restored." It is true that the British governmental policy not to allow even a passing mention of Indian troops in the British papers is directed ultimately against the "legitimate demands of the Indian people."

But we feel confident that, when peace follows this barbarous international hecatomb, when broader principles of international brotherhood supplant the suicidal policy of nationalism and spread-eagle imperialism—in that day of ultimate triumph and everlasting victory Mother India shall get *Swaraj*—her much-coveted home rule.

# FOUR BATTLE POEMS

BY WILFRID WILSON GIBSON

## BEFORE ACTION

*I sit beside the brazier's glow,  
And, drowsing in the heat,  
I dream of daffodils that blow.  
And lambs that frisk and bleat—*

*Black lambs that frolic in the snow  
Among the daffodils,  
In a far orchard that I know  
Beneath the Malvern hills.*

*Next year the daffodils will blow,  
And lambs will frisk and bleat:  
But I'll not feel the brazier's glow,  
Nor any cold or heat.*

## THE QUESTION

*I wonder if the old cow died or not.  
Gey bad she was the night I left, and sick.  
Dick reckoned she would mend. He knows a lot—  
At least he fancies so himself, does Dick.*

*Dick knows a lot. But maybe I did wrong  
To leave the cow to him, and come away.  
Over and over like a silly song  
These words keep bumming in my head all day.*

*And all I think of, as I face the foe  
And take my lucky chance of being shot,  
Is this—that if I'm hit, I'll never know  
Till Doomsday if the old cow died or not.*

## RAINING

*The night I left my father said:  
"You'll go and do some stupid thing.  
You've no more sense in that fat head  
Than Silly Billy Witterling.*

*"Not sense to come in when it rains—  
Not sense enough for that, you've got.  
You'll get a bullet through your brains,  
Before you know, as like as not."*

*And now I'm lying in the trench  
And shells and bullets through the night  
Are raining in a steady drench,  
I'm thinking the old man was right.*

## VICTORY

*I watched it oozing quietly  
Out of the gaping gash.  
The lads thrust on to victory  
With lunge and curse and crash.*

*Half-dazed, that uproar seemed to me  
Like some old battle-sound  
Heard long ago, as quietly  
His blood soaked in the ground.*

*The lads thrust on to victory  
With lunge and crash and shout.  
I lay and watched, as quietly  
His life was running out.*

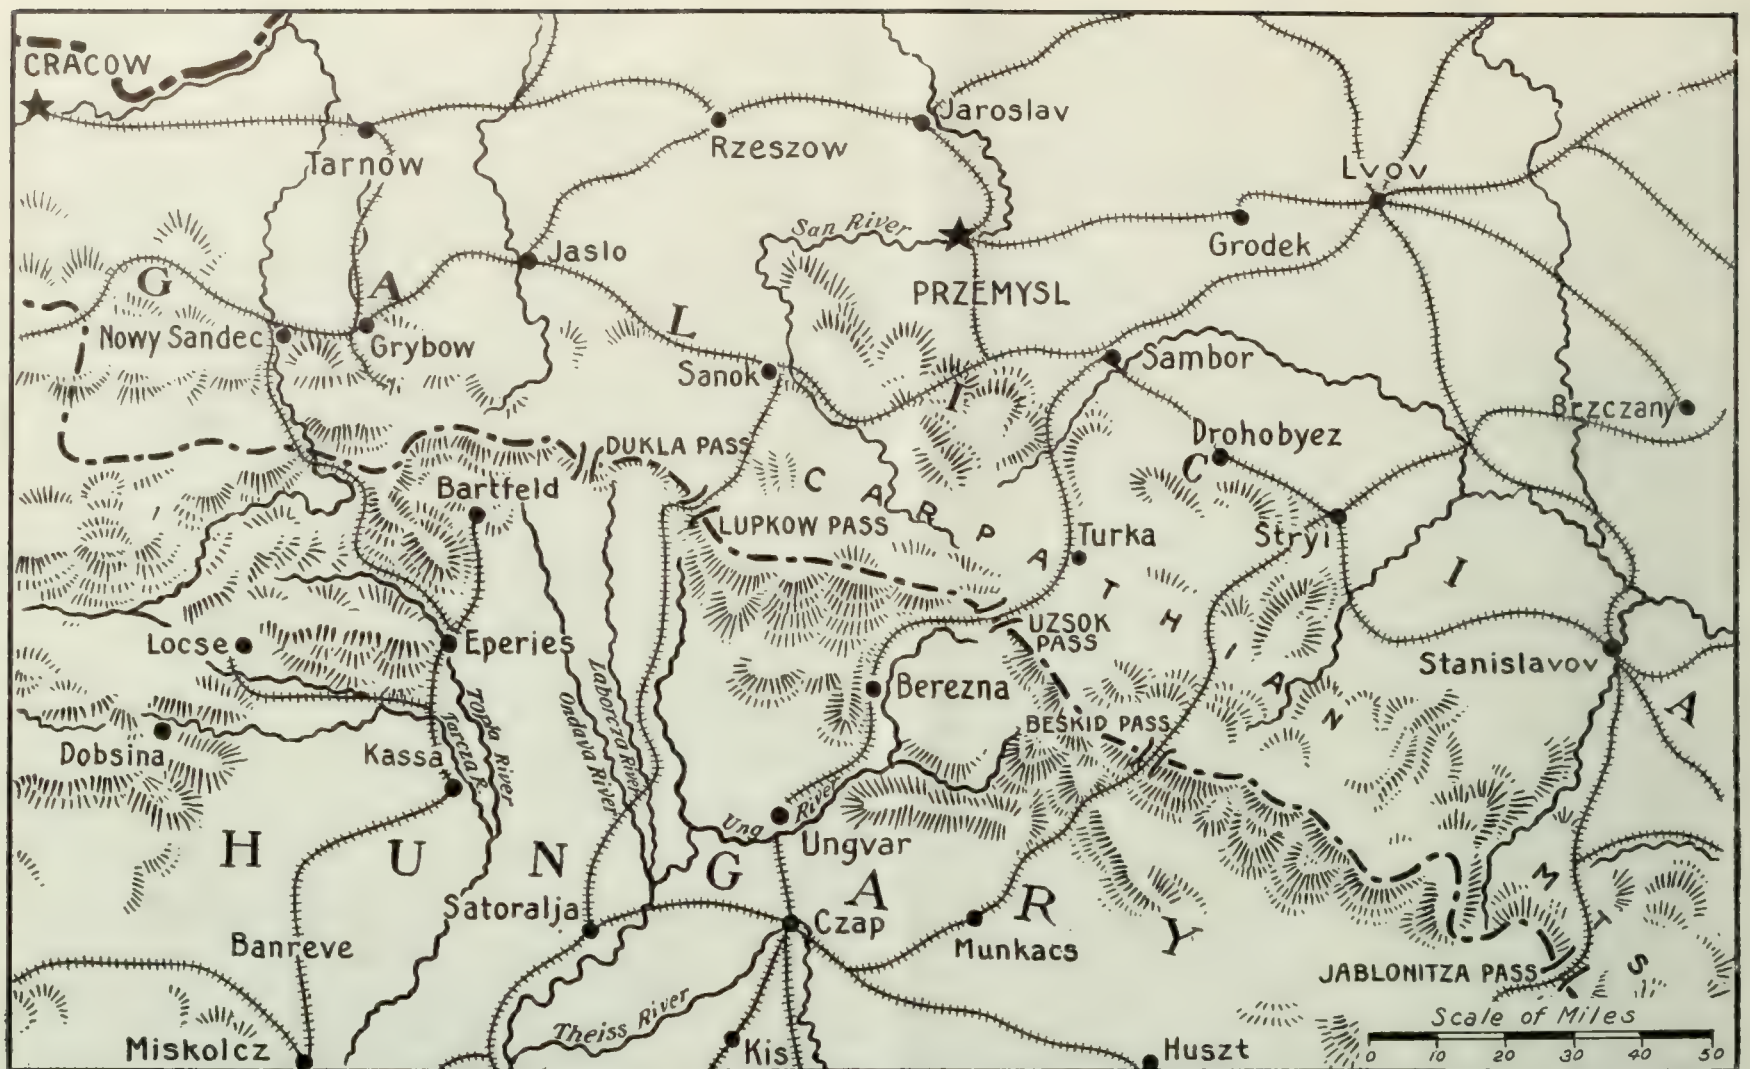

*Brown Brothers*

EARLY SPRING  
THIS IS WHAT IT MEANS IN THE BRITISH TRENCHES

THE INVASION OF HUNGARY

The Russians have partial or entire control of the four main roads leading thru the Carpathian range, Dukla, Lupkow, Uzsok and Beskid (or Vereczke) passes. This gives the invading forces a base of nearly a hundred miles on the crest of the Carpathians from which to project a wedge into the heart of Hungary

## CROSSING THE CARPATHIANS

### THE SIGNIFICANCE OF THE RUSSIAN INVASION OF HUNGARY

**W**HEN the surrender of Przemyśl released the investing army and relieved the Russians of the danger of an attack in the rear from the fortress, the Russians had two courses open to them. Should they do as they had done twice before in the present war, move on westward and attack Cracow, which if taken would let them into either Austria or Germany? Or should they turn south and scale the mountain rampart that encircles the Hungarian plain? Geography advised the former course. Politics the latter. Politics won the debate. So the Russians, instead of following the easier route along the railroads and up the Danube valley toward Cracow, have undertaken the invasion of Hungary.

In preparation for this movement, which both sides anticipated would begin in the spring, fighting of the hardest kind has been carried on all winter in the passes of the Carpathians. Of the details of this fighting we have heard little and know less. No knowledge of mathematics beyond the ability to add is necessary to warn the attentive reader that the reports from Vienna and Petrograd are not to be taken at their face value. But if the claims of victory and the numbers of slain and captured are to be received with cau-

tion no such incredulity need attach to stories of the suffering and heroism of the troops who attacked or defended the redoubts which command the deep defiles. Those who have tried making their way thru felled timberland in winter time will best appreciate what it would be if the smooth white surface of a snow-bank concealed a pitfall, if the moving of a branch might touch off a mine, if barbed wire were stretched between the trees, if bear-traps and wolf-traps had been set for men, if sharpshooters lurked beneath the evergreen boughs and a battery was concealed behind a crag. But the story of these terrible months of incessant conflict has yet to be told. We must rely upon our imaginations to reconstruct the scene, for there are no American correspondents in this region and photographs are rare and unsatisfactory. Altho several hundred thousand of our fellow citizens have come from Galicia, Hungary, Bukovina and Rumania, yet they do not contribute to the knowledge of the American reader and this is one of the few parts of Europe that have not been overrun by our tourists.

Yet the European traveler in search of health, hunting, scenery or society finds the Carpathians most attractive and in the summer time

it is hard to get rooms in the fashionable and expensive hotels in the High Tatra. This is not "high" from the American point of view. Our Westerners would call its highest peak a mere foothill since it is only 8737 feet above the sea. But in beauty and wild grandeur the Rockies or the Alps have little to compare with these pine forests, precipitous heights and deep-set tarns, "the eyes of the sea" as they are called, reminding us of Jokai's sweetheart.

The Russians naturally do not propose to invade Hungary thru the heart of the mountains, but have directed their attack at the lowest part of the watershed which lies between the High Tatra and the East Beskids. Here the elevation does not exceed three thousand feet and there are three passes thru which railroads run from Galicia to Hungary. The most easterly of these is Beskid (or Vereczke) Pass with an altitude of 2680 feet, and a tunnel of more than a mile. Next comes Uzsok Pass, 1845 feet, then Lupkow Pass, and beyond is Dukla Pass, which has no railroad but thru which the Russians have made their way to Bartfeld, or Bartfa. This, the first Russian conquest in Hungary, is a town of 6000 inhabitants. The names mentioned in the daily news are unfamiliar and

confusing, but a glance at a relief map shows that the invasion of Hungary amounts to this: the Russians have crost the watershed by following up the tributaries of the San and following down the tributaries of the Theiss.

For defense Hungary has depend-  
ed upon Nature, so once within this  
mountain bulwark the Russians have  
a clear road to Budapest except for  
such field forces as may be inter-  
posed. These will be outnumbered in  
any case and are hardly likely to  
prove any more successful in with-  
standing the invading hosts in Hun-  
gary than they have been in Ga-  
licia.

But an army in the heart of Hun-  
gary is likely to be a deathblow to  
that curious congeries of diverse na-  
tionalities which has been gathered  
in the course of a thousand years  
under the Hapsburg crown. "Austria  
is not a state; it is a government."  
If one should put his five finger-tips  
upon the map of Europe anywhere  
and undertake to make a nation of  
what he had chanced to touch he  
would not have a more impossible  
task than has the aged and unfortu-  
nate Francis Joseph. Without speci-  
fying all his various titles we may  
say that the Austro-Hungarian mon-  
archy consists of the

- Kingdom of Bohemia
- Kingdom of Dalmatia
- Kingdom of Galicia and Lodomeria
- Grand-Duchy of Cracow
- Archduchy of Austria
- Duchy of Salzburg
- Duchy of Styria
- Duchy of Carinthia
- Duchy of Carniola
- Duchy of Bukovina

"NOT A STATE, MERELY A GOVERNMENT"

- Margravate of Moravia
- Duchy of Upper and Lower Silesia
- County Palatine of Tirol
- Territory of Vorarlberg
- Margravate of Istria
- County Palatine of Goritz-Gradisca
- Town and District of Trieste
- Kingdom of Hungary
- Province of Croatia
- Province of Slavonia
- Town and District of Fiume
- Province of Bosnia
- Province of Herzegovina.

These heterogeneous elements have  
never been brought together by con-  
quest or a common interest. They  
have no bond of union except that of  
the single sovereign to whom they  
have fallen by the chance of inher-

itance and matrimonial alliance. The  
method of national expansion pecu-  
liar to Austria found expression in  
the twelfth century in the couplet:

Bella gerant fortes tu felix Austria  
nube,  
Nam quæ Mars aliis dat tibi regna  
Venus,

which we may venture to Anglicize:

The brave wax great by wars;  
You, happy Austria, wed,  
For they to dominion by Mars,  
You by Venus are led.

But it may well be questioned  
whether Austria was indeed "happy"  
in this peaceful process of empire-  
building instead of the fires of war  
and affliction thru which other na-  
tions have been fused into one. The  
twelve million Germans would rather  
belong to Germany. The ten million  
Magyars want to rule themselves and  
the other peoples living with them.  
The eight million Bohemians and  
Slovaks, the four million Ruthenians  
and the million Slovenes incline to-  
ward Russia. The five million Poles  
want independence. The three mil-  
lion Rumanians want annexation  
with Rumania, the five and a half  
million Serbs and Croats annexation  
to Serbia and the million Italians an-  
nexation to Italy. It would seem that  
under this condition of internal  
strain the Austro-Hungarian mon-  
archy must fly into fragments at a  
touch like a Prince Rupert's drop.

The Russians have invaded the  
Kingdom of Hungary. What the Em-  
pire of Austria looks like alone may  
be seen by the outline map published  
herewith. Its lack of geographical  
coherency is symbolic of its lack of  
deeper unity. The parts do not seem  
to belong together—and they do not  
seem likely to stay together much  
longer.

THE GATEWAY OF THE CARPATHIANS

Uzsok Pass is the pass which the Russians are now trying hardest to gain, for it lies on the  
most direct route between Lemberg or Lvov and Budapest. The railroad seen in the picture  
crosses the great divide at Uzsok by means of numerous zigzags and six tunnels

# THE WORLD OVER

## Telephoning to Moving Trains

Between a moving train and a railroad station twenty-seven miles apart telephone conversations have been proved possible. The train was the Lackawanna Limited and the wireless station was at Binghamton, New York.

Four months have been spent in experimenting with the new DeForest radio telephone, and the final results are said to be so satisfactory that a wide application of these instruments to passenger trains of the Lackawanna system will follow shortly. Mr. L. B. Foley, superintendent of telegraphs of this railroad, advocated the use of wireless telegraphy on trains for a number of years and in the early part of 1914 the idea was given a trial. The results of this experiment were so successful that he determined to give the wireless telephone a similar test.

The problem of telephoning to and from fast trains was put before Dr. Lee DeForest. The task was no easy one, as heretofore the wireless telephone has been one of the most unreliable devices imaginable. Instead of following along the lines of the old wireless telephone, Dr. DeForest set about devising an instrument which would eliminate the principal objection to the

old type—the difficulty of adjusting the *oscillator* by means of which the powerful electric currents carrying the voice are sent thru the air. In accomplishing his object, he has discarded the direct current arc in favor of a device known as the quenched gap into which is fed alternating current at an extremely high frequency. The quenched gap once adjusted requires no further attention, and is locked to prevent tampering.

The new telephone was first installed in the Lackawanna wireless station at Scranton, and the voice of the speaker at the transmitter was clearly distinguishable on the train as far distant as fifty-two miles. In this test the train was traveling at the rate of over fifty miles an hour. This experiment proved that wireless conversation could be heard above the noise of the train, and an equipment was accordingly installed. Altho twenty-seven miles is the greatest distance at which an exchange of conversation has been held, much greater distances will be possible when several minor difficulties are overcome.

The telephone is located in a small booth at the end of the smoking car, while the special dynamo which supplies the powerful currents for the transmitter is located in the baggage

coach. The antenna consists of four wires suspended by insulators along the roofs of four cars.

Altho for the private use of passengers the cost of using the wireless 'phone will not amount to a great deal more than ordinary long distance charges, the chief purpose, of course, will be for despatching and directing the movements of trains.

Railroads thruout the country have already shown some interest in the application of the wireless telephone to railroad trains, especially in freight service. According to estimates made by the Lackawanna, each unnecessary stop that a long, heavy freight train is now compelled to make represents a loss to the road of from \$20 to \$30—perhaps \$200 a day. It frequently happens that scheduled way-side stops of a "manifest" freight train could be avoided if it were possible to telephone orders to the train crew, when under full speed, and at a reasonable estimate of cost the saving in operating expenses would be considerable.

## Butter from the Post Office

The efforts of the Government postal authorities to stir up traffic in food products between the farm and city homes have been consistently energetic ever since last spring when the movement was started in Washington. By means of circulars, printed and distributed at the expense of the Government, many thousand city housewives have been placed in commercial touch with farmers of their community. The latest available figures show that Washington, for instance, has developed a traffic in eggs, butter, fruit, poultry and other farm produce amounting to 250 parcels per day. These have traveled direct from the farm to kitchen—with no middleman save Uncle Sam. This means 250 less sales per day for the grocers of the national capital. It also means 250 instances of better profit for farmers. Atlanta and St. Louis average over 1000 packages per week; San Francisco, Boston and several dozen other large cities a slightly smaller amount.

In the work of bringing the farmer and the consumer together the authorities have gone very thoroly into this problem of foodstuffs distribution. Every possible thing has been done to give the farmer an equal chance to compete with the corner grocery on equal terms. Special fast auto service is used in many cities to effect immediate delivery of perishable goods. Refrigerators have been installed in some post offices. The hours of delivery have been extended far into the night. In certain places a system of telephone calls keeps housewives informed of the arrival of packages.

The most remarkable step taken in this important movement, however, has been the issuance of a price-list by

Lackawanna Railroad

### THE TELEPHONE STATION ON BOARD THE TRAIN

It occupies a small booth at the end of the smoking car. The antenna consists of four wires carried along the roofs of four cars. Messages have been caught on the train from a distance of fifty-two miles, and at twenty-seven miles from the stationary base the operator on the train has been able to talk back

Postmaster Otto Praeger of Washington. In reality it is a *mail order catalog*, put out by the Federal Government in behalf of its farmers. Lists of producers and the various goods which they offer for sale are set forth, definitely priced, in a twelve-page bulletin distributed to Washington householders. The poorest farmer in Virginia or Maryland, provided he have a reputation for honesty in the eyes of the compilers of the bulletin, can have his wares advertised and called to the attention of Washington's housewife aristocracy without a penny of cost.

The bulletin proved of immense help to a great number of the farmers in the neighboring states of Maryland and Virginia, and even disposed of whole season's crops for Pennsylvania producers.

Made in U. S. A.

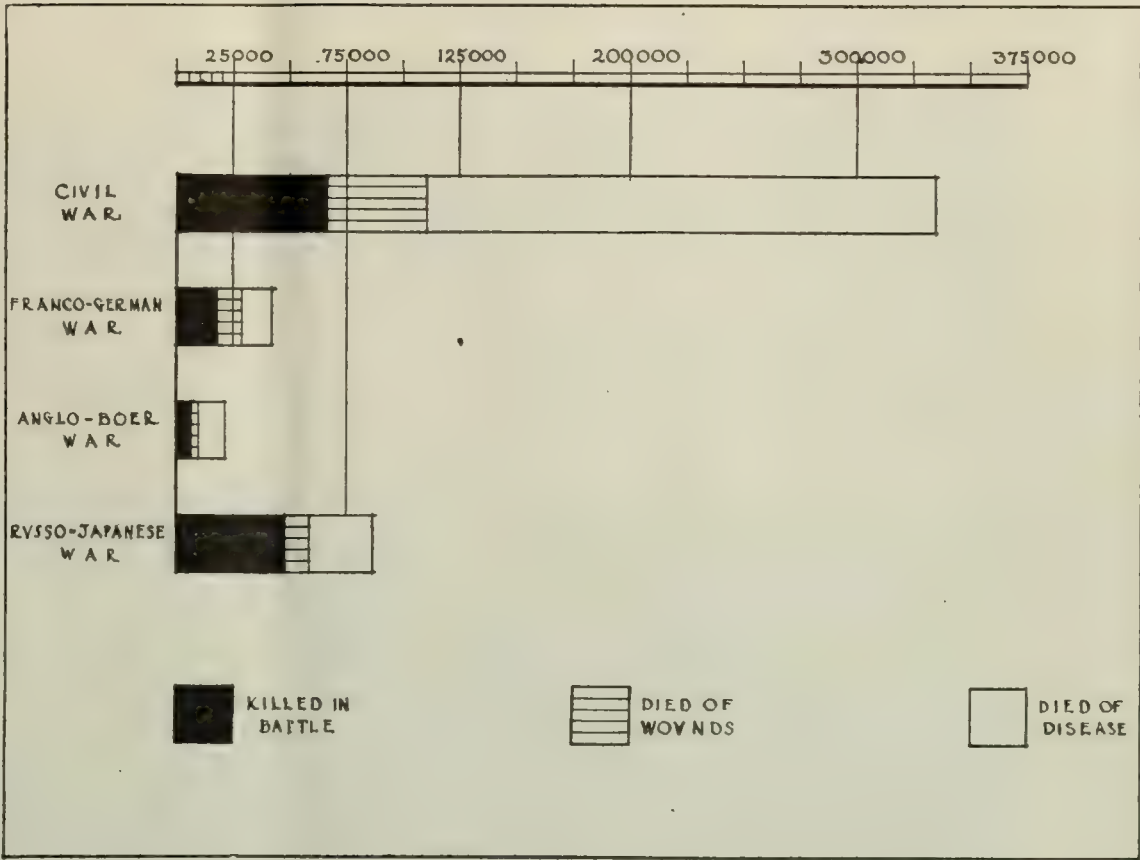

To supplant "Made in Germany" in the mind of the world and his wife by "Made in U. S. A." as a token of quality and usefulness in manufactured articles is the present aim of American manufacturers. "Made in Germany" became world-famous without the aid of an eye-filling device or a uniform label. "Made in U. S. A." has been reinforced by a striking design chosen in competition from 119,000 suggested trademarks. It was the Detroit Board of Commerce—in the automobile country—that offered a prize of \$500 for the best suggestion.

The design selected, in the opinion of the judges, closely approximates the specifications. "It is simple, strong and mechanically perfect; it is a two-color job which makes for economy; it easily can be woven in textile fabrics; it is so open that it will reproduce perfectly down to a quarter of an inch; its use as a stencil, stamp or metal die presents no difficulties, and its character is such that it will print satisfactorily in any medium or by any process. The design is elastic in that the name of the city can be omitted or widened, or contracted, without destroying or impairing the composition. The design, also, is thoroly American in atmosphere, composition and color scheme. Its merit of simplicity and legibility will be a strong argument for its adoption and use on American merchandise in foreign trade."

MADE TO CIRCLE THE GLOBE

The prize-winning device for a "Made in U. S. A." label easily reproduced and instantly recognized anywhere. It took the \$500 offered by the Detroit Chamber of Commerce

DEATHS IN THE VICTORIOUS ARMIES IN FOUR RECENT WARS  
Note the diminishing importance of illness as a factor in the death rate of the armies. The present war should show a further advance in this particular

Soy Milk

Among the other industries upset by the war is the manufacture of vegetable milk which had been started in France and Germany. This is made by grinding up the soy or soja beans to a fine flour, suspending this in water and heating. The product resembles milk in looks, taste and composition. It is rich in protein and fat and if the sugar is wanted this may be added. It can be produced much cheaper than milk since an acre of ground will yield beans enough for ten times as much of this "milk" as if it were used for pasturing a cow. Besides, the trouble of milking is done away with and any one who has been brought up on a farm knows what a chore that is. Then, too, there's no danger of the tuberculosis bacilli that are apt to lurk in the most innocent looking glass of milk.

The oil which the soy beans contain to the amount of some twenty per cent can also be used as a butter substitute in various ways. In fact, we have in soy the raw material for synthetic food products whose value we have hardly begun to appreciate. Except for those who patronize Chinese restaurants and learn to like soy sauce on their rice Americans hardly make any use of it. England imports about ten million dollars' worth in ordinary years, tho what they use it for is something of a mystery unless it goes into that unknown compound beloved of the British palate and none other, Worcestershire sauce. The native heath of the soy bean is Manchuria, and China exports thirty million dollars' worth a year. But there is no reason why the United States should not raise its own soy. The Department of Agriculture has long urged it in vain as a profitable crop, not only for stock but also as a food for human beings. Like other leguminous plants it enriches the soil instead

of impoverishing it. Its use as fertilizer and fodder is doubtless one reason why Americans do not take to it as a food.

A Year of War

In a recent issue of *The American Underwriter* Mr. Edward B. Phelps has presented an interesting chart, which we reproduce above, showing the deaths in four of the principal wars of the last half century.

From a study of the chart it is apparent that 508,256 men lost their lives from armies of 2,388,637 in 109 months of fighting. This is the equivalent of 90.1 deaths per thousand soldiers per annum. If we assume the same mortality rate for the present great European war, and place the average strength of the combined armies in the field at 6,000,000, we should expect 540,000 deaths during a year of war. There are certain causes at work which might reduce the mortality, namely, the steel-jacketed, high-velocity bullet, which may reduce the deaths from wounds, and the better knowledge in fighting disease, which is likely to reduce the mortality from this cause. But, on the other hand, it must be borne in mind that the fighting at present is more nearly constant. In our Civil War there was a campaign culminating in two or three battles followed by several months of comparative inactivity, while now the battle seems to be raging almost continually at some point.

The total number of deaths among the males twenty years of age and over in the entire United States during 1914 was probably a little more than 500,000. It therefore seems quite likely that a year of fighting in Europe with 6,000,000 men engaged will cause more deaths to the soldiers than will result from all causes among the adult male population of the United States.—WILLIAM B. BAILEY, Yale University.

### DRIVING CATTLE TO COMMISSARY HEADQUARTERS IN GALICIA

A sight which must be familiar enough in peace is given a touch of the fantastic by the helmeted cavalymen who ride behind the peasants whose cattle have been taken

# THE CHAUTAUQUA IDEA

"THE MOST AMERICAN THING IN AMERICA"

THE Chautauqua Idea permeates the fifteen thousand Lyceum Courses and three thousand Chautauquas conducted in all parts of the United States during the year. The

*A department published monthly under the direction of Frank Chapin Bray, Chautauqua Editor of The Independent, and devoted to the peculiarly American movement for popular education whose many phases have come to be distinguished by the name Chautauqua.*

paid attendance in one year is said to have exceeded ten million persons. Broadly speaking, the Chautauqua is a summer and the Lyceum a winter program of similar character based upon the idea of providing lecture-education for the people in community centers. The Lyceum originated in New England for winter evenings indoors. Chautauqua began as an all-day summer institute in the open air. Such differences persist to an appreciable extent if one's attention is called to them. Lyceum Courses consist of from five to twelve program events occurring at intervals from November to May. Chautauquas in open-air weather group program features morning, afternoon and evening for a number of days in succession, and as a rule organize supplementary attractions and activities for children or special groups of men and women in order to foster a crowd spirit while the Chautauqua lasts.

course ticket secures admission. The number and character of attractions depend upon the judgment of the committee and the amount which can be guaranteed or probably covered by the sale of admission tickets. There is no fixed standard or proportion of lectures to other features. Some bureaus offer series of lectures or recitals on the University Extension model as well as single addresses by notables. In the smaller towns a course is likely to consist of two lectures or popular addresses, two concerts, and an interpretative reading, a dramatic performance, or an evening of magic for the fifth feature. For such a course \$250 to \$500 is a common price and course tickets are sold at \$2 or less. Churches, public halls, theaters, Y. M. C. A., library or public school auditoriums accommodate the audiences.

By current usage also the Chautauqua has become a common name for almost any consecutive daily program of lectures, addresses, readings, concerts and entertainments secured by a local organization or committee for which "season" tickets are sold. Where

REV. RUSSELL H. CONWELL, D.D.

Pastor of the Baptist Temple and president of Temple University, Philadelphia. He has been a public speaker fifty-two years and has delivered his best-known lecture, "Acres of Diamonds," more than five thousand times

assembly grounds, cottages, tents, auditoriums or parked property have been established and maintained for Chautauqua purposes the usual form of local organization is a stock company or educational corporation not for profit. But Chautauquas conducted without investment in special plants, utilizing the existing community facilities as the Lyceum Courses do, are increasing in number. Recently the most striking and effectively advertised development has come thru the promotion and rise of Circuit Chautauquas, for which the whole physical equipment, tent-auditorium, and program complete, is furnished by a bureau, booking agency or association to one community after another on contract guaranteed by a local organization or committee.

The Redpath Chautauqua Circuit System comprizes seven tent Chautauqua equipments and sets of traveling program attractions in the hight of the season. The earliest Redpath Circuit begins at Jacksonville, Florida, in April. The Affiliated Lyceum Bureaus, a recent combination of seven bureaus, offers booking service of Chautauqua talent in all parts of the country. From fifty to sixty agencies or bureaus are in the business of booking Lyceum and Chautauqua program features. Some fifteen Circuit Chautauqua Systems are operated during the season. The Circuit Chautauquas last five to eight days in each community, depending upon whether a Sunday program is included or not. Morning lectures, afternoon addresses and music, evening entertainments, are the rule. As many as fifty or sixty persons, including a band or company of dramatic players, may appear on the program. \$2500 is a common expense figure. "Season" tickets sell for \$2 to \$2.50. Competition is keen between bureaus not only in securing exclusive lists of "talent" but in placing contracts for their Chautauquas in the same territory. Bureaus also serve as agents, supplying talent to many independent Chautauquas. Some readjustments between the fixed traveling program plan and the independent local Chautauqua demands may be expected.

The Chautauqua Association of Pennsylvania conducts simultaneously three Circuits of seven-day tent Chautauquas in the East at low cost during the summer season. In the spring and fall this association extends its season by a three-day Circuit of Lyceum Festivals—abbreviated Chautauquas without the tent equipment for the benefit of the smaller towns and villages. In Iowa, the independent Chautauqua Associations have a coöperative state organization thru which booking and routing of program talent to save expenses and time of travel is attempted.

For many years the winter and spring calendar has shown southern

states initiative in Chautauqua development alongside the Lyceum movement. There are established Florida Chautauquas in February and March; Georgia Chautauquas in April, May and June; South Carolina, North Carolina and Tennessee Chautauquas between April and July. Winter Chautauquas in the North have been successfully conducted indoors at Binghamton and Olean, New York, Bradford, Pennsylvania, Bridgeport and Waterbury, Connecticut, and at Chautauqua, New York, with supplementary outdoor winter carnival features.

The early Lyceum was a coöperative cultural movement of local spirits employing volunteer home talent for inspiration and leadership. Then outside speakers of reputation and authority were secured. An era of peripatetic lecturing followed in which at one time Major J. B. Pond's bureau of imported and American celebrities led the procession. In time the rise of University Extension eclipsed previous developments, and this lecture movement in turn has been modified and reshaped to meet changing educational demands. Some university adaptations of Chautauqua methods we shall consider later in these pages.

The early Chautauquas, scores of them in most of the states from coast to coast, patterning after the original Chautauqua, developed open-air Assemblies of campers or cottagers gathered together under changed "vacation" environment for special educational purposes. Such conditions certain local Chautauquas in the various states continue to successfully provide for periods varying from ten days to a month or more. The present trend of the Chautauqua movement, however, is largely organized on business efficiency lines to take at least the Chautauqua platform idea into the heart of cities, towns and communities for community uplift purposes. Appeal is made for a rallying of the best elements in the community to the support of an inspirational and entertaining program. Specific addresses on "community building" are just now outstanding features. The methods of town "boosting" associated with "old home" week and similar celebrations are adopted to assure the success of the higher grade Chautauqua week.

In both the Lyceum and the Chautauqua preponderance of "entertainment" has been vigorously discussed. It pays the freight, some say conclusively. It has been further justified on the plea that a needful service is rendered in carrying clean amusement to hosts of people not otherwise well served. Moreover, it cultivates taste for music and drama and spreads modern ideas of play and recreation as a proper part of adult education. Experienced managers say that few public men draw anything like their fee at the Chautauqua gate, but men and women who have done things, experts in church, educational, social and civic work are in strong demand. The problem of maintaining an educational standard worthy of the Ly-

ceum and Chautauqua name is a constant one.

One representative bureau list of "talent" offered for Lyceum and Chautauqua engagements this year contains 149 names, 71 classed as lecturers, 41 as musical companies, 37 as entertainers and artists. Another leading bureau list has 107 names, 48 of lecturers, 43 of companies, 16 of entertainers. Among the best known names appear: Dr. Frank W. Gunsaulus, Dr. Newell Dwight Hillis, Dr. Hugh Black, Dr. S. Parkes Cadman, Col. George W. Bain, Dr. Edward A. Steiner, Maud Ballington Booth, Dr. David Starr Jordan, Judge Ben B. Lindsey, Vice President Thomas R. Marshall, Speaker Champ Clark, Senators Thomas P. Gore, Robert L. Owen and William S. Kenyon, Congressmen Victor Murdock and Richmond P. Hobson, Secretary of Labor William B. Wilson, ex-Senator Frank J. Cannon, ex-Governors Robert B. Glenn, Joseph W. Folk and Herbert S. Hadley, Dr. Harvey W. Wiley, Dr. Woods Hutchinson, Professor Herbert L. Willett, Professor Charles Zueblin, Lorado Taft, Mark Sullivan, John Ken-

drick Bangs, Edna Ferber, Edmund Vance Cooke, Strickland W. Gillilan, John T. McCutcheon.

Lecture-education in some form is admittedly the persistent force in the permanent life of the Chautauqua and the Lyceum. Russell H. Conwell of the unique Temple in Philadelphia has delivered his lecture on "Acres of Diamonds" (the treasure right at hand if one only has eyes to see it) more than 5000 times. Ralph Parlette's "University of Hard Knocks" (education from life's experiences) has passed the 2000 mark. Social, economic and civic questions, as well as history, travel, literature, science and art are interpreted to millions of adults from the Lyceum and Chautauqua platform by speakers whose competence is recognized. In the formation of serious and deliberate public opinion on mooted questions there is a corrective value in face-to-face contact of an open-minded audience with a man and his message if he has one. This service is sometimes underestimated by a sophisticated or partizan press given to assuming an impersonal authority itself not wholly free from public suspicion or subject to a similar face-to-face test. The maintenance of such a free forum has permanent educational importance in a democracy. And the touch of an inspiring personality if it can be secured is universally recognized as the vital element in developing the educational impulse in other people, whether in the conventional school or in the larger unconventional school of everyday life.

The original Chautauqua Institution, without assuming responsibilities for variants or adaptations of the Chautauqua Idea beyond the administration of its own platform, summer schools, reading courses and educational plant at Chautauqua, New York, does stand for freedom in trying out unconventional methods that may be necessary to determine and maintain the best ideals of democratized education.

The Nebraska Epworth Assembly sets up a camp of 500 to 600 tents for its season and is a distinctively religious Chautauqua. It was established in 1897 and has been managed by a churchman and manufacturer, L. O. Jones. It has paid its way from the beginning with a high-grade program and acquired a park of forty acres adjoining Lincoln in which \$30,000 accruing profits have been invested.

It is considered significant that on a Texas Chautauqua Circuit of some forty towns, altho an unpropitious season, showed an average deficit of \$450 to be made up in each town, all of them renewed contracts for another year.

Establishment of the Richland Center, Wisconsin, town auditorium and local government building is attributed to the Lyceum Course demand for audience room.

"Community Chautauquas" is the change of name announced by one enterprising bureau this spring.

## THE COMING SEASON AT CHAUTAUQUA

### SPECIAL WEEKS

Community Affairs.....	July 5-10
Temperance .....	July 12-17
Remaking of Contemporary Europe .....	July 26-31
Justice and the Courts..	August 2-7
Music (Russian Symphony Orchestra) .....	August 9-14
Recognition (Home Missions Institute) .....	August 16-21
Internationalism and Christianity (Foreign Missions Institute) .....	August 23-28

### SOME SPEAKERS

Mr. Sanford Griffith, Lieut., special investigator, Belgian Staff.....	July 1
Chancellor Samuel B. McCormick, University of Pittsburgh .....	July 4-9
Mr. E. J. Ward, author of "The Social Center".....	July 5-6
Mr. and Mrs. Charles Rann Kennedy, playwright, actress .....	July 19-23
Bishop Francis J. McConnell, Methodist Episcopal..	July 11-16
Mr. O. H. Benson, Boys' and Girls' Clubs, U. S. Dept. of Agriculture .....	July 15
Dean Shailer Mathews, President Federal Council of Churches .....	August 8-13
Mrs. Percy V. Pennybacker, President General Federation Women's Clubs..	Aug. 14, 17
Bishop John H. Vincent, Chancellor Chautauqua Institution .....	Aug. 15-17
Dr. Frank W. Gunsaulus, Armour Institute, Chicago, .....	Aug. 22-27
Dr. Katherine B. Davis, Dept. of Correction, New York, .....	Date not fixed

## IN THE SPRING

BY WINIFRED WELLES

I met a maid who, merry-eyed,  
Went laughing thru the rain—  
The trees were mists of budding green  
And April on the wane.

Like flowers that twinkle in the grass,  
Her little, bare, brown feet—  
Deep drenched in clouds the low, wan skies,  
And wet the silver street.

About her sweet, flushed face the curls  
Clung damp and soft and light,  
And dark her eyes where laughter glowed  
Like lanterns in the night.

How strange that all the tearful day  
Should shine so suddenly,  
And my sad heart should flood with gold  
Because she smiled at me.

No April with her jeweled mists  
Shall pass my ways again,  
But that I'll think of her who ran  
With laughter thru the rain.

## CHINA VERSUS AMERICA

BY H. K. TONG

ONE country surpasses another in certain things. Brazil produces better coffee than any other nation in the world; England's conservatism finds no rival; Japan's imitateness has no equal; Russia's tyranny is unsurpassed; France's luxury is incomparable; Jewish shrewdness is traditional; and America's hustling enterprise is matchless. In cookery, embroidery, the making of porcelains and lacquer-ware, and in the etiquet of eating and dressing, the Chinese people surpass the Americans.

A Frenchman once said that every Chinese is a born cook, and that no nation has a greater variety of dishes than that old empire. He is quite right. If a foreign traveler in China has once tasted some birds' nest soup, young bamboo sprouts, sharks' fins, fish maws, cassia mushrooms, pigeons' eggs, fish gills, fried teals, roasted pheasants, larded quails, sweet lotus soup, or any of a thousand other courses, he will gratify his palate with Oriental dainties even if he has to walk ten miles to get them. Nothing tastes better than that birds' nest soup, which is "a white, soft, slippery substance, not unlike a badly made junket or flummery." Chinese bamboo sprouts are by far superior to American pickles or comfits. Of a pleasant green, they are delicate in taste, wholesome as food, and cheap in price. Regarding the other dishes, no explanation is necessary; the mere mention of their names sharpens one's appetite.

In the method of eating and dressing China also surpasses America. The Chinese, with a pair of chopsticks made of wood, ivory or bamboo, can do almost anything. He uses them to convey rice to his mouth, to cut meat, and to eat cabbages as

*The present indication that China is destined to play a subservient part to Japan as a rather energetic big brother lends special interest to this little sketch of the Chinese mores by a young Chinaman who proved his ability in competition with American students. After a course at the Columbia School of Journalism he returned to his home and since 1913 has been English secretary to the Chinese Senate and managing editor of the Peking "Daily News."*—THE EDITOR.

well as eggs. Sometimes they serve as testing rods. The chopsticks are a pair of cylindrical sticks, not as thick as a pencil, and about eight and a half inches long. They are held between two fingers of the right hand. The Chinese can get along fairly well with a pair of chopsticks and a porcelain spoon, while on an American dining table there are usually placed a long array of spoons and forks and knives, large and small.

It is doubtful whether the clothes of the Chinese man are inferior to the American's. In summer the latter has to wear collar, necktie, shirt, coat and trousers, while the former wears only a pair of loose trousers and a loose jacket. But it is undeniable that the Chinese woman's dress, which consists of cloak, skirt and silk ribbon hat, is superior to the American girl's complex clothing and hat pins, which stick out like lances.

Every foreigner has a profound admiration for Chinese embroidery. The skilful woman can embroider dragons, phoenix, fruits, flowers and men, on white silk cloths in the most lifelike fashion. Shawls, tablecovers, handkerchiefs, screens, cushions and chair-backs display the fantasies of color in fine natural shades.

China not only surpasses America in embroidery, but also in the skill of making pottery, porcelains and lacquer wares. The art of molding clay has been cultivated in China to a high degree.

Altho China cannot equal America in commerce, transportation, daily luxuries and education, on the other hand Chinese hospitality, filial piety, cheerful industry, politeness, wonderful memory and peace-loving temperament are lacking in the Americans.

The Chinese people are not forgetful to entertain strangers, missionaries and tourists, not because they have in mind what the Bible says, "thereby some have entertained angels unawares," but simply out of a spirit of hospitality cultivated for the last four thousand years. The natives usually welcome traveling missionaries with consideration. Whenever a native receives a foreigner, he goes to his neighbors who have more experience than himself to find out the kind of food the stranger likes to eat. The host asks a number of such questions—eggs well done? soft boiled? Missionaries in Mongolia, Manchuria or Russia are denied shelter and food, but they always find hospitality in China.

The Chinese people are not only generous to foreigners, but they are also bountiful to one another. In summer, villagers serve to thirsting travelers tea from a big can in front of their doors or in resting places. Mountaineers give away free sandals. During the theatrical season strangers are frequently invited to an unknown house to dine for days in succession. They are served with the best wine and with most delicate dishes. Rich persons dispense little red pills to cure cholera. Every fam-

# REGAL

## Power with Economy

Unquestionably, if all Regal owners could give expression to their opinion of the dominant feature of Regal cars—the one outstanding fact would be their unlimited power.

They are always hungry for the hills, and at a touch of the throttle leap forward as only an engine, with surplus power, and perfect balance can. Yet this power is secured with the greatest economy.

Now, there are Three Regals, all of the same rugged design and construction, which has characterized Regals for eight years. Surely among them is one, suited to your needs—and your pocket book.

A Light "Four" 106 inch wheel base	\$ 650
A Standard "Four" . . . . .	1085
A "V" Type "Eight" . . . . .	1250

All are completely equipped—electric lights, horn and starter—one man top, demountable rims included. All are comfortably roomy, have full streamline bodies, and crown fenders.

In filial piety the Chinese is superior to the American. In China no one is more honored and respected than the person who has great reverence for his parents. Of this spirit Chinese history records hundreds of cases. A pious son, who was poverty stricken and had no money to buy a mosquito net, did not let his aged mother go to bed until he lay motionless and fed the mosquitoes with his own blood so that they would not bite her. Another pious son refused to leave his mother in order to enjoy worldly glory, and she, knowing her son's piety, committed suicide to set him free from maternal bondage. Many other sons cut their own flesh to cure their parents' diseases. Frequently children went to jail to take the place of their elders—even to die for them. Instances of self-denial on the part of children—rare in this country—are numerous in China.

Charity organizations in China exist for the support of those who are old, childless and penniless, but in the United States similar institutions have to be provided for those whose children have deserted them. Many lodgers in the Municipal Lodging House in New York have sons who live well and earn good wages, but they have no share in their children's earnings. They have to stay in the charity house with a few pennies and threadbare clothes.

It is the ideal of Chinese filial piety that whatever children do, they should strive to reflect glory upon their parents. The filial piety begins with attention to their elders and is completed by the elevation of themselves. Before the day of Yao and Sham the Chinese people acquired habits of hospitality which were strengthened by Confucius and other sages. Dynasty after dynasty fell, emperor after emperor was dethroned, but filial piety still remains a national characteristic.

In industry the Chinese excel the Americans. If the latter should try to compete with the tough, indefatigable, hard-working Chinese in the labor market, they would surely be beaten badly. Chinese laundrymen in this country work hard, but Chinese farmers at home work even harder. Toiling early in the morning and late at night, Chinese farmers labor seven days a week and three hundred and fifty days a year. Under the hot sun they plow, uproot the weeds, draw water, and reap. Neither the coldest wind nor the roughest storm can drive them into the house. In other occupations men are equally industrious—carpenters, masons, shoemakers, jinriksha drivers, boatmen, merchants, printers, blacksmiths and scholars.

The Chinese people are always content with their lot; the Americans never are. They are hard-working and economical; they see clearly the invisible wealth which they are gathering by dint of sheer hard labor.

In courtesy China also surpasses America. As a rule, all Chinese are polite to the extreme. They are kind to the old and the young, to women and crip-

ples. Altho women in China do not occupy important positions socially, they are respected wherever they appear. In free theaters, seats are always reserved for women; in boats, the safest places are given to them; in time of danger, women receive first consideration. In the "Titanic" disaster skeptics said that if the ship had been commanded by a Chinese captain not a single woman would have been saved. The scoffers slandered the yellow race because of their ignorance of the illustrious history of China, which records frequent cases of women being sent to places of safety in time of war, while men were exposed to attack.

A Chinese, unlike an American, who would oppose other men's viewpoint till it ends in an altercation, is always courteous, and answers a question with "Yes, yes, yes, yes." In case he disagrees with his opponent he will say, "Your honor will take more time to reach a better conclusion. Your honor is quite right, but perhaps you may have a wiser opinion later on. I, worthless little brother, think somewhat differently from you. However, my ignorant conclusion may be wrong and yours right. I beg your excellency to think over the matter."

But Oriental politeness has its bad aspect. It takes too much time. If a guest is leaving his host's door, he has to turn his head and ask a dozen times that the host should not accompany him any further. The same is true of tea-drinking, and there is a great deal of ceremony between host and guest. So it is with dinners and every social gathering. Even in fighting a duel, one person—provided both are gentlemen—will say to the other, "Pray hit me first." The other refuses and says, "Oh, no, please you hit me first."

Politeness is especially manifested in the form of an invitation. Few Chinese go to an invited dinner on time; instead they delay for an hour or so. Polite in the extreme, altho consenting to accept the invitation, they would not go to dinner until pulled and dragged in a gently rough manner by their host. Knowing the habit of his guests, the host always turns out all the members of his family to drag one after another of his invited friends to the dinner. A youngster is often sent out by his mother to hunt their guests like a hound, and, finding them, drag them like mules to his mother's house. Observing such customs, foreigners usually laugh, but they laugh mistakenly.

The Chinese has a better memory than the American. Many scholars have committed to memory ten or twenty books of more than a hundred pages each, and can say them from the first page to the last without making a single mistake. A little boy used to be required by a Confucian teacher to memorize two or three books in one year, but this practise has been abandoned.

Last of all, China excels America in the love of peace. China has lost her territory bit by bit, but her people still worship peace. That stage of civilization has not yet been attained by any Christian nation.

Peking

In years to come  
the Lamp may  
change, but the  
mark on the lamp  
will always be  
**MAZDA**

**F**OR MAZDA is not the name of a Lamp, but the Mark of MAZDA Service—that scientific research organized and carried on in behalf of the manufacturers entitled to make MAZDA Lamps.

Each of these Manufacturers receives from MAZDA Service the newest developments, inventions, improvements and advances in the science of lighting. And as these are incorporated in the lamp, it steadily becomes better and better. In this advance, the lamp may change to forms unthought of now. But the Mark on the lamp will always be MAZDA—the mark of this Service.

And so the Mark of this Service is your assurance when you buy a lamp (whether it be today, tomorrow or years hence) that you have the best lamp science knows how to make.

# THE NEW BOOKS

## RIVAL IMPERIALISMS

More and more as the Great War progresses does its character become that of a duel between the rival empires of Britain and Germany, the one fighting to maintain a world supremacy, the other seeking to shatter, or at least to share in it.

As an interpreter of British imperialism no one could be better than the late Professor Cramb. As his eloquent *Germany and England* will take rank in literature for its prophecy of the impending struggle, so his *Origins and Destiny of Imperial Britain* interprets the half-conscious national aspirations of the British. Written at the time of the Boer War to justify and strengthen the arm of England by a clearer realization of her end, in this greater crisis its republication may serve the same purpose. His peculiar beliefs in the holiness of war, set forth in his *Germany and England* so well that they earned for him the title of the "British Bernhardt" (see *The Independent*, October 19, 1914), are expressed even more strongly in this earlier volume.

British imperialism is different from any of its ancient or modern prototypes, according to Professor Cramb:

The earlier (imperialism), that of the ancient world, little modified by mediæval experiments, limits itself to concrete, to external justice, imparted to subject peoples from above, from some beneficent monarch or tyrant; the latter, the imperialism of the modern world, the imperialism of Britain, has for its end the larger freedom, the higher justice whose root is in the soul not of the ruler but of the race.

This ideal has been evolved thru the "law of tragedy" and the "religious ideal." But if England was thus purified for her mission in her weary struggles with France and Scotland and under Warwick and Cromwell, may we not urge that Germany was equally purified in the centuries she lay prostrate, a prey to her own dissensions and to Napoleonic tyranny?

As the extension of Roman dominion brought the *pax Romana*, so British sovereignty has brought the *libertas Britannia*. Rome laid the foundations of the modern continental states and it is Britain's mission to mold the newborn of Australasia, Canada, South Africa, and to be the interpreter of the new civilization of the world to ancient India and Egypt. Liberty and justice are the watchwords of the British raj. Professor Cramb does not take into account "opium wars" and English unwillingness to establish preferential tariffs for the sake of her children.

It is here that German imperialists take issue with Britain. It is with no little concern that Dr. Paul Rohrbach in his *German World Policies*, translated by Dr. Edmund von Mach, sees that

"the world is growing British." Germany must spread abroad "the German idea" and German *kultur*; not necessarily the actual dominion of the German Empire, altho, despite Dr. Rohrbach's repeated assurances to the contrary, that seems to follow as a natural corollary, so much as an appreciation and understanding of things German in foreign parts, which can be the only sure basis for the markets upon which modern Germany so much depends.

And for all this Dr. Rohrbach frankly holds up Britain as the example. Not thru any British "by-your-leave" must this world position be won; if necessary Germany will fight for her "place in the sun." Germany, too, must achieve the same "world consciousness" as Great Britain; so that nothing can happen in any part of the globe without an immediate realization of its effect on German interests. This is the secret of British world power, and it must be Germany's also.

Dr. Rohrbach insists that Germany must make a new start in this colonization, and here again she must follow the examples of the British, French, and Americans in the establishment of schools and missions. She must recognize, even if it be against Prussian tradition, local self-government. At home, also, German schools must do more to foster this growth of world consciousness, people must travel and become more cosmopolitan.

*Origins and Destiny of Imperial Britain*, by Prof. J. A. Cramb. New York: E. P. Dutton & Co. \$1.50  
*German World Policies*, by Paul Rohrbach, translated by Dr. Edmund von Mach. New York: The Macmillan Co. \$1.25.

## SYSTEMATIC HOUSEKEEPING

Mrs. Franks has undertaken the reform which all have acknowledged is desirable but some have pronounced impossible, the introduction of *Efficiency in the Household*. She does not despair of the ability of her sex to acquire those habits of scientific management which have transformed the business world and she has provided, not a volume of advice or scolding, but a system of kitchen bookkeeping so that the housewife may work out her own problems in a methodical way. There is a menu suggested for the breakfast, luncheon and dinner of every day in the year, with blank spaces for the shopping list and the actual meals served. The estimates are based on a family of six and an average cost of sixty-three cents a day per person, but could be easily adapted to a household of any size or income. The time required for keeping up the record is only ten or fifteen minutes a day and would be well recompensed by increased economy in the purchase and use of materials. Watchfulness in the housewife is a great stimulus to honesty in the grocer-

man. The preface contains excellent advice as to marketing and menus. Those of our women readers who have been interested in the efficiency campaign of The Independent will gain from this volume an opportunity to try it in their own work.

*Efficiency in the Household*, by Thetta Quay Franks. Garden City: Doubleday, Page & Co. \$1.50.

### GREAT PEOPLE IN A LITTLE PLACE

Hillsboro is a little town in Vermont, at the foot of Hemlock Mountain, and Dorothy Canfield Fisher has written its annals in a loving and sympathetic way. *Hillsboro People* contains a series of short stories told of the village life that goes on when the summer boarder is far away; and there is much that is admirable in the telling. The life of the country town is intensive, and its dramatic possibilities lie beneath the surface of apparent dullness. It really takes a villager to be keenly interested in the happenings about him; to estimate the events that are vital because they are few and can be appreciated; to agree with the author that in the shadow of Hemlock Mountain "to love life one does not need to be what is usually called happy; one needs only to live."

*Hillsboro People*, by Dorothy Canfield Fisher. Henry Holt & Co. \$1.35.

### POETRY OF THE BIBLE

The fifth volume of the Student's Old Testament on *The Songs, Hymns, and Prayers of the Old Testament*, is characterized by the many excellencies of the previous volumes. No biblical student can afford to be without this compendium of critical results, prepared by Charles F. Kent.

Scribners. \$2.75.

### SOME HERO

It cannot be described. It must be read—at a sitting. So impossible as to be quite fascinating, *Treasure Island*, *Robinson Crusoe*, *King Solomon's Mines* and the *Three Musketeers* are tame by comparison, in mystery and thrills—especially thrills. As to literary style, none is needed. There isn't time. But it would pack the movies! *The Return of Tarzan*, by Edgar Rice Burroughs, is the book we're talking about.

McClurg. \$1.30.

### BIRDS OF NEW YORK

To tell the school children of New York about the birds of their own state is the purpose of the New York State Museum, in issuing a portfolio of bird pictures, taken from the monumental work, *Birds of New York*, by E. H. Eaton, which was reviewed at length in The Independent for February 8, 1915. One hundred and six full-colored plates make up this collection and give a beautiful as well as a comprehensive view of the native birds of New York.

New York State Museum. 50 cents.

### EATING AS A FINE ART

Clarence E. Edwards is the lineal descendant of Savarin, and if one may not dine with that master of menus in Paris, one may lunch with this genial table companion on all sorts of extraordinary dishes, in all sorts of extraordinary place in *Bohemian San Francisco*. He presents a city unknown to most tourists, and one to delight the traveller who desires the uncommon and the picturesque.

San Francisco: Paul Elder. \$1.25.

### HUGH BLACK ON CULTURE

Fortunately there is always a certain proportion of the world waking up to the desirability of culture. To such *The Practice of Self Culture* by Hugh Black discloses

## SOME SCRIBNER BOOKS

### John Finley

in *THE FRENCH IN THE HEART OF AMERICA* has written a veritable epic of the development of much of our country from French beginnings. He shows that such towns as Pittsburgh, Detroit, Buffalo, Chicago, etc., have pasts as romantic as many European towns.

\$2.50 net.

### Henry Cabot Lodge

in *THE DEMOCRACY OF THE CONSTITUTION* gives, as the *North American Review* says, "with characteristic force and clearness . . . an eloquent exposition of the theory of American government as understood by Washington and Lincoln."

\$1.50 net.

### E. Alexander Powell

in *THE END OF THE TRAIL* has written, as the *Cincinnati Times-Star* says, "with the eye of an artist, the vision of a seer, and the soul of a poet . . . the story of the real West today." Almost indispensable if you are going to California this summer.

\$3.00 net.

### Oswald G. Villard

has written of *GERMANY EMBATTLED*, of which the *North American Review* says: "The book is high-minded; it is truthful; it is worthy of America. . . . His treatise may well stand before the world as perhaps the clearest and most succinct expression of the American attitude."

\$1.00 net.

### Mrs. Francis King

in *THE WELL-CONSIDERED GARDEN* has written a complete and practical book telling of color harmony, balance, design, spring and summer flowers, garden accessories and necessities, everything that will help to improve your garden.

Profusely illustrated. \$2.00 net.

### Elizabeth Miller

in *DAYBREAK* has written a wonderful historical novel—a story of the age of discovery. Fifteenth century Spain with all its splendor is the setting of the story, and among other episodes in the brilliant succession of events is the discovery by Columbus of the Western Hemisphere.

\$1.35 net.

**Charles Scribner's Sons**  
Fifth Avenue at 48th St., New York

the satisfying possibilities in "the unity of the personal life" that lies mid-way between the German kultur and the culture of the dilettante. But even the confirmed culturist will find interest in the chapters emphasizing the culture of specialism and imagination, in all its pertinency to this present age.

Macmillan. 50 cent.

### THE PLEASURES OF LIFE

Robert Haven Schaufler's essays in *The Joyful Heart* show the same exuberance of spirit, the quick understanding of human aspiration, delicacy of feeling, and lively power of description that have appeared in his former books. It is a tonic to read his glowing sentences and follow his studies in the joyous aspects of poets, musicians, and other notables who have drunk from the brimming cup.

Houghton Mifflin Co. \$1.25.

### A BEACON TO YOUNG MEN

With ideals untarnished but tempered to the world, with courage and perseverance toward the right until a man has "found the best that is in him and has satisfied his heart with the highest achievement he is fit for," not until then has a man truly found himself. Such is the message—one out of his own life, we surmise—which President Wilson has put into *When a Man Comes to Himself*, and which, for every young man, should be as a beacon set on a high hill.

Harpers. 50 cents.

### APPLETREES AND INDIANS

A whole-souled missionary is Eleanor Atkinson's *Johnny Appleseed*, who scattered good cheer and orchards among the pioneers of the Middle West and preached and practised the gospel of brotherhood and fair play for Indians and settlers. A half-century labor of love was his and his sure philosophy of helping others made him forget its hardships and its setbacks. The book breathes a wholesome spirit of optimism and the sane social service of man-to-man comradeship and help.

Harpers. \$1.25.

### MENDENHALL LECTURES

If DePauw University were fortunate in receiving a legacy for the establishment of the Mendenhall Lectureship, the authorities were still more fortunate in securing Bishop Edwin H. Hughes to deliver the first series of lectures on the new foundation. These lectures, just published, on *The Bible and Life*, discuss the relation of the Scriptures to the home, education, industry, wealth, and sorrow in a most practical and helpful way, leaving aside questions of scholarship and theories of inspiration.

Methodist Book Concern. \$1.

### THE STORY OF THE CHURCH

The need of a text-book of church history for use in Bible schools has been supplied by Professor Robert Hastings Nichols, who has prepared two small volumes on *The Growth of the Christian Church*. The first volume traces the course of "Ancient and Medieval Christianity," the second covers the period of "Modern Christianity" from the Renaissance, closing with a special chapter on American Presbyterianism. The work is notable for its simplicity, accuracy and adaptability for class work.

Westminster Press. \$1 each.

### POETIC NATURALISM

There is the almost childlike love of nature and understanding of her moods that comes from simple-hearted joy of living in *Songs from the Clay*. A master of clear-cut description and keen satire, James Stephens enlivens the one with the touch of genuine human emotion and softens the other with a whimsical reflection or a good-humored smile. Thru the poems runs a spirit of optimistic faith in life's best, for we may all "Learn that we are better than our clay And equal to the peaks of our desire."

Macmillan. \$1.

### A BEWITCHING SINNER

## Tired Nerves

—Symptom  
**NOT** Disease

Neurasthenia is due largely to habits which may be corrected by giving attention to causes of the ailment.

This is fully explained by Dr. John Harvey Kellogg, who gives you in his new book—"Neurasthenia"—results of his experience with thousands of cases treated during the nearly forty years he has been Superintendent of the great Battle Creek Sanitarium. Dr. Kellogg's book is not a dry book—nor couched in technical terms. On the contrary, Dr. Kellogg has the happy faculty of making his writings easily understood and intensely interesting. If you suffer from nervousness—exhaustion—sleeplessness—or any other form of Neurasthenia, get this book and study it. It shows the way out—teaches you how to obtain relief from the dread fangs of nervousness.

The book contains 250 pages, printed with plain type on fine book paper. There are several full page illustrations, diet tables and valuable instructions as to exercise, relaxation, rest and sleep. The regular price of the book is \$2 but, to give the work widespread distribution, Dr. Kellogg has permitted us to bind an edition in library paper covers and, while these last, we shall sell them at **only \$1 a copy**. Send your order and remittance today. You take no risk. If you are not entirely pleased and satisfied with the book, it may be returned and we will promptly refund your money. Order at once and get relief from nerve suffering. Address—

**GOOD HEALTH PUBLISHING CO.**

304 W. Main Street

Battle Creek, Mich.

gruity as satisfying as the romance of the delightful young pagan "biographess" and the brilliant parson of London. *Patricia*, however, is of the earth earthy thruout and never does the author's pen allow her growth to check her consistent Irish wit and charm. Entertaining as the story is, think with the book one must, for a deep undercurrent moves beneath the sparkling ripples of the surface.

Putnam. \$1.35.

### FOLK WHO WRITE

It strikes one as especially fitting that Romain Rolland, whose dignified letter to Hauptman early in the war spoke sorrow but no rancor, and has touched the hearts of many who have never read *Jean Christophe*, should be working in that division of the International Red Cross that has charge of the prisoners of war.

There are those who wish that Gertrude Atherton would drop works of the imagination and devote herself to works of research. These are the librarians in the libraries where she has gathered material, and their choice in the matter is due to the writer's personality, not to her books. If any one doubts that this is a huge compliment to Mrs. Atherton let him ask the first librarian he meets.

Another story, just announced, about that fascinating maiden Anne of Green Gables, makes one again wonder why, while the conventional young man, the man you would not find noticeably odd did you meet him at a dinner, still serves acceptably as hero, the maidens who make "best sellers" have the spiritual nature of fireworks and keep the reader sitting up every instant to see how they will "go off" next. There is a philosophical reason for this, tho not space to work it out.

Some folk have luck! There is Louise Collier Willcox, down in Norfolk, ostensibly busy over the thoughtful papers running in the *Delineator* and preparing her third volume of essays. But besides these, with her son, Westmore Willcox, Jr., not yet out of college, but known to those who watch the magazines for verse of promise, she is publishing shortly a book of poems. Since by no endeavor may a poet ever be made, to what but luck can you lay the lot of one at once a poet and the mother of a poet?

The failure of John Muir in his fight to preserve the Hetch Hetchy has in no wise discouraged Kate Douglas Wiggin in her efforts to save the lovely Saco river from the power company that seeks to dam it and turn its beautiful freedom to practical account. So obvious the need of manufacture, so subtle the need of beauty that the champions of the stream need the guile of the serpent and the courage of the lion. But every one whom the Fates have ever set beside an untroubled river is wishing success to Mrs. Riggs and her neighbors of Hollis.

It was under the old regime that Katherine A. Carl was amazed by a command to paint the portrait of the Empress Dowager of China, and from the adventure wrote her book on the life in the Peking palace. Since then she has painted plain Americans, but the Washington Square studio held a Chinese atmosphere and its talk drifted readily across the Pacific, so one is not surprized that Miss Carl is on her way to see what good the recent changes in China have wrought to make up for the vanishing of empresses and silken garments.

Despite the size of the publisher's index every librarian knows of books still lacking. The other day a worried looking student came to the desk from a painful search in the card file for a work on "processes." This seemed a bewilderingly broad topic, but with the usual reluctance of the library reader to divulge his precise needs he explained that he meant how to do anything from baseball to smelting. His opinion of books dropt visibly when told that he would have to try the catalog again under B and S. Some publisher should publish an adult "Boy's Handy Book."

## Glacier National Park!

Season June 15 to October 1

This tremendous mountainland, high in the splendid Montana Rockies, now may be enjoyed as never before.

A new mammoth mountain hotel, the "Many-Glacier," has been erected on Lake McDermott, in the Park's heart. The gateway hotel, the "Glacier Park"—at the Great Northern's trackside—and nine enlarged chalet groups complete a chain of delightful hostleries.

New tours—by auto-stage deep in among the mountains, a-saddle over wonder trails onto the Continental Divide—have been arranged.

## THE MARKET PLACE

### SECURITIES AND PROSPERITY

Great activity and rising prices on the New York Stock Exchange last week excited much interest thruout the country. There was one "million share day," the 9th, when 1,275,760 shares were sold. The total for the week was 3,700,323, exceeding the previous week's record by nearly 1,000,000, and there were large net gains thruout the list. The greatest advances, as a rule, were made by the industrials, and notably by the shares of those companies which are working on war orders. Shares of one motor company which were sold a year ago at 37, and which crost par soon after the beginning of the year, rose to 148, and showed a net gain of 18 points for the week. A locomotive company was credited with an order for \$20,000,000 worth of shrapnel. As for some time past, the most spectacular movements were in the shares of the Bethlehem Steel Company. No dividends have ever been paid on these shares, and there is no promise of one in the near future, altho the company's earnings have recently been very large. The price rose 29½ points on one day, the 8th, and at the end of the week there was a net gain of 22½. More than 600,000 shares of Steel were sold, with a gain of seven points.

Many reports about Bethlehem Steel were in circulation. The common stock outstanding has a par value of only \$14,862,000, and a majority of it has been held by President Schwab and his associates. Some thought the stock had been cornered, but the Exchange authorities declared, after investigation, that there was no evidence of a corner or of manipulation. No warrant was found for rumors that Germany or the English Maxim-Vickers Company was buying to obtain control. Indeed, a German newspaper has recently urged German holders of the shares to sell, because the company is making war supplies for the Allies. The demand for the stock was not explained. It may have been due to an expectation that the large profits would eventually be distributed.

While the advance of the prices of many industrials has been caused, as we have said, by their profitable work on war orders, the general upward movement is due to a prevailing conviction that business conditions are improving and that a large measure of prosperity is soon to be enjoyed. Our people are beginning to realize the meaning of an excess of \$700,000,000 of exports over imports in the last few months. There was a good crop report last week, and this had some weight. One of the great trade agencies said: "Influences favoring business are now more numerous and potent, and there is an unmistakable trend toward ex-

panding activity." Secretary Lane, returning from a visit to the Pacific coast, published a highly optimistic report, predicting expansion in the near future and greater expansion after the close of the war. The reports of ninety bank examiners, published by the Treasury Department, gave the evidence of improvement. From many sources there was testimony pointing to a general betterment of conditions and promising a continuous advance.

### ANOTHER GREAT WHEAT CROP

Our crop of wheat last year was the greatest ever harvested in the United States. That part of it which came from winter-sown seed, 684,990,000 bushels, exceeded the largest preceding yield of winter wheat by 160,000,000 bushels. In Europe and Australia there was a decrease. Even if there had been no great war, the foreign demand for our wheat would have had exceptional force. But war locked up Russia's surplus. The result has been that our exports have largely exceeded those of any previous year, and that prices have been very high. Our farmers were led by prevailing conditions to increase their wheat acreage. There was no indication that the foreign demand would lose its strength, or that there would be any considerable decline of prices.

The first of the Government's reports concerning the growing winter wheat was issued last week. Condition (on April 1) was only 88.8, against 95.6 one year ago, but the estimate of probable yield was 619,000,000 bushels, a quantity larger by nearly 100,000,000 bushels than any winter wheat crop in the past, that of last year excepted. There is compensation for the comparatively unfavorable condition in the increase of the area of the wheat fields. Last year's crop was taken from 36,008,000 acres. This year's plants are growing on 41,263,000 acres. Here is an increase of four-ten and a half per cent. To the crop from winter-sown seed is to be added eventually, of course, the spring wheat. High prices have also caused an increase (twelve per cent) of the rye acreage, and there is promise of a yield of 45,000,000 bushels of this grain, against last year's record-breaking crop of 42,779,000.

There will be a great demand abroad for the new American wheat. If the war should end within a few months, this demand would survive. In Chicago the market statisticians are pointing to the devastation of the wheat areas in northern France and East Prussia and saying that—for lack of farm laborers and for other reasons connected with the war—the wheat output of the importing countries will probably be reduced from an annual average of 1,120,000,000 to not more than 800,000,000

bushels. This reduction will compel these countries to buy much more than their annual average of 540,000,000. It may be that they will need at least 800,000,000 bushels. There will be a good market for all the wheat we can spare.

TWO LOANS

While it is true that several neutral countries accustomed to seek loans in London, Paris or Berlin are now looking to New York for supplies, it should be understood that those money markets have not entirely withdrawn from the foreign field. We spoke last week of the loan of \$1,000,000 unexpectedly procured for the new Government of President Guillaume Sam, in Hayti, by the French Government. This had not been foreseen at Washington, where the State Department was negotiating with President Sam for the establishment of an American fiscal protectorate. An impression prevailed that the European belligerents were so busily engaged in the war that they would do nothing for Hayti. But President Sam got his loan from France and has the promise of more. Italy and Germany joined hands with France in helping him. An opportunity to gain influence in the vicinity of the Panama Canal was not neglected.

Argentina has already borrowed several millions here, and is negotiating for a loan of \$15,000,000, but the London market is not closed to her. Last week the British Government gave its consent to a London loan of \$12,500,000, to be used in construction work on the Central Argentine railroad. The war expenses are great, but they permit an occasional loan to borrowers in this hemisphere.

ARKANSAS RATE LAW CONDEMNED

Another state law affecting railroad rates is on its way to annulment. In Arkansas, the Federal District Court has declared that the law of that state providing that passenger rates shall not exceed two cents a mile is confiscatory and must not be enforced. A tariff of freight rates imposed by state authority was condemned at the same time and for the same reason. The two-cent rate law is seven years old.

Probably there will be an appeal, but action taken by the Supreme Court a few weeks ago shows that the lower court's decision will be confirmed. At that time the court of last resort annulled the two-cent passenger rate law of West Virginia (eight years old) and a law of North Dakota limiting the charges for carrying coal. These rates did not permit a profit, or the profit was very small. Such laws will not be sustained by the courts, and the number of persons in this country who think there ought to be laws of this kind is decreasing.

The following dividends are announced: American Light and Traction Company, preferred, 1½ per cent; common, 2½ per cent, and 2½ shares common stock on every 100 shares common stock outstanding, all payable May 1. Westinghouse Electric and Manufacturing Company, common, quarterly, 1 per cent, payable April 30.

SCHOOLS AND COLLEGES

Interlaken—a school on a farm

where boys learn by doing. Actual contact, under competent instructors with growing of crops and care of live stock on a 670 acre farm. Shops, work with tools and animals, deep woods, beautiful lake, boating, bathing, skating, healthful sports, right associates.

High standards of scholarship—under experienced instructors who know life and modern educational methods. Preparation for American and European universities. An exceptional school plant—gives opportunity for imitative and executive work. Only the sons of American business and professional men of good moral character admitted; the number is limited. 1915

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....\$27,964,578,109.00

Received premiums thereon to the extent of.....287,324,890.99

Paid losses during that period 143,820,874.99

Issued certificates of profits to dealers.....90,801,110.00

Of which there have been redeemed.....\$3,811,450.00

Leaving outstanding at present time.....6,989,660.00

Interest paid on certificates amounts to.....23,020,223.85

On December 31, 1914, the assets of the company amounted to.....14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

HOME LIFE INSURANCE COMPANY

Geo. E. Ide, President.

256 BROADWAY NEW YORK

DIVIDENDS

American Telephone and Telegraph Co.

A dividend of Two Dollars per share will be paid on Thursday, April 15, 1915, to stockholders of record at the close of business on Wednesday, March 31, 1915.

G. D. MILNE, Treasurer.

American Light & Traction Company

The Board of Directors of the above Company at a meeting held April 6th, 1915, declared a cash dividend of One and One-Half Per Cent. (1½%) on the Preferred Stock, a Cash Dividend of Two and One-Half Per Cent. (2½%) on the Common Stock and a dividend of Two and One-Half (2½) shares of Common stock on every One Hundred (100) shares of Common stock outstanding, all payable May 1, 1915.

The Transfer Books will close at 3 P. M. on April 15, 1915, and will reopen at 10 A. M. on May 1, 1915.

C. N. JELLIFFE, Secretary.

WESTINGHOUSE

Electric & Manufacturing Company.

A dividend of one per cent. on the COMMON stock of this Company for the quarter ending March 31, 1915, will be paid April 30, 1915, to stockholders of record as of March 31, 1915.

H. D. SHUTE, Treasurer

New York, March 24, 1915.

Insurance

Conducted by

W. E. UNDERWOOD

This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.

MISSOURI SUICIDE LAW

There is a Missouri law of some years' standing which, in general terms, prohibits suicide as a defense by insurance companies contesting the payment of death losses. Indubitably, it was the intention of the legislators who enacted the law to make its provisions applicable only to litigation arising under life insurance policies.

Some dozen or more years ago a suit was instituted in that state for the recovery of a claim made under an accident policy, the holder of which committed suicide. The accident company defended its refusal to pay, confident that the provision in its policy exempting it from liability in the event the insured took his own life would fully protect it. But it did not. The claim was fought to the court of last resort, all the decisions being against the company, on the general principle that it was a death loss under an insurance policy.

This finding has since that time caused the accident companies innumerable difficulties which, try as they might by amending their policy contracts, they have been unable to remedy. A few years ago they succeeded in convincing the legislature that the law should be so amended as to exempt them from its provisions, but the bill was vetoed by the Governor.

Aside from the fact that the law as construed has heavily augmented the loss ratio of the companies, there is a social evil involved which is steadily increasing in proportion with the knowledge among the people that self-destruction is a liability which the courts compel the companies to assume. A number of men of comparatively good standing, in financial and other difficulties, have loaded up at small comparative cost with accident insurance, and at the critical moment have committed suicide. Last month a business man of St. Louis shot himself fatally in a street car in order that the \$20,000 of accident insurance he carried would be increased in value as a claim, under the policy provision which doubles the benefits for injury or death occurring while a passenger on a common carrier.

REPORT OF THE CONDITION OF THE CENTRAL TRUST COMPANY

of New York at the close of business on the 19th day of March, 1915.

RESOURCES

Stock and bond investments, viz.:  
Public securities (book value, \$9,834,088.64), market value \$9,834,088.64

## EASTON SANITARIUM.

For treatment of Elderly People needing skilled care and attention; also for nervous and mentally ill. Superior location. Visit here before selecting a place elsewhere, or call up Dr. Kinney for particulars. Phone 166, Easton, Pa.

This is a monstrous condition of affairs and serves as an illustration of the attitude in some states toward all classes of insurance companies. Altho the plain result of such a law is to encourage self-destruction, it would be preposterous to assign that as the object aimed at by the legislators and administrators of the state. On the other hand, it cannot be denied that in their unreasoning hostility to insurance companies and their eager desire to mulct them at every turn, they are not only encouraging it but are undermining one of the foundations of human society.

### DECLINE OF ASSESSMENTISM

Assessment life insurance, except that branch of it represented by numerous fraternal orders, is rapidly disappearing from the field. Such of the independent associations as could do so have used the material remaining in their hands, consisting of assets and insurance in force, in the formation of new organizations to be conducted, as to all future undertakings, on the reserve principle.

The latest reorganization along these lines reported is that of the Merchants Life Association of Burlington, Iowa, which has about \$1,000,000 of assets and outstanding insurance approximating \$60,000,000. At the time this association commenced business, 1894, there were forty others of the same class flourishing in that state, none of which now survive. Several years ago the Bankers Life Company of Des Moines, which prospered prodigiously, or seemed so to do, with a plan peculiarly its own, thru which it hoped and promised indefinitely to postpone the inevitable, also reorganized under the reserve system and has since been making strenuous efforts to induce its members to exchange their assessment certificates for level premium policies at, of course, much greater annual cost.

There's the pity of it! Hundreds of thousands of uninformed persons years ago accepted at par the representations made by the promoters and agents of assessment concerns. They believed that the old line life companies were overcharging their policyholders for the protection furnished, and they were assured that it could be supplied thru the assessment, or natural premium system, at from one-third to one-half the cost. A man has but one term of years to spend here. He has little opportunity to rectify past mistakes; and he who has given twenty or thirty years of fidelity to a false system of life insurance has none. The years have gone with all who do, and health is past with most of them. They must stay with the assessment phantom or lose all; they must remain, however inordinate or burdensome the cost becomes from year to year. Theirs is an error beyond correction.

Governor Whitman of New York has approved the two bills recently passed by the Legislature of that state amending the workmen's compensation law providing for direct and immediate advance payments of indemnities to injured workmen by employers and insurers.

## Are You Going Deaf?

Deaf people hear clearly. Write at once for particulars of the latest wonder of science, the improved

### NEW 1915 Thin Receiver Model Mears Ear Phone

Thousands of sufferers from deafness have recovered their hearing with this perfected instrument. It has 96 sounds covering 8 entire octaves of 12 tones each. In this instrument you get, at last, the perfection of the hearing device. All changes in sound adjustment instantly made by a touch of the finger to suit any condition of the hearing organs or to register either loud or ordinary sounds.

**Free Trial** Prove its powers at our expense. Will you try a Mears Ear Phone for 15 days in your own home, absolutely free? Will you believe the evidence of your own ears? That is all we ask. Send for free trial offer.

**96 Degrees of Sound** Positively the very newest, latest invention for the deaf. You get the real tones of the natural voice—the finest qualities in music. In this latest perfected ear phone we have striven to give to all deaf persons sound responses as nearly like those of the normal ear as possible. You will be truly amazed when you put this thin receiver phone to your ear for the first time. Write for the free book on deafness. Get our direct-to-you-from-our-laboratory offer.

### Valuable Book FREE

The Mears Ear Phone book — mailed free — explains all the causes of deafness; tells how to stop the progress of the malady and how to treat it. Write at once — now — for this Free Book and our Special Introductory Offer. Send a postal today.

# New Course for Reading Clubs and Circles 1915-16

Four cloth-bound Chautauqua Books, all relating to one general plan, and a year's subscription to The Independent as covering topics of the hour.

**\$5 ——— An American-Year Course ——— \$5**

1. "Social and Economic Forces in American History." Different writers, Edited by Albert Bushnell Hart. (\$1.50) 510 pages. Discreet in touching all controversial matters, each section or element being treated by someone sympathetic toward it. Very readable, yet scholarly and authoritative, with the dignity of Professor Hart's name as a guarantee. Varied points of view will be agreeable to those who usually find historical reading tedious. Yet it has the coherence of a definite history. An exceptionally good "backbone" for all other studies of the year.

2. "Changing America." Edward A. Ross. (\$1.20) 236 pages. Sprightly and stimulating in manner, distinctly and admirably informing in matter. Exhibits facts that only a diligent, courageous, and scholarly worker would have arrived at, then presents a query or a mild suggestion rather than a declaration as to the inferences. Avoids categorical assertion of any mere theory and is therefore safer from criticism than most equally progressive books. Sure to provoke beneficial thought and to excite live discussion among groups of persons reading together.

3. "American Ideals in Character and Life." Hamilton Wright Mabie. (\$1.50) 330 pages. Conveys a great deal of wholesome reflection in Mr. Mabie's perfectly acceptable manner. Chosen to give the course its literary element. Though not a formal history of American Literature, it treats much more largely of literature than of anything else, having chapters devoted also to art, to schools, and to universities. A model of literary style and conventional good taste in handling the various matters involved. Tolerant even towards what it deprecates. If for a moment in passing it notes the "flamboyance" of our fellow American travelling abroad, for example, it does so with a word thrown in as to his many worthy traits.

4. "The Ways of the Planets." Martha Evans Martin. (\$1.25) 266 pages. Popular astronomy. Same author as "The Friendly Stars," used with so great success in the Chautauqua course of 1909-10. The simplicity, charm and instructiveness of the Star book will cause former readers to welcome this new volume with enthusiasm.

5. So far as the war and strictly current topics are concerned, they will be found treated in the weekly issues of The Independent. (\$3.) A subscriber to the Chautauqua Course receives The Independent week by week precisely as though he or she subscribed for The Independent alone. Only some half dozen pages of each issue, under the title, "The Story of the Week," is required to be read.

Separate parts of the course at prices marked in parentheses. The price of the entire set of material sent to one address is, as usual, \$5.

Program Outlines, Bibliography, Helps and Hints in a Monthly Bulletin, "The Round Table," without extra charge. For Topical Outline (Year Book) free, address

## INDEPENDENT OPINIONS

### Likes and Dislikes

No one knows better than the editor  
that it is as difficult to please all the  
people all the time as it is to fool them.  
But if we can only please most of our  
readers most of the time we ought to  
be content. And criticism is as good for  
an editor as fleas are, in Pudd'nhead  
Wilson's judgment, for a dog. "Keeps  
him from brooding too much on being  
one."

I have been intending for a week to give  
myself the satisfaction of expressing my  
delight in the three articles of Dr. Ward  
on the inspiration of the Bible, I am not  
unfamiliar with the attitude of modern  
scholarship, not unacquainted with some of  
the books and pamphlets designed as popu-  
lar introductions to the study of the Bible,  
but for naturalness of approach, for lucid-  
ity, for directness and simplicity, for con-  
vincing reasonableness, I do not see how  
these articles of Dr. Ward could be sur-  
passed. I should put them along with Dr.  
Clarke's *Sixty Years with the Bible*.

It seems to me that if they were put in  
such form that they could be easily circu-  
lated that they might do much good in re-  
moving the apprehension that even sensible  
people still hold of modern criticism.

WILLIAM H. POWERS  
*Librarian, South Dakota State College,  
Brooking, South Dakota*

Contrary to the old counsel of Francis  
Bacon, the mass of men and more so the  
young boy, read and take much for grant-  
ed; and that unconsciously. In face of this  
we have been obliged to remove from our  
students those Independent issues contain-  
ing "Jesus the Christ" and other such arti-  
cles by William Hayes Ward. There are  
no doubt a vast number who think as we  
do on this matter.

B. F. CORNELIUS  
*St. Mary's College, Oakland, California*

I have been a reader of The Independent  
for sixty years, and a subscriber for nearly  
fifty, and enjoy it more every year. Profes-  
sor Ward's articles exprest my views ex-  
actly and were well worth a year's subscrip-  
tion. You have a magazine in a class by  
itself.

JOHN A. YOUNG  
*San Diego, California*

It has given me a great deal of satisfac-  
tion to watch the growth and steady im-  
provement in The Independent. In the fall  
of 1908 you published the names of some  
subscribers to The Independent who had  
been such at its beginning in 1848 and you

will find there the name of my father, Wil-  
liam Watson, of Cottage Grove, Minne-  
sota, who read it all of his lifetime.

The Independent has been sent to me in  
China and no paper gives so many helps  
to missionary administration as it does, and  
in this connection I would like to mention  
especially your "Efficiency Articles." To-  
gether with *The World's Work* it gives us  
our stock in trade to try to make more real  
life in China by giving suggestive and force-  
ful comparisons. *System*, too, is very help-  
ful for business administration, but it does  
not give us such help on educational prob-  
lems as does The Independent.

Here's hoping for still more success for  
you and anything we can do for you, and  
ourselves thereby, we will be glad to do.

PERCY T. WATSON  
*Fenchow, Shansi, China*

Your editorial of March 22, "And There  
Shall Be No More Kings," was the best  
thing I ever read. It was worth all I paid  
for the six months' subscription.

C. K. FARLEY  
*Almont, Michigan*

Allow me to congratulate The Independ-  
ent on having achieved a masterpiece of  
republican bigotry and sophistry in the  
article "There Shall Be No More Kings."  
When the great European "republic" res-  
cued the United States from a king what  
a pity it didn't make a clean job of it and  
stamp out all the slavery czars and dicta-  
tors as well. In any case, is it wise or pa-  
triotic to take time fussing about all these  
horribly mistaken peoples who will *not* take  
advice or rebuke, while here in this great  
free republic the statistics of crime, of  
divorce, of strike casualties, of preventable  
fatalities, etc., are higher than in any other  
civilized country. "By their fruits ye shall  
know them" in peace as well as in war.

(MISS) MARY B. ALLAN  
*Anacortes, Washington*

### A New Dictionary

Julius F. Wolff of Freehold, New Jer-  
sey, has found that the dictionary is an  
unsafe guide to the meaning of words  
as now employed in the newspapers and  
suggests that the following definitions  
more accurately represent modern  
usage:

Civilization, Liberty, Culture, Democracy,  
etc.: The justification of all the nations at  
war in proceeding to kill as many farmers,  
artizans, clerks, etc., as possible.

Prize Court: A solemn inquiry by a  
band of pirates undisturbedly coming to a  
decision that the booty is lawfully theirs.

The Declaration of London: A set of  
rules governing warfare which the other  
side must observe, if it does not wish to  
be considered uncivilized; *we* are not bound  
by these rules as we did not sign them.

Neutral: An American citizen with Ger-  
man sympathies.

Unhyphenated American: An American  
citizen with English sympathies.

Colored Papers: (note: white also is a  
color) As much of a nation's pre-bellum  
diplomatic correspondence as will save its  
face.

### The Service of the Mothers

The London *Public Opinion*, which  
gives its first page to a reprint of our  
editorial of February 22 on the "war  
brides," prefaces it with a quotation  
from Mrs. Harben's speech at Kingsway  
Hall:

There was one Frenchman in the ward  
to whom I went to say good-by. He said  
"Good-by, nurse. Are you going?"

I said "Yes; only for a few days—to  
spend Christmas with my five little chil-  
dren."

And he asked "Have you got five chil-  
dren?"

"Yes," I said; "five beauties."  
He answered "Your country must be  
proud of you; you have done more for it  
than I could ever do for mine."

# Dieting A Delight

**Y**OU don't miss the good things the doctor forbids you to eat when you are at Battle Creek because there are so many other good things to take their places.

At the great Health Resort, there, thirty years of research and experiment have perfected a diet system in which the food is as good as it is good for you.

The diet of the average well-to-do American is complicated with dishes adopted from the cuisine of every nation on earth and by markets stocked with the food products of every clime.

This wealth of food material is used without knowledge or discretion on the ordinary family or hotel table. The result is that diseases due primarily to infection of the alimentary canal increase steadily year by year.

The physician's warning to correct errors in diet is difficult to follow. The foods he prescribes are unskillfully prepared, while the rich and dangerous dishes he forbids are most tempting. Convenience and appetite conspire against following out the doctor's orders. The patient perseveres for a while, but gradually gives up the effort, and is soon eating and drinking the things he likes best and can get most easily.

\* \* \*

At Battle Creek the culinary department is under the charge of trained dietitians who use only the highest quality of materials and know how best to retain the exquisite natural flavors of the food which no skill in seasoning or flavoring can ever really replace.

The importance of enjoyment as a factor in digestion is fully recognized. While the diet system is rigorous in that it excludes flesh foods, irritating condiments and rich made dishes, it replaces these generously with a perfectly balanced ration which reduces the protein supply to the amount actually required by the human body. Vegetable meats, very delicious and appetizing, the choicest fruits and vegetables and wholesome sweets, free from cane sugar, are elements in a diet so excellent and varied that it is readily accepted in place of the toxic high protein dietary of the ordinary family table.

The calorie plan gives a patient a wide freedom of choice in the selection of his food while at the same time he is faithfully following the prescription of his physician.

The calories or food units of each kind contained in a portion are entered on the menu opposite the name of the dish. A patient who requires 200 calories of protein, 600 calories of fat and 1200 calories of carbohydrates, selects these as he pleases, subject of course to such general prohibitions as the doctor may have imposed. He is thus guarded against too much food or too little or an improperly balanced bill of fare. The liberty he enjoys is a help to appetite and makes each meal a genuine pleasure.

Even the special and highly restricted diets necessary for diabetic patients have been worked out on lines that provide ample nutrition without danger. At no other place is there obtainable such a large and palatable variety of diabetic foods. The limited diet facilities of the average home make it very difficult to control many cases which show rapid improvement when the exact kind and quantity of nourishment they need can be furnished in appetizing form.

Three large farms and several greenhouses furnish the supplies for the Sanitarium table. Milk, cream and butter come from carefully inspected sources. The finest fruits, fresh and preserved, are served at every meal. In addition to these there is a long list of special foods for which Battle Creek is famous. The Toasted Wheat Flakes, Corn Flakes and Rice Flakes first prepared at Battle Creek are now familiar on breakfast tables everywhere. They form only part of the list of dextrinized cereals invented at the Sanitarium to take the place of starchy mushes.

Dieting at home is an uphill road which is too often abandoned before real benefit is reached. Dieting at a table where every condition is arranged to help the patient and add to his comfort and enjoyment enables him to get the utmost good with the least possible discomfort and deprivation.

\* \* \*

Battle Creek is easily reached from either the East or the West. All main line trains of the Michigan Central and Grand Trunk Railways between New York and Chicago make a regular stop.

The Wolverine, leaving New York at 5 in the afternoon, is one of the finest and fastest trains in the country. It arrives at Battle Creek next morning at 10 o'clock. A limousine from the Sanitarium will meet you at the station.

NUMBER 3464

## WHAT OUGHT WE TO DO?

**W**HAT should neutral nations do about the sale of munitions of war to belligerents? What should they do about the violation of The Hague conventions and of international law by warring powers?

These questions, which are presented in vivid form by two articles which we publish this week, are serious ones. They are closely related questions, and in a sense new questions—for they spring from a new feeling throughout the world toward war, a new sense of international responsibility.

Germany thru its official spokesman, the Imperial German Ambassador, has demanded that we shall cease selling munitions of war to the Allies, in order to make our neutrality a matter of reality. Belgium, speaking unofficially in the words of Senator La Fontaine, urges that the United States, by cutting off all intercourse with the German Empire, express our stern disapproval of Germany's course toward Belgium and its disregard in general of The Hague conventions.

The business of selling death is a gruesome one. But so long as the world permits international disputes to be settled by force of arms, and so long as the nations of the world do not set the stamp of international disapproval upon the practise, the providing of arms for the settlement of such disputes cannot be looked upon as illegitimate.

But Germany does not object to our selling arms and ammunition—merely to our selling these indispensable supplies to only one side in the conflict. "In reality," says Count von Bernstorff, "the American industry is supplying only Germany's enemies. A fact which is in no way modified by the purely theoretical willingness to furnish Germany as well, if it were possible."

The Imperial Ambassador is ingenious; but he does not state the point accurately. Our willingness is not theoretical; it is actual. An editorial paragraph in the *Philadelphia Press* states the fact with more precision, "If Germany would send some ships here she could get any kind of cargo wanted—foodstuffs, munitions of war or anything else. That's the way the Allies are doing it."

That is the fact. It is not American partiality that keeps American rifles and cartridges and shells out of Germany. It is the British fleet. Let Germany but gain control of the sea, and there will be no lack of American supplies for its armies.

For the United States now to put an embargo on the export of munitions of war to England, Belgium, France and Russia would be a flagrantly unneutral act. It would change during the course of hostilities the rules for the

conduct of neutrals so as to deprive the Allies in large measure of the military advantage secured for them by their superiority upon the sea.

The argument made on behalf of the cause of peace in general against the sale by neutrals of war materials seems to rest on a surer foundation. No people who believe in peace themselves ought to allow their own industries to be used to thrust arms into the hands of peoples who wish to fight. While it is of course legitimate to manufacture arms for purposes of national defense, the sale of arms beyond the nation's borders for commercial profit commits the country permitting such sales to a guilty complicity in the war without even the justification which may be urged for the belligerents themselves.

On the moral side of this question there can be but one view held by right-minded men. The sale of munitions of war by neutral nations is one of the evil practises which the custom of nations still permits because international law is in a state of incomplete development comparable with that of private law in the tenth century. But the moral aspect of the case is not the only one to be considered. The practical results of an international agreement preventing such sales by neutrals to belligerents must be taken into consideration as well.

If no nation, in the time when war comes upon it, may buy arms in another country, each nation of the world would doubtless set up vast storehouses of rifles and cannon, shot and shell, and erect its own manufactories for every kind of war material. In time of peace every nation would thus arm to the teeth. The race for armament would become madder than ever; and no nation, however small, would dare to be left behind. All the evils and dangers that the making of arms and munitions now brings with it—pressure toward war, increase of armies and navies, corruption of government servants—might be vastly increased.

The question whether the cause of peace would be best served by prohibiting this international traffic in arms or by permitting it is not any easy one to answer. The strong arguments on both sides must be carefully weighed when the Great War is over. It is clear, however, that meanwhile the business cannot be stopped without working injustice to one side or the other in the present conflict.

Senator La Fontaine's proposal that the United States should, to use his words, make its "neutrality active and beneficent," has much force. The opinion has already been expressed in *The Independent* that it is the duty of this country, the greatest neutral signer of The Hague

conventions, to protest vigorously against their violation. At the first time of trial, the agreements made by the nations of the world for their own observance in case of war have quickly broken down. They have proved of no effect because nations that helped draw them up and joined with others in promising to abide by them, when self-interest demanded, calmly violated them.

Every signatory of The Hague conventions is concerned with their repudiation. They were not rules to bind only any two nations that might later go to war, but a compact among the nations of the world. Their violation is an offense not against the enemy, but against the world.

Against such an offense the neutral world should protest in no uncertain terms. In such a protest the United States should be the natural leader.

Whether to such a protest should be added the program of economic restraint proposed by Senator La Fontaine is a more serious question. To refuse intercourse with a belligerent would be tantamount to an abandonment of neutrality, which, as we have indicated above, it would be unwise, unfair and unneutral to adopt during the course of hostilities. But to protest deliberately and to serve notice of our intention to bring the cases of convention violation up for judicial adjudication when the war is over would be merely to discharge an international responsibility.

The duties of neutrality are two. The one is negative, to do nothing to help either side. The other is positive, to protect and defend the civilization of the world. We cannot stop selling materials of war in the present crisis of affairs, without being false to the first duty. We cannot remain silent when international agreements to which we are a party are violated without being derelict in the second.

### SOCIAL CONTROL PRESENTLY

**N**ATURALLY much speculation is indulged in and a good deal of talk, more or less sage, is heard upon the relation of government to the plain man, after the European war is over.

Every war strengthens governmental authority and widens the scope of its activity. The present war has so magnified government on a scale unprecedented.

Nothing is any longer sacred against molesting governmental power. A man's house has become the king's castle, his shop the king's armory; his personal habits are dictated by officials.

There seems to be a general expectation that this expansion and strengthening of social control will be permanent; and among thoro-going individualists there is unconcealed fear of that "coming slavery" of state socialism that Herbert Spencer predicted. Are fear and expectation warranted? What are the probabilities?

Peace makes for liberty, as war for control. Unless other forces are at work, the return of peace should soon be followed by individual assertiveness, and the development of strong political movements for the relaxation of authoritative control. Business should be let out of leash, and the individual should once more become a responsible moral being.

Those who were watching social developments in the twenty years before this war began, during which America and Western Europe enjoyed relative peace, are aware, however, that causes other than war have rap-

idly been developing the functions of government and strengthening governmental authority.

Within the lifetime of men now in middle-age the world has had cumulative evidence that military conflicts are not the only ones which strengthen governments at the expense of individual freedom and initiative. Spencer did not see that the conflict between corporate and individual business, the conflict between big business and small business, and the industrial class-struggle, were creating "regimentation" and regulation as remorselessly as war always does. Industrial conflicts, as everybody now knows, have been for a quarter of a century creating laws and commissions to control railroads, to curb trusts, to regulate hours of labor, wages, and methods of payment, to supervise living conditions, to enforce sanitary rules, and, in the interests of morals and efficiency, to prohibit the production and sale of alcoholic drinks. Inasmuch as it is quite certain that economic evolution would be attended by industrial conflicts of increasing destructiveness if social control were relaxed, we confidently may predict that the return of peace to Europe will not be followed by an era of *laissez-faire* and uncurbed individual enterprise.

The probability plainly is that an organization of human relations and activities with reference to economy of energies, efficiency, the proper development of bodily and mental power and of character, which already was well under way thru the operation of economic causes, will be furthered by the experiences of war.

This means—not to put too fine a point on it—that for a good while to come human affairs will be carried on under a system more like state socialism than some of us will desire or approve. The old individualism, which was simply a state of non-organization, will not come back; and the big issues of politics from this time forth will be new ones in form, altho not in principle. The conflict between authority and liberty will go on, but it will no longer be incidentally or ostensibly a conflict between system and hit-or-miss enterprise. System, plan, purpose, efficiency ideals, general well-being as the object of collective endeavor, will be accepted as a matter of course. The fight will be over questions of method—how far shall individual wills be merged in a collective will, and individual action controlled by collective authority? How far on the contrary shall we get good team-work thru the voluntary concentration of the free choices of enlightened men upon objects of common desire?

If peace prevails social control will be moral and plastic, and the individual, socialized and working with his fellowman, will still feel himself free.

### THE LAW OF THE COSSACKS

**T**HE ancient code of the Cossacks consisted of six commandments, and for breaking any of them the penalty was instant death. One of them enjoined total abstinence in time of war. The Cossacks were not under ordinary circumstances distinguished for sobriety, far from it. During the periods of idleness intervening between wars getting drunk was their chief amusement and occupation. But once the call to arms was heard in the Setch a man who took a single drink was shot.

Out of this band of outlaw warriors, the Kazaki or "free men," the Russian army and Russian nation has

grown. So it was not so startling to them as it would have been to the British or French that the declaration of war should have been followed a month later by a ban of liquor thruout the realm of All the Russias. The way had been prepared for it long before. When the Government took over all the distilleries and vodka shops some years ago the Premier, the late Count Witte, intended state control to lead ultimately to prohibition. But the measure had the opposite effect because his successors in the Government proved unwilling to give up a source of revenue that brought forty million dollars a year into their needy treasury. The liquor business in the hands of the Government proved altogether too successful. The consumption of spirits increased rapidly and the ravages of drunkenness became so alarming that everyone agreed that something must be done. The Czar in a rescript to the new Minister of Finance, Mr. Barck, early in the year 1914, said:

I have come to the firm conviction that the duty lies upon me, before God and Russia, to introduce into the management of the state finances and of the economic problems of the country fundamental reforms for the welfare of my beloved people. It is not meet that the welfare of the exchequer should be dependent upon the ruin of the spiritual and productive energies of numbers of my loyal subjects.

Count Witte at that time urged a radical reduction in the sale of liquor, but the ministry would only consent to some slight reforms, such as allowing local option and appropriating part of the liquor revenue for the promotion of temperance.

But the war gave occasion for a sweeping reform and with the order for mobilization every wine, beer and vodka shop was closed. On September 16 total prohibition was made imperative "until the end of the war." By this act a direct saving of nearly half a billion dollars a year, the amount spent for liquor, is effected and an indirect saving of much greater amount due to increased efficiency and the reduction of disease, crime and time lost from work. But it remains to be seen whether the Russian people will consent to the maintenance of prohibition after the war is over and when military discipline and patriotic enthusiasm have relaxed.

### A MOST DESIRABLE JUBILEE

**A** FULL half century has now passed, and more, since the end of the Civil War, fifty years since Abraham Lincoln dedicated in the blood of his martyrdom a new era in our nation's history; and yet we have had no jubilee celebration of so momentous an epoch in the annals of the nation. It appears to be yet too soon to celebrate what was a victory to the one army and a defeat to the other, while yet some veterans survive who had part in the defeat and the victory. But we most heartily wish that the churches in our country which were divided by the war might find grace enough to celebrate their jubilee by coming together again. It is not too soon to project such a jubilee.

There are three great churches that were divided by the war, the Methodist, the Baptist and the Presbyterian. They still remain divided. Union has been suggested and talked of by many well-meaning people, but some objection has always been presented by suspicious ecclesiastics. There is no good reason for delay. We are all one country, not two. There are no slaves and no slaveholders. They are the same sort of Presbyterians

or Baptists or Methodists north and south of an imaginary line. The division is unreasonable and absurd. Before this jubilee year is out plans should be agreed upon that will ensure union.

The Presbyterians meet annually in their two General Assemblies. The duty of union is more pressing than any other business that can come before them. It needs no compromise, no yielding of principles or polity on either side. They should each in their General Assemblies send down to the presbyteries the simple question, Are you willing to unite? and the thing could be decided at the fall meetings of the presbyteries. It ought not to take much longer for the Methodists and Baptists. A strong voice from a distinguished Southern Methodist, the Hon. Josephus Daniels of North Carolina, Secretary of the Navy, has just spoken for union. Why wait? It is a disgrace to the denominations that they remain thus divided. Are the states more Christian than the churches? Is Christ divided? Yes, Christ is divided, so far as the American Presbyterian Church, or the Methodist Episcopal Church, or the Baptist communion can keep him divided. Paul wrote to the Christians of Corinth a letter rebuking them for a schism far less abhorrent than that which now divides three of our strongest denominations.

### CULTURE

**C**ULTURE is a large word and has many applications. As applied to a field, the simplest of all the uses of the word, it means such treatment of the soil as will secure the most valuable crops; and this use may suggest what is the true culture of a man or of a people.

Neither a man nor a people possesses true culture that does not properly care for the body. A cultured mind needs a sound body; and a sound body requires plenty of food, plenty of air and exercise, and plenty of sleep. A nation has not culture which does not care for sanitation, that is not versed in medicine and surgery, and does not love athletics. The Greeks were the most cultured of all ancient peoples, and they are famed for their athletic contests, the great festivals of the people, whose victors were crowned with wreaths and celebrated by poets. It is one sign of culture if some modern nations make much of athletic contests. But this is not enough.

A much larger element in culture is the intellectual. The more knowledge the more culture; the better trained and more active the mental powers the finer the culture. The more general the education, the more advanced it is, by so much higher is the culture. And, still further, the more all this knowledge is applied by the arts of invention and manufacture for the welfare of a community, by so much is the culture of such a community advanced. Yet all this knowledge of history, literature, arts and sciences, with all the developments of modern invention, does not assure worthy culture. A man may be a prodigy of knowledge, or a master of invention, and yet be a boor. He may fail of culture just as a mere athlete may fail of it. The Greeks invented culture and civilization, and yet they had no knowledge of a steam engine or an automobile or a zeppelin or a mitrailleuse.

The love and practise of the arts of beauty, of painting, sculpture, music, poetry, is a large factor in the composite we call culture. One who can sing finely and

has a large knowledge of operas and composers has thereby gained some culture, and equally one who knows how to manage his hands and feet in a company and his voice in conversation, has gained some culture; and these outward graces by their very superficiality make a large part of the show of culture, but are not the whole of it.

To get the perfection of culture there must be in a country or in an individual a fair degree of all these phases, or elements of culture; and there must be besides these the evidently truthful expression of good will. There must be a kindness of spirit, a mutual consideration and deference which expresses a regard for the interests and the equal rights of others. Nothing shows a greater lack of culture than a crowding for place, a carelessness for the feelings of others, a crushing of the weak, a contempt for the inferior or unfortunate, a lack of chivalry to women, or a readiness to take offense and to demand either apology or the duel. Honor given to the art of war above the arts of peace is foe to culture. Yet a man may be all infused with altruism and still be an ignorant clown.

What, then, is culture? It is the possession of a fair degree of all these elements; of bodily excellence; of knowledge of literature, science and art, exercised for the benefit of the community and with all kindness; of grace and ease of manner and knowledge and practise of those conventionalities which mutual respect and regard have created; and, in the individual or in the community, of an unselfish consideration for the rights of others and a fine sense of honor.

This is culture. Is it the same thing as *Kultur*?

### WHITE HAIR FROM FRIGHT

THE war correspondents occasionally report cases where the hair has been suddenly whitened thru suffering and anxiety and this has revived the controversy, long continued but never settled, over the possibility of such an occurrence. It is firmly fixed in folklore and literature but generally scouted by medical men, who do not see how the pigment could be quickly removed or neutralized since there is no circulatory system in the hair. The cases usually cited are mostly old and unauthenticated. In the "Prisoner of Chillon" we read

My hair is gray, but not with years,  
Nor grew it white in a single night  
As men's have grown from sudden fears.

But Byron neglects to give a reference to the page of the medical review from which he derived authority for his statement. That the hair of Mary, Queen of Scots, and Marie Antoinette turned white before their execution may be reasonably accounted for by the presumption that their toilet facilities in the prison were lacking in whatever was the courtly equivalent of our American walnut juice and sage tea.

But altho it is doubtful whether the color of any single hair can be changed suddenly by any psychological or physiological cause, it is probable that a head of hair may appear white much more rapidly than could be accounted for by a new growth. A French physician suggests an explanation of this which is at least ingenious and plausible. It is that hair which appears brown or black may yet have in it many gray hairs, for

when hair turns gray it means that the older hair as it falls out is being replaced by a new growth of gray. Now it is well known that disease or distress may cause a rapid falling of the hair thru the drying or shrinking of the follicles of the scalp and in such cases it is natural to assume that the older hair would be most apt to fall. That would cause the gray hair to predominate and become conspicuous and give rise to the belief that the hairs themselves had whitened.

### ETHICS MINUS RELIGION

WE are told in *School and Society* that the president of the University of Utah in hiring a professor to teach ethics and psychology warned him that he ought not to mention the word "religion" in the classroom lest discussion follow that might offend the community.

This reminds us of the secularization of the French textbooks which was so thoroly done that even the sentence "Notre Dame is a church" was struck from the primer. An over-zealous minister of education in Australia went quite as far when he changed "Christian mother" to "anxious mother" in a poem of the reader and cut out from "The Wreck of the Hesperus" the stanza that even his ingenuity could not sufficiently expurgate:

Then the maiden clasped her hands and prayed  
That saved she might be;  
And she thought of Christ, who stilled the wave  
On the Lake of Galilee.

The Utah professor must have found his task considerably lightened, for taking out all reference to religion would not leave much of ethics and would make a big gap in psychology. It would be much the same thing as ordering an instructor in mechanics not to mention the steam engine. For as was shown in the article by Professor Poincaré published in our issue of April 5, 1915, the science of ethics can at best merely give the reasons why morality is good for the community. It can never inspire the individual to action against his personal inclination.

### THE BLOW TO FRENCH LETTERS

WE are glad to see that the *Mercure de France* has resumed publication, since it is the only periodical from which one can obtain a knowledge of the current literature of every country. But this first war number is saddening since it shows how completely French literature has been crushed out by the great calamity which has overwhelmed the country. In place of the usual long list of new books of the fortnight, as varied and attractive as any country could present, we see only seventeen published since August, and of these sixteen deal with war themes.

Worse still is the list of fifty-nine authors of distinction who have perished in the Great War. A temporary suspension of productivity is not a serious matter, but such a loss of talent as this is literally irreparable. We may well hope that the trials thru which France is now passing will result in a purer and nobler literature, but such a renaissance, if it comes, will be the weaker for the loss of these young poets, novelists, dramatists and journalists who might have led in it.

# THE STORY OF THE WEEK

## THE GREAT WAR

**April 12**—Russians take 2700 prisoners near Uzsok Pass. French attacks on St. Mihiel wedge repulsed.

**April 13**—British rout 15,000 Turks near Shaiba, Mesopotamia. Germans renew attacks upon Russian positions on Niemen and Narew rivers, Poland.

**April 14**—Zeppelins bombard Tyne shipyards. Dutch steamer "Katwyk" at anchor near North Hinder light-ship blown up by submarine.

**April 15**—British battleships bombard Turkish coast near Enos preparatory to landing. French gain hill near Lorette, north of Arras.

**April 16**—Zeppelins and Taubes raid East Anglia and Kent. French cruiser bombards El Arish, near boundary of Egypt and Palestine.

**April 17**—A French aviator kills six children and a woman in Freiburg. Turkish torpedo boat attacks British transport in Aegean.

**April 18**—British submarine sunk in Dardanelles. Russians claim capture of 70,000 in Carpathians between March 18 and April 12.

### The Struggle for Uzsok Pass

The long battle of the Carpathians has narrowed down to a contest for the possession of Uzsok, one of the five railroad passes leading from Galicia into Hungary. The peaks and passes to the west of Uzsok are already in the possession of the Russians, but it would be fatal to advance their right at Bartfeld so long as their left is held back at Uzsok. Instead of giving way at this point as they have elsewhere, the Austro-German forces seem to have been strengthened and have ousted the Russians from some of the positions they had taken on the Galician side. This, taken in connection with the reported massing of troops in Bukovina, still farther to the east, may be taken to indicate that the Austrians and Germans are preparing for a strong attack on the Russian left. Petrograd estimates the forces of the enemy in the Carpathian region at over two million men, of whom 280,000 are Germans.

The Russian right got over the range without much difficulty, for the region about Dukla Pass is comparatively low, open and rolling country. The efforts of the Russians in this section are confined to gaining the foothills that guard each side of the Ondava River, down which they have progressed about twenty miles.

The Russians seem to have complete control of Lupkow Pass, though they do not appear to have penetrated it as yet to any considerable extent. They have also captured a high

within three miles of Uzsok Pass. The civil administration of Ungvar, the first important town in Hungary on the railroad from Uzsok Pass, is said to have withdrawn, in expectation of a Russian invasion.

The Germans claim that the advance of the Russians has been decisively checked and their strength irreparably impaired by their losses in this, "the most terrible battle in all history." The Russians, according to Berlin estimates, have lost 500,000 men in less than three months. The casualties among the Russian officers amount to more than 71,000. The Germans and Austrians hold over a million prisoners.

### The Fight for St. Mihiel

Along most of the France-Flanders line there is little to report. The Germans seem to have secured a foothold on the west bank of the Yser canal. In the Arras region the French have carried the spur of a hill southeast of Notre Dame de Lorette and repulsed the German attempts to regain it. This gave them sixty yards of German trenches. In Champagne, northwest of Perthes, the Germans exploded mines under the French trenches, but gained little ground. The French have held Hartmanns-Weilerkopf, the easternmost of the Vosges mountains, in spite of the desperate charges made by the Germans for four successive days in storms of rain and snow.

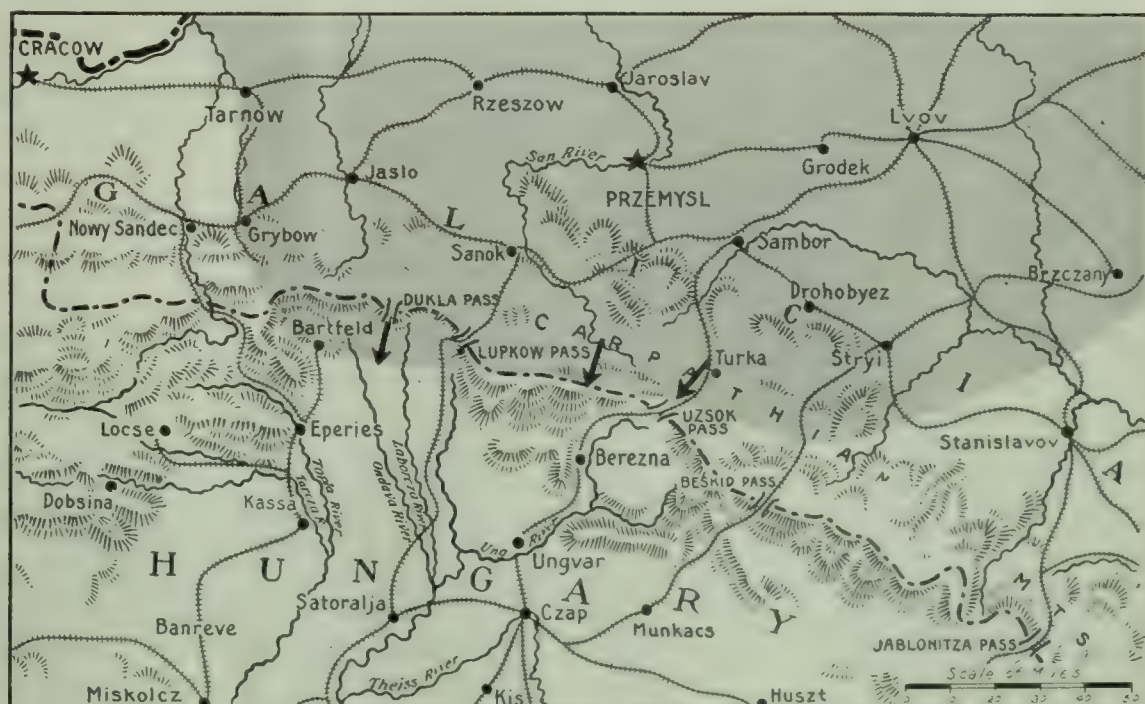

But these operations appear to be of slight importance compared with

the struggle now going on in the Woevre district. The Germans are evidently determined to hold on to the St. Mihiel salient as long as possible and the continued attacks of the French upon both flanks of the wedge have made no apparent progress during the week. The fighting on the south side in the woods of the Meuse and Moselle has been fierce and losses are heavy. The Germans report finding 700 French bodies in one place and 500 in another. The French are accused by the Germans of using bombs and hand grenades which on exploding diffuse an asphyxiating gas which poisons all the soldiers in the trenches for yards around. The same charge is made against the English at Ypres.

### The Capture of Les Eparges

On the north side of the St. Mihiel wedge the efforts of the Germans to recapture the ridge of Les Eparges have been frustrated. This point, which was taken by the Germans on September 21 and held by them until April 9, overlooks the Woevre plain between Metz and St. Mihiel from an altitude of 1350 feet. The Germans had entrenched themselves strongly on the crest and concealed sixteen batteries of heavy guns where they could command the ground across which the French must advance from the fortress of Verdun.

But the French advanced underground, running trenches and tunnels toward the German lines and

THE STRUGGLE FOR UZSOK PASS

The Russians attempting to invade Hungary from Galicia have gained possession of Dukla and Lupkow Passes and the Carpathian range as far as Uzsok Pass, but this is still held by a strong Austro-German force

Press Illustrating Company

#### IT COST ENGLAND 2527 LIVES TO DO THIS

Neuve Chapelle after the artillery and infantry left the town in the Allies' possession. Public

opinion in England was exhilarated by this proof of the army's ability to break the German lines, but disquieted by the losses, which seem excessive

exploding mines under their trenches. The foremost of the German trenches was carried in this way on February 17 and four days of furious fighting ensued.

On March 18 another four-day battle was begun, in the course of which the French left flank gained 360 yards of trenches and the right 110 yards. Ten days later the Germans attacked with the fresh troops of the Tenth Division, but were repulsed.

The story of the final victory of the French we give in the words of the British officer, known as the "eyewitness," who has recently been deputed to supplement the brief and dry official reports with descriptions of the fighting in France:

The final and decisive battle began on April 5. It was raining heavily and the slopes were slippery, the infantry sometimes plunging in mud up to their thighs as the advanced trenches were stormed. These were taken after sanguinary bayonet fighting, but to the east the advance was checked by aerial torpedoes, which the Germans threw upon the oncoming foe. All that night from 6 p. m. to 4:30 a. m. the battle continued ceaselessly, the fresh German troops fighting admirably. Our men resisted well, but were forced to retreat. The same evening, however, we again attacked, again fighting all night with the bayonet, gaining 550 yards of trenches and capturing 100 prisoners.

Receiving reinforcements the enemy made violent counter attacks several times, but our artillery mowed them down and held them in check. Our reinforcements reached us with difficulty, as the communicating trenches had been demolished. By the morning of the 8th our rifles were choked with mud and we had to attack with the bayonet again. Fifteen hours of continuous fighting won us almost complete possession of the position, but then a fog descended upon the hill, and so it was ten o'clock

the next night before the Eparges spur finally was cleared of the enemy and our gallant troops, covered with mud from head to foot, were victorious.

The Battle of Neuve Chapelle  
Ever since the battle of March 10 at Neuve Chapelle there have been rumors that the whole truth had not been told about the affair, that the losses of the British were much greater than the Government was willing to admit, and that these were largely due to a blunder in management. It was whispered about London that, owing to the fog and a breakdown of the field telephone service, the British guns continued to shell the German trenches after they had been captured by the British troops.

The obscurity surrounding the affair is in part cleared away, but the suspicions of mismanagement are partly confirmed by the detailed report of the battle which was issued a month after by Field Marshal Sir John French. In this he admits that "considerable delay occurred after the capture of the Neuve Chapelle position"; that "the infantry was greatly disorganized"; that the telephone communication was cut so that one captured house had to be abandoned because the British bombardment continued; that the gain might have been much greater if there had not been unnecessary delay on the part of certain brigades in following up the attack while the resistance of the enemy was paralyzed. That General French regards some one as to blame for this is evident from the following passage, but it is not known to whom he refers:

I am of the opinion that this delay

would not have occurred had the clearly expressed order of the general officer commanding the first army been carefully observed. The difficulties above enumerated might have been overcome earlier in the day if the general officer commanding the Fourth Corps had been able to bring his reserve brigades more speedily into action.

The extent of the losses was not at first realized, for the casualties have been reported in daily lists issued at intervals of a few days. But the total British loss in the three days' fight is now estimated by Sir John French at 12,811, distributed as follows: Killed, 190 officers, 2337 men; wounded, 359 officers, 8174 men; missing, 23 officers, 1728 men. This is a heavy price to pay for a gain of three square miles, but the victory has done much to hearten the English, since it is the first time they have carried one of the entrenched positions of the Germans, and it proves that the German line can be broken if the attacking party is willing to pay the price. The losses of the Germans are believed to be much greater, as Field Marshal French states that "the enemy left several thousand dead upon the field and we have positive information that upward of 12,000 wounded were moved by trains. Thirty officers and 1657 of other ranks were captured."

The Prince of Wales served as dispatch bearer for the General Staff during the battle and also was on duty in the trenches. The Indian troops from Lahore and Meerut took a leading part in the assault of the German entrenchments and entanglements.

The conclusion of Sir John French is important as showing why the

British Government is making such desperate efforts to speed up the manufacture of munitions:

In war as it is today, between civilized nations armed to the teeth with the present deadly rifle and machine gun, heavy casualties are absolutely unavoidable. For the slightest undue exposure the heaviest toll is exacted. The power of defense conferred by modern weapons is the main cause for the long duration of the battles of the present day, and it is this fact which mainly accounts for such loss and waste of life. Both one and the other can, however, be shortened and lessened if attacks can be supported by a most efficient and powerful force of artillery available; but an almost unlimited supply of ammunition is necessary, and a most liberal discretionary power as to its use must be given to artillery commanders. I am confident that this is the only means by which great results can be obtained with a minimum of loss.

**The War in the Air** In the earlier part of the war airships were mostly used for scouting purposes and not for attack. The French War Office issued the estimate that during the first eight months of the war some 10,000 aerial reconnaissances had been made by French aviators and that they had traveled more than 1,000,000 miles in the air. Probably the German machines have covered a greater distance; and the English, who were slow to take up aviation, have since the war been very active in the construction of aeroplanes and the training of pilots. In February the

Belgian towns were attacked by as many as forty British aeroplanes at a time.

With the spring has come an increase of activity in aerial warfare, and we hear of several bomb-dropping expeditions almost every day. Both Zeppelins and Taubes have flown to England four times during the week, but it is impossible to determine their route, purpose or the extent of damage done from the information given out. According to the Berlin account, a Taube aeroplane got as far as Greenwich, only five miles from London bridge, and the Zeppelin dirigibles inflicted serious damage to the British naval yards on the Tyne and killed men on the patrol boats. According to the London version nobody was killed and little injury was done to property. The London *Chronicle* reports that the aeroplane which passed over Kent, dropping a dozen bombs, and the Zeppelins which passed over East Anglia, dropping some fifty bombs, caused a total loss of life of one blackbird, one field mouse, one chicken and two horses.

The Tyne attack took place on the night of April 14. The Zeppelin first appeared over Blyth about eight o'clock in the evening. It sailed south to the Tyne River and thence out to sea. Newcastle, the great ship-building center, was missed probably because warning was given in time to have all the lights in the

city put out. Incendiary bombs caused fires in several of the neighboring towns, but these were easily put out.

Early in the morning of the 16th two Zeppelins visited Suffolk and dropt explosive bombs on Lowestoft, Southwold and other towns, but did little harm except to window glass. In the afternoon a Taube flew over Canterbury, dropping bombs on nearby towns.

A French aviator flew over Freiburg in Baden on April 15 in broad daylight, tho hidden by the clouds, and dropt three bombs with fatal effect. One of them exploded in a group of children playing in front of the station and three of the children were instantly killed and horribly mangled by the flying fragments. Three other children were so severely wounded as to die soon after. The same bomb killed a truckman and his horse and mortally wounded another man near the station. A second bomb dropping in front of the Church of the Sacred Heart of Jesus put to death a passing workman, and the third, breaking thru the roof of a house, tore off the right arm of a woman.

**Attacking Constantinople by Land** It seems that the army under General d'Amade, which has been prepared to coöperate with the fleet in the attack on Constantino-

## NOVEMBER, 1915! FORWARD!

Referendums in New York, New Jersey and Massachusetts this November carry the suffrage question into the very heart of the East for decision. In New York City the Woman Suffrage Party is sending out this gaudy lunch-wagon from which Miss Alberta Hill is seen talking to a City Hall Park crowd

ple, will be landed on the coast of European Turkey, near where the new boundary line of Bulgaria reaches the Ægean. On the 14th ten battleships of the Allied fleet appeared off Enos and two of them, entering the bay, bombarded the Turkish camp there. This is about 100 miles west of Constantinople, so probably some nearer point on the Gulf of Saros (Xeros) will be occupied by the expedition as a base.

The British steamer "Manitou," formerly of the Atlantic Transport Line, which was conveying troops from Egypt to this point, was attacked off the Island of Chios by a Turkish torpedo boat which apparently put out from Smyrna, altho that port was supposed to be closed. Three torpedoes were discharged at the transport. The London report says that none of them hit, but adds the mysterious statement that about fifty of the men on the transport were drowned. The British cruiser "Minerva" and some destroyers then gave chase to the torpedo boat and ran her aground on the island. The crew were made prisoners and the boat blown up.

The sentences imposed in the Terre Haute election fraud cases, when considered in connection with the prominence and official positions of the convicted men, make the prosecution a memorable one. Of the 126 men indicted, eighty-nine pleaded guilty and twenty-seven who went to trial were found guilty by a jury. Donn M. Roberts, mayor of the city, whom Judge Anderson called "the arch conspirator," was sentenced to be imprisoned in the Federal penitentiary at Leavenworth, Kansas, for

six years and to pay a fine of \$2000. Five years in the same prison, with a fine of \$1000, is the punishment prescribed for Eli H. Redman, judge of the Circuit Court, and Dennis

Shea, sheriff of the county. Other terms were as follows: Three years and \$500 for Harry S. Montgomery, president of the city's Board of Public Works; Thomas C. Smith, city judge; George Ehrenhardt, member of the Public Works Board, and Edward R. Driscoll, secretary of the County Democratic Committee; two years and \$100 for Lewis Nunley, assistant city engineer; Elmer T. Talbott, city comptroller; Hilton Redman, son of the convicted judge; John E. Green, a merchant, and William S. Crockett, superintendent of a cemetery; one year and \$100 for Maurice Walsh, county sealer of weights and measures; John M. Masselink, inspector of weights and measures and recently a member of the State Legislature; Charles Houghton, assistant custodian of the City Hall; Joseph O'Mara, street commissioner; Alexander Aezel, inspector of paving; Arthur Gillis, clerk of election board; Joseph Strauss, liquor salesman, and George Sovern, gambler. Only one of those who pleaded guilty had a prison sentence. This was Ed-

Press Illustrating Company

#### INSIDE A FRENCH HOSPITAL CAR

On the Red Cross trains which carry the wounded from the base hospitals to the larger war hospitals there are facilities for constant medical attention to the wounded

ward Holler, ex-chief of police, who is to be confined for one year.

Twenty of those sentenced gave notice of appeal. It was ordered by the court that the bond on appeal should be \$10,000 for each year. Eight withdrew their notice and began to serve their terms. Three of these were Judge Smith, Sealer Walsh and Street Commissioner O'Mara. The city council has begun impeachment proceedings against Mayor Roberts. In the cases of four of the convicted men sentence was suspended because they are to be witnesses for the Government at the approaching trial of Roy Shattuck, Republican candidate for Congress, for fraud at the same election.

"The evidence," said the judge, when he imposed sentence, "showed that the saloons were the centers of nearly all the corruption at the election. My notion is that the saloon will have to go. I believe the time will come when the people will rise up and smash the saloon—at least, as we have it now."

**Labor Controversies** Building operations in Chicago have been checked by a strike of 16,000 carpenters, who demanded an increase of wages from sixty-five to seventy cents an hour. The employers offered an addition of two and a half cents an hour, but this was rejected. About 7000 lathers, painters and sheet metal workers were already on strike, and the action taken by the carpenters promises to make 120,000 workmen idle, half of them not connected with unions. This labor movement ties up \$30,000,000 worth of building projects. Building

contracts in the city amount to more than \$100,000,000 and include the work on the new union railroad terminal, which will call for an expenditure of \$65,000,000. When the strike was announced, the employers at once ordered a lockout of the strikers and their union. They will look for nonunion men. Governor Dunne directed the State Board of Arbitration to offer its services, but there was no indication that these would be accepted.

The strike of street and inter-urban railway men in Auburn, New York, and the vicinity, which originated in a controversy between two unions and which threatened to involve nearly all of the railways in the western part of the state, has been ended by a compromise agreement, owing mainly to the efforts of James M. Lynch, the State Commissioner of Labor. The men have gone back to work, and the dispute is to be submitted to a conference.

If not settled in this way, it will be given to arbitrators.

In Newark, New Jersey, on the 11th, there was a fight between the employees of A. Hollander & Sons, fur dyers, who were on strike because men had been discharged for organizing a union, and the workmen employed in their places. Two strikers were killed, and two strike-breakers, with a bystander, were wounded.

While the Calumet and Hecla Copper Company has increased the wages of its 12,000 men by ten per cent, thus restoring the rates in force before the Great War, there has been a reduction of about fourteen per cent in the sheet and tin plate mills of the United States Steel Corporation. This was due to what is said to have been a larger reduction in the mills of competing companies.

#### Little Revolutions

It was reported to our Government last week that Rosalvo Bobo had started a new revolution in Hayti. He was formerly the Haytian minister to Santo Domingo. This movement against President Sam was due to a belief prevailing in the northern provinces that Sam was about to give control of the country's finances to the United States. But Sam has declined the offered American fiscal protectorate and has accepted

#### ADVERTISING FOR TEETOTALERS

This corner coupon is clipped from a full-page advertisement in the London Times, paid for by a number of business men, and urging all those who favored total prohibition to write Mr. Lloyd George. Thirteen sacks of mail—estimated to contain some 70,000 letters—were received in reply, and the end had not been reached. The fate of the movement rests with Parliament, the ministry having decided not to make prohibition a Government measure

the aid of France, whose Government has procured for him a loan of \$1,000,000.

Dispatches from Minister Sullivan, saying that a new revolution was causing disturbance in Santo Domingo, led to the transfer of the cruiser "Des Moines" from Progreso to Dominican waters. The revolt is said to be related to a quarrel of the President with Congress.

The rebellion in Nicaragua has been subdued, and the Government controls the situation. Dr. Salvador Castrillo, formerly Nicaragua's Minister at Washington, was the leader of the revolt. He proclaimed himself Provisional President and issued three decrees. The first repealed the law which established a currency unit. The second said that political offenders should not be punished by imprisonment, and in the third he ordered that the French language should be used in all diplomatic business. Those rebels who were active in the vicinity of the capital were surrounded and their commander was captured. Others in the neighborhood of Leon were routed by the Government troops.

**Villa and Obregon** General Obregon's report about the first battle with Villa at Celaya was misleading, but it appears that Villa's forces, having entered the city, were driven out of it, with a loss of 4000. He sent 1000 of his wounded to Guadalajara. This battle took place on the 6th and 7th, and continued for thirty-eight hours. Afterward Villa said that he had Obregon surrounded. The latter declined to come out of the city and fight in the open.

The next battle was fought on the 14th and 15th. There are conflicting reports about it, but the evidence points to Villa's defeat. In a long telegram which has been published, Obregon declared that Villa's forces were routed, with a loss of 14,000 men. He captured 8000 prisoners, 5000 rifles and thirty cannon, he added, and was pursuing the enemy. But his own loss was only 200. This seemed incredible, but it was believed in Vera Cruz, where the church bells were rung and the victory was celebrated by parades. Carranza sent to Washington a repetition of Obregon's report. On the other hand, Villa telegraphed that he still held all his positions and was making preparations for a decisive battle.

The fighting at Matamoras continued, but the garrison made an efficient defense and in one sortie killed 300 Villistas. There is an epidemic of small-pox in the city. Bullets have been falling in Brownsville, but no American resident has been wounded.

#### IN MEXICO'S LITTLE WAR

A little soldier—twelve years old—in Villa's army. He was killed at Matamoros the other day. The revolutions in Mexico may be expected to drag along at a low potential till the European war is over, and then—

At the end of the week Villa withdrew a part of his force because he needed it at Celaya. General Monclovia Herrera routed another part of Villa's army thirty miles south of Laredo and put to death 200 prisoners. Two or three days later he was killed by his own men. Some say they mistook him for a Villista; others call it assassination.

The port of Tuxpam was taken by Villa's men, but they were soon driven out of it. Our Government is sending a warship to carry foreigners away from the city. An army transport is to serve the foreign residents of Tampico in the same way. The oil industry there is paralyzed, and a majority of them are destitute. The Brazilian Minister has procured a train which will carry 300 Americans from the capital to Vera Cruz. This will be done with the consent and aid of both Zapata and Carranza.

**Huerta Defends Himself** Huerta, formerly President of Mexico, arrived and landed at New York last week, accompanied by his private secretary and Abraham Rabner, his financial adviser. Rabner's brother is trying to get possession of 1,000,000 rounds of ammunition, 10,000 rifles and twenty-five machine guns which were consigned to the Huerta Government but were seized in April last by our Government, which holds them. Huerta asserted that he was traveling for pleasure and that he intended to remain in this country a month or two. He denied that he was thinking of visiting Mexico.

To the press he gave a long signed statement. In it he denied that he was responsible for the killing of President Madero. He knew who was responsible, but he would not tell. It was "a soldier's secret." But he attacked Madero, saying the latter had been elected by the help of thousands of released criminals, the Treasury's money, and the bayonets of bandits. Madero, he continued, had annihilated Mexican union, prostituted the discipline of the army, dissipated the Treasury surplus, and sowed the seeds of anarchy. He commended his own administration and complained that the American people had been misled about him by their newspapers. The many recent crimes and outrages in Mexico were due to Madero's anarchical propaganda. President Wilson had not been fair to him. He had retired from office, hoping thus to help his people. Anarchy was too soft a word for the situation in Mexico at present. But he was confident that the country would be saved, not by a bandit, but by a strong man—he would not say who.

AMMUNITION VANISHES QUICKLY—THE FRENCH ALONE FIRED 180,000 SHELLS A DAY AT THE MARNE

## THE BUSINESS OF SELLING DEATH

BY ONE OF THE SALESMEN

I AM a war-contractor in a very large way. Of course I know that nearly all the handsome young automobile salesmen who decorate the lobbies of the Broadway hotels are my keenest competitors, but I am still in this greatest of modern business games and will remain in as long as the fighting goes on.

I am in this new deal solely because I need a yacht, a rather good house just off Fifth Avenue and a few more bonds in my safety deposit box. My neutrality exceeds even that of Bryan and Bartholdt, for I will willingly sell to any fighter who has the price and can get his goods home, since my invariable terms are C.O.D. New York docks.

This great game is quite new to me. I am a lawyer and have for the past twenty years been engaged in the development of large American industries. I have lived abroad; in England, France and Germany. When the Great War broke out I was down on the troubled Mexican border engaged in a very delicate affair which detained me, so I reached New York late last November with no thought

*The balance of trade has swung rapidly in the last few months to the side of the United States. Our exports, mounting feverishly, have come greatly to overtop our imports. Influential factors in this result are the steadily growing sales of arms and munitions of war to the warring nations. Out of this grim business of "selling death" has sprung a new functionary of business—the middleman between the big contracting groups, who secures the orders from foreign governments, and the American manufacturers. He serves the contractor, and thru him the foreign government, by showing them the way to the men who have or can make the supplies of war they sorely need. He serves the manufacturer of arms and munitions, clothing and equipment, by bringing his market to him. Here is the story of such an intermediary, told with complete frankness and a kind of picturesque cynicism. It raises in practical form the vexing question of the duty of neutrality in relation to the sale of munitions of war to belligerents. It also suggests the no less difficult question of the attitude which lovers of peace should adopt toward this business of "selling death"—a question by no means so simple as might at first appear. These questions are discussed editorially on another page in this issue.—THE EDITOR.*

whatever of being a war-contractor. One day I dropt in on one of my most important allies in business—a rather sedate, polite gentleman, whose quiet offices look down on surging Broadway, twenty stories below. He told me that he was selling to the Allies, gave me some details, exhibited a deadly-looking Lee-Enfield rifle, with drawings and specifications; some hob-nailed shoes; several styles of a sort of harness for infantry, in leather and fabric; some samples of cartridges and shells and heaps of

cables and letters regarding the articles. I was interested and promptly decided to get busy and go after some of these big orders and take my chances of making a profit.

I recollected that my grandfather had made a couple of million dollars running the blockade during the Confederate war (it was all in Confederate money, tho) and perhaps I might be as lucky in this uproar.

I am ignorant of rifles, beyond my hunting experiences and what my father told me of his experiences in the Confederate army. I don't know anything about naval affairs, other than my

yachting days and life aboard trans-Atlantic liners. However, I am accustomed to think in very large sums and to gather around me experts as I need them; experts are cheap and useful. Meeting emergencies is my specialty. My knowledge of American resources is broad. My connections in Wall Street are strong. So, without an instant's hesitation, I was sitting in this game and I have toiled day, night and quiet Sundays ever since.

This is about how it works out. At

present the Allies are the principal buyers, for they control the sea. Some of the smaller endangered nations have bought heavily and some of the neutrals less in danger have replenished their ammunition wagons and forts. Germany is after cotton and gets rubber and copper thru her neutral neighbors, more or less. If we could only manage to get war materials into Germany at present prices, we would sell them largely, but the British blockade cuts us off from these vast profits. Greece is very active; buying uniforms, flour, powder; trying hard to place an order for 600,000 rifles since the gunworks at Liège are closed to her agents. This trifling order was tossed aside as too small. Rumania is after ammunition and Serbia and Bulgaria are equally active, but their orders are small.

England is fairly well off in rifles, shoes and ammunition; France is doing pretty well, but Russia is fearfully short of everything. Germany is best equipped and I know that the great shops at Essen and Liège are working day and night. The daily press amuses me very much, when I have time to read, with their silly "war-news." Not one has noted the activities at Liège. Belgian resist-

ance last fall stalled Germany; Belgian industry may yet save the Kaiser. Germany is one vast workshop which will go on producing munitions as long as there is an ounce of copper in a hausfrau's kitchen. Their shortage is never going to be in food, but in copper, cotton, rubber and gasoline.

As to myself and my associates, we are mainly lawyers, private bankers and large industrial promoters. Our offices are in the Wall Street district and are manned by capable subordinates who know how to keep their mouths shut and work hard. The banks like us and never keep us waiting. Our capital is not large, but we can command any needed sum in a day.

The buyers are in New York; quiet, reserved chaps who prefer our Broadway hotels, where they live well. They have no offices, as high rents seem to them a waste. Huge credits are open at our principal banks. Samples of rifles, shoes, clothing, etc., accompanied by elaborate specifications, are in our hands. All dealings are finally with the actual manufacturer, but we make the trades and the financial arrangements. We call \$700,000 a small order and the big ones run to \$30,000,000. The terms: Buyer agrees to pay a cash sum on signing contract and the balance as goods are delivered at an American port, giving New York bank credit to protect this deferred payment. Seller gives bond to fulfil contract, shows that he has the mechanical and financial ability to make good, and gets busy.

I cannot divulge prices, but I will say that many important lines are absolutely sold out for two years ahead and prices on essential ingredients on many orders trebled in price by the law of supply and demand. As to profits, I may merely state that we have to divide with many and they are greedy. The profit side reminds me of a story that a Scotchman told me in the Savage Club, London, several years ago. "My father was a maker of rifles in 1861. One Bulloch, uncle of your Mr. Roosevelt, and one Wilson, whose granddaughter married one of our dukes, called and offered father his regular price, \$15 per rifle, with a bonus of \$45 if he would deliver the arms in the Confederacy. Father nearly wore out the carpet tramping up and down, but he could not plan to beat the Yankee blockade."

Closed contracts leave us free to put over others. The cable is our telephone. Expense is nothing. Time is everything. One chemical jumped twenty cents a pound overnight; another fifty cents in a week and will

go to \$10 a pound by May. One order for \$250,000 was accepted and the cable fluttered in next day asking for five millions more at the same price. One for six millions was flashed back at thirty-four millions. We could not fill either increased order as even this country has its limits, strive as we will.

This is where the trouble comes in and precisely why we are necessary and American manufacturers so helpless. Our business men are clever and industrious, but utterly lacking in ability to grasp this vast situation or meet its terrible emergencies. They tried, at first, frantically. Rushed their best salesmen over to Europe. They failed completely and the boss beat it over after them and met failure. They tried to change European methods of doing business and got mad on being turned down! They promised anything and everything to anybody and talked themselves out of favor with certain high personages. It is a new experience for a big man among us to be ordered out of a government office, but it happened. Our manufacturers lack patience and cannot grasp that this is war—and the terrible time element involved. Things to kill men with are useful only if they arrive on time in perfect

*Illustrated London News*

#### A SINGLE SOLDIER IS EXPENSIVE

His gun costs \$25; 1000 cartridges, \$35; uniform, \$8. Other necessities bring the total up to \$91 to \$95

*Illustrated London News*

#### EQUIPMENT THAT IS SOON DESTROYED

The average life of a uniform is two weeks; a rifle, six months. It requires two and a half rifles to a man at the start

sequence and quantity. We get these huge orders because we can literally recruit and organize the willing, capable but utterly inexperienced American manufacturers. We are the "General Staff" for our people who wish to sell. We exist because we are necessary.

A striking phase of this greatest of wars is this: it is an impersonal, corporate war; a war waged by men who know nothing of war and care less. It is the resources of the whole world being rapidly organized and used up mighty fast. Why, the French army alone fired 180,000 shells a day in the long battle of the Marne. My best contractor can only turn out 7000 a day. The fighters blaze away seventy million cartridges a day. All France cannot make but a paltry 70,000 shells a day. The little wars along the edges are almost reduced to using clubs and arrows. Kitchener, Joffre and the Kaiser are not so important as the man who leases a bunch of factories and converts them into ammunition plants overnight. Such men are now putting together a great War Trust for each side in the field. I am convinced that civilization is going in pretty deep. They are staking all on this contest and neither side will give in, but fight it to a finish. National exhaustion is the only logical end. Some of the peace people amuse me in their efforts to speak about this war. I wish they could look over my desk and see the business side of war; its regularity and its efficiency. We have simply applied modern business methods to making war and are killing men by machinery in up-to-date fashion.

There are no true neutrals anywhere. This is a free, open scrap and every living man, woman and child; every beast and bird; every article of value on earth is being dragged into this stupendous maelstrom, for in its effects it reaches all. You doubt this? Keep your eye on prices. Wheat up; cotton down. Wait and see; it will reach even you in time.

In our offices we sit, with gleaming rifles, heavy shells, powerful explosives and useful articles about us. We telephone, telegraph and cable to the ends of the earth for information; we scribble on "scraps of paper";

plan and arrange to organize mighty forces that are being used to fight battles. Our figures are correct—they have to be. Our secrets? Surely we have them; in the safe. We scarcely ever think of human beings using our supplies to fight—to kill. One day I heard this: "That Enfield sight-guard showed up in a *Times* Sunday picture. A dead fellow had his rifle sticking up and I saw it."

The foreign buyers are middle-aged military and naval men from the ordnance and supply departments and not exactly the type of heroic soldier impressionable girls fall in love with and marry. They don't joke.

We play no favorites. It is business, pure and simple, with us all the time. We do not talk war-news; we haven't time. It's all we can do to attend to the details and meet the rapid changes of the day's struggle to close orders. All this contracting is divided up like a department store. I know nothing of the feeding of armies; I am interested only in the arms and ammunition and a little in clothes and harness. Ocean freights do not concern us, since all that is arranged by the buyers.

From "scraps of paper" on my desk I glean a few facts. My sources are the best in the world. Here are the present numbers in arms either at the front or in training. The numbers seem to be vastly larger than the public believes. England, three million; Russia, six million; France, four million; Serbia, three hundred thousand, and Belgium two hundred thousand—total for the Allies, thirteen million five hundred thousand. Japan is omitted for good reasons. On the other side: Germany, six to

eight million; Austria, four million; Turkey, one million—total for the empires, eleven to thirteen million men. For comparison, note that the Confederates had only six hundred thousand to the Federals' three million men and yet they held out four years!

Another of my notes shows the initial cost of equipping just one private soldier in all these struggling millions. Gun, \$25; 1000 cartridges, \$35; uniform, \$8; underwear, \$3; harness (belt, knapsack, etc.), \$9; shoes, \$3; blanket, \$3; extras, \$5 to \$9. Total, \$91 to \$95. The average life of a uniform is two weeks; a rifle, six months. It requires two and a half rifles to a man at the start. The remarkable feature of this war is the rapid waste of equipment of every kind. I estimate that if peace does not take place before long exhaustion will set in during 1917, but no man can foresee anything in this event; it is too big and too strange to human intelligence; all we can do is to live each day as it comes along. Civilization is surely on fire and the fire is spreading; driven by the fierce wind of circumstance it sweeps over the realities of the whole world and there is no telling where it will end.

Comedy invades even our very serious councils. We can spot the would-be worthless man when he begins to talk of getting those three hundred thousand old Krag rifles that are stored up in our Government arsenals. Those rifles have been sold fifty times—and never delivered once and they never will be. They were held at \$9 before the war; I could get \$50 for them today. They are utterly unobtainable.

Another kind of pest is the man who offers to deliver the hundred thousand Mausers that Huerta left in Vera Cruz. This fellow winds up by asking for a small advance payment to travel to Mexico. Sometimes we are bothered by the little man with the big man's letter of introduction. His interview begins by an assurance that he "has a friend of a friend of an intimate friend of Kitchener" and winds up by solemnly confiding to us that he is followed by detectives! Of course there is espionage, even in New York, but that is harmless and I have got used to it.

## THE HINT WITHIN

BY STEPHEN PHILLIPS

At moments, when night relaxes, and stars go seaward,  
Soft hath come o'er me a thought;  
That perchance we dream awry if we dream the Creator  
Aloof, apart from ourselves;  
That a Power outside us forbids, chastizes and drives us,  
Wherefore we know not, nor guess.  
O brother, hath never a splendid hint surprized thee  
That to rule we have but to claim?  
That ours are Orion, Arcturus, the Pleiades,  
The gorgeous fall of the Sun?  
That ours are Death and Bliss, and Renunciation,  
And the keys of all Heavens and Hells?  
What if the thief, the murderer, even found guilty,  
Be but glimmering low in his light,  
And the murder or theft delay but a final kingdom;  
Delay it, alas, how long?  
What if apart from ourselves, never God existed,  
But that we, we ourselves are God?

*J. Horace McFarland Company*

## IN AN OLD GARDEN

HERE, IN THIS SEQUESTERED CLOSE  
 BLOOM THE HYACINTH AND ROSE;  
 HERE BESIDE THE MODEST STOCK  
 FLAUNTS THE FLARING HOLLYHOCK;  
 HERE, WITHOUT A PANG, ONE SEES  
 RANKS, CONDITIONS, AND DEGREES.

ALL THE SEASONS RUN THEIR RACE  
 IN THIS QUIET RESTING PLACE:  
 PEACH, AND APRICOT, AND FIG  
 HERE WILL RIPEN AND GROW BIG;  
 HERE IS STORE AND OVERPLUS,—  
 MORE HAD NOT ALCINOUS!

HERE, IN ALLEYS COOL AND GREEN,  
 FAR AHEAD THE THRUSH IS SEEN;  
 HERE ALONG THE SOUTHERN WALL  
 KEEPS THE BEE HIS FESTIVAL;  
 ALL IS QUIET ELSE—AFAR  
 SOUNDS OF TOIL AND TUMULT ARE.

HERE BE SHADOWS LARGE AND LONG;  
 HERE BE SPACES MEET FOR SONG;  
 GRANT, O GARDEN-GOD, THAT I,  
 NOW THAT NONE PROFANE IS NIGH,—  
 NOW THAT MOOD AND MOMENT PLEASE,  
 FIND THE FAIR PIERIDES!

—Austin Dobson

# GRANDMOTHER'S GARDEN

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," "HOW TO LIVE IN THE COUNTRY"

WE are not quite sure that we have been making progress of a genuine sort all thru these years since gardens stopped being grandmotherly. In our own gardens things climb over each other to get a breath of air and a streak of sunshine. Grapes and passion vines twist together, and on our verandas a rose can scarcely get leave to exist. The old-fashioned garden had an old-fashioned formality about it, to be sure, but it did not have any more varieties than could be talked over by the grannies when they visited each other.

Of all plants these ladies loved best pinks and sweet peas. The sweet peas were of the old style, and sweet they were. They ran over brush until they got to the trellis of clothes line, and there they built a hedge hard to beat. One might smell them thru the whole garden, the odor mingled with that of honeysuckles just across the path. We like to take a whole lap full to school; we mean we used to like to do it, to Lucy; and she, on the sly, would give us as many kisses as one might count while the schoolma'am's back was turned. It was a good thing that floors creaked in those days, and one might know when to be on the sly. Does anybody know where we can find a bunch of the old genuine grass pinks; I mean the roots?

Tulips and jonquils came next in favor, and with them, of course, were the golden daffodils. We always did love tulips and always will. It is a wonderful flower, because you can have so many of them. If you will but stick them into your strawberry bed, they will come up and blossom and then get out of the way before the strawberries need the sunshine and the dews. So one may have two of the finest things in the world combined. There is a dignity about this flower, and then there is a certain dignity of character in the jonquil—but we think not so much of it. The spicy flavor varies almost as much as the striping and the spotting. We love all this group, and in our northern garden never can get too many of them. An old tulip couch, where hundreds of them have been cultivated, will never wear out. The bulbs multiply for years after the ground has been turned to sod, and up comes the memory of old gardens, laughing thru the meadow grass, daffodils winking with the dandelions.

As we remember the old garden, there was abundant color in all seasons. Somewhere these dear old women had got a sunflower that was

not big enough to grow for chicken feed, and they were growing them along the grape arbors. They were not so bad after all for bouquets, for a single flower was allowed to fill the whole dish. Carrot leaves were already exquisitely beautiful in those days, but I do not remember that beets had become crimson leaved, or that the vegetable garden was valued for its florescence—with one exception. If you must know what one flower of our grandmother still best holds its own it is that wonderful pickle flower, the nasturtium. A wonderful sweet flower, teasing you with all sorts of color, and asking only the poorest soil, the "sturtion" still is worthy of highest praise.

These dear grandmothers did not know the pansy, but they got on very well without it, so long as they had the johnnie-jump-up. We do not know whether this little flower was the parent of the gorgeous pansy or not, but we do know that it is one of the sweetest and prettiest little letters of the alphabet. A small bunch of them would serve for a buttonhole bouquet, and they did nicely in saucers placed in our bedrooms.

There were two or three kinds of roses only, but truly we would like to see all of these brought back once more into the garden. How many of our readers remember the cinnamon rose? It was not large, but it had a nice color, and that real raggedness that goes with abundant flowering. The cinnamon rose stood in the corner of the fence, out of the way, and just blossomed all over.

Down here in Florida we have the Cherokee rose, that grows all over the houses of the "darkies," and covers our sheds and hen houses, but it is not quite up to the cinnamon rose. Lower down, not more than two feet high, generally bordering the path to the street, and mixed in with the red and white peonies, was the Thousand-to-one rose. That means a rose that gave a thousand petals to every blossom. We never counted them, but really those roses were huge and sweet and should never have gone out of fashion. They were also called cabbage roses. We have them still, growing along with Druskies and Marechal Neils; but we have no longer, alas! either the grandmother or the mother. We wonder if they are still cultivating roses in Paradise.

A little later there came about two climbing roses: the Baltimore Belle and the Queen of the Prairies. Bless us! but how these did win the hearts

of our mothers! I have a Baltimore Belle modestly covering a whole shed roof, and yielding in May such bunches of sweetness and delicacy as fascinated my forbears. The Queen of the Prairies is a bit coarser, but it is a great thing, all thru the farmyards where it can be allowed to cover a stump or climb a fence.

We could talk a good while longer about this dear old garden, where we used to lie down by the side of a brook and pick watercress; or sit on a stone and patter our feet in the water for the fish to nibble; but as we remember it we see just now only one more flower as notable as those we have named, or nearly so. It grew high upon the banks next the house. We wonder how often some little girl or boy pulled open the gate and modestly begged for a "piny." Some said "pinny," and for that matter it did no harm, as grandmother herself always said "pinies." How proud a day it was when a magnificent double white was planted alongside the superb old crimson!

To be sure, the world has improved, and as for the new flowers there is no end of them; yet there come times when the world needs a rest, a sort of general world sleep. We would like to see all the old grandmothers back again for a spell, and in full charge of the houses and gardens. They deserve it; did they not do well enough to give them a longer lease of life? We were happy under their rule. Yes! let us go back and be at peace.

And now, as we look back, we see there was this about those old time gardens, that they were drawing-rooms for friendly intercourse; they were not reserved for flowers alone, but for folk also. Best of all was the kindly intercourse, the exchange of garden lore, and the rich delight of sharing what one most enjoyed. The world was very small in those days and the people got together in their churches and their gardens, without hearing every time about the Republic of China and the thirty thousand importations by the Department of Agriculture. It was altogether more like a single home, where one sweet soul could grandmother a whole community. Her herbs went to every sick chamber and pinches of sweet william seed made all the young mothers more cheerfully start out in life. It was with flowers that they bound the folk together, and with flowers that they trained the children.

*Sorrento, Florida*

# GIVING THE MORO-AMERICANS A CHANCE

BY THE RT. REV. CHARLES H. BRENT, D.D.

EPISCOPAL BISHOP OF THE PHILIPPINES

THE whole watch-cry of philanthropy today is this: "To save aright the soul of the man or woman, you must first heal the body, train the mind, fill the heart, employ the hands of the boy or girl." This is the spirit of the movement inaugurated last fall for the upbuilding of the wards of the nation. Its objective is the pacification, the education, and eventually the Christianization of the Moro people of the Philippines, and a similar emancipation of their pagan neighbors. It is under the auspices of the Harmony Club of America, 30 Church street, New York City. I have the privilege of being the director of the work under a local Advisory Board.

This particular enterprise is worthy of attention for two special reasons: because it is typical of the spirit and method of twentieth century charity, and because it has an immediate bearing on a current question of national significance—the problem of the Philippines. The disclosures recently made by Honorable Dean C. Worcester, former Secretary of the Interior, have wrung from an Assembly, reluctant to admit the facts, a satisfactory anti-slavery law, and should sharpen our sense of responsibility for the deliverance of child life from the variety of kindred evils which threaten it, especially in the less civilized portions of the Islands. Further in the Moro country, owing to the Mohammedan custom of secluding young girls of marriageable age, and of polygamy, there exists a condition intolerable to the American mind.

The department of Mindanao and Sulu, which is the home of the Moro, contains approximately 300,000 boys and girls whose sole hope of emancipation and development rests in the aggressive and prompt philanthropy of outside agencies. There are no regenerative influences in the corrupt Moro civilization. Mohammedan and pagan parents are not as a rule intentionally unkind to their children. But their ignorance is so dense, their

BISHOP CHARLES H. BRENT

customs so uncouth, and their ideas of life so untutored that a child has but a poor chance at best. Very few know how to read or write. They live in huddled fashion in one or two-room shacks where filth and vermin abound. Such ideals and ambitions as they have are the product of a low social order. The Moro child is the victim and toy of the customs and superstitions, the savageries and inanities of his ancestors.

As a political puzzle, one of our greatest national problems is what to do with the Philippines. But no matter what may be the answer, we must get the children of the Philippines ready and willing to handle whatever the future brings. Thus far little has been done either by the Government or by voluntary effort to educate the Moros and their immediate pagan neighbors. In the Mountain Province, on the contrary, there has been such notable progress among the hill tribes that we are encouraged to believe that equal effort will meet with equal success among the Moros.

Here is the plan we have worked

out for the Moro child. Start with him at an early age—at seven years, before the fangs of a corrupt civilization are fixed in him. Where it is possible, as it sometimes will be, to influence a whole family to adopt a decent mode of home life, there is no need to encourage the child to leave his home. Otherwise take him from the hovel where he lives; put him in a dormitory under the supervision of competent teachers; give him a minimum of literary and a maximum of industrial training, never allowing him to be alienated from all that is sound and good in the life of his people. Often the first thing to do is to heal the child of the physical ailments—hookworm, malaria, skin disease—which are common in tropical countries, and help him to live so as to avoid reinfection. Furnish him with simple and serviceable tools in place of the bolo or barong that is at once his weapon and chief implement of work. Teach him how to use them. Work his muscles

and emotions normally in athletic games. Utilize his warrior instinct by enlisting him in the Constabulary as a guardian of the peace. Equip him with a trade which he can ply among his own people, that he may win the self-respect which is born of the conscious ability to produce. Most of all, turn his attention to the soil and the amazing fertility of his country, so that he will be able to double and treble the crops which the present tickling of the ground yields. Train his head, hands and heart together. Saturate him with Christian motives, ideals and influences. Some day win him to the Christian faith. If not, force him at least to respect, and lead him to emulate, Christian conduct, citizenship and virtue.

Experience has taught us that such training can be given, when buildings and equipment have been provided, for one dollar a week per child. But a considerable outlay for plant and personnel must be made before we can gather our children, or indeed take a single further step. In Zam-

boanga work has been going on for some time in a quiet way among both boys and girls, but we need added facilities. In Tulay, just outside the walled town of Jolo, we have rented quarters where the beginnings of an industrial school for girls find shelter. It is adequate for the present only. The wife of a hadji recently asked the head of this work how long she was going to remain, adding that she hoped it would be forever. Before the end of the year we ought to have a permanent building where we could take boarders. Buildings for the boys' agricultural and industrial school in Maibun on the island of Jolo, and for a similar institution in Sengl on the island of Basilan, are needed at once. The pivotal factor in such work as we have begun is personnel. Those whom we already have pass the highest test, and we can secure competent and experienced workers if their salaries and the permanence of the undertaking can be given reasonable guarantee.

Side by side with educational there must be medical work. There is no agency among the Mohammedans so far reaching or so productive of good results as this. War, especially in Jolo, has left the people exhausted,

hurt and decimated. We must win their confidence by the touch of mercy. Medical work is the most powerful avenue of approach to the adult without whose confidence we shall never be allowed to handle the children. For the first time in history trained nurses are moving to and fro in Tulay on daily errands of mercy among the natives. We have one fine twenty-six bed hospital—in Zamboanga. We need another such in Jolo.

At this late day the Government is using every endeavor to promote the establishment of agencies of mercy and education thruout the Department, only to find that its meager revenue will enable it to do little more than touch the hem of the need at a moment when we should be rich in resources. In the Sulu Islands the inhabitants have just passed thru one of the bloodiest years in their recent history. In battle after battle they have been defeated and killed without quarter being asked for or given. As a result they are exhausted and gasping tho not crushed. They will soon revive again, and unless we take them by storm with benevolence, the ugly history of yesterday will surely repeat itself.

It is not surprising that the Moro thinks that Christian creed and conduct are incompatible. We have preached love and practised force. Now the moment has come when we are called upon to undo the effect of the past by living our creed. It would be worse than futile to start a Christian propaganda among the Moros. They are saying to us: "Show your faith by your works." We must do it.

A wave of hopelessness sweeps over one when confronted by a mass of Moro or pagan adults. But it is not so with their children. They are as impressionable, as appealing, as lovable as any children of any color in the whole world. Many of them are orphans, made so by American rifles. There is no enmity in their faces. They are as friendly as can be, ready always with a smile and a greeting. You can see the latent intelligence in their eyes; the skill resident in their slender, sensitive fingers; the power in their comely, half-clad or wholly naked bodies. Only opportunity is lacking, and that we must supply or be guilty in the sight of heaven. These Moro boys and girls never had a chance to succeed, and never will have a chance unless we provide it.

THE WOMAN'S PEACE PARTY DELEGATES TO THE CONFERENCE AT THE HAGUE. IN RELIEVING PRESENT WAR SUFFERING AND STRIVING TOWARD FUTURE PEACE AMERICAN WOMEN ARE TAKING THEIR SHARE OF EUROPE'S TERRIBLE BURDEN

# LET AMERICA ACT

BY HENRI LA FONTAINE

IT is very necessary that the American people should be warned of the secret discontent which is beginning to be felt in Europe and which before long will be openly and sharply displayed. Nobody disputes the sympathies which the overwhelming majority of the citizens of the United States and other neutral countries have shown to martyred Belgium, the indignation expressed by the greater part of the press on the subject of the undeserved sufferings inflicted on that country by the pitiless and heartless invaders, the large scale on which a helping hand has been stretched out to assuage the miseries of a population abandoned to the pangs of hunger. But what the world is waiting for from the spectators of the drama which is being enacted is not merely charity but justice.

There is no doubt that Germany and Austria have trodden under foot all the engagements they entered into at the two Peace Conferences at The Hague, but the neutral states, under the influence of an inexplicable fear, maintain a silence which also becomes complicity.

The work of the Peace Conferences received energetic support from the American Government. Both in 1899 and 1907 the representatives of that Government proposed and supported at The Hague the most progressive and constructive measures. The work that was done was essentially its work; its duty, not only to itself but also to all the nations that approved its efforts, is to ensure the maintenance and development of that work. With what authority will the American Government speak, when the time for the discussion of terms of peace arrives, if during the conflict, without raising any protest, it has allowed the perpetration of the worst offenses against international law as formulated with its collaboration? It will be said, and it is being said already, that the neutral states, like the aggressive states, have fallen into disrepute because what little they have said has only been for the purpose of defending low and despicable financial interests.

Those who have profound sympathy and admiration for the great American republic desire and urge upon her that she should remain the pioneer of international law in the present and future as she has been in the past. She can, either alone or with the support of all the neutral governments, call attention to the conventions signed by her and by the governments which have deliberately

*Henri La Fontaine, Nobel peace prize winner and Belgian senator, is an untiring internationalist. By politics a Social Democrat, he has accomplished much for social progress in Belgium, but his distinctive service has been rendered as professor of international law in the University of Brussels (which he helped to establish), as a member of the Interparliamentary Union, president of the Berne Peace Bureau, co-founder of the Union of International Associations, co-editor of "La Vie Internationale," and author of several histories of peace and arbitration. He is now a refugee in London. In the editorial pages will be found comment on his message to America.—THE EDITOR.*

set at naught their provisions by violating the neutrality of Belgium and Luxemburg, by the massacre of women, old men and children for crimes committed by others; by seizing the private property of the civil population and abandoning their goods to pillage and systematic incendiarism; by putting unarmed citizens in front of their troops; by bombarding open towns or fortresses situated at a distance from the scene of military operations, and in any case without previously warning the inhabitants; by insidiously attacking ships carrying refugees and wounded; by sowing floating mines in the open seas; by attacking neutral vessels without caring about their neutrality and without concerning themselves with the fate of the passengers and crews.

All these things are prohibited by formal clauses or by time-honored customs, but no effective sanction has guaranteed their observation. Now there is first a moral sanction, which is the result of universal reprobation, blame and reproach. And there is a general surprise at the silence of the official representatives of the neutral states, and of the United States in particular, when everybody, with scarcely an exception, is expressing indignation and protest.

But is it true that there is only a moral sanction and that there is no direct and material sanction apart from any act of war or violence? In international as in national law, the law has its origin in tacit consent or custom. A custom, in order to be binding, has no need to date back to time immemorial; it is established when its necessity is clear.

At the present time two governments intoxicated with pride have given themselves up to misdeeds and crimes which have aroused the con-

sciences of the nations, and have not the other governments the right to have recourse to unusual methods of coercion in the presence of this exceptional and unexpected case of collective madness? Is the method that we support unusual? It is quite true that the governments made use, directly or indirectly, of the international boycott, and if the neutral states agreed this means of constraint might be definitely reckoned as part of positive international law.

It is in this direction that all those who care for the future of Europe and the security of the world wish the United States to take the initiative. On the disturbers of public international order, disturbers who, alas! cannot be shut up in prison or cell, must be imposed the collective will of the states in order to compel respect for international law.

In the present tragic and abnormal circumstances an appeal from the United States would rally all the neutral states to the policy of economic constraint which we think it our duty to support. It would put under the ban of humanity the states which are disturbing the tranquillity of the world and break off all international relations with them; all imports and exports would be suspended; postal and telegraphic services would be broken off; all nationals of these countries would be requested to return to their own country and would be sent home by the quickest route. These measures might only be taken successively as the need arose, but there is no doubt that they would be thoroly effective. What is happening in Germany and Austria, as a result of the watch kept by Great Britain alone on mercantile vessels sailing to those two countries, is a manifest proof of the coercive power of such measures.

The temporary exclusion from the comity of nations, thus realized as a means of bringing to their senses the governments in insurrection against their own international engagements, would constitute the most persuasive of experiences, and by a pacific and negative process, without bloodshed, would create the most energetic sanction for ensuring a definite peace among the nations in the approaching necessary Federation of the States of the World.

By making themselves the protagonists of this measure of universal public welfare, the United States would not abandon their neutrality, but their neutrality would no longer be passive and silent—it would be a neutrality active and beneficent.

London

*If it isn't an Eastman, it isn't a Kodak.*

# The No. 1 Autographic KODAK, *Special*

Small enough to go in your pocket—*conveniently*.

Good enough to do any work that any hand camera will do—*satisfactorily*.

**SPEED.** The Shutter has a speed of 1/300 of a second and slower controllable speeds to one second—also has the time and bulb actions, *and is large enough to give the full benefit of the anastigmat lenses* with which the camera is listed.

**QUALITY.** All the way through the No. 1 Autographic Kodak *Special* has that mechanical precision, that nicety of adjustment and finish that gives the distinction of “class”.

**SIZE.** The pictures are 2¼ x 3¼ inches; the camera measures but 1⅜ x 3⅜ x 6⅝ inches, in spite of the fact that its equipment provides for anastigmat lenses of the highest speed.

**AUTOGRAPHIC.** It is “autographic”, of course. All the folding Kodaks now are. You can date and title the negative easily and permanently at the time you make the exposure.

**SIMPLICITY.** Effective as it is, the Kodak Idea, Simplicity, has not for one moment been lost sight of, there are no complications. The No. 1 Autographic Kodak, *Special*, has the refinements that appeal to the expert—to the beginner it offers no confusing technicalities.

# Stop!

# Look

at the ingredients clause on the label of the Baking Powder you purchase. See what the powder is. If the label says Cream of Tartar, you are assured of pure, wholesome, healthful food.

# If it says Alum Listen

to the warning of the many medical authorities, chemists, and pure food experts, who advise against the use of those baking powders which are made from alum or other inferior substitutes.

## ROYAL BAKING POWDER

Contains no alum. It is made from Cream of Tartar, which is derived from grapes. It is absolutely pure.

# FOOD AND EFFICIENCY

SIXTH ARTICLE IN THE SERIES ON  
EFFICIENCY AND LIFE

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

THE other day I found a hard-boiled cynic lodged in my path. Immediately I became solemn, respectful and attentive. To smile in the presence of a cynic is to insult him—and I always endeavor to be polite.

The visitor growled thus: "What are you anyway—just a fancy writer on efficiency? Have you done hard things, do you enjoy the health you talk about, are you a good business man? Show me your deeds, and I will accept your words."

Having praised the gentleman for his frankness (and thereby mollified him), I proceeded to tell him a few things.

I always take a challenge like this; and before the cynic left he delivered an apology and a vote of thanks. I mention him here as a proper introduction for this article.

Some one may say here, "What does this man know about the science

of nutrition? He has no medical degree—therefore he can know nothing of the principles of health."

I am not a pathologist, I do not prescribe in acute disease. But for a number of years I have been affiliated with health schools and sanitariums, have studied and watched the application of the leading systems of diet in Europe and America, and have doubled my own working capacity largely thru wise regulation of eating habits.

Moreover, I have cured in myself a variety of chronic ailments, including violent headache, dyspepsia, insomnia, and a pessimism black as ink. This recital may not be dignified, but if you want deeds you can't stop for dignity. I shall give you not theories but facts in the food realm, and the intrusion of this personal introduction may be condoned, as a means of enlisting your faith.

No man can achieve his most and

best without a practical working knowledge of dietetics. Only a crazy person would try to shovel coal into the works of an automobile, or put a gas-stove in an aeroplane. Yet the average "business man" treats his stomach, the source of his energy and heat, in a manner as foolish, as dangerous. An efficiency expert is a man who shows you how "scientific management" starts in the stomach.

A well-drest, fine-looking gentleman eats in the restaurant where I have my noon lunch. This, in general, constitutes his meal: white bread, ice-water, cheese and spaghetti, coffee, a sweet, heavy pudding or pie, a cigaret, a violent discussion of some heated matter like politics or business, and a rush back to the office. Every item of this lunch is wrong, particularly as the man I speak of has the coal-black hair, sallow complexion, deep-set eyes and narrow face of the person with a

approximate your grade in Food Efficiency

# Resinol Soap

helps keep the skin  
fresh and youthful

If you want a clear, fresh, glowing complexion, use Resinol Soap at least once a day. Work a warm, creamy lather of it well into the pores, then rinse the face with plenty of cold water.

It does not take many days of such regular care with Resinol Soap to show an improvement, because the Resinol balsams *soothe* and *refresh* the skin, while the pure, alkali-free soap is *cleansing* it. The same treatment does wonders for the hands, arms and neck.

When the skin is in a very neglected condition, with pimples, blackheads, redness or roughness, spread on just a little Resinol Ointment for ten or fifteen minutes before using Resinol Soap.

Its soothing Resinol medication, added to its exceptional purity, have led doctors and nurses to recommend Resinol Soap to thousands upon thousands of mothers as safest for baby's skin and for the child's toilet in after life. The Resinol Soap habit cannot be formed too early.

Resinol Soap is not artificially colored, its rich brown being entirely due to the Resinol balsams it contains. Twenty-five cents at all druggists and dealers in toilet goods. For a guestroom size trial cake, write to Dept. 33-G, Resinol Baltimore, Md.

liver born sluggish. When the brother was absent a couple of weeks, I did not need to be told that he was laid up with a "sick headache" and influenza. I knew it was coming. But, as I had not met him socially etiquet forbade my telling him what folly he was guilty of

#### THE IMPORTANCE OF LUNCHEON

By the proper method of eating your noon lunch, you can get fifty per cent more work out of yourself in the afternoon. This one fact, rightly imprest on the employees of American industries, would increase the value of our trade output millions of dollars' worth a year.

For weeks before the event of a national horse race, the food of the high-strung pacer is weighed, measured and supervised with the utmost care by an expert trainer. The minds and bodies of the majority of American citizens are intent upon the race toward business leadership. Yet we ourselves consume, literally and regularly, stuff that even a mongrel horse would not eat. We buy poison in cans, we order it at restaurants, we take it from the butcher and the baker, we drink it from the public water mains. And the impurity of our daily food supply is but one of several factors inducing bad results.

It is claimed that nine-tenths of all chronic diseases originate in the digestive tract. Among the disorders largely caused, and largely curable, by the food element are these: rheumatism, indigestion, catarrh, kidney complaints, liver troubles, gout, colds, headache, skin affections, obesity, sleeplessness, anemia, certain mental and nervous derangements. When we are as much concerned about our own health as we are about the health of our cattle, we will establish everywhere scientific food-stores, to supplant or at least supplement our unscientific drug-stores.

#### EAT WELL AND BE WELL

Would it not be better, safer, more economical, to eat wisely and stay well, rather than lose the time and money that illness costs, and besides run the risk of being poisoned, overstimulated, enervated, by drugs?

In the realm of food study there are so many conflicting theories that the learner is bewildered. We do not advise the rash adoption of any of these theories; but earnestly suggest that the reader become acquainted with the experiments and conclusions of nutrition specialists and modern scientific investigations in dietetics.

Let us now state a few principles and methods of the science of nutrition.

1. *Choice of food.* This depends on age, occupation, health, temperament, taste, mental condition, spiritual unfoldment. Children should be given abundance of cereals, which provide the building material for bones and teeth; but in old age people should eat more sparingly of most grains, which then, by excess of mineral matter, solidify the arteries. A soldier on the march may safely, perhaps beneficially, consume a pound of chocolate and cheese a day; but let a college girl try the experiment—as many a one is prone to do—and she is likely to fail in both her health and her studies. A ditch-digger may eat potatoes three times a day, and work off the starch manfully; but if a clergyman is guilty of such folly, his sermons will be as pasty as a mess of tubers.

#### INTELLIGENT EATING FOR BRAIN-WORKERS

In particular should brain-workers regulate their meals on a rational, chemical, basis of required food-values. The process of thinking, planning, and feeling uses brain and nerve substance faster than physical work wears away muscle and tissue. Every brain-worker should select foods rich in albumen, lecithin, phosphorus and potash, first having learned what these foods are, from a standard book on diet.

2. *Combination of food.* Meat will go properly with vegetables but not with nuts; acid fruit with nuts but not with milk; cereals with milk but not with turnips or tomatoes; fats and oils with turnips but not with stewed peaches; and with stewed peaches, wheat crackers harmonize, but hot white flour biscuits do not. These are but a few examples of the importance of the study of food chemistry.

A proper dinner menu for a person in good health would include a thick or a clear soup (not a chowder or mixt soup); a meat, or meat equivalent (lentils, nuts, eggs, cheese, grain glutens); a starchy vegetable, such as potatoes, rice or egg plant; a succulent vegetable, such as celery, spinach, onions or asparagus; a salad of lettuce, romaine, cress or the like, made with olive oil and lemon juice, and a simple dessert—custard, gelatine, soufflé, or wholesome pudding.

3. *Preparation of food.* Where the different methods of cooking a dish are all available, they are most wholesome in this order: baking, broiling, stewing, boiling, frying. Thus a baked potato is one of the most digestible things in the world, while a "French fry" would discourage any stomach but a longshoreman's.

In cooking cereals, vegetables and

fruits, care should be taken to preserve all the original essences and juices, the mineral salts being the most valuable ingredients, and not to be thrown away with the parings or the water. Foods such as apples, onions and celery, that may be eaten either cooked or uncooked, are in general more digestible if cooked, more nourishing if taken raw.

4. *Schedule of meals.* For a brain-worker, dinner should come between six and seven in the evening. Breakfast should be very light—at most a soft-boiled egg, a bit of toast, a hot drink, and a simple fruit such as baked apple, or stewed sauce. If such a breakfast seems required, the noon luncheon should be even less of a meal—better only a nourishing drink, such as zoolak or malted milk or hot chocolate.

If you find that you can well omit breakfast entirely—as thousands of ambitious, energetic people have found to their gain—let the noon luncheon be confined to eggs or fish, one fruit or vegetable, possibly a salad, and a custard, ice-cream or other dessert that quickly digests. A luncheon of fried ham and eggs, crullers, and coffee, takes five hours to digest—meanwhile the blood that should be in your brain, helping you to think for your work and your advancement, is all congested in your alimentary tract. Result: liver and brain both sluggish. "Three square meals" do more to tire a man out in a day than a week's regular work would do—if he ate sensibly.

#### THE OTHER FACTORS

5. *Place of eating.* A good wife will tell you that a home is the finest place in the world—to get away from. There should be a law forbidding a man to eat his three meals a day, every day in the year, in the same family dining-room. Experiments have shown that pleasing, new sights and sounds promote the excitation of the gastric nerves and juices; and often a "jaded appetite" is but a faded imagination. A bite in the pantry cupboard, a snack from a delicatessen, a meal at a dairy lunch, a picnic in the woods, even a starched and frilled table d'hôte dinner conjured by a French chef—these variations of the eating habit should be interpolated among the dining-room dismalities of household routine.

6. *State of mind.* If you tell a man, half an hour before dinner, that a small fortune has been left him, he will eat probably twice as much, and everything will taste like nectar and ambrosia. But if you tell him his bank has failed, he will eat next to nothing, and what he does eat will disagree with him. All our thoughts

# HAVE A REAL VACATION

## With a Blue Bird Motor Boat

**S**TART right now to plan a "motor boat summer" for yourself and the family. In a few short weeks every lake and river in the country will be calling the man who has a tiny spark of the sportsman in him.

There will be endless opportunities for camping expeditions, picnics, fishing parties and daily expeditions, up that shady cove where nature always seems at her best.

Of course, your blood tingles when you think of it. But—make no mistake—you must have a boat of your **own**—and a good one.

### "BLUE BIRD" MOTOR BOATS

have solved the summer problem for thousands of healthy, "outdoor" families.

These boats—exquisite in line and appointment—are made over moulds of highest grade Louisiana Cypress.

The woodwork in decks and coaming are of the best selected oak, the boats are very handsomely varnished and trimmed with the best "sun and waterproof varnish," and the hulls are finished in either blue or white paint. The engine is the Detroit two-cycle reversible—can be run slow or fast—has only three moving parts. **STARTS WITHOUT CRANKING**, uses very little fuel and is so simple that a child can handle it.

All models are now in stock—16, 18 or 20 footers. Send your order at once. Every boat and engine is fully guaranteed and **subject to thorough test and inspection before shipment.**

### Agents Wanted Everywhere

Ask for Demonstrator Agent's Offer. Big reduction for first Blue Bird sold in any locality—World renowned Belle Isle and Hudson River canoes can also be handled in connection with the Blue Bird motor boats.

If interested in canoes please specify in your inquiry and we will send you our **New 1915 Dream Book of Canoes.**

**Write today for 1915 Book of Blue Birds.** A postal will bring it. All boating problems solved by us. None too small, none too big.

### DETROIT BOAT CO.

### A TEXT BOOK IN POETRY

Frederick Houk Law, Head of the English Department of Stuyvesant High School of New York City, writes as follows concerning the value of The Independent to Students of English Literature:

"In poetry alone a paper like The Independent is exceedingly rich. Between September 21 and December 28, 1914, The Independent printed no less than fourteen poems of high merit. These poems were written by such well-known writers as Clinton Scollard, William Watson, Robert Underwood Johnson, Wilfrid Wilson Gibson, Richard Burton, Percy MacKaye and John Finley. Selections were given from many poets, including Edwin Arnold, Bayard Taylor, James Montgomery, Robert Browning, Lord Byron, Longfellow, Gilbert Chesterton, Robert Southey, Schiller, Felicia Hemans, and Edward C. Stedman. Here then is a text book in poetry such as can be found nowhere else. The poems are printed because of their vital relationship to present day events. They lay hold at once on the apprehensive mass of the student and lead him into active thought. A single lesson a week in this living field of poetry may accomplish more than the other lessons assigned in the classic texts."

and emotions at mealtime influence digestion. The Bible merely states a physiological truth, in preferring a "dinner of herbs where love is" to a fatted ox and hatred. Only a man deaf and blind can safely eat in the average boarding-house; the views and the vicissitudes of persons there assembled would wreck the digestion of a goat. When you seat yourself at dinner, make yourself forget your business cares and household worries—next year you will smile at them, why not smile now?

7. *Enjoyment and companionship.* Good digestion lies halfway between the ascetic and the sybarite, where the truth of the former meets the taste of the latter. We should enjoy food thoroughly, but not as a gratification of the senses. True hunger—the kind that revels in a piece of dry bread—has largely disappeared from modern civilization. The only way to recover it is to stop eating, for a meal or a day or a week. The periodic fasts ordained by the Church were hygienic more than dogmatic; but in leaving their dogma, we have lost their hygiene.

As for dinner guests and companions, authorities hold various views. Animals prefer to eat alone; children are supremely happy when exploring a jam-jar with no one in sight; men of genius flout and ignore the dinner-bell; and among discarnate spirits there is probably no such institution as a family dining-room. Yet the average man or woman is miserable eating alone. Most of us shrink from solitary dining as we would from the plague. Why?

It has been suggested by a keen observer that the reason why the average persons requires dinner companions is that they may assist him in keeping his mind off his stomach. Recalling how dense and doleful my own mind used to be, I can well understand the reasonableness of this explanation. For most people, cheery companionship at table seems better than solitude—but gloomy neighbors are worse than none. A sane middle ground, between the hermit who always eats alone and the society victim who never does, would be this: a sharp division of one's meals into those of efficiency and those of hospitality (the former being breakfast and luncheon on business days, the latter being dinner on business days and other meals also on holidays); then a habit of taking the efficiency meals alone, or anyway in silence, but the friendship meals in company with cheerful neighbors.

I have increased my physical and mental capacity for good work probably 100 per cent by revolutionizing the eating habits that kept my ancestors poor and my associates lazy. The human hot-bed of disease, of poverty, of stupidity, and of sloth, is the stomach. Regenerate and reorganize the stomach, and you have taken a giant stride toward the lofty plane of the superhuman.

This article, brief and incomplete as it must be, from lack of space, should however mention something more vital than food—namely, water.

If you weigh 150 pounds, more than 100 pounds of you is water; and to pre-

serve health, create energy, maintain buoyancy, you must drink two pints of water for every pound of solid food you eat. Fresh fruits, fruit juices and juicy vegetables are mostly water; therein lies their chief benefit. We should make a habit of drinking not less than six glasses of pure water each day, starting with a glass or two on rising, and consuming the rest, between meals, during the day. This habit, like every other, becomes automatic, and is no more trouble in the morning than washing our face or buttoning our shoes.

Recent experiments by noted European chemists and physicians go to prove that a pure, soft, drinking water, taken in right quantities, at the right time and temperature, increases health and vigor as follows: It purifies the blood, tones the stomach, aids digestion, promotes assimilation, improves appetite, clears and freshens the skin, balances the action of the heart, steadies the nerves, relieves the kidneys, stimulates the liver, lubricates the colon, wards off disease, clarifies the brain, mildly and healthfully stimulates the entire organism.

Water is the best "tonic" known. Next to air, which is free, water is indispensable; and in modern civilization, real water costs real money. Bottled water is bottled health. If you ever have to go to a café with "the boys," you can still be a "good fellow" and yet not a fool by ordering sarsaparilla, fruit juices, celery tonic or ginger ale—which are wholesome varieties of doctored water.

The prime essential in both food and drink is absolute purity. Nothing should be allowed to enter your kitchen—whether it comes in a milk-pail, a water-pipe, a tin can or a butcher's basket—unless first the source of the food has been guaranteed pure. Your local board of health, or a national dietetic organization, should be consulted on each and every item served at your table.

Where was Magna Charta signed?  
At the bottom!—*Princeton Tiger*.

"Who was Shylock, Aunt Ethel?"  
"My dear! And you go to Sunday School and don't know that!"—*Life*.

"Mamma, is papa goin' to die an' go to heaven?"  
"Why, Bobby, what put such an absurd idea into your head?"—*Life*.

On the sofa they were seated, the engagement was quite new; in a ring he had invested—she had promised to be true. "If a doubt e'er comes between us," she began with a pout, but the young man moved up closer, and left no room for doubt.—*Indianapolis Star*.

Regular Customer—"I shall want a large quantity of flowers from you next week for my daughter's coming out."  
Flower Woman—"Yes, mum. You shall 'ave the very best for 'er, pore dear. Wot were she put in for?"—*Punch*.

This story which started on the Chautauqua circuit is passed along by *Everybody's*: A booking agent for a Chautauqua bureau visited the most prominent man of the town. "Mr. Jones," said he, "I called to see you in regard to a Chautauqua." "It won't do a bit of good," spoke up the prominent citizen. "My wife and I have looked over all the catalogs carefully, and have already decided on another machine."

## Spring Sale at McCutcheon's

Reg. Trade Mark

During the entire month of May wherever you may turn in our ample aisles you will find attractive values.

**Table Linens** below the normal prices, and this in view of the fact that flax will be scarce and linen more costly next year on account of the war.

**Fancy Table Linens**, including many lines which are especially suitable for the summer home.

**Towels, Bed Linen and Bed Coverings** of every description.

**Neckwear, Hosiery and Lingerie**, dainty creations, also modern Silk and Knit Underwear.

**Women's Outer Garments**, including Summer Dresses, Waists and Blouses of the newest models.

Send for new "Spring Sale Booklet".  
Mail Orders receive our prompt attention.

## TOWNSEND'S TRIPLEX LAWN MOWER

Patent Pending

The  
Greatest  
Grass  
Cutter  
on  
Earth

Cuts a  
Swath  
86 Inches  
Wide

Drawn by one horse and operated by one man, the TRIPLEX MOWER will mow more lawn in a day than the best motor mower ever made, and cut it better at a fraction of the cost.

Drawn by one horse and operated by one man, it will mow more lawn in a day than any three other horse drawn mowers with three horses and three men. (We guarantee this.)

Floats over the uneven ground as a ship rides the waves. One mower may be climbing a knoll, a second skimming the level and a third paring a hollow.

Does not smash the grass to earth and plas-

ter it in the mud in springtime, neither does it crush the life out of the grass between hot rollers and hard, hot ground in summer, as does the motor mower.

The TOWNSEND Triplex Mower has displaced all other types of the larger mowers on many well-known golf courses, estates and parks. We also manufacture a great variety of general purpose mowers and TOWNSEND'S Golf Wonder for putting greens.

Send for illustrated catalogue giving partial list of users of TOWNSEND MOWERS. (Free)

**S. P. TOWNSEND & CO.**

## For Your Daughter

The most important change now coming to pass in the world is the participation of women in community affairs. In the opinion of deep thinkers, this movement of women will be sterile unless it is based upon mother-love and carries the spirit of the home into the community. This new book tells how one woman, working as a mother, has developed a great community movement. The story includes that of delightful girl life at the summer camp where Camp Fire Girls started. Over 250 pages of fascinating reading matter and wonderful pictures (more than 50) showing how girls swim, dive, paddle canoes, go on "hikes," hold "council fires," cook, dance, sing and have other fun outdoors.

This means more than fun, however. It means vigorous health and learning to do the necessary things of life in co-operation with other girls. Thus, in community relations, the spirit of the home is developed, mother-love is preserved and the girls gain strength and character with which to meet new responsibilities later to be required of them by developing modern conditions. Reading this book gives pure delight and it makes a gift any girl will thoroughly enjoy. Price only \$1.25 *postpaid* anywhere in the U. S. Mail your order to

## THE NEW BOOKS

### WHAT WOMEN REALLY WANT

A great many women will want Mrs. Beatrice Forbes-Robertson Hale's new interpretation of feminism, entitled *What Women Want*. It is clear and comprehensive and full of genial common-sense. The author unerringly puts her finger on the weak spot of an argument such as Ellen Key's "right to motherhood," by her contention for a child's "right to two parents," and a man's right to fatherhood. The chapter on the Drama is especially noteworthy as the comment of an accomplished actress, who has played in some of the plays she reviews, on the place given to woman on the stage of three hundred years. All the arts mirror the estimation placed by each age upon woman, and most of all upon the art of living together, sweetly and harmoniously and nobly. Mrs. Hale's book is a courageous attempt to survey a wide field in a brief compass, and it is successful in linking the inchoate "Woman's Movement" to the general longing for a more complete democracy. Feminism is not a sporadic and isolated phenomenon, but an inevitable part of social progress. And what women want in spheres of social effectiveness is what women need for their best development. Equality of opportunity to serve the present and sway the future is what women really desire.

*What Women Want*, by Beatrice Forbes-Robertson Hale. Fred'k A. Stokes. \$1.25.

### RELIGIOUS CHANGES

*A Century's Change in Religion* is the fruit of Professor Harris' studies while professor at Andover Seminary, and later President of Amherst College. It is not a comprehensive treatise on theology or religion, or both, but a review of the changes which have taken place in thought and practise during the past hundred years; what the younger Edwards called "improvements," particularly in theology. In the changes of view and practise, President Harris finds much to commend and little to regret. The author's scheme does not allow him to give a history of the softening of creed, for that would take him back half a century further to the time of President Edwards, and would add to the names of Dr. Samuel Hopkins and Dr. Bushnell, whom he mentions, those of Emmons and Taylor, Finney and Park.

President Harris sees a principal cause for the decay of Calvinism in the change of view as to the inerrancy and infallibility of Scripture, and the better view of God as Father rather than as Governor of the moral universe. Thus, with the historical Adam have fallen away the doctrines of imputation and original sin, and the preaching of Heaven and Hell as motives for con-

version. He does not regret the passing of revivals and of the insistence on a period of conviction of sin, preferring the process of the instruction of children and their growth from infancy into Christian life. Perhaps he does not sufficiently recognize that the New England Primer was for children, and taught that "Young Obadiah, David, Josiah, all were pious," and that Jonathan Edwards's wife was not the only one he mentions of those who from their infancy were guided by grace. The relaxation in Sunday observance he does not disapprove, and we are a bit surprised to learn that in his boyhood's New England home such "quiet games" as backgammon, checkers and "authors" were allowed. He does not even condemn the less stress now put on miracles, and while he appears still to hold to the virgin birth and some sort of a resurrection of our Lord, he does not put heavy evidential weight upon them. He sees the Church more fully comprehending the spirit of Christ than in any previous age, knowing better the brotherhood of service. The whole of this very interesting discussion of the passing from the old to the new is told in such a way as to offend as little as possible the sensitiveness of those who are of the previous generation, and to leave certain implications not very definitely stated. The volume will be of particular value to those who remember somewhat of the earlier strictness of faith and practise, and will be of encouragement to those who fear that the Church has lost much of its essential faith.

*A Century's Change in Religion*, by George Harris. Houghton Mifflin. \$1.25.

### THE CITY OF BROTHERLY LOVE

Matthew Arnold, writing home from Philadelphia more than thirty years ago, intimated that its trees contributed as much as its people in making that city the most attractive he had seen in America. And its embellishment of trees has been seized upon to produce the charm of picturesqueness in quite half of the hundred and more beautiful lithographs with which Joseph Pennell illustrates his wife's account of *Our Philadelphia*. But whether they contain trees or not his pictures are among the best drawings that this prolific draftsman has ever published. Each is a more or less idealized and etherealized transcript of some spot or aspect of a city which the artist has found beautiful because he loves it. By a deft combination of weather and light conditions with the right point of view Mr. Pennell succeeds in making even skyscrapers, railway yards, the William Penn statue, and the Broad Street Station attractively picturesque.

Charming as are the pictures that

adorn the book they are no whit more delightful than the story Mrs. Pennell tells. This is largely an autobiography, the story of her childhood, youth and young womanhood, of her family and friends, of the narrowly circumscribed Philadelphia she knew before she met Joseph Pennell and of how he revealed to her the beauty of streets and houses she had not known before. She gives delightful glimpses of Walt Whitman, George H. Boker, Dr. Horace Howard Furness, George W. Childs, and many another. The final chapters are devoted to impressions of a Philadelphia revisited after a quarter of a century. To Mrs. Pennell the Philadelphia of her girlhood is beautified by the golden light of memory, and she writes of it all with love and joy, and with a quietly bubbling humor.

In telling how she came to love it, she pays this tribute to the city:

I had to work to learn that Philadelphia had worked, and still worked, and worked so well as to be the first to have given America much that is best and most vital in the country—the first to show the right way with its schools and hospitals and libraries and newspapers and galleries and museums, the leader in the fight for liberty of conscience, the scene of the first Colonial Congress and the signing of the Declaration of Independence and the Centennial Exposition to commemorate it, a pioneer in science and industry and manufacture—a town upon which all the others in the land could not do better than model themselves—while all the time it maintained its fine air of calm that perplexes the stranger and misleads the native. But I had found it out, found out its greatness, before age had dimmed my perceptions and dulled my power of appreciation; and to find Philadelphia out is to love it.

Pictures and text together, here is a record of the old Philadelphia that has passed and the new Philadelphia that is passing, for which not alone Philadelphians but all true Americans may be grateful.

*Our Philadelphia*, described by Elizabeth Robins Pennell; illustrated with 105 lithographs by Joseph Pennell. Philadelphia: J. B. Lippincott Company. \$7.50 net.

## RUSSIAN SYMBOLIC DRAMA

In translating three of the *Plays of Leonid Andreyeff*, Clarence L. Meader and Fred Newton Scott of the University of Michigan have opened a new and fascinating field of literature to the English reader. Of Andreyeff's realistic prose we have had some samples, mostly tales of war, crime and punishment. But of his symbolic drama we have known only his *Anathema*, a modern drama on the plot of Job, which proved strangely impressive as given in a Yiddish theater on the East Side in 1910 in spite of scant space and poor scenery.

In this volume we have three other symbolic plays, of which one, if we adopt Shaw's classification, might be called "pleasant" and the other two decidedly "unpleasant." Why it is that the Russians who have a hard life, anyway, what with the climate and the government, should enjoy making themselves still more miserable by pessimistic literature and drama must be left to the psychiatrist to determine. The allegory of *The Life of Man* presents

## It's Like Magic to Her.

"I never supposed when I was a girl that some day I could take a powder, put it in a little hot water, let it cool, and have a dessert so delicious that it would make one's mouth water to think of it. I'm a good cook, but I've never been able to make anything better than those

# JELL-O

desserts. Just think what one can do with a ten-cent package of Jell-O!

"The plain Jell-O, the Jell-O and fruit, the Jell-O and whipped cream, and Jell-O in a hundred forms—all so simple and easy to make. It seems like magic to me."

She has told it all, and every woman who has used Jell-O will agree with her.

Cost, 10 cents. Time of making, one minute.

Seven pure fruit flavors: Strawberry, Orange, Lemon, Raspberry, Cherry, Peach, Chocolate.

Each in a separate package, 10c. at any grocer's.

The new Jell-O book is a real Kewpie book, with pictures of Kewpies by Rose O'Neill herself. If you desire one and will write and ask us for it we will send it to you free.

THE GENESEE PURE FOOD CO.,  
Le Roy, N. Y., and Bridgeburg, Ont.

The name JELL-O is on every package in big red letters. Be sure you get JELL-O and not something else.

# See Chautauqua First

(Midway between New York and Chicago, on Chautauqua Lake, which is 20 miles long and 1,400 feet above sea level)

**During two months every year, Chautauqua is the greatest center for popular education in the world**

¶ The slogan, "See America First," expressive of a great deal of wisdom in the past, now takes the imperative mood. In 1915 Americans are counseled by grim and lamentable facts to do their travelling at home.

¶ We must have vacations; where in America shall we resort? Extravagance and heedless adventure will have less appeal; sobriety, wholesomeness, a sane quest of what is truly recreative and enlarging to the individual will prevail as never before.

## RECREATION

education and inspiration in the best sense are all found in the community life of Chautauqua. It may be declared without boasting to have ministered preëminently to these rational demands in the days of its founders and now after forty years of growth it still follows the same ideals. Young men play baseball here before crowded bleachers. There is a rowing crew whose personnel varies so much that some of its performances have been an astonishment for moderation and some of them have won quite opposite praise. There is twenty miles of as pretty water for sailing as a skipper's heart could desire, and a half dozen to a dozen smart little craft enter every year for the cup. The muscallonge which was "taken out" by the Indians here long ago and so gave the name, "Chautauqua," still rewards the patient angler, occasionally with forty pounds of gaminess, often with half that weight, and some men pay little direct attention all season to anything but the fishing. Golf, and roque, and tennis have each its enthusiasts. The roads are good for

motoring, the lake for launching, and the climate for all outdoor activities.

## THE PHYSICAL LIFE

of the place is healthful. Many a man who attends consciously to nothing else, however, nevertheless chooses Chautauqua for his vacation because its life is not solely on the physical plane. During its two months every year, it is the greatest center for popular education in the world.

¶ Thought, idealism, sincerity without solemnity, pervade it like an atmosphere; and though he sits through no lectures, the kind of visitor we have suggested enjoys collateral benefits from this higher side of Chautauqua life. He values it too for his sister or his wife, the women folk being more implicit in such things, or he thinks it beneficial for the children.

¶ If one of the liveliest and largest figures in America comes to speak with authority on some subject of vital public interest, this fellow citizen of ours may content himself with echoes of it at the dinner table; but in any case it reaches him and he counts it a by-product. Nor are the platform addresses left wholly to women. Eight thousand persons may be gathered in and around the Amphitheater while a baseball game proceeds at the other end of the grounds.

## MAKING VACATIONS PROFITABLE

¶ Everything at Chautauqua is designed or has evolved without design to make the vacation of some fifty thousand Americans each year profitable. If they hope to go abroad by and by, here are studies in art, literature, history, and—yes, with a larger meaning of course, in geography. If they expect to engage in effort to improve some of our cities at home, here are lectures and conferences and classes dealing with the social problems of the time.

¶ If the kitchen or the nursery or the school room is their domain here its possibilities are considered. If expression, or folk dancing, or parliamentary law, or music, or the tooling of leather is a favorite subject, it can here be cultivated. The Chautauqua Summer Schools offer instruction in fourteen departments, and have more than 3000 enrolments annually. As the inveterate fisherman gets echoes of the lecture and the classroom, so the devotee of these other pursuits draws in the vigor of the outdoor life. All the lectures are in "halls without walls." The lecturer breathes outdoor air. As he speaks, birds fly and fuss above him, and he looks around at trees and

### MILLER BELL TOWER

in Miller Park, on Chautauqua Lake, erected as a Memorial to Lewis Miller, who with Bishop Vincent founded Chautauqua Institution.

**HALL OF PHILOSOPHY, OR "HALL OF THE GROVE" AT CHAUTAUQUA.** The original building, modeled after the Parthenon at Athens, has been reconstructed and made a permanent memorial to the founders of Chautauqua Institution.

other objects of a natural world. Distortion and hatred vanish. Speaker and listener alike are kept in mind of larger things.

¶ Music, the drama, readings, moving pictures, entertainments, etc., etc.

¶ Program announcements made thus early are only a foretaste of what may be hoped for when plans are complete. Authorization has been given for the following:

## Making Home Management Easier

Where the housewife's comfort is considered Western Electric Inter-phones should be in use. They are easily provided for in new homes or old. When building, the same wires that are strung for door bells and push buttons may be made to serve for Inter-phones, without adding materially to the cost. In houses already built, they can be installed at very little expense.

## Western Electric Inter-phones

save running from floor to floor, put the living room or bedroom in instant touch with kitchen or garage—make home management easier. There is different equipment to meet different conditions; so, whether you are interested in wiring a house just being built, or simply in adding Inter-phones to your present home equipment, write to our nearest house below and let us send you booklet No. 27-A B.

Any reliable electrical contractor will install Inter-phones.

## WESTERN ELECTRIC COMPANY

New Orleans						Detroit

EQUIPMENT FOR EVERY ELECTRICAL NEED

in all its five acts—not Shakespeare's seven ages—a picture of disillusionment and vanity that would have satisfied the soul of Schopenhauer or Ecclesiastes. Yet it must be tremendously effective on the stage. *The Black Maskers* is more shiverish still, even tho—or because—we can but faintly imagine what he means by it all. Without attempting to interpret its symbolism we may say that it is on the face of it a dramatic presentation of a case of alternating personality culminating in insanity. Duke Lorenzo gives a grand ball at which the guests, and others uninvited, appear in masks of increasing horribleness. He can recognize none of his friends in all the crowd, or if he does it is as more than one. Three women impersonate his wife, and finally a second Duke Lorenzo appears to dispute with him his very personality. Thus we have what Hugo put into words and Barnard into marble: "I feel two natures struggling within me." The "pleasant" play, *The Sabine Women*, we can hardly conceive as coming from the author of *Red Laughter* and *The Seven Who Were Hanged*. The introduction explains that it is a satire on the Constitutional-Democratic party of the Duma, but it might have a much wider application. Take, for instance, the marching orders of the Sabine army:

Two steps forward, one step backward; two steps forward, one step backward. The first two steps are designed to indicate, Sabines, the unquenchable fire of our stormy souls, the firm will, the irresistible advance. The step backward symbolizes the step of reason, the step of experience and of the mature mind. In taking that step we ponder the outcome of our acts. In taking it we also maintain, as it were, a close bond with tradition, with our ancestors, with our great past. History makes no leaps, and we, Sabines, at this great moment, we are history. Trumpeters, trumpet!

In this fashion the outraged husbands reach the Roman camp, bearing four hundred volumes of laws and precedents to prove the illegality of kidnapping. Armed with these documents and aided by the highest legal talent the Sabines establish the identity of their wives, present their marriage certificates and convict the Romans of their crime. But when the Romans calmly confess to the kidnapping and ask the Sabine husbands what they are going to do about it they can only denounce the criminals to the world and then retreat in the same order, one step forward, two steps backward, bearing their law books on their backs.

Plays of Leonid Andreyeff, by C. L. Meader and F. N. Scott. Chas. Scribner's Sons. \$1.50.

## A TRIBUTE TO A DISTINGUISHED TEACHER

Fifteen of his former students, now professors in various universities, have made a volume of *Studies in Southern History and Politics* in honor of William Archibald Dunning, Professor of History at Columbia University, a specialist on the *bellum* period. The monographs treat manifold topics arising before, during and after the war between the states. Political theory is

## 'Don't-Snore'

U. S., Canada and British Patents

**Stops Snoring and Mouth Breathing. Money Refunded if it Don't.** Keeps the nostrils open for normal breathing by reinforcing the muscles of the nose which relax while asleep. **Made of Rolled Gold.** So comfortable the wearer is unconscious of its presence. Sent under plain cover. Ask for booklet.

Thos. B. Morton Co., Inc. 730 Starks Bldg. Louisville, Ky.

represented by an examination of the philosophy of Calhoun and other Southern thinkers, a paper on the interpretation of the Confederate Constitution and one on the literary movement toward secession. In political practise the operations of the carpet-baggers in the Senate and the condition of negro suffrage are analyzed. Among the more purely historical essays there is an entertaining account of the different plans for deportation and colonization of the colored folk. Professor J. W. Garner of the University of Illinois is general editor of these contributions to scholarship.

*Studies in Southern History and Politics*, edited by J. W. Garner. Columbia University Press. \$2.

**PAPAL INFALLIBILITY**

Dr. George Salmon's famous lectures against *The Infallibility of the Church* are now placed within the reach of all. They are filled with historical learning and evidences of exegetical skill.

Dutton. \$1.25.

**SONGS OF OUT-DOORS**

A subtle sympathy with nature's moods express in delightfully human terms is the chief characteristic of *Crack-o-Dawn*, a collection of lyrical verse by Fannie Stearns Davis. Their melody has the happy lilt of a bird-song, but thru it runs a note of deeper experience and of joy in life that comes only from sorrow mastered. Since the publication of *Myself and I* Miss Davis has gained a richer poetic imagination and a surer touch.

Macmillan. \$1.

**COMMON SENSE MEDICINE**

It is a matter for sincere congratulation that the old fashioned family medical books are being replaced by common sense volumes on health that omit all advice as to medicines. Dr. Sadler's *Worry and Nervousness* makes clear how many every day ailments are due to fear and to neglect of orders as to food, exercise and sleep. One of the most interesting paragraphs in the book is that in which he pleads for fewer operations on neurasthenic patients.

McClurg. \$1.50.

**THE MAKING OF THE UNIVERSE**

Men and women of seventy years will remember in their youth Antoinette B. Blackwell as a vigorous platform defender of abolition and woman's rights. In her ninetieth year she has just published *The Making of the Universe*. Her solution of the riddle of the universe is based on the eternal existence of an Absolute Being, which is God, and the derivation of finite existences developed or created out of the substance of the Infinite. The key to their unity she finds in the correlation of equal opposite forces.

Boston: Baxter. \$1.

**A LITTLE CORNER OF DEVON**

Eden Phillpotts has rarely chosen a setting more suited to his characteristic study of the psychology of the community, than the pottery of *Brunel's Tower*. The interaction of personality and art is worked out in a very interesting way, from master to thrower, and the sketch of the woman whose work is her very life and the tragedy of her rude awakening to incapacity and failure is an able bit of interpretation and there is a very real strength in the story of the hero-worship of a talented lad for the master of the pottery.

Macmillan. \$1.50.

**AIRING A GRUDGE**

An allegory which betrays little more than an impatient scorn of the "problem play" and those dramatists who seek their subjects in society's ills is *The Theater of Ideas*, by Henry Arthur Jones. Instead of the brilliance usually marked in Sir Henry's plays, the satire here attempted is dull and commonplace. Of greater interest are the three one-act sketches, notably *Grace Mary*,

# DORAN'S NEW BOOKS

## THE VALLEY OF FEAR

*The Biggest Sherlock Holmes Story*

by A. Conan Doyle

"I am inclined to think—" said I.

"I should do so," Sherlock Holmes remarked impatiently. He took the envelope, held it up to the light and very carefully studied both the exterior and the flap.

"It is Porlock's writing," said he thoughtfully. "The Greek *ε* is distinctive."

The curtain is up! Holmes and Watson on the stage!

The reader settles down with a contented sigh to the strangest mystery ever solved by Holmes—THE VALLEY OF FEAR—a plot made and laid in America. Color illustrations by Arthur I. Keller

### SCANDINAVIAN BEAUTY

A book of strange imaginative power and unique contrasts is *Sanpriel*, by Alvide Prydz, one of Norway's greatest women writers. Always the world of very real humanity in the Forest Home Hotel is outlined against the almost unreal beauty of Flyen, one of those plateaus peculiar to the mountains of Norway, as summer after summer takes up the thread of the rare idyl of love. The sympathetic translation by Hester Coddington reveals a wealth of poetry and symbolism.

Badger. \$1.25.

### A LITERARY LIFE

Hardly is to be found a writer with less care for fame than *Edward Rowland Sill*. Even those who long since discovered the handful of thoughtful, graceful essays and the three all too thin volumes of verse knew nothing of the poet himself. Study, teaching, writing, these were the quiet activities of his years. But the man of eager desire; of clear, critical perception; of positive conviction, and always of loyal comradeship, is of more worth than incident, and him W. E. Parker makes known.

Houghton Mifflin. \$1.75.

### GREATER LOVE HATH NO MAN

It seems almost an intrusion upon *The Little Mother Who Sits at Home* to read her letters to the son to whom she was father, mother and big pal. They are so intimate a part of her, yet in their spirit of mother-love they are universal. There is breadth of vision and true comradeship, irresistible humor and great pathos in this little book edited by Countess Barynska and it would be too sacred a thing to share with the world did not the sharing make life braver and and finer.

Dutton. \$1.

### A CLEVER ANALYST

There is no shade of conventionality in Katherine Fullerton Gerould's work, either in subject or interpretation, yet her originality never degenerates into the bizarre. Her new volume, *The Great Tradition*, like *Vain Oblations*, is a group of striking stories, some of them little more than studies, some wider in scope, but each is a curious episode brushed in with clean, swift strokes, by an artist who does not blur the effect by over-intense color or multiplication of detail.

Scribners. \$1.35.

### FAIR RECOLLECTIONS

Whatever John Jay Chapman's topic and whether one agrees with his judgments or not, his pen has "a way wid it." *Memories and Milestones* belong mainly to Boston of the mid-century and deal with long honored names: Norton, Howe, Eliot, Brimmer. However playful or deft the touch, there is acumen in the characterizations that make them more than random recollections, and, as in the fine analysis of the Abolitionists, bring an individual or a group into new relief.

Moffat, Yard. \$1.25.

### A BOOK OF JOYOUS POETRY

More original and less didactic than Frances Ridley Havergal; gladder and less mystic than Christina Rossetti, is the devotional poetry of Katherine Tynan, now gathered in the beautifully made little volume, *The Flower of Peace*. The keynote of the verses is thankfulness which after all spells peace. Such poems as "Adventus Regnum Tuum," "The Man of the House," "St. Francis and the Ass" and "Introit" have as fine skill in words as they have directness, simplicity and freshness.

Scribners. \$1.50.

### THE TOLSTOI OF THE TEMPLE QUARTER

The recent visit of M. Brioux to this country as envoy from the French Academy to the American Academy and the sensational success of his "Damaged Goods" has aroused an interest in his other work. P. U. Thomas of London University, in *The Plays of Eugene Brioux*, gives a

convenient summary of these with copious extracts. He does not, however, include the later dramas, such as "Faith" and "The Lone Woman," and does not add much in the way of criticism or biographical details.

Boston: Luce. \$1.

#### SALESMANSHIP

We should like to put a copy of *How to Sell* into the hands of clerks where we trade. It would undoubtedly enable them to get more money out of us, but it would be painless extraction. The author, Nathaniel C. Fowler, Jr., teaches by example rather than precept, and his model dialogs on how to sell books, life insurance, real estate and anything else that people want or don't want are well written.

McClurg. \$1.

#### BEAUTY AS A PROFESSION

Every ugly duckling should read *The Diary of a Beauty* and be consoled. The endowment of a "form divinely fair" is not what fancy paints it, judging by the fortunes of Luella Baird, and she had luxury, travel and the beginnings of a stage career to add zest to life, but it is all a bit dull to read about. Molly Elliott Seawell has put her material together like a "stint" of patchwork and in the process has lost the spontaneity of *The Melting of Molly*.

Lippincotts. \$1.25.

#### THE SCIENTIFIC METHOD IN PHILOSOPHY

Bertrand Russell of Cambridge is one of the clearest thinkers and writers of our time and if his Lowell Lectures of 1814 published under the title of *Our Knowledge of the External World* are not easy reading, it must be laid to the inherent difficulty of analyzing such fundamental concepts as time and space and causality. The new theory of infinity discovered by Georg Cantor in 1882 has revolutionized mathematics and its introduction into metaphysics and into theology is, to say the least, creating a commotion.

Chicago: Open Court Pub. Co. \$2.

#### THE TYRANNY OF THE INQUISITION

A panorama of rich color, of dramatic scenes and striking characters is Marjorie Bowen's new historical novel, *Prince and Heretic*, giving a very real and tragic picture of The Netherlands in the pitiless grasp of the Spanish Inquisition, and her passionate struggle in the throes of its terrors. Thru it all moves William of Orange, from his unhappy marriage with Anne of Saxony thru his diplomatic attempts to influence Philip of Spain, to his final appearance as the heroic protector of the Low Countries.

Dutton. \$1.35

#### GREEK VASES

*Athenian Lekythoi* are a distinct class of vases deposited in graves. They are slender, usually small, and with funereal scenes on a white ground. They show the shaft at the grave, mourning figures and Charon appearing with his boat. This volume supplements another by Arthur Fairbanks, who classifies the lekythoi not by subject but by the style of their fracture. The forty-one plates represent mostly vases in American collections, and the careful description in the text adds much of value to what is accessible to the American student.

Macmillan. \$3.50.

#### PEMMICAN HISTORY

*Tabular Views of Universal History*, compiled by George Palmer Putnam and continued to the beginning of the Great War by George Haven Putnam, is just the book for the man who wishes to keep his memory on the shelf where it will be handy instead of inside his braincase where it is easily mislaid. Chronological outlines of the history of the principal nations arranged in parallel columns show at a glance the political condition of the civilized world at any given time. But we hardly care for the sinister implication in listing the deaths of prominent people in the column headed "Progress of Society."

Putnam. \$2.50.

## "Why am I slowing down?"

—and then you sit and wonder why—when the wonder is that you have kept the pace so long. For the rush of business with its countless worries falls so heavily on a man's nervous system.

Perhaps you have slowed down a little from *exhaustion* of the system's forces. But once the nerves have been restored to vigor and the whole system *revived*, recharged with a new store of energy, the old-time endurance, the old-time capacity to accomplish will return.

And it is in giving this welcome help to the overworked nerves that Sanatogen has won so many friends. Both a *food* and a *tonic*, Sanatogen feeds and *rebuilds* the impoverished cells and tones up the system, infusing new strength into blood and tissues.

Hon. Robert F. Broussard,

U. S. Senator from Louisiana, writes:

"I am convinced from personal experience that Sanatogen nourishes the nervous system, thus stimulating the mental faculties and increasing one's capacity for sustained work."

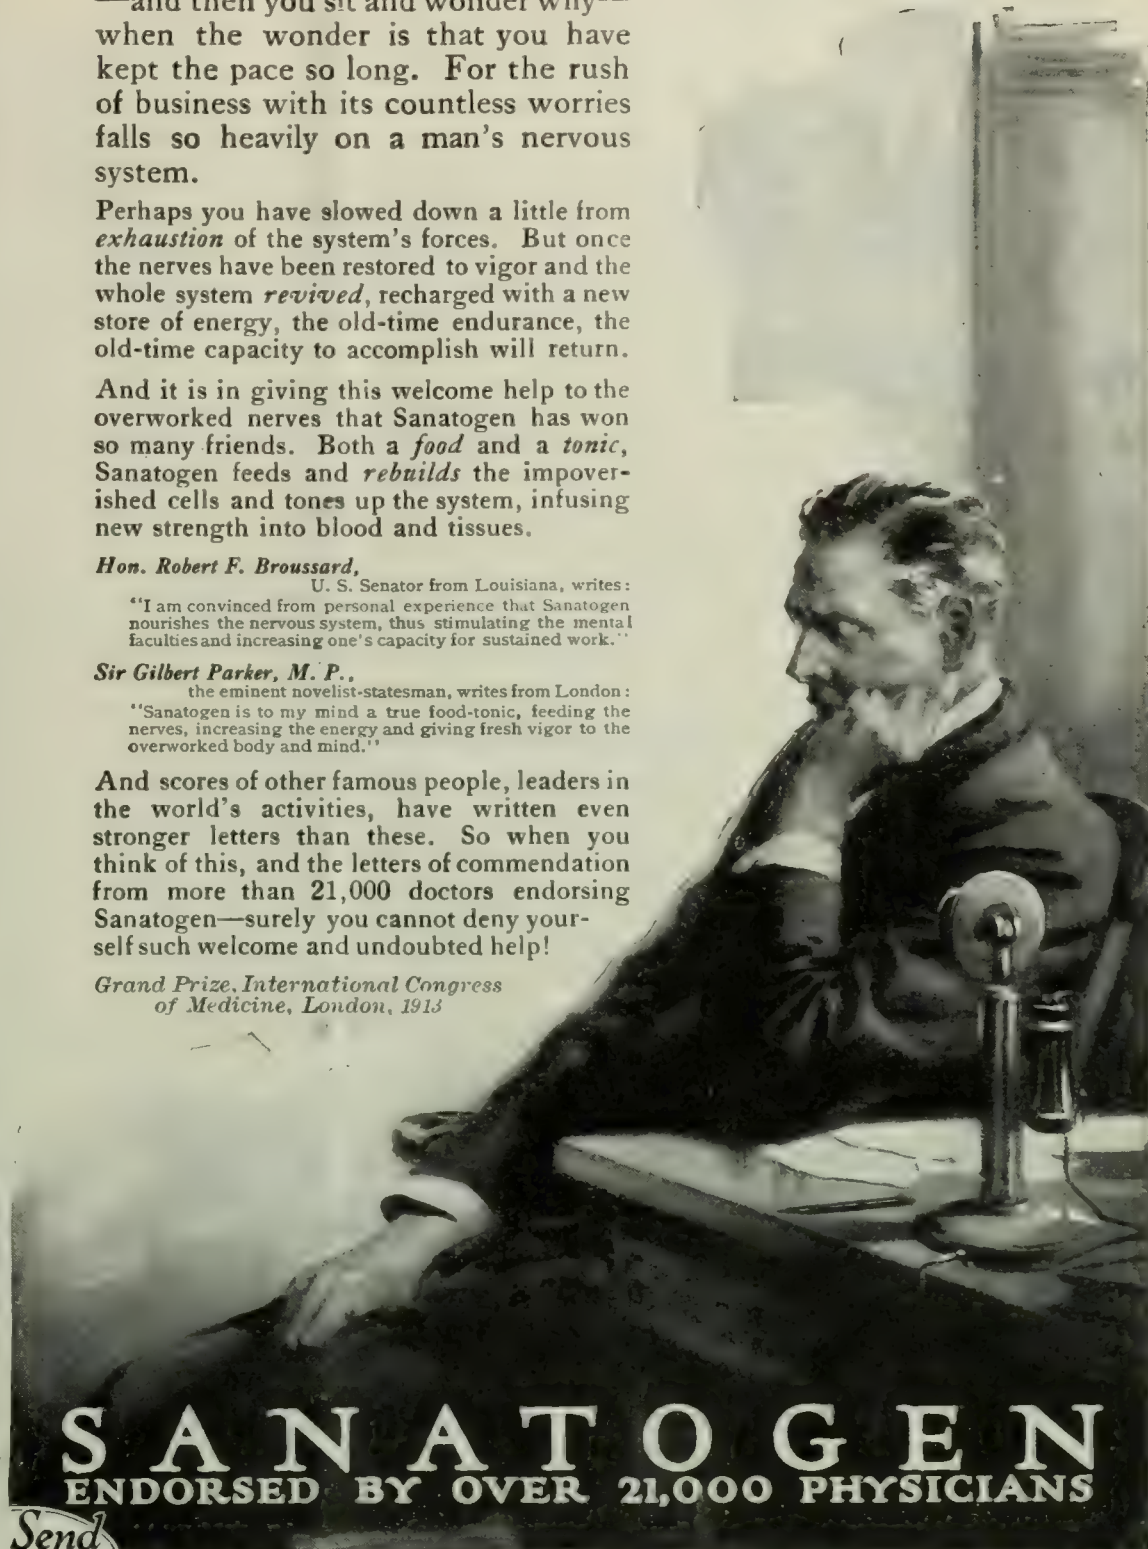

Sir Gilbert Parker, M. P.,

the eminent novelist-statesman, writes from London:

"Sanatogen is to my mind a true food-tonic, feeding the nerves, increasing the energy and giving fresh vigor to the overworked body and mind."

And scores of other famous people, leaders in the world's activities, have written even stronger letters than these. So when you think of this, and the letters of commendation from more than 21,000 doctors endorsing Sanatogen—surely you cannot deny yourself such welcome and undoubted help!

Grand Prize, International Congress of Medicine, London, 1913

Send

for Elbert Hubbard's new book—"Health in the Making." Written in his attractive manner and filled with his shrewd philosophy, together with capital advice on Sanatogen, health and contentment. It is FREE. Tear this off as a reminder to address THE BAUER CHEMICAL CO. 26-R Irving Place, New York

## A MESSAGE TO PARENTS

If Education is to be preparation for complete living, boys and girls must be led to a proper appreciation of the vital interests, movements and events of the present. No one is fitted to take his place as an American citizen and voter unless he has an intelligent understanding of modern, national, political and social problems. It is surprising to see how many students are uninformed on the most commonplace news of the day. These students are not really to be blamed, for most of them have not been given the proper advice and guidance.

Give Them The Independent

# Select Your Boat From this Catalog

## 172 Boats to Choose From

**Fifty Leading Boat Builders** have joined with the Gray Motor Co. in issuing a catalog of Specialized Boats—specialty of each concern from a 16 ft. fishing launch at \$103.00 to a beautiful mahogany express runabout with every ingenious device that modern thought has developed in a boat, with a self-starting 6-cylinder GRAY motor, complete in every detail for \$2500.00—or a snug, safe, roomy little cruiser with all the comforts of a home—**172 boats** that you choose from. Write for this catalog today, sent free.

We make it easy for you to find just the boat you want, at the price you want to pay, and in the locality you wish to buy it in, with a **GUARANTEED** motor installed.

## A Number of Things by Edwin E. Slosson

Some time ago I took occasion to call attention in this department to the fact that our enterprising advertisers were accomplishing a feat which the philologists used to tell us was impossible, that is, making up a word arbitrarily and getting it into the language. This process I alluded to as "etymological abiogenesis," a phrase which, I remember, struck me at the time as a neat and succinct characterization of the phenomenon. Judge, then, of my surprise to see that W. J. Lampton, writing in *Fame*, treats this logonomical adventure of mine with a lightness which, it seems to me, and I hope I am not too sensitive, verges toward the disrespectful. For the benefit of those to whom *Fame* is unknown I must explain that it is a periodical devoted to what it usually calls "ads." Of course, if I had been writing for *Fame* instead of for *The Independent* I would have used words of one syllable so far as possible. But can Colonel Lampton suggest any phraseology which would be less open to the accusation of polysyllabification? Would he have preferred me to say "the spontaneous generation of vocables" or "verbal creatio ex nihilo?" In order to show how infamously I have been treated by *Fame* I quote the criticism in *extenso verbatim et literatim*:

Etymological abiogenesis? Yes, that's it. Looks like it might be one of those consonantal combinations we see these days in the newspapers from the regions where they seem to be shooting alphabets all to pieces and shipping the remains to this otherwise happy land as war names, doesn't it? Sounds more like it, too, if anybody can say it so's you can hear. Anyhow, whatever it is, it doesn't look or sound as tho it had anything to do with advertising, does it? But it does. It is a term I discovered some time ago in *Fame's* unostentatious contemporary, *The Independent*, and was used by Associate Editor Slosson in formulating a few incongruous remarks on the subject of the modern advertisement's work of contributing hitherto unborn words to the language which were so expressive that they really filled a long-felt want. Editor Slosson meant well enough, no doubt, in using the term, but if any adsmith now on the job of constructing clear and convincing advertisements for public use were to try to put the same over on any plain minded advertiser there would sure be trouble. No magazine, even of the most cultured class, would dare print it as anything except high-brow reading matter; if a newspaper handed it out, the neutrals would swear it was pandering to Pan-slavism; if the billboards flaunted it forth it would be arrested for disturbing the peace, and if a car-card attempted to swell up wide enough to take it all in it would burst wide open with a loud explosion.

Therefore it will readily be seen that altho it defines a well-known function of advertisements, it must not appear in the transaction. Mr. S. mentioned only kodak as an abiogenesistematized word, but he might have mentioned others of advertisement origin, found in such sentences as "they phoebesnowed from New York to Buffalo," or "she sapolioed the woodwork once a week," or "she golddusttwinned it to a polish," and a lot more presenting words of advertising parentage and expressing ideas otherwise wholly inexpressible. Yet notwithstanding the very evident value as a word producer that etymological abiogenesis is, it can never be a term for indiscriminate use in advertising matter itself. Its relation to an advertisement is almost identical with that of a threshing-machine to a loaf of bread. Even the dull-witted among us know that a threshing-machine greatly facilitates the production of a loaf of bread, but if a dull-wit should attempt to put the threshing-machine into the loaf grave difficulties and objections would arise. So with an attempt to work an etymological abiogenesis into an advertisement for common use. I don't know whether Mr. S., in writing advertisements for *The Independent*, ever tries to e. a. them or not, but if he does I do know that he would be a dismal failure as a writer of car cards.

In conclusion I desire to state that if any adsmith or other readers of this able article doesn't know what etymological means, it is time he looked up the definition, and as for abiogenesis, it is from two Greek words, "abios," life, and "genesis," origin, and Mr. Slosson should be made to eat his words. That's what!

W. J. LAMPTON.

The *London Times* of January 5 published the following hymn, which has been set to music by Sir Hubert Parry:

Lord, guard and guide the men who fly  
Thru the great spaces of the sky,  
Be with them traversing the air  
In darkening storm or sunshine fair.

Thou who dost keep with tender might  
The balanced birds in all their flight,  
Thou of the tempered winds be near,  
That, having Thee, they know no fear.

Control their minds, with instinct fit  
What time, adventuring, they quit  
The firm security of land;  
Grant steadfast eye and skilful hand.

Aloft in solitudes of space  
Uphold them with Thy saving Grace.  
O God, protect the men who fly  
Thru lonely ways beneath the sky.

M. C. D. H.

But Charles Stracey in *The New Witness* objects to the hymn as hardly suitable at the present juncture and suggests that "if the petitions it contains were accorded without exception the result might be most unfortunate." With a view of averting this danger he advises the addition of the following stanzas:

This prayer, O Lord, of course applies  
Only to us and our Allies;  
The men upon the other side  
Do not "uphold," or "guard," or "guide."

It is not hard, O Lord, to know  
A "Taube" from a "Blériot":  
Should Zeppelins attempt a flight,  
Don't keep them with thy "tender might."

Don't prosper the aerial work  
Of German, Austrian, or Turk;  
But give the impious fellows fits,  
And smash them into little bits.

In England the movement against all things "Made in Germany" extends into the field of philology. The high church Anglicans are urging the boycott of that low German name, "Santa Claus."

## Why is a Waste Basket Bigger than a Letter Basket?

Answer—Because most letters go into the waste basket—because most men don't think or care enough to make their letters look important and interesting.

Where do *your* letters go—those sales letters and other important letters on which you and your office force put thousands of hours and thousands of dollars a year? Isn't it worth a little more thought to keep them out of the waste basket, to insure their being read?

To send out letters that will side-step the waste basket is not necessarily expensive. A little careful thinking will solve the problem for you. Hundreds of the most important concerns in America have gone to the bottom of this problem—with an eye on expense. You will find them using dignified, impressive stationery produced on

## Construction Bond

They use Construction Bond because it is a high class paper—and so known—marketed in a manner which holds down the price. It goes *direct* to the most substantial printers and lithographers in the two hundred principal cities of the United States. And it goes in big quantities—500 pounds or more at a time. This cuts out the expense of doing a small lot business—saves losses on irresponsible accounts—and gives you substantial, impressive business stationery at a usable price—obtainable through a nearby printer or lithographer who is invariably competent and responsible.

Write us for our portfolio of twenty-five handsome specimen letter-heads. You may find a suggestion which will help you improve your own stationery. You will also see the various colors, finishes and thicknesses, in which you may obtain Construction Bond with envelopes to match.

Write us now and you will be making the first move to keep your letters out of the waste basket—to save some of the business you have been losing by neglecting this important detail.

THE INDEPENDENT,

119 West Fortieth Street, New York

It is nothing more than a corrupt form of St. Nicholas and if that is too state-ly for the children they can use the good old Anglo-Sax—no, British term "Father Christmas."

But this would not suit the extremists of the opposite wing of the church. I am reminded of the time when a fanatical Protestant, Thomas Massey, proposed in Parliament to abolish the name "Christmas" because it implied "a Popish mass" and to substitute "Christ-tide." Whereupon an Irish member rose and inquired if the honorable gentleman would not change his own name to "Toe-tide Tidey." This seemed somehow to serve as a motion to lay the question on the table and nothing more was heard of it.

The letters that Philip Vickers Fithian wrote to his father from Princeton have attained a celebrity that their author could not have foreseen, tho he could not have composed them with greater care if he had known that they were to appear among the model American letters collected by Prof. Elizabeth D. Hanscom in *The Friendly Craft* and among the source documents of Prof. J. A. James's *Readings in American History*. The style, however, is a bit old-fashioned and needs to be brought up to date:

Jan. 13. Anno 1772.

Very Dear, and Much Respected Father,

Through the distinguished Kindness of Heaven, I am in good Health, and have much Cause to be delighted with my Lot. I would not change my condition, nor give up the Prospect I have before me, on any Terms almost whatever. . . .

Every Student must rise in the morning, at farthest by half an hour after five. The Bell rings at five, after which there is an intermission of half an hour, that everyone may have time to dress, at the end of which it rings again, and Prayers begin; And lest any should plead that he did not hear the Bell, the Servant who rings, goes to every Door and beats till he wakens the Boys, which leaves them without excuse. . . .

I am not much hurried this Winter with my Studies; but I am trying to advance myself in an acquaintance with my fellow-Creatures; and with the Labours of the "Mighty Dead." I am sorry that I may inform you, that two of our Members were expelled from the College yesterday; not for Drunkenness, nor Fighting, nor for Swearing, nor Sabbath-Breaking. But, they were taken from this Seminary, where the greatest Pains and Care are taken to cultivate and encourage Decency, and Honesty and Honour, for stealing Hens! Shameful, mean, unmanly Conduct!

If a Person were to judge of the generality of Students by the Conduct of such earthborn insatiate Helluo's; or by the detested Character of wicked Individuals, (which is generally soonest and most extensively propagated, and known abroad) how terrible an Idea must he have!

I am, through divine goodness, very well, and more reconciled to rising in the Morning so early than at first.

From, Sir, your dutiful Son,

P. FITHIAN.

I handed this over to a student in Valhalla University with the request that he translate it into twentieth century English, campus brand, and the following is his version:

4/26/15.

Hello Dad!

Just take it from me, Princeton is some college! I am having a ripping time here and wouldn't budge an inch if old John D

offered me all the oil (and water) he owns. Just the same it's an awful bore getting up so early in the morning. I am cut to the limit on chapel now and if my alarm-clock doesn't work any better tomorrow I'll throw it out of the window and get another. It woke me up at seven this morning and of course I turned over for another snooze and it was eleven o'clock before I woke up again.

I'm not boning up very much this winter for exams are some time off yet, but I go out with the fellows quite a lot to see a bit of college life. I don't believe in letting my studies muss up my education, and one can take one's preceptor too seriously. By the way, a couple of studes were fired yesterday. They hadn't gone on a drunk or got into a row at all, they just hooked a pair of pullets. Think of being canned for that!

And now all the comic (?) papers will call us studes a lot of crooks altho I haven't so much as pinched a souvenir spoon since I've been here. Things like that give a bad name to the coll.

I'm as husky as a breakfast-food ad and getting up with the larks isn't quite as tough on me as it was at first.

So long, Dad, till next time.

P. FITHIAN.

The aerial post between the besieged fortress of Przemyśl and the outside world was brought down one day as it passed over the Russian lines and among the postcards in the mail-bag was found this conundrum:

What is the difference between the siege of Troy and the siege of Przemyśl?

The Austrian officer who propounded this to his folks at home was thoughtful enough to add the answer, lest he should die and leave it unexplained:

In the siege of Troy the soldier was inside the horse. In the siege of Przemyśl the horse is inside the soldier.

At the annual meeting of the American Society of Zoologists Professor Neal discussed the question: "Does Amphioxus Eat with His Left Ear?" He decided in the negative on the ground that "the homologues of the premandibular cavities of Elasmobranchs are the first permanent myotomes of Amphioxus." I am glad this question is settled for I have been given to understand that he was an ancestor of mine and I was naturally sensitive about his table manners.

It was a student in the University of Atlantis who in reporting a lecture on George Bernard Shaw said that he wrote with a victrola pen. This is ambiguous. He should have told whether G. B. S. uses the steel or wooden needle.

Whenever I read of a German victory I shudder to think that the Germans may get to London and then *The Times* will come out as *Der Donnergott*.

It is customary in most countries to say "Good morning" as a greeting even when it isn't true. But the Englishman says "Beastly morning" and it generally is.

"May your shadow ever grow less," is a much more welcome salutation than the original form in these days of slender lines.

## WHERE'S THE MONEY COMING FROM?

**T**HE children,—the house—the butcher and the gas company—all need more, and more and more money. You can't do any more work—and you can't do any different work. What are you going to do? That's your problem.

Your answer is here. You can get more money—for less work. When a corporation wants to make more money without increasing its plant it calls in a great Efficiency Engineer—like Harrington Emerson. Now—you can do the same for yourself; for Harrington Emerson has applied the principles which he has already given to 200 corporations to you, as an individual in the

### Course of Personal Efficiency

24 Lessons—With Charts—Records—Diagrams—Condensed—Clear—

Through this course already 5,000 men are on the way to get what they want in the quickest, shortest, easiest way. The Treasurer of the biggest bond house in the Northwest saves hours every day—an author in New York does twice as much work and has more time to sell that work—a State official saves his State \$3,000 on one job.

The Efficiency Movement has swept the world because it has brought to men who saw no way out a new light to success. Other nations have profited—other nations make the most of their time and their talents—but we in this country—with our abounding wealth, have been prodigal with natural resources, with mental resources, with time. Now we must stop and reorganize.

And above all, it is the individual who must reorganize himself, because it is he who is the basis of the trouble. Let The Emerson Course teach you to conserve your brains, your time—for these are your capital—just as money and machinery are the capital of a factory. Learn to invest them right. There's more coming to you out of life—Get it. Get the

money and rest and success you ought to have. You won't work longer—you'll work less. You are full of unused energy. Consider country people and city people. The rapidity of the city man's life bewilders the country man. A day in New York is a terror. But give him a year in the city and he will keep the pace as well as any one. He will get ten times as much out of himself—and he won't be working any harder. That's what Efficiency will do for you who are already in the city. It will attune you to a new gait—a new zest and snap—and things will leap along where now they crawl.

These principles are not casual ideas of Mr. Emerson's. They are the scientific principles he has developed in forty years of study. He has applied them in over 200 factories, railroads and other organizations. They are studied by other Efficiency Engineers in America, England, France, Germany and other countries who have learned them from Emerson. His big organization in New York—he has 40 assistants) has taught Efficiency to steel mills and railroads, factories and publishers.

### Take the First Lesson Without Charge

It's too big to explain—too new and too vital. Send the coupon for the first lesson **free**. Follow its instructions. Then if you feel your work easier and its results bigger—you can have the whole course. We have seen the tremendous effects of this one lesson. We have before us the letter of the man who says it "woke him up,"—the letter of the man who was on

the wrong road when this lesson set him right. We know—that's why we're glad to give you this lesson free—so you can be set on the right way without loss of time.

Now—today—send this coupon. You can't have last week's minutes back—but you can still use next week's right. Send this coupon now.

## DIVIDENDS

### UNITED CIGAR STORES COMPANY OF AMERICA.

Common Stock Dividend No. 10.

A regular quarterly dividend of 1½% has this day been declared upon each share of Common Stock issued and outstanding, payable May 15, 1915, to stockholders of record April 29, 1915. The common stock transfer books will be closed at the close of business April 29, 1915, and will remain closed until the opening of business May 17, 1915. GEORGE WATTLEY, Treasurer.  
Dated, April 14, 1915.

### FEDERAL SUGAR REFINING CO.

April 14, 1915.

The regular quarterly dividend of ONE AND ONE-HALF PER CENT. (1½%) on the Preferred Shares of this Company will be paid May 1, 1915, to stockholders of record at the close of business April 29, 1915. Transfer books will not close.  
A. H. PLATT, Secretary

## THE MARKET PLACE

### AN ACTIVE STOCK MARKET

On the New York Stock Exchange last week there were violent fluctuations, sharp advances, much excitement and a large volume of business. Four "million-share" days swelled the total for the week to 5,890,401, against 3,710,323 for the week immediately preceding. It was distinctly a "war order" market. The remarkable fluctuations and gains of Bethlehem Steel still commanded attention—for the shares, which were selling at 46 when the year began, rose to 155 on the 13th, and showed an advance of 20 points in fifteen minutes—but the securities of several other companies began to be affected in the same way and for similar reasons. Railroad stocks remained almost stationary, altho there were large transactions with respect to them. For example, Reading, with sales of 255,000 shares, showed a net gain of only ½, and Union Pacific (213,600 shares) had an advance of only 1½. In Atchison, Missouri Pacific, and New York Central there was a loss.

Such changes in shares that were by no means neglected were in sharp contrast with the net gains of from 10 to 9 points in the stocks of industrial companies which are at work on large orders for war supplies. There were signs of selling by foreign holders. These sales probably account for the failure of the railway shares to advance in sympathy with the industrial movement.

The most sensational advance was made by the shares of the American Locomotive Company, which rose from 49½ to 68 on Friday, owing to reports about an order for shrapnel, the value of which was variously estimated between \$20,000,000 and \$65,000,000. Other similar companies gained by the report, even if there were no proof that orders had been given to them, but it was known that several companies were sharing in the very large contract of the Canadian Car and Foundry Company with the Russian Government. Some of the week's net gains due to war order reports were as follows: American Locomotive, 23¼; American Car and Foundry, 8½; Baldwin Locomotive, 15¼; Westinghouse, 8¾; Bethlehem Steel, 29½; General Chemical, 10½; Maxwell Motor, 5½; New York Air Brake, 22½; Pressed Steel Car, 8¾. In the latter half of the week there were very large transactions in United States Steel, for which a net gain of 3¾ was shown. None of the current reports assigns a large war order to this great company, but many have reasoned that the orders placed elsewhere require great quantities of steel, which the Corporation may be asked to supply.

There were notable gains for the shares of copper companies, including 8 points for Amalgamated, 6½ for Utah, and 4½ for Chino. This is due

to the higher price for the metal, for which buyers are now paying almost as much as the highest figures, 17½ cents, reached in 1912. In 1914, the summit was 14½ cents. After the war began, the price fell to 12½. Exports were greatly reduced, declining from 72,000,000 pounds in July to 38,000,000 in August. From that month there was gradual improvement, but not until recently have the shipments been in the neighborhood of the normal quantity. The improved demand for export has been accompanied by a better demand at home, owing partly to the use of copper in the manufacture of war supplies. Therefore the price has risen to 17 cents, and the profits of the companies are growing. On the 15th the Calumet and Hecla Company increased by ten per cent the wages of its 12,000 employees.

### ORDERS FOR WAR SUPPLIES

The war order which has most forcibly affected prices in our stock market is one given by the Russian Government to the American Locomotive Company for shrapnel. It is difficult at the beginning to obtain the facts in transactions of this kind, partly because there are parts of the agreement which are not completed. We spoke a week or two ago of an order for \$80,000,000 worth of shrapnel said to have been given by Russia to the Canadian Car and Foundry Company. With respect to that order we now have the statement of the company's president, Mr. Curry, who says: "The order is worth more than \$80,000,000. It calls for the manufacture of 2,500,000 explosive and 2,500,000 shrapnel shells, all to be finished by the end of January, 1916. At the present time we are negotiating with about twenty-five Canadian manufacturers, and in all probability between 500,000 and 1,000,000 shells will be made in Canada."

It will be seen that he does not expect the manufacture of more than one-fifth of the entire quantity in his country. The remainder of the order, it is well known, has been placed in the United States, but the shares so placed, and the names of the companies holding the sub-contracts, have not been disclosed in any trustworthy public statement.

This Canadian contract appears to be distinct from the one held by the American Locomotive Company, which is said to have been procured by direct negotiation with Russia, and in which J. P. Morgan & Co. have been concerned. It is said that at first Russia was inclined to order \$100,000,000 worth, and that the total was subsequently reduced to \$60,000,000. We have the public statement of officers of the company's branch at Richmond that one-half of the "order

for 2,500,000 shrapnel shells" will be filled at that branch, while the other half will have the attention of the company's plant at Dunkirk.

Apparently these are not the only orders for shrapnel. We read that the E. W. Bliss Company of Brooklyn has been making this kind of ammunition at the rate of 30,000 shells a day; that it has purchased hundreds of machines for the work, and on account of it has made three successive additions to its plant. It is also reported that the Westinghouse Electric and the New York Air Brake companies have procured an order for \$20,000,000 from the French Government. And there is a story that the Crucible Steel Company is considering an order so great that, if taken, it will require enlargement of the Atha plant in New Jersey at a cost of several million dollars. In all these statements and rumors no provision is definitely made for the needs of Great Britain. Surety companies are busy in connection with guarantees for the cash advances of the ordering nation, especially with respect to the contract in Canada, where large advances to enable the manufacturers to extend their plants are said to have been made by Russia.

In comparison with these shrapnel orders the new purchases of other war supplies seem small. Belgium bought last week \$1,150,000 worth of uniforms, and 155,000 yards of khaki were taken for the Boy Scouts of England. One of the allied powers was seeking 2,000,000 yards of cotton drills for summer clothing. Russia placed an order for 2,000,000 pairs of shoes in New England, and was said to be looking for as many pairs of Cossack boots, the price of each of which would not be less than \$5. An order for 15,000 sets of harness was reported. A factory in Watervliet, New York, was making tents for Greece. In Kansas City a dynamite explosion at the Cudahy Packing Company's storage house ruined \$500,000 worth of beef ready for shipment, and it was thought that the explosive had been placed by some foe of the Allies. There is night work, with an increased force, at the factory of the Pneumatic Tool Company in Chicago, on account of foreign orders. France is in the market for horses, altho she has bought many thousand. It was said that she might be willing to take 100,000 because she foresaw a dearth of farm horses in her territory after the close of the war.

### STOCK EXCHANGE SEATS

The revival of business on the New York Stock Exchange has caused a sharp advance in the price of Exchange seats or memberships. When the Exchange was closed last fall seats were offered by holders at \$34,000. They were not in demand. The broker's occupation was gone—for a time, at least. And before business was suspended there had been a lack of that activity which gives the broker commissions enough to live on. Office forces had been reduced, and clerks out of work were in need.

But there was some improvement in March, when a seat was sold, or a membership transferred, for \$40,000. Two

or three weeks ago the large increase of the number of shares sold, with evidence of betterment thruout the country, gave new value to the seats. Last week, in which were four million-share days, five seats were bought—three at \$59,000, one at \$60,000, and one at \$63,000. Then there were bids of \$70,000, with no takers. The highest price last year was \$55,000, and that was not exceeded in 1913. But there were sales at \$73,000 in 1912, 1911 and 1910. Some years earlier the record high price of \$95,000 was reported.

### THE RIGGS BANK CASE

There should be, and doubtless there will be, a thoro investigation, in the court proceedings, of the charges and counter-charges made in the controversy between the Riggs National Bank, of Washington, and Comptroller Williams and Secretary McAdoo. If the bank has engaged in unlawful and otherwise objectionable practises, its misconduct should be brought to light and due punishment should be imposed. If Mr. Williams has subjected the bank to persecution, his unfitness for the important office he holds should be clearly exposed and he should be required to make way for a better man. It is desirable that the proceedings should result in a clear and authoritative definition of the Comptroller's powers, and in a decision as to a national bank's lawful obligations concerning certain methods and practises as to which complaint has been made in this case.

The controversy is one of more than local importance, because the financial and other interests involved are not confined to the District of Columbia. The bank is closely associated with a great bank in New York. It has repeatedly been alleged that both Mr. Williams and Mr. McAdoo have regarded this New York bank and other allied financial interests with hostility on account of events in the record of their undertakings before they held Government offices. These reports must have been known to both of them and should have led them to be careful in their use of power. We do not say that their power has been used unjustly or without due care. These allegations about personal resentment and feuds make it important that the official inquiry should be exhaustive.

By a bill which Governor Walsh signed recently the four Massachusetts savings banks which do a life insurance business are empowered to issue policies for \$1000. The limit has been \$500.

Owing mainly to the requirements of the Clayton trust law, the number of the directors of the American Telephone and Telegraph Company has been reduced from twenty-five to seventeen.

In a paper read before the Royal Statistical Society in London a few weeks ago, Edgar Crammond estimated that the war, up to July 31, would cost the belligerents \$45,739,500,000. He included in this total the destruction of property, the loss of production and the capitalized value of loss of life.

The following dividends are announced:  
United Cigar Stores Company of America, common, quarterly, 1½ per cent, payable May 15.  
Federal Sugar Refining Company, preferred, quarterly, 1½ per cent, payable May 1.

## Turn Your Spare Time into Money

Your spare time is worth exactly what you make it worth. Turn it into money.

The International Correspondence Schools will help you to make every hour worth dollars. They will give you in your spare time the training that will enable you to get and hold a better job.

If you are really ambitious, find out what the I. C. S. can do for you.

It makes no difference who you are, where you are, or what your handicaps may have been, the I. C. S. can help you.

Every year more than 5000 persons of all ages and occupations voluntarily report increased wages and better positions, due solely to I. C. S. training.

## YEATES SCHOOL

Box 504 :: Lancaster, Pa.

Sixty-first year opens September, 1915

College Preparatory, \$700.00 per year. No extras.

Lower School for young boys

110 acres field and stream. Gymnasium, Swimming Pool.

A new building ready for occupancy September next, makes possible fifteen additional pupils. Application for reservations should be made now.

Correspondence and fullest investigation invited

## SAME LIGHT—NO GLARE

KLEARGLOW is the most effective appliance yet produced for its purpose. Made of scientifically designed glass surfaces in one piece. Attached to your regular automobile lamps, KLEARGLOW casts its soft, unclouded rays on the road without the glare of unshielded lamps. "Dimmers" are dangerous—KLEARGLOW is safe.

### KLEARGLOW

The Auto Light Diffuser

is not a dimmer—does not take away any light. No lost power from headlights. You can see ahead with KLEARGLOW on the darkest and most dangerous country roads. KLEARGLOW originated in Switzerland and is popular throughout Europe. Permanently installed in ten minutes. Improves car's looks. Write for folder which shows how you can avoid accidents, damage to car, and arrest and fine for violation of headlight regulations. The folder also tells how you can try KLEARGLOW free for fifteen days. Address

**H. G. PARO** 714 Michigan Boulevard Building Chicago, Ill.

## Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....	\$27,964,578,109.00
Received premiums thereon to the extent of.....	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers.....	90,801,110.00
Of which there have been redeemed.....	\$3,811,450.00
Leaving outstanding at present time.....	6,989,660.00
Interest paid on certificates amounts to.....	23,020,223.85
On December 31, 1914, the assets of the company amounted to.....	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

### 1850 THE UNITED STATES LIFE INSURANCE CO. 1915

In the City of New York Issues Guaranteed Contracts  
JOHN P. MUNN, M.D., President

FINANCE COMMITTEE

CLARENCE H. KELSEY

Pres. Title Guarantee and Trust Co.

WILLIAM H. PORTER, Banker

EDWARD TOWNSEND

Pres. Importers and Traders Nat. Bank

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

## INSURANCE

CONDUCTED BY W. E. UNDERWOOD

### DEPENDENT OLD AGE

Measured by the world's standard of productivity, some men and women outlive their ability to sustain themselves. A person at every age must possess one of two things: service capacity to exchange for sustenance, or its equivalent in money. Failing both, he becomes a burden to others. The assertion is made by statisticians that to every fourteen producers in the adult population, there is one who has reached age sixty-five in want who is the recipient of charity. The personal observation and experience of most people will doubtless confirm the conservatism of this statement.

We know that old age is to some persons a misfortune almost, if not fully, as great as death. Many God-fearing and obedient men, contemplating the miseries resulting from the helplessness of old age, have regretted their survival and wished their lives and usefulness had been simultaneously ended.

Most men are convinced of the necessity of life insurance as a protection for their dependents; comparatively few of them give any consideration whatever to the hardships they themselves may be called upon to face before they die, and long after the responsibilities of a family have passed away.

So we see, upon considering this subject, that there are two distinct perils: one which threatens a man's dependents by depriving them, thru death, of his support and protection; the other due to survival to an impotent and dependent old age. Both are as terrible as they are unnecessary.

Life insurance properly maintained will obviate the difficulties flowing from both sources. Long term endowments, payable at age sixty-five or seventy-five, will, at a moderate annual cost, shield a family against the untimely death of its provider; and, if he survives to old age, supply him with the means of at least living comfortably. Again, if those who for years have maintained a fairly good line of insurance, mainly as a family protection, would keep it in force after it was no longer needed by dependents, instead of surrendering it for spendable or losable cash, as nearly everybody does, it could be converted at the proper time into an annuity payable for the remainder of life.

Men should insure against the terrors of old age as well as against those of death. The evening of every human life should be serene. It can be.

### A MISLEADING TERM

What is a dividend in life insurance? Considered from the insurance company's side, it is the sum of all the surplus remaining at the end of the year—the difference between the total of its income that year, and its disbursements, plus its increased liabilities during that period. By surplus is meant excess in-

come and not profits; for, as in commercial transactions, there are no profits. The premiums of a properly constituted life insurance company include an overpayment of the service rendered. Therefore, the surplus or dividend in the company's hands when the year closes is composed of money contributed by the policyholders when they paid their premiums. It is, in short, a contributed surplus and not, as in trade enterprises, an earned surplus.

It follows, then, that when a policyholder receives his share of this surplus once a year he is merely taking back a sum of money remaining unused out of a larger sum paid by him twelve months earlier. The conclusion is obvious: it is not a dividend in the usual sense of that word. It represents a division of something, a share, and to that extent only does it qualify as a dividend.

Life insurance people themselves recognize the inappropriateness of the word, but have failed to find one more fitting. The thing referred to is really a return to the policyholder of the unused portion of his premium and might well be called "return premium."

At the annual election of the Metropolitan Life Insurance Company, which was recently transformed from a joint-stock corporation to a mutual, more than 300,000 votes were cast by policyholders, most of them by proxies and by mail.

The General Accident Fire and Life Assurance Corporation, Ltd., of Perth, Scotland, announces that it has undertaken aircraft insurance and will issue policies to cover the risk of damage and loss to property caused by bombs dropped by the enemies' aircraft. The charges will range from two shillings to five shillings per cent according to locality.

According to figures recently promulgated by the Insurance Department of Connecticut, 131 fire insurance companies transacting business in that state reported total earned premiums received from all sources in 1914 of \$296,480,739; total underwriting losses and expenses incurred, \$305,277,448; resulting in an underwriting net loss of \$8,796,709. The loss ratio of the combined companies was 62.48 per cent, and the expense ratio, 40.30 per cent, making the total outgo on these two accounts 102.78 per cent of the earned premiums.

C. A. S., Evanston, Ill.—In the order named, measuring by total assets, the New York Life Insurance Company, Mutual Life Insurance Company and Equitable Life Assurance Society, all of New York, are the largest life insurance companies in the world. The assets of each on January 1, 1915, were: New York Life, \$790,935,396; Mutual, \$611,033,801; Equitable, \$536,376,840. On that date they had insurance in force, respectively, \$2,347,098,388; \$1,612,574,168 and \$1,494,234,342. The Metropolitan Life Insurance Company has in force \$2,991,114,069, of which \$1,837,584,189 is industrial; and the Prudential Insurance Company has \$2,592,478,248, of which \$1,567,542,431 is industrial. The Mutual Life Insurance Company of New York is the oldest company in the United States issuing regular life insurance policy contracts for specific amounts at death at fixed and mathematically ascertained annual premiums. It commenced business February 1, 1843.

PEBBLES

A man with a single opinion is apt to spoil it by overcoddling just as he would an only child.—*Life*.

Kind Stranger—How old is your baby brother, little girl?

Little Girl—He's a this year's model.—*Chicago News*.

Charlie Loveday—Um—ah—er—er! He! he—

Jeweler (to his assistant)—Bring that tray of engagement rings here, Henry.—*Buffalo Courier*.

"O say, who was here to see you last night?"

"Only Myrtle, father."

"Well, tell Myrtle that she left her pipe on the piano."—*Nebraska Awgwan*.

Two students walking together on the campus.

First spoke to a co-ed.

Second—Who was that?

First—Ida.

Second—Ida who?

First—Ida know.—*Minnehaha*.

One of the wealthy men of Cleveland, whose education is not as comprehensive as his business instinct, recently visited Washington and, incidentally, some of the historic towns of interest thereabout.

"Here," said a guide to him one day, "right here in this room, sir, George Washington received his first commission."

Whereupon the Clevelander brightened up. "Do you happen to know," he asked, "what per cent commission it was?"—*Harper's Magazine*.

After many years of long and faithful attendance on his patients, old Dr. Brown decided to take a much-needed vacation, intrusting his practise to his son, a recent medical graduate. Later, when the old gentleman returned, the younger physician told him, among other things, that he had cured Miss Anthony, an aged and wealthy spinster, of her chronic indigestion.

"My boy," said the old gentleman, "I'm certainly proud of you; but Miss Anthony's indigestion is what put you thru college."—*Harper's Magazine*.

The justice of the peace was just on the point of marrying the couple.

"Oh, before I begin," he said, "I must find out your names."

"Marrius," said the bridegroom.

"Sure," said the J. P., "as soon as I find out your names."

"Marrius," said the groom.

"Yep," repeated the J. P., "but I must first know your full name."

"Will U. Marrius," said the groom.

"No," said the J. P., "I'll be switched if I will."—*Pennsylvania State Froth*.

A civil engineer, who was building a railway in Mexico, was trying to show a native how much the new railway would benefit the country.

"How long does it take you to carry your produce to market at present?" he asked.

"With a mule it takes three days," was the reply.

"There you are!" exclaimed the engineer. "When the new railway is in operation you will be able to take your produce to market and return home the same day!"

"Very good, señor," was the placid reply, "but what shall I do with the other two days?"—*Youth's Companion*.

A California youngster had been permitted to visit a boy friend on the strict condition that he was to leave there at five o'clock. He did not arrive home until seven and his mother was very angry. The youngster insisted, however, that he had obeyed her orders and had not lingered unnecessarily on the way.

"Do you expect me to believe," said his mother, "that it took you two hours to walk a quarter of a mile?" She reached for the whip. "Now, sir, will you tell me the truth?"

"Ye-es, mamma," sobbed the boy. "Charlie Wilson gave me a mud turtle—and I was afraid—to carry it—so I led it home."—*Boston Transcript*.

SCHOOLS AND COLLEGES

MASSACHUSETTS, Franklin.

**Dean Academy** Young men and young women find here a home-like atmosphere, thorough and efficient training in every department of a broad culture, a loyal and helpful school spirit. Rolling Prairie, Indiana

# INDEPENDENT BULLETIN

The Mayor of New York City, John Purroy Mitchel, now some fifteen months in office, will present through The Independent next week his first magazine article for the country at large on his administration. The Mayor will give an account of his stewardship under the reform administration. Professor Giddings, who will contribute an editorial for the same number, says the Mayor's article is the most remarkable statement he has ever read from an American Mayor.

The National Chairman of the Woman's Peace Party, Miss Jane Addams, is the representative of The Independent at the Woman's Peace Conference at the Hague. Miss Addams sailed on the 13th with a notable group of women who, with Miss Addams, will represent the United States at this important world conference. Miss Addams will send to The Independent, at the earliest possible moment, one or two articles in which The Independent readers will learn, at first hand, what the women of the world think of war as expressed in the Conference and what they intend to do as their share toward permanent peace.

The author of "A Circuit Rider's Wife," Corra Harris, has been three months in the war zone. Now she writes for the readers of The Independent from "The Peace Zone in the Valley." Her neighbor there, a genuine neutral according to Mrs. Harris, remarks, "Well I don't hold nothin' agin them heathens that's killin' one another, all I say is that it's less expensive to live accordin' to the Bible than accordin' to the world." This article will appear in an early issue of The Independent.

PADEREWSKI  
BY JOHN FINLEY

PART I (1914)

Beside Scamander's stream in ancient Ilium  
(From whose dim, moon-lit ramparts Troilus  
Sighed toward the Grecian tents where Cressid lay)  
Brave Hector, so 'tis said, derided him  
Whose love for Helen gave to Homer's harp  
The timeless Iliad: "O brother mine,  
The sounding lyre will not avail thee now";  
Meaning (I translate from forgotten Greek  
With aid of Lang), that spear and sword alone  
Will serve ascending man.  
Last night, in Troy,  
(Not Hasselik, all tumultous, but Troy  
Which sits beside a new-world Simois)  
I heard brave Hector's taunt again, and then  
I heard reply: Great Paderewski played  
Not such a puny lyre as Paris twanged,  
But one Cristofori designed to sound  
The thunderings of battle, and, alike,  
The peaceful breathings of an oaten pipe;  
And hearing, said: "Had this Red Polack stood  
Beside old Priam on the Trojan walls  
The battle lost immortally were won."

I thought, what marvel that a human mind,  
From protean animalcules upward bred,  
Should transmute into sound, thru hands  
That might be clinging still to tropic boughs,  
What other minds, discarnate now, have dreamt  
From out the air into such symphonies  
As God with all His earth orchestral range,  
From cataract, thru souging wind, to lark,  
Could not produce without the will-free aid  
Of His last creature, Man!—And what rebuke  
To idle, sloven ineffectiveness.  
In every movement, practised till it seemed  
As perfect as an orchid or a rose,  
True as a mathematic formula,  
Yet full of color as an evening sky!  
What hope for what man's mind and hand will do  
Having done this!

The playing ceased, and when  
Out thru the shining mists the chauffeur drove  
His wind-swift car into the Troad dark,  
Then paused in drenching rain to mend his tire,

I could but see Ixion hovering there,  
Above his flaming wheel, which naught could stop  
Save music, even for the briefest spell,—  
Ixion, listening, longing ceaselessly  
For that entrancing strain to come again.

And then these questionings began to come  
From out the night: "Why should this age exhume  
A buried Troy, and search for crumbling shards  
Along the Mander and the Simois,  
Or wonder if Ulysses' 'wooden horse'  
Did graze his fill beside Boonarbasshee,  
When there are many Troys, and mirrored,  
Above the ground; where out of fire and stream  
Myriads of horses are each day evoked  
That skyward race in clouds of steam and smoke;  
Where Helen's 'purple web of double fold'  
Is 'broidered by machines more skilled than hands;  
Where fact, more noble far than ancient myth,  
Daily presents heroic, beauteous stuff,  
Still braver, fairer than the best that was,  
For new earth-epics and availing song?"

Is it, that no seer-poet yet has come  
To write the new-world Trojan Iliad,  
No Orpheus come to sit beside the wheels  
Of dumb machines and sing the laborers  
Out of the torments of monotony,  
Make them forget the tireful, aching round  
Of drudgery, as if the wheels had paused?  
And will one come, Polack or other breed,  
To play above the grinding of the mills,  
To sound his thund'rings o'er the giant guns  
That now are sleeping in the arsenal  
Of silent Watervliet, beside the road  
O'er which we pass?—There was no answer save  
The flapping of the chain or swish of tire  
(Or so the practic chauffeur did protest),  
But as I peered into the dark, I heard  
Brave Hector's body dragging in our wake  
With jangling armor and with battered helm,  
As once it trailed behind Achilles' car.

PART II (1915)

"Since the war began Paderewski declares he has not touched the piano. . . . 'How can I play,' he cries, 'when my countrymen are dying?' . . . Paderewski in distress, Apollo deprived of his lyre, Orpheus without his flute, stands for the helplessness of Poland."—New York Times.  
A twelvemonth gone! It is as Hector said:  
"The lyre will not avail thee now" O Pole,  
Apollo's heir!—Indeed, how canst thou play  
With groans of dying brothers in thy ears,  
And frenzied mothers clutching at thy hands,  
And children crying thru the night?

Thy magic spell could make them all forget  
Hunger and pain and death, but in thy love  
For luckless Poland thou hast turned thy face  
To her as Orpheus to Eurydice,—  
And hell still holds her fast, while thou in grief  
But criest "Poland," "Poland," o'er the earth.

# Touring

## in The Eight-Cylinder Cadillac holds new fascinations

THE greatest boon the Eight-Cylinder Cadillac confers upon the American people is that it removes the strain and the weariness from long distance motor travel.

If ever a nation needed the relaxation, as well as the exhilaration of motoring, this nation needs it. And if ever a motor car was at once both stimulating and soothing, that car is the Cadillac "Eight."

Men and women all over America are awakening to this delightful discovery.

The roads of the continent are calling to them with a new charm and a new insistence.

The Cadillac "Eight" has supplied the last necessary link in the chain of causes which constitute the thing called luxury.

It sets the traveler free from taut nerves, from tense muscles, and from constant concentration on the performance of the motor.

All the glorious tingle of a noiseless flight through space is there in increased measure.

But the strain is gone—gone, and forgotten, because the flow of power is so continuous and so quiet that you are scarcely conscious that the engine exists.

There are no convulsive movements of the motor, no noise of straining and labor, no irritating vibration—because there is no lapse or halt between Cadillac power impulses.

You relax and rest, in the Cadillac "Eight," because the unpleasant reminders of intermittent power are removed.

You forget the engine, you forget the mechanical system which is carrying you forward—and luxuriate in a sense of serene well-being and comfort.

The mind is released from its thralldom to the car, and turns a thousand times more often to the beauty of the road, of the sky and of the landscape.

The joy of touring is not only a greater joy in the Eight-Cylinder Cadillac, but it calls into being a new set of physical and a new set of mental sensations.

Heretofore, no matter how gallantly your motor mounted a hill, you were conscious every moment that it was climbing—that it was laboring.

Now, you only know that the hill was high because you saw it before the mount began—or looked back after the crest was reached.

The old sensation is now exactly reversed.

Then, the car fought against the hill and triumphed over it—now, the hill seems to melt away before the car.

You can now travel almost continuously on high gear—under throttle control.

The power application is so fluid that the effect, when you accelerate the speed, is very much as though you had "turned on" the power, as you "turn on" water by opening a spigot.

As far as sound and vibration are concerned, the engine does not seem to be energizing at all.

The car simply glides from one rate of travel to another, without perceptible effort or hesitation.

The result is that the mind is lulled into repose and the body obeys the impulse of the mind.

All the niceties of Cadillac construction supplement and simplify and emphasize the luxurious action of the Eight-Cylinder engine.

The latter might be ever so perfect and still fail of its full efficiency if the car as a whole were not manufactured in every minute part with relation to the requirements of the motor.

Cadillac thoroughness is responsible for the accuracy of every function which might contribute to the efficiency of the engine.

And, too, the spring suspension, and the deep soft upholstery share the task of resting and soothing mind and body—the two work to that end in continuous harmony.

More than eight thousand Cadillac owners are now enjoying these marked elements of ease which confer a new charm upon motoring.

Our information would indicate that nearly all of them experience the same impulse—a renewed and irresistible call to long distance touring.

With rough roads largely robbed of their terrors and good roads made almost doubly delightful—with hills no longer to be dreaded and gear shifting practically eliminated—with a new and astonishingly active acceleration, always to be relied upon—touring in the Eight-Cylinder Cadillac becomes an unalloyed delight.

### Styles and Prices

Standard Seven passenger car, Five passenger Salon and Roadster, \$1975.  
Landaulet Coupe, \$2500. Five passenger Sedan, \$2800. Seven passenger  
Limousine, \$3450. Prices F. O. B. Detroit.

A complete line of Cadillac Cars and a demonstrating chassis are exhibited at the  
Panama-Pacific International Exposition, San Francisco, Calif.

NUMBER 3465

## THE LEADER AND THE BOSS

**T**HE libel suit between William Barnes and Theodore Roosevelt brings into the searching light of public attention the perennially interesting question of the party leader and the party boss. What is a leader? What is a boss? Are the two identical? When we seek to differentiate the one from the other, are we making a distinction without a difference? If, on the other hand, they are not one but two, what is the relation of each to the legitimate functions of political parties and to the general welfare? These are questions worthy of serious consideration entirely apart from any view of the merits of the present case.

Political parties are inseparable from our system of government. We have had great parties, few in number, for a century and a quarter. There is no indication that we shall be without them while the republic lasts. And while we have parties we shall have men who lead and men who follow—for that is the way of mankind wherever men are gathered together for a common purpose.

It is a vital question for the nation, therefore, whether our parties are to be guided by leaders or controlled by bosses. For there is a distinction between the two wide as the poles.

**T**HE leader works in the open. He stands for principles. He stirs the consciences and convinces the minds of his party associates. He appeals to their belief in their party's principles, to their eagerness for their party's success, to their loyalty to the state, to their desire to promote the popular well-being.

The leader controls by virtue of clear vision, of honesty and sincerity, of devotion to principle, of ability to win victories, of magnetic personality, of success in producing results. He is able to lead so long, and only so long, as he can persuade others that he is right, that he is sincere, and that the party, under his leadership, is likely to win. He must convince his party or it will not follow him.

The boss moves under cover. He lets himself be bothered with principles only when it will serve his ends to do so. He despises the conscience of his followers and ignores their intellects. He appeals to self interest, to desire for office, to cupidity and greed.

The boss rules by force of ability in intrigue, of unscrupulousness in purpose and action, of callousness to dishonesty and corruption, of knowledge of the weaknesses of men, of willingness to use base means to accomplish political and personal ends. He is able to lead because he has it in his power to reward obedience to his will and to punish recalcitrance. In his control over

the giving and the withholding of office, in his ability to secure profit from special interests in return for legislative and administrative favors, he possesses powerful means for influencing lesser party bosses and party workers. Herein lies the most significant difference between the leader and the boss. The leader influences his party associates; the boss cajoles them with promises of reward or drives them with threats of punishment.

The leader believes sincerely that the people ought to rule. The boss either believes sincerely that they ought not to rule, or, as is more likely, cares not a scrap whether they ought to rule or not—but simply knows that it is not to his profit that they should. The leader proceeds upon the theory that government should be for the benefit of all the people; the boss upon the theory that it should be for the benefit of himself and his associates, political, personal and business.

**T**HE predominating influence in party affairs of the true leader—provided only that he be wise and skilful and strong, for well intentioned but ineffective leadership is no better in a party than in an army—is good for the party and good for the community. It is good for the state because it seeks to make the party serve the state. And it is good for the party precisely because it is good for the state. In the words of Governor (now Mr. Justice) Hughes, one of the finest examples of the political leader in the present generation, "In the forwarding of measures or the shaping of issues he should never forget that the final test will be the public interest, and that while he may move within the broad limits assigned to him by the traditions of his party, *public service must ever be the highest party expediency.*"

The rule of the boss, on the contrary, is bad for both the state and the party. It is bad for the state because it sacrifices the general welfare for the illegitimate profit of individual interests. It is bad in the long run for the party because it forbids it to perform with a single mind its one legitimate function, the service of the state.

Such is the leader and such is the boss. Of course there are bosses and bosses—just as there are leaders and leaders. For not every man denominated a boss is a Tweed, not every man called a leader is a Hughes. Some leaders at times descend to the methods of the boss; and some bosses rise on occasion to the heights of leadership.

It is leadership that is admirable and desirable; bossism that is despicable and intolerable. Leadership should be supported ungrudgingly wherever it is found—even if it be found in a boss. Bossism wherever it appears—even in a leader—should be fought implacably.

## "CANADA SAVED THE DAY"

EVERY American's heart beat faster when the news was flashed across the ocean last Sunday.

The greatest battle of the war was raging in Flanders. The Belgians, the French and the British were facing 500,000 of Germany's bravest, heavily entrenched, in the arc-shaped battle front above Ypres. The Canadians held the British left, next to the French. It might be the turning point of the war.

The Germans threw grenades of asphyxiating gas. A yellow cloud of vapor blew over the French trenches. The French fell back. The Germans charged. The Canadians were forced to give way in order to keep in touch with their line. Then reforming, the whole Canadian division countercharged. They drove all before them. They recaptured their guns. They remanned their trenches. They took one hundred of the foe prisoners. They left a thousand dead. But the tide of defeat was turned.

Said a wounded Canadian officer:

Our boys were more than magnificent; but there are very many of them whom we will never see again. The shelling started soon after one o'clock. It was directed mainly to the French lines north of us, but huge shells came behind our trenches every few minutes.

It was literally hell for the poor French beggars who were joined up to us.

Our artillery was splendid and caught the Germans with raking shrapnel side fire. It was lucky for the French, but unlucky for us, for it drew a part of the attack on our front.

The Germans were mowed down by our machine guns, but they came solidly over 200 yards and over our entanglements. Several mines were let off at just the right time by our engineers, but still they came on, yelling taunts in English, which were meant particularly for us Canadians.

We had some shells of this asphyxiating kind earlier, and thought we knew what to expect. Our men were staggering around almost in delirium a few minutes, but then they absolutely ran amuck among the Germans.

The United States is neutral. But the United States will ever applaud the valor of men who are not afraid to die. Such are they who fight under the banners of the eleven nations of the earth now at war.

But beyond all, the United States must applaud the heroism of Canada. Canada is our kith and kin. Canada is our neighbor. Once we invited her to join our Union. For a hundred years neither cannon nor fort has frowned over the 3000 miles of frontier between us. We have shown the world the way to peace and disarmament.

In this supreme and solemn hour of victory, when the blood of her sons reddens like the maple leaf the clay of Belgium, we realize more than ever that Canada's heritage and civilization are ours also. The Canadians are Americans.

## NEWS FROM TURTLE BAY

IT was a beautifully circumstantial story that came over the wires—or the more elusive wireless—the other day from Lower California. The Japanese, under guise of saving the cruiser "Asama," grounded in Turtle Bay several months ago, were establishing a naval base, installing a garrison, mining the harbor, and in general preparing for some dark and hostile purpose. The only defect in the story was that it was not true. Or rather, like the report of Mark Twain's death, it was greatly exaggerated. It is true the "Asama" was

and is aground—on a sandy, treacherous shore. It is doubtless true that the Japanese are trying hard to save her. But that they have thrown away a perfectly good warship as a pretext for getting a foothold within striking distance of the United States is a little too much for easy belief.

But the incident has been fruitful in one respect. It has added, as President Wilson suggested in his address to the Associated Press, a new phrase to our current speech. "News from Turtle Bay" is obviously and appropriately the kind of intelligence that ought to be told to the marines.

## LEARNING TO EAT CORN

IF the besieged countries, Germany and Austria-Hungary, are to escape starvation it will be by the help of the two vegetables which are perhaps America's greatest gifts to the Old World, maize and potatoes. Yet both these have had to fight their way into the European dietary against the power of prejudice dominated by ignorance and entrenched by law and custom. The potato was in France thought only fit for pigs until Parmentier made it fashionable by inducing the King to wear a bouquet of its blossoms. This reminds us that the useful and ubiquitous tomato was first cultivated in the United States under the enticing name of "love-apples" for its beauty alone because it was popularly supposed to be poisonous. The labor leader Corbett denounced with fiery eloquence the introduction of the potato into England as a conspiracy of the capitalists to reduce the British working classes to the level of the beasts or the Irish. In Bavaria our own Benjamin Thompson, there known as Count Rumford, had to put the potatoes into his famous soup by stealth lest the paupers he was feeding should revolt at the outrage. But now potatoes have become the staff of life for the Germans, who once despised them.

It was over two hundred years after Sir Walter Raleigh presented to Queen Elizabeth the first potato brought to Europe before the people would accept it as an article of diet. Corn has yet to win its way into the European stomach. The efforts made by the Austrian Government to induce the people to eat cornbread during the war were at first resented. They refused to eat such "pig fodder" even tho served by the dainty hands of countesses and duchesses. Nevertheless those who could screw their courage to the tasting point found it not so bad as they had feared and many, they say, have come to use it if not to like it.

It will be remembered that our Agricultural Department a few years ago undertook a corn crusade for the conversion of Europe—under the naïve belief apparently that if the people there got to eating corn they would buy it of us instead of raising it. But the Europeans were not to be taken in by any such a Yankee trick as that. In vain did our delegates lecture on the food value of corn and display polychromatic charts proving that each kernel was as full of calories as an egg of meat. In vain did the pretty graduates of our cooking schools proffer hot muffins and flapjacks—with maple syrup—to the passing crowd. In vain was the crispest popcorn displayed under the sign "A Delicious American Confection. Please try some." 'Arry and 'Arriet jeered and

giggled and passed on. So also did Hans and Gretchen. During the famine in Ireland our generous-hearted Westerners sent over a shipload of cornmeal, but the Irish peasants said they would rather starve than eat the stuff—and some of them did.

Perhaps the war will teach the Europeans that we Yankees know what's good to eat as well as some other folks, tho we fear it will be a long time before they can be educated up to the proper appreciation of the delight of eating green corn from the cob.

### WHIMSICAL MR. BARKER

**T**ITANIA'S bower, in Mr. Granville Barker's production of "A Midsummer Night's Dream," is a charming thing of green and white draperies with a few twinkly red and white electric lights overhead. Critics questioned whether the lights were beautiful; Mr. Barker replied that he liked them; and there was an end on't. This spirit of Mr. Barker and his associates is what makes the plays which New York has been seeing so delightful. They are fancy-free and as daring as a March wind.

Even when one sees a brilliant silver and black palace set in Athens, or a large and cheerful pink spot on a drop suggesting an Athenian street, or an extravaganza of orange and black in a costume, or golden-faced fairies, or a forest made of a great spotty portière, riotous with greens and blues and purples, the most sophisticated theater-goer, trained to stage realism, cannot laugh at them. They are too obviously good-humored; one chuckles and admires, for they all betray the whimsical artist who fillips convention and frolics with his brushes.

Mr. Barker's work is of serious import as an element in the growing movement toward a theater free from unimaginative practise and commercial ideals; but it is humorous, too, with that subtle humor of color and line that enriches the flavor of the text.

### HIGH DIPLOMACY

**A**MORE admirable and effective diplomatic communication than the reply of this Government to the Imperial German Ambassador on the subject of neutrality and the trade in arms could hardly have been written. It is infused with perfect courtesy and consideration. It offers patient and painstaking reiteration of considerations that should long ago have been self-evident to its recipient. Its temper is irreproachable—and the purpose which it announces is inflexible. There is nothing in it to which the most captious might object; nothing which the most wilful might misunderstand.

The German Ambassador is told with perfect good humor but with unequivocal firmness that he has ventured to discuss subjects with which the German Government has no concern; that he has used language which is susceptible of being construed as impugning the good faith of the United States; that it is taken for granted that no such implication was intended; but that His Excellency is evidently laboring under certain false impressions. This is a stern rebuke, which loses nothing of its sternness by reason of its tone of irreproachable courtesy.

Proceeding to the substance of the Ambassador's complaint the note declares that the United States has yielded none of its rights as a neutral to any belligerent. Referring to the acceptance by the United States, as a matter of course, of the right of visit and search, the note adroitly shifts the burden of criticism to the German side in words which can only refer to the German warning as to the possible treatment of neutral vessels by its submarines: "It [the American Government] has, indeed, insisted upon the use of visit and search as an absolutely necessary safeguard against mistaking neutral vessels for vessels owned by any enemy."

In conclusion, the note sets forth the unassailable position of the United States that it is not within its choice, in view of its profest neutrality and its diligent efforts to maintain it in other particulars, to interfere with the exportation of arms to the belligerent countries. The placing of an embargo on the trade in arms at the present time would be an unjustifiable departure from the principle of strict neutrality, to which this country is unalterably committed.

It is gratifying to have the United States represented in the present world crisis by diplomacy of the high order exhibited by this note to Germany.

### A WORLD COURT

**O**N May 12, 13 and 14 there will be held in Cleveland a World Court Congress. Mr. Taft, Judge Parker, John Hays Hammond and many other distinguished publicists will be present and take part in the deliberations. The Judicial Arbitration Court was created by the Second Hague Conference. Its constitution and method of procedure have all been agreed upon by the nations—all except the detail of the method of apportioning fifteen judges among forty-five nations. We hope that Elihu Root, James Brown Scott and others are right when they believe that the time is now ripe—even before the war ends—for establishing this court. But let the Conference remember that the most important thing about a court is its *jurisdiction*, not the method of electing judges, or their quality, and that any scheme is likely to provoke opposition that puts the judicial power exclusively in the hands of the big powers, as was proposed by the United States at The Hague and later by Secretary Knox.

### HOW DOES JOHN BULL LOOK?

**T**HE custom of reprinting in a single magazine cartoons from various sources shows that there is a wide difference of opinion as to racial characteristics. Take, for instance, the Englishman. The American cartoonists have followed the British tradition in representing John Bull as a short, jolly but determined looking gentleman of rotund corporation with a broad smile on his thick lips and drest in the costume of a squire of the last century. But the John Bull of the continental cartoons is quite the opposite in appearance. He is very tall and thin, with a sour visage, a hatchet face, retreating chin and rabbit teeth projecting from his half-open mouth. He usually wears an ill-fitting suit of traveler's tweeds or highland kilts. We are not speaking particularly of the German war cartoons, where there is an

extra touch of malice, but of the stock type of the French, Italian and German artists in ordinary times. Which of the two, if either, comes nearest to the physiognomy of the average Englishman? A true caricature must be the accentuation of a real trait, an exaggeration of whatever strikes the stranger as the distinguishing mark of nationality. We may put it in mathematical language by saying that a caricature is the graphical symbol of the difference between the observer and his subject.

The difference between the Briton's opinion of himself and his neighbor's opinion of him extends to more things than the physiognomy. "Merrie England," those who live there love to call it, but continental visitors are invariably struck by its sadness and dreariness. The particular virtue on which the Englishman prides himself is truthfulness and frank honesty, yet "perfidious Albion" has become proverbial and the most friendly writers from over the Channel take pains to explain that the English are not really hypocritical but merely given to the habit of shutting their eyes and making believe.

### DIAGNOSIS BY JURY

THE case of Harry Thaw, the insane killer of Stanford White, has taken a new turn. A jury is to be asked to pass upon the question of Thaw's sanity.

This is as absurd as if a jury of twelve men—farmers, clerks, grocers, plumbers, bookkeepers—were asked to decide whether a man had smallpox before he could be deprived of his liberty by committing him to a detention hospital.

Thaw was not executed for killing White solely because he was declared insane. As an insane criminal he is properly considered a menace to the community and confined. He should be kept in confinement until he has regained his sanity, if he ever does. The question whether he has returned to sanity is one not for laymen but for physicians.

The responsibility for ascertaining this fact rests upon the state, whose duty it is to protect the public from the menace of an insane person who has shown homicidal tendencies. Thaw should remain in confinement until the state shall determine, thru whatever expert medical inspection it chooses to avail itself of, that he has become sane.

Diagnosis by jury is as absurd and as iniquitous in the case of insanity as it would be in the case of smallpox or yellow fever.

### CONSTANTINOPLE UNDER AMERICAN CONTROL

A NOVEL solution of the Constantinople question is suggested in *The Near East*, one of the best informed of journals on such subjects. The proposal is that the United States "should offer or be invited to hold the city in trust for the world at large," and it is urged that "such a scheme would go as near to reconciling all the conflicting opinions as any scheme could possibly go." This international waterway between the Black and the Ægean Seas is too important to all the European powers to be left in the hands of any one of them. That is why they hitherto intervened whenever the Turks were likely to be expelled. It is doubtful even now if the other Allies would consent to the acquisition

of Constantinople by Russia. But Russia might well be content with an international guarantee of freedom of passage through the Dardanelles and Bosphorus, especially if she obtains some other southern port such as Alexandretta. It has been proposed to give Constantinople to the King of the Belgians, but if the neutrality of Belgium before the war was in doubt she certainly cannot be neutral now.

The United States is the only one of the major powers which cannot be suspected of territorial ambitions in the Balkans, and we have always a friendly interest in Constantinople, as our colleges there prove. The proposer of this scheme says: "The only party likely to raise any real difficulties over the adoption of this plan would, I think, be the United States," but he adds: "The job should appeal to Uncle Sam by its very bigness, and I hope he'll think about it—and take some prompt action."

He is quite right in supposing that America will not be eager to proffer her aid in solving the problem that has involved the world in war. It is only a few years since we responded to a similar appeal from this quarter and sent Morgan Shuster to straighten out the finances of Persia. He was altogether too successful, and just when it seemed that he was about to restore financial and political independence to Persia he was removed by the joint action of Russia and Great Britain.

### FEEDING THE ENEMY

WHILE the Germans are trying to starve out the British and the British are trying to starve out the Germans by cutting off the food supply of the whole nation, warfare in Galicia seems to be conducted on more humane principles—at least on occasion. An instance of literal compliance with the Old Testament injunction, "If thine enemy hunger give him bread to eat," is reported by Fritz Kreisler, the Austrian officer and violinist, in his *Four Weeks in the Trenches*. At the beginning of the war, when the Austrian troops were entrenched before Lemberg, they were surprised to see the Russian officer in command of the enemy's lines advance with an orderly and a white flag. They were still more surprised when, after being blindfolded and led to the Austrian major, the Russian explained in broken French that his men had been left without supplies for several days and were in danger of starving. Accordingly he had come over to see if he could not borrow enough food to last until the Russian commissary made connections with his command.

The Austrian major, amazed and amused at the naivety of the request, or moved by the manifest exhaustion of the Russian emissaries, sent a sack along the trenches, and each of the Austrian soldiers, standing there knee-deep in the foul swamp water, threw in some fragment of his own scanty rations. While this collection was being taken the Austrian officers provided a banquet for their guests out of their cherished reserves, a can of beef, a slice of salami, two tablets of chocolate, crackers and cheese. The Russians thanked their enemy hosts with tears in their eyes and departed for their own lines, with a sack of provisions as heavy as they could carry.

Apparently the starving garrison of Przemyśl did not think of this simple way of getting food when the Russians were besieging that fortress.

# THE STORY OF THE WEEK

## The Battle of the Ypres Canal

While the British were engaged in repelling the charges on Hill 60, south of Ypres, the Germans surprised them by a vigorous attack north of Ypres, by which they made a gain of over five miles and obtained a foothold on the western bank of the Ypres Canal. The German troops had been massed for this movement on the line between Steenstraate and Langemarck, about five miles northeast of Ypres, and on April 22 a forward rush was made which carried them half the distance toward the city. The advance was covered by fire from the artillery concealed in the forest behind the German lines. The attacking forces had to pass over open ground covered with wire entanglements, while the British machine guns struck them in face and flank, and mines were exploded under their feet. Nevertheless, the Canadian contingent stationed at this point had to give way, leaving to the enemy four of their 4.7 inch guns. These were later recovered by a bril-

liant charge after reinforcements had been brought from the rear.

On the left of the Canadians a body of French zouaves and marines were stationed, and still further to the north along the canal was a Belgian contingent. Both were driven back by the impetus of the German right and had to abandon the western side of the canal at the villages of Lizerne and Het Sas. These were, it appears, afterward regained. The Germans took 2470 prisoners and thirty-five cannon. The losses on both sides are said to have been very heavy.

The success of the German assault of the Allied lines north of Ypres is laid by the British accounts to their use of bombs which spread poisonous and asphyxiating gases. These are said to kill or stupefy all the men in the vicinity of a bursting shell, and the fumes are alleged to extend more than a mile. Such weapons are contrary to The Hague rules, but the German official reports have repeatedly charged the French and British with using them. All the governments deny the use of any illegal weapons of this nature, and it has been generally supposed in this country that the accusation came from the fact that the gases naturally evolved in the explosion of a shell filled with picric or other nitric powder might suffocate and stain yellow the skin of nearby men who were unhit by the shrapnel. The Germans, however, admit using at Ypres hand grenades which evolve a heavy, stifling smoke, apparently a modern form of the old Malay stink-pot.

If the rumors of German movements in Belgium are correct the attack on Ypres is not merely for the purpose of checking the British advance, but is a renewal of the effort of last fall to force a passage to Calais. It is said that 80,000 fresh German troops have been brought from Aachen to the Yser within the past week and that these reinforcements are in part composed of new recruits and in part of Hindenburg's veterans from Poland.

For the last six months the Hill 60 battle line in Flanders had remained practically stationary. The irregularities had been mostly smoothed out in the course of the long conflict, and the line ran nearly straight north and south except for a bulge of about five miles toward the east around the ancient city of Ypres, which has been held

## THE GREAT WAR

*April 19*—British hold Hill 60, captured April 17, against repeated German attacks. Austrians attack Russian right and left in Carpathians.

*April 20*—Russians evacuate Tarnow, Galicia. German airmen drop 100 bombs on Bialystok, Poland.

*April 21*—Austrians take 12,000 Russian prisoners at Uzsok Pass. 35,000 British and French land at Enos to attack Constantinople.

*April 22*—French take half mile of trenches in Ailly wood. Germans cross Yser Canal north of Ypres.

*April 23*—Germans explode five giant mines near Beausejour, Champagne, but French occupy the excavations. Russian cavalry again raid East Prussia, near Memel.

*April 24*—Germans lose Lizerne and gain St. Julien near Ypres. Fighting at Combres, Woevre.

*April 25*—Germans attack from La Bassée. Anti-war riots in Trieste.

by the Allies. But now, altho the spring campaign has only begun, there are already two decided changes in the line, for the British have made an eastward thrust south of Ypres and the Germans have made a westward thrust north of Ypres.

The British attack was directed toward the low ridge overlooking the plain designated on the military maps as "Hill 60." This stands between Zillebeke and Hollebeke on the eastern side of the canal and railroad from Ypres to Comines; on the French border. This hill, which has been held by the Germans since October, has served as a screen for their heavy artillery posted on the higher ridges to the east, so they have been enabled to shell Ypres and the Allied positions along the Yser Canal at will. The capture of the hill was due to the British sappers, who had been engaged for months past in driving tunnels in order to undermine the German trenches. The Germans, learning of their operations, had been countermining, and it is said that they would have blown up the British tunnels within a half an hour if the British had not anticipated them by igniting their mines under the outer line of defenses on the hillside. By the explosion of the mine on the evening of April 17 many of the Germans were killed or wounded, and the rest of the defenders of the first trench were so demoralized by the shock and heavy artillery fire following it that they offered little resistance. The second line was stoutly defended, and the

THE BATTLEFIELD OF YPRES

The struggle now going on about the old Flemish town of Ypres seems likely to develop into one of the bloodiest actions of the war. So far honors are even. The British have captured Hill 60, which stands between the villages of Lillebeke and Hollebeke and commands the railroad leading from Ypres to the French frontier. The Germans have advanced from Poelcapelle and Langemarck to St. Julien and Het Sas

British suffered heavily in taking it by storm.

During the night the British troops were occupied in putting the captured trenches into a state of defense, altho the Germans, knowing the exact range of the hill, showered it continually with shell and shrapnel. Shortly after daybreak compact masses of gray-coated troops were seen advancing over the plain to attack their lost position. The British mowed them down by ranks with rifle and machine fire, but each time they reformed and repeated the attack, until finally darkness put a stop to the fighting. On the following day the Germans renewed their efforts, but with no more success. Their losses in trying to regain Hill 60 are estimated in the French official bulletin at 3000 to 4000 men. The number of prisoners taken by the British is very few, four officers and forty-five men.

#### The Land Attack on Constantinople

The military expedition which has been prepared to coöperate with the naval forces in the reduction of Constantinople has been in part landed on the coast of

#### ATTACKING CONSTANTINOPLE BY LAND

A force of British and French troops has been landed at Enos, near the new Bulgarian boundary line, and is expected to march thru Thrace for the purpose of taking Constantinople in the rear, while the Russian fleet is trying to force the Bosphorus and the Anglo-French fleet the Dardanelles. Other forces are said to have been landed on the Gallipoli peninsula at Cape Suvla and the isthmus of Bulair.

European Turkey. The troops were assembled at Alexandria, Egypt, and then transported to the island of

Lemnos, from which they are being conveyed to the mainland. The number so far brought to Lemnos is supposed to be 35,000, altho, on account of the strict secrecy imposed at all points, very little is known about the movement. The expedition is said to be under the command of Sir Ian Hamilton, instead of the French General d'Amade, as at first reported. General Hamilton has taken part in most of England's wars for the last thirty-five years. He marched to Kandahar under Roberts in 1880 and to Khartum under Kitchener in 1884. He fought in the first Boer war of 1881 and took part in the defense of Ladysmith in 1899.

The Anglo-French expedition is said to have made its first landing at Enos, which is as far away from its objective as possible, since it is near here that the new boundary line of greater Bulgaria touches the Ægean sea. From this point to Constantinople is over 150 miles. Landings are also said to have been effected at Cape Suvla, on the western side of the Gallipoli peninsula, and at the isthmus of Bulair. British troops occupied the tip of the peninsula as soon as the forts at the entrance to the Dardanelles were reduced, and no doubt a landing could as well be effected at Suvla, but it is surprising to hear of a landing at Bulair. This is the narrowest part of the peninsula and has been several times bombarded by the French and British warships in the Gulf of Xeros, but putting troops here is a different matter, since they would at first be greatly outnumbered by the Otto-

Holsinger

#### THE UNIVERSITY OF VIRGINIA'S FOUNDER

This statue of Jefferson, the gift of Charles R. Crane, was unveiled on the University of Virginia's beautiful campus on April 13, a few days after the sculptor, Karl Bitter, had been killed by an automobile in Broadway.

man forces on either side. Bulair was supposed to have been well fortified against a land attack. It is said that 350,000 troops have been collected for the defense of Constantinople and placed under the command of Field Marshal Baron Kohmar von der Goltz, the German officer who organized the Turkish army and planned the Turkish fortifications several years ago.

The mystery of the "Manitou," the British transport which was reported last week to have lost fifty men altho *not* hit by a Turkish torpedo boat, is cleared up by an explanation of the Admiralty Secretary in Parliament. It appears that the torpedo boat "Demir Hissar" ran the blockade of the Dardanelles about a month ago and has been chasing troopships in the Ægean ever since. Finally she came across the "Manitou" conveying British soldiers from Alexandria and, with unaccountable generosity, gave her eight minutes in which to put off her troops in boats. Then two torpedoes were launched at the empty ship without taking effect. But some of the boats capsized, so that twenty-five of the soldiers were reported drowned and as many more missing. Then the "Demir Hissar," being pursued by British warships, ran aground on the island of Chios and her crew have been interned by the Greeks.

A British submarine, "E-15," was swept out of her course in the Dardanelles and ran aground near Kephez Point. After being struck by a couple of shells from the Turkish batteries she was abandoned and twenty-four out of her crew of thirty-

one were rescued by the Turks. Lest the submarine should be repaired by the enemy, a British aviator blew her up by dropping bombs on the periscope and conning tower, which stuck up out of the water.

The superdreadnought "Queen Elizabeth" has been joined at the Dardanelles by her sister ship, "Warspite," also completed since the war began and even more formidably armed, since her eight big guns are of 16 instead of 15-inch caliber.

#### The Carpathian Deadlock

The Russian advance thru the Carpathian passes has made no further progress during the week, tho whether this is due to the melting snows or to the Austro-German opposition is indeterminable. An official statement from Petrograd reviewing the recent operations declares that the Russian troops have successfully accomplished their object, which was not the invasion of Hungary, but the regaining of old Russian territory and that the movement which began on March 19 had by April 12 resulted in the seizure of the principal chain of the Carpathians for a distance of seventy-five miles and the capture of 70,000 men, 900 officers, thirty cannon and 200 machine guns.

On the other hand, the German advices indicate that the Russians have not only been checked in Hungary but thrown on the defensive in Galicia. The Austrian and Bavarian troops under General Litzinger made their way in considerable force thru the Uzsok and Beskid passes on the

extreme east of the Russian line and attacked the enemy's left flank on the Galician side of the range in conjunction with the troops from Bukovina.

At the same time the right end of the Russian line was outflanked by an attack along the Donajec River. This forced the Russians to fall back some twenty miles toward the east, evacuating Tarnow, which is as far as they had got on their last drive toward Cracow. They also retreated from Neu Sandec to Gorlice, but claim to have recovered this ground a few days later. Obviously the success of either the Austrian movement from the east or from the west would take in the rear the Russians in the Carpathians or compel them to withdraw from the passes.

#### Japanese Demands on China

The negotiations between Japan and China are said to have reached a critical point, and it is even reported that Japan has issued an ultimatum demanding the acceptance of her chief demands within a few days. The points which President Yuan is most reluctant to grant are understood to be the demands of the Japanese for exclusive rights in the Fukien province, for a share in the police of the principal Chinese cities, for half of the armament contracts, for the railroad and mining concessions of the Yang-tse Valley, and participation in the administration. On the other hand, the Chinese Government has conceded practically all the privileges demanded by Japan in Manchuria, Eastern Inner Mongo-

## THE LINE OF BATTLE

According to the calculation of the *Paris Matin* the front of the Allies is divided up as this diagram indicates

lia and the Shantung peninsula, as well as the right to establish schools and hospitals, to travel and settle in China, and to propagate Buddhism.

American missionaries resident in China have cabled to President Wilson a 5000-word protest against Japanese demands. The message has not been given to the public, but is understood to be an argument that, unless our Government supports China in her resistance to the Japanese encroachments, American interests in the Far East will be sacrificed and the Chinese republic imperiled. Our Government seems reluctant to take any action in the matter, but it is reported that the American Minister in Peking, Dr. Paul S. Reinsch, has been instructed to inform the Chinese Government that the United States approves of the attitude of China in refusing to grant preferential treatment to Japan which would impair American treaty rights.

In England there is a growing dissatisfaction at the tacit acquiescence of the British Government toward the Japanese demands, even when these are in conflict with British concessions, as in the case of the customs service and the Han-Yang iron works. A number of questions on the subject have been asked in Parliament of the Foreign Office, to which Sir Edward Grey made the general reply that the British Government would use its best efforts to secure equal opportunities in China for the commerce and industry of all nations.

The Chinese Government has accused Japan of fomenting rebellion and protecting brigands in Manchuria and Shantung, and issued a protest against the continuous accumulation of troops in Chinese territory. There are now said to be over 150,000 Japanese troops on the continent. A troop of Japanese artillerymen with eight Gatling guns have been housed in the legation at Peking. The response of Japan is that the numerous manifestations of anti-Japanese feeling among the populace have made such precautions necessary. President Yuan Shih-kai has officially denounced as a traitor Sun Yat-sen, whom he suspects of

instigating another rebellion against his authority. The effort made by Dr. Sun two years ago for the overthrow of Yuan was supported by the Japanese, and after the collapse of the rebellion Sun fled to Japan, where he has since remained.

Our Great Our exports continue  
Exports to be very large. In  
March they amounted  
to \$299,009,563, greatly exceeding  
those of any March in past years.  
Secretary Redfield predicts that the  
total for the year ending with June  
will be \$2,750,000,000. For nine  
months the amount has been \$1,933,-  
475,000. While the growth is due in  
part to supplies used only in war, it  
has been caused also by greatly in-  
creased shipments of wheat, corn,

oats, flour and meat. In nine months breadstuffs show a gain of \$294,000,000. When comparison is made between March of this year and March a year ago, some striking changes are seen. For example, exports of oats have risen from 81,000 to 9,474,000 bushels, and those of canned beef from 265,000 to 6,930,000 pounds. What the Government calls war material has been going out recently at the rate of about \$20,000,000 a month, and the total for the six months ending with February was \$92,415,000, the largest increases being assigned to horses, auto trucks, woolen goods, cartridges and explosives. In six months the shipments of horses, auto trucks, aeroplanes and motorcycles amounted to \$46,736,000. There were 149,598 horses, valued at \$32,000,000.

The excess of exports over imports demands consideration, of course, as it is highly favorable to this country and makes Europe a debtor for a very large sum. This excess in March was \$140,969,347. In September last the excess was only \$17,000,000. It has grown rapidly. For the nine months ending with March it was nearly \$720,000,000. There are no indications that the monthly balance in our favor will fall below \$125,000,000 while the war continues.

Orders for War Supplies Some of the reports about great orders for shrapnel, which affected the stock market week before last, were not well founded, but exact information concerning the order placed in Canada, and the sub-contracts in this country, has been given to the public. Russia's order to the Canadian Car and Foundry Company is for \$83,000,000 worth of shrapnel. That company and other manufacturers in Canada will do about three-eighths of the work (or enough to call for \$31,171,000) and the remainder will be done in the United States. Sub-contracts have been given to thirty-seven manufacturers here. Their names and the quantities assigned have been published. In some cases the amount is less than \$100,000. The largest allotment is \$6,000,000, to the Recording and Computing

AT THE CIRCUS

Machine Company, of Dayton, Ohio. Negotiations are pending for contracts of \$10,000,000 each, with the American Locomotive Company, the Pressed Steel Car Company, and the United States Cartridge Company. The first of these is the company whose shares have greatly advanced in price. It is said that the Canadian company has an option on all similar orders to be given by Russia, and that Russia will advance large sums to it from time to time. It is estimated that the profits on the contract for \$83,000,000 will be \$20,000,000. The Westinghouse Air Brake Company has, it is said, a shrapnel order of \$20,000,000 from France and an order for \$1,000,000 worth of brakes from Russia.

Within a few days there have been orders for \$1,000,000 worth of aeroplanes, and the manufacturers are

very busy. Russia has placed a new order for \$15,000,000 worth of field and machine guns. The Lackawanna Steel Company is to make \$2,250,000 worth of steel for shrapnel. A company in Chicago has a foreign contract for \$2,000,000 worth of benzol. There are reports about a very large order, placed with a car building company, for army wagons. Chicago packers have a new order for 2,000,000 pounds of beef. To the American Woolen Company have been given orders for uniform cloth. Some reports say that the value is \$7,000,000. Belgium has bought 500,000 yards from four firms in New York. The Remington Arms Company continues to enlarge its plant, on account of its orders.

#### The Terre Haute Convicts

Donn M. Roberts, mayor of Terre Haute, and fourteen others recently sentenced to be imprisoned for election frauds, were carried from the jail in Indianapolis, on the 18th, to the Federal penitentiary in Leavenworth, Kansas. As they left the jail, eighty-two other residents of Terre Haute, who were punished by jail sentences for the same frauds, said goodbye to them. They passed thru Terre Haute, but several thousand people waiting at the station were not allowed to see them. The car was closed and the window curtains drawn down.

The Terre Haute saloons were closed, for the first time, on a Sunday, it is said, in twenty years. James Gossom, acting mayor, remarked that the people demanded a change of this kind. At the penitentiary the mayor and his convicted associates were photographed, and their Bertillon measurements and finger prints were taken.

Five days later the mayor was impeached by the city council of Terre Haute. There were thirteen charges, one of them alleging that he had attempted to bribe members of the council. Several of the convicts—Sheriff Shea, Sealer Walsh, Street Commissioner O'Mara and others—have resigned. The state's Attorney General has applied to the state's Supreme Court for the impeachment of Circuit Court Judge Redman, who was sent to the penitentiary for five years.

With one exception, a Progressive election officer, all who pleaded guilty or were convicted are Democrats. The trial of five Republicans for fraud at the same election will soon take place. Their names, and the offices for which they were candidates, are as follows: Roy L. Shattuck, for Congress; William S. Fears, county recorder; William E.

#### MEXICO'S NEW STRONG MAN

By his defeat of Villa, General Obregon becomes for the nonce Mexico's military leader, unquestionably stronger than his chief, Carranza. His harsh measures while in charge of Mexico City do not promise well if his power should increase

Myers, county assessor; Morton H. Holmes, county commissioner; Warren Soules, county treasurer. It is alleged that they conspired with Mayor Roberts and other Democrats, seeking to secure their election by fraud, and paid \$950 for the work which was to be done.

#### The Defeat of Villa

The situation in Mexico has been greatly changed by the crushing defeat of Villa at Celaya in a battle with Obregon, Carranza's leading general. There were conflicting reports about this battle, but it is now known that the account given by Obregon was substantially a true one. He declared that Villa had been routed, with a loss of 14,000 men killed, wounded or captured, and forty-eight cannon. Villa and Carothers, the agent of our Government who was with him, have admitted a loss of 6000 men. Villa had said in a telegram sent to his brother at El Paso just before the engagement that it was to be the greatest battle of his career and that he would win or die. It is reported that defeat so enraged him that he shot several of his officers. He quarreled with General An-

WILLIAM R. NELSON

The late editor and owner of the *Kansas City Star*, whose will establishes a trust fund "for the purchase of works of fine arts, such as paintings, engravings, sculpture, tapestries and rare books, the purpose being to procure in this manner works which will contribute to the enjoyment of the public generally, but are not usually provided for by public funds." These collections are to remain in Kansas City

geles, his chief of artillery and recently his candidate for the presidency. Angeles censured him for failing to follow, in the battle, a plan devised by himself. Whereupon Angeles was arrested for insubordination and his successor was appointed. Some days later, however, there was a reconciliation. "The misunderstanding," said Villa in a telegram, "has been adjusted. He is a most efficient and loyal officer."

Villa retreated to Irapuato, which had been his headquarters. Abandoning this place, he took his beaten army northward to Aguascalientes. There and at Torreon he sought to assemble a force that would check Obregon.

Villa had been accustomed to boast that he had never lost a fight. Because of this defeat he suffers in the estimation of those who have followed him. Consequently there have been desertions. Garrisons in the north are wavering, and the Villa movement on the west coast is losing force. His quarrel with Angeles, the shooting of subordinates at Celaya, and the subsequent execution of four residents of Torreon have caused distrust and fear in his own army.

#### Our Policy in Mexico

There has been published at Washington a long letter sent by Secretary Bryan to the Rev. Francis C. Kelley, of Chicago, president of the Catholic Church Extension Society, concerning our Government's policy with respect to Mexico and the efforts made in behalf of Catholics there. There can be no permanent pacification, Mr. Bryan says, until the land question is justly and wisely settled. And democracy must be sustained by education. "Above and beyond all, the full flower of democracy, lies religious freedom, the principle which the builders of our own republic made the crown of the whole structure."

The Administration, he continues, has not felt at liberty to play any part in the internal affairs of Mexico except that of friend and adviser, although it is in some peculiar degree charged with the duty of safeguarding, so far as it may within the limits of international privilege, the lives and rights of foreigners in that country. It has repeatedly advised and warned those in authority as to the "fatal effect any disregard for the lives or rights of those who represented religion, or any attack upon liberty of conscience or of worship, would have upon the opinion of the people of the United States and of the world."

He cites messages of warning sent to Villa and Carranza, and con-

cludes by saying that the Mexican leaders must realize that, in order to command the sympathy and moral support of America, Mexico must have, when her reconstruction comes, just land tenure, free schools, and true freedom of conscience and worship.

In reply, Father Kelley says Mr. Bryan must lament the fact that his "very strong telegrams" against persecution of the clergy have had no effect upon the revolutionists, who have continued to subject the clergy to violence and outrage. He finds it a hard thing to contemplate the continuance of this misconduct, but says it is pleasing to know that the advice and warnings were sent.

#### Labor Questions

At the close of the litigation concerning the union boycott of certain manufacturers of hats in Danbury, Connecticut, a judgment of \$252,130 in favor of the complaining manufacturers and against 186 members of the local union was sustained by the Supreme Court. Mr. Gompers, head of the Federation of Labor, recently proposed that Congress should appropriate \$252,130 for the payment of these damages because, he asserted, it was not intended that the Sherman act should be applied to labor unions. But Congress declined to take such action. The successful plaintiffs, Loewe & Co., now give notice that they will satisfy the judgment by selling the real estate of the 186 men if payment be not otherwise made before May 20. The homes of the defendants and their savings bank accounts were attached long ago. The national union of hatters bought the bank accounts, paying their face value, about \$60,000. The value of the real estate is about \$225,000. Some friends of the defendants are saying that the Federation of Labor, which supported the boycott, could by a small assessment pay the damages and save the hatters' homes for them. But such action is not expected. Those who suggest it point out that by assessment the Federation raised \$230,000 for

the defense of the Los Angeles dynamiters.

There is a new controversy between John D. Rockefeller, Jr., and Mr. Walsh, chairman of the Federal Commission on Industrial Relations. The correspondence between Mr. Rockefeller and Mr. Bowers, the managing director of the Colorado Fuel and Iron Company, before and during the memorable coal miners' strike, was given to the commission by Mr. Rockefeller. Much of it has been published by Mr. Walsh with the comment that it contradicts the testimony given by Mr. Rockefeller some time ago concerning his connection with the company's conduct.

The carpenters on strike in Chicago, where building operations were checked and many other workmen made idle by their action, have accepted the proposition of the State Board of Arbitration that members of the board shall act as mediators.

Underwood & Underwood

#### PRESIDENT WILSON'S FATHER

The President spoke the other day before the Potomac Presbytery in Washington, paying a notable tribute to the Presbyterian minister, Rev. Joseph R. Wilson, whose picture is above. He said: "I have not come here as representing the office which I now occupy, because as soon as Doctor Taylor asked me if I could meet with the Presbytery, my thought went back to a time, long before I had any thought of occupying public office, when, thruout a very happy boyhood, I was associated with one of the most inspiring fathers that ever a lad was blessed with. . . . My father was a very lively companion and seemed to provoke and draw out liveliness in other people. He had the very risky habit of always saying exactly what he thought, a habit which in part I inherited, and of which I have had diligently to cure myself. But he was the best instructor, the most inspiring companion, I venture to say, that a youngster ever had, and in facing a Southern Presbytery I cannot think of myself as the President of the United States; I can only think of myself as the son of Joseph R. Wilson."

# FROM THE PEACE ZONE IN THE VALLEY

BY CORRA HARRIS

AUTHOR OF "A CIRCUIT RIDER'S WIFE," "IN SEARCH OF A HUSBAND," "THE RECORDING ANGEL"

**M**EN make war, but they cannot make peace. Peace is. And it always has been since the beginning, when the light was divided from the darkness, when the waters under the heavens were gathered together unto one place and the dry land appeared. "And God said, Let the earth bring forth grass, the herb yielding seed, and the fruit tree yielding fruit after his kind. . . . And the earth brought forth grass and the herb yielding seed after his kind, and the tree yielding fruit whose seed was in itself after his kind. And God saw that it was good."

This is something that we cannot destroy nor change. It was the standardizing of peace upon the principles of everlasting order. It was a treaty made with the stars by the Maker of the stars. The light is still divided from the darkness, the seas from the dry land. The grass springs and the herb yields seed, and the fruit tree fruit after its kind as surely as the sun shines and the rains fall. We change everything else, but we cannot change this. We cannot make night day. Beyond our million little lights the shadows still fall. We join the seas, but the dry land still rises above them. We reap the grass and cut down the trees, but they rise again, immortal from our dust. We are the disease, the disorder in the midst of this health and order and everlasting peace. Flesh is the one transient thing, a kind of proud flesh of nature, which dies as often as it lives, which if it is put into the ground does not rise again—not here. We live again only by faith.

So, the only thing we really can destroy is each other and that which we create ourselves, governments and civilizations. And we do that as often as we have the strength and opportunity. We have never seen peace. With all our getting of wisdom, it passeth our understanding, because we cannot and will not read the green and everlasting script in which it is written all about us.

Photograph by Amelia M. Watson

IN THE VALLEY WHERE PEACE IS

Seven days after one of the great battles in France, last autumn, I visited the place where a thousand men had fallen. A village lay in ruins upon the banks of the river. The earth was seamed with trenches. The silence was like the silence in the Beginning. There was no signs of the life of man, but the evidences of his death were everywhere. Nothing that he had achieved in that place remained—only a long grave in the meadow behind the trenches. This was the epitaph which war had written of him and his works in that place.

But already the order of peace was busy there. The vines upon the blackened walls of the houses were putting forth new leaves. They had not ceased to lift their blossoms when cannon roared and shells bloomed like poppies in the streets of the town. The grass was springing in the dark red smears upon the earth above the trenches. When a thousand men fought, feared and died there, it feared not, and could not die because of that ancient

treaty of peace made in the beginning with everlasting life.

The only thing we can destroy in this world is ourselves. The only peace we can break is our own peace, not the peace of God.

This was the conclusion I reached after traveling up and down thru the war zone in Europe for three months. I perceived clearly for the first time in my life that the only way to accomplish peace on earth and good will to men is not thru treaties with men nor nations, but by keeping the great peace treaty made by God in the beginning. To live as the grass lives, according to the seasons. To love as the flowers love when they bloom in June. To grow as the trees do, fearing nothing, neither winter's cold, nor summer's heat, nor storms, nor anything that is, knowing that all things work together for goodness and peace, except greed and ambition, of which all the earth is guiltless save man.

The days of those three months passed like a horrible dream. Sometimes I walked where hundreds of men lay bleeding and dying of their wounds. Sometimes I saw a long procession of women and children flying from their homes, staggering with weariness, hunger, thirst and terror, and if I sought refuge from fearful scenes in churches, there I beheld other women, and old men praying strange prayers which no God of Peace could answer. And more awful than any of these scenes, sometimes I walked over battlefields where the earth was stained with death and where the silence was terrific. It is impossible for the mind of man to conceive of the destruction wrought by man against man in these battle-burnt countries. Reason staggers and the imagination is appalled by sights more hideous than death. One must refuse to understand what this roaring red fury means or risk madness.

As for me, I had another refuge. Thru all these horrors I carried with me my own heavens and earth. When the German bombs flew over my head

in Paris, I remembered a certain cabin far away in the foothills of the Blue Ridge Mountains in Georgia, where a little wren had her nest in a thorn tree beside the door. When I walked among the graves upon a battlefield, I remembered a Valley where the wheat must be spreading like a green veil. When I saw broken bridges, I remembered the foot log across the creek at home which connects my Valley with the rest of the United States, and I recalled the ford below where many a team stood knee-deep in the cool, green shade to drink as they passed thru. When I saw sentries standing in every field and along every road of France, I remembered other men, weather-browned, bearded soldiers of peace turning the land in the fields at home. When I saw young wives weeping as they parted from their husbands, I remembered the little bride in The Valley whose husband had the farm next to mine.

Above the roar of cannon at Soissons I heard the wind in the pines at home. When I passed thru the great forest at Compiègne, from which the very birds had refugeed, I could see the robins in the Chinaberry tree above the cabin chimney, and a certain covey of partridges who always walked in single file across the hill in the twilight dusk to their secure shelter in the blackberry vines.

All these things, great and small, I said over to myself day by day as a nun tells her beads. And they were like that to me, a faith and a prayer, as far beyond the inferno in which I moved as the sweetness of Paradise is beyond the harshness of mortal pain.

One night at Compiègne when the roar of the cannon at Soissons seemed to be rocking the very earth, I began to wonder as I lay in the terrible red glaring darkness if this was not the reality and my Valley only a dream. From that moment of doubt, I made all haste to sail. I was in a hurry as saints are to verify my faith in a certain place and a peace which I remembered.

**T**HE boat upon which I sailed for New York was nearly destroyed by a mine off the coast of Ireland. When at last we reached New York, I took the first train for The Valley. All the way as the train flew down thru the winter hills I hoped and prayed that I might find it as I had left it, and the people as deeply rooted and kin to the soil.

"But you will not," some one said. "The war has affected this country almost as much as it has Europe. There is much suffering owing to financial depression."

But as I remembered my neighbors they had been poor for so long that they had risen above mere finances. So I persisted in my anticipations of finding one spot upon the earth where man and grass and earth and sky are united in the only treaty of peace that can be kept in this world.

The Valley had not lost a hair of her head. Far and wide the green mist of young grain covered the earth. The trees were all standing upon the hills; not one had gone into bankruptcy. The same fire seemed to be burning still upon the hearth that I had left months before. Nothing was changed except that the wren has taken possession of the kitchen.

**T**HE first person who called was my nearest neighbor. He has a black beard and cheeks that show above it like red winter apples. He smacked his hands before the fire, looked at me as if I were a simpleton who had somehow survived a foolish adventure and shouted in his hearty out-of-doors voice:

"Well, glad to see you back! Is that war agoin' on over there yet?"

"It's just begun," I replied gravely.

He was serious. He really did not know whether the armies of Europe were still fighting or not. We do not take papers in The Valley. And we have few travelers among us from the outside world. The only news current here is furnished each Sabbath day from Moses and the prophets. Saint Paul is the walking delegate of the only reforms we recognize.

"Are they all a-fightin'?" he asked after a pause.

"Very nearly all. War is a terribly contagious disease."

"Who's a-workin' then?" he demanded, going straight to the root of the matter.

"There is no work in the sense you mean," I replied. "A great part of the land in France and Belgium will not grow crops this coming year. It is to be trodden and trenched by the armies. The factories are closed, or burned. All industries have failed."

"How then will the people live?"

"Most of those who are fighting will be killed or wounded, and the rest are starving."

"The women and children starvin'?"

"Chiefly the women and children," I answered gravely.

"But, gosh, they can't stand that!" he exclaimed.

"No, that's how the war will end, the way all wars end, not because one army conquers the other, but when so many of the helpless ones behind the fighting line are without food or shelter that even savages cannot endure the horror of it.

Meanwhile," I added, "you and I and the rest of our people must be taxed to support them."

"Not me!" he announced emphatically.

"Yes, everything you sell brings less on account of this war. Everything you buy costs more, for the same reason," I insisted.

"But I ain't sold nothin' and I don't buy nothin'."

Then he told me that he had 800 bushels of corn in his crib, a barn filled with oats and peas and hay, a hundred bushels of wheat and enough meat "to do him."

"But surely you cannot consume all that!" I objected.

"No, but what we don't use I'll lend to the neighbors, to be paid back after the next harvest."

"But that is foolish. You need the money."

"I'm livin' to see my whiskers turning gray, and I've never needed much money, less, at least, than I do of everything else. It's in the Book that man must live by the sweat of his brow, but it don't say he's got to sweat to keep up them rascals in the stock markets, nor them fools that's wasting their substance fightin' one another!"

This doctrine was soundly scriptural, personally narrow, and it appeared to me almost ignoble in the light of all the suffering I had recently witnessed.

He looked at me, doubted the quality of my silence, and went on by way of defense:

"If the Bible was full of advice about how to buy and sell and get rich, it wouldn't be the Bible. It wouldn't be nothin'. Folk wouldn't read it nor try to live by it. Instead of that it says we shall not kill, and we shall not steal nor covet."

"And that we shall love one another," I interrupted.

"Well, I don't hold nothin' ag'in them heathens that's killin' one another. All I say is that it's less expensive to live according to the Bible than according to the world."

**H**ERE was the earth's grim lord. And the salt of him had not lost its savor. He was not ethically right according to modern economics, but personally he was as deeply rooted in righteousness as one of the pines on the hill above the cabin. He belonged to the soil as faithfully as the faithful—taking from it only what he needed, giving back to it the labor of a strong body.

My neighbor was not an Industrial Worker of the World, he was just a farmer who could dig his own ditches, plow his own fields, and harvest his own crops. Therefore he

did not complain of the labor, nor of the exposure. He has a wife and nine children, a warm house, and substance. He earned it himself, which is as much as should be expected of any man, reckoning from his next remark as he arose and kicked the logs upon the hearth into a roaring conflagration:

"I didn't start that war. I don't believe in fightin', and, if I know it, I'll not waste a cent helpin' them folks to kill one another. It's wrong!"

I REGARDED him with thoughtful interest. He was not a soldier, nor a financier, nor a philanthropist. He was literally a neutral. He was against war. He would neither profit nor lose by it. If this country should adopt his views, forbid the sailing of any vessel to belligerent ports, or any vessel from belligerent nations entering our ports, it might cost us something now and in the future, commercially speaking. But we should have preserved our own peace, developed our own resources, and set an example in real neutrality which would have a definite influence upon all war planning nations hereafter.

"Is there any news in The Valley?" I asked by way of changing the subject.

"We've had a good meeting at Olive Vine Church. Baptized seven converts."

He mentioned this first because relatively it was the most important thing that had happened, as one might mention the increase of trade or an anarchist plot as the most important news, say, in New York.

"Anything else happened?" I asked, after he had mentioned the names of the redeemed and given the details of their struggle for the remission of their sins.

"Dolly's got a baby," he announced, laughing.

He is the father of the little bride whom I mentioned in my stories from The Valley last spring. Dolly was then the newest bride; now she is the youngest mother.

He ruffled his grizzled hair and

combed his beard in the earnest effort to recall any other item of interest.

"Ah, yes, I knowed something else had happened!" he exclaimed presently. "Old Man Pardee died about three months ago. Good man. Give the preacher leeway for a mighty good funeral sermon."

I had been where a thousand men died and were forgotten in a day. But here in this valley we pay closer attention to life and death. When a good man passes he becomes one of the local major prophets. We refer back to him as an authority upon righteousness and the weather. He does not die at all, he lives.

We went out of the cabin presently walking in silence along the road to discuss a broken dam between his farm and mine. I was thinking of his "news," seven souls redeemed from sin, a baby born, and an old saint gone to his reward. This was all worth mentioning that had occurred here during these months when I had been where everything was happening, the old world turned upside down, cities razed to the ground, nations made homeless, women and children starving, a million men killed in battles, or lying wounded and maimed in hospitals.

BUT you will observe this, where men keep the ancient peace of the heavens and the earth: that which transpires is in the course of nature. The seasons change, the harvest ripens, the young are born, the old die, and some receive forgiveness for sins—all a matter of sowing and reaping what you sow. It is not a bad report, but no one would choose it for the sensational feature in the Sunday supplement of a daily newspaper.

"It's fixin' to rain again," said my companion, cocking his weather eye at the lowering clouds as we passed on. "The Valley's been under water twice already. What with everybody fightin' on yon side, and the floods in this side, there's some folks around here predictin' the end of the world.

Say it's in the Bible that way," he added serenely.

"What do you think?" I asked.

"Suits me either way. I can afford to die, and I can afford to live. But I ain't hankerin' to get killed in a fight. Not decent for a man to quit his wife and children like that."

When the man next to the ground yields the hallucination of patriotism and glory in battle, we have made definite progress toward lasting peace. If our country is ever involved in a great war, the Government will be reduced to conscription to get fighting men. That is certain. I have not seen in this valley a single man, young or old, who wants to join the colors. They do not lack courage. They have acquired moral sense.

ALL the days since my return to The Valley have been like this first one. I have recovered my foundations, by sense of security, my faith in the everlasting. The conditions in the old world are more terrible now than when I returned. But I am no longer able to think in terms of horror. My mind is sweetly holden by the peace of this place. There are no searchlights to remind me of London and Paris, only the moon in the heaven. No airships over this valley, only the birds flying about their spring business. No booming of cannon, only the wind in the pines. No ambulances filled with wounded men, only the farm wagons rolling noisily along the valley road. No white-faced women and old men waiting for news from the "front." Providence is the "front" here. And news comes day by day from the warring earth, of life, of growing grain, of flowers in June, and of the harvest to come. The seeds we plant are the prayers we pray, sure of the answer, which always comes since that first day when God foreordained the grass and the herb yielding seed and the fruit tree yielding fruit after its kind. This is the song of peace written in living green upon the earth since the beginning.

*The Valley, Georgia*

## TO A COUNTRY MAIDEN

BY STEPHEN PHILLIPS

Stay thou, maiden, in the dew!  
Tho thy pleasures are but few,  
Be not anxious for the strife,  
And the hustle we call "life"!  
All our ladies stepping fine  
Cannot match thee, sweetheart mine;  
They but glitter, thou dost shine.  
And their faces are but made,  
Fresh at eve, with morn they fade;

Thou art rosiest in the dawn,  
Laughing on the seaward lawn.  
Tripping in a simple gown,  
Go not thou to London town!  
Which is fairer, the cut flower,  
Gracing the hot ball-room hour,  
Or the violet we espy,  
Lighting on it suddenly?  
All these gorgeous blooms I'd pass

To perceive thee, lovely lass,  
Simply growing in the grass.  
Tripping in a fragrant gown,  
Go not thou to London town!  
Maiden, stay thou still in dew,  
Tho thy pleasures are but few;  
Shading hat, with ribbons down,  
Charms me more than any crown;  
Go not thou to London town!

MELVILLE STONE, GENERAL MANAGER OF THE ASSOCIATED PRESS

"I TAKE THE ASSOCIATED PRESS VERY SERIOUSLY. I KNOW THE ENORMOUS PART THAT YOU PLAY IN THE AFFAIRS, NOT ONLY OF OUR COUNTRY, BUT OF THE WORLD. YOU DEAL IN THE RAW MATERIAL OF PUBLIC OPINION, AND, IF MY CONVICTIONS HAVE ANY VALIDITY, OPINION ULTIMATELY GOVERNS THE WORLD."—PRESIDENT WILSON, IN HIS ADDRESS AT THE ANNUAL MEETING OF THE ASSOCIATED PRESS

# PLAYHOUSE PROGRESS

WHAT GRANVILLE BARKER AND WINTHROP AMES  
HAVE DONE FOR THE ART OF THE THEATER  
BY MONTROSE J. MOSES

IT is invigorating to find two theatrical managers at the present time in New York whose interests are engaged on the side of culture and whose efforts indicate a steadfast adherence to ideals of beauty. These men are both young; there is a difference of only six years between them in age; and they have both won the confidence of that part of the public seeking intellectual enjoyment. Toward Winthrop Ames on one hand and toward Granville Barker on the other, our attention is turned as the channels of best effort in our theater today, outside the conventional theatrical field.

Most of our managers have been born inside the theater; they have risen from the ranks, and have developed in strength and power with the evolution of theatrical conditions. They have grown from the lowest position of call boy or usher, to the highest position of dictator of theatrical policies. In other words, their

*Granville Barker came to New York this winter and at the old Wallack's Theater, now to be demolished, produced Shaw's "Androcles and the Lion" and "The Doctor's Dilemma," Anatole France's "The Man Who Married a Dumb Wife," and "A Midsummer Night's Dream." The fashion in which he put on these plays made this the most significant dramatic event of the year. His relation to the theater of enlightenment calls to mind the American manager whose purposes and interests parallel his own, Winthrop Ames, whose "Little Theater" was the first of New York's intimate playhouses. Mr. Moses has served the readers of The Independent as dramatic critic for several years and is the author of numerous books on dramatic subjects.—THE EDITOR.*

traditions have been those of the "show" business. That is nothing against them, except in so far as it

serves to limit their intellectual point of view. Power and experience have been their education, and men like David Belasco and Charles Frohman have put commendable impress on the theater in America. But the time has arrived when a new type of theatrical manager is coming to the front. Ames in New York, and Barker in London are examples of the type.

There are no men more different in their inheritance than these two; yet there are no two men whose experiences in the theater have been more alike. When you meet Winthrop Ames you are confronted by a certain formal finesse which is readily accounted for by the dominance of his Puritan ideas, his Boston traditions and his Harvard training. But Granville Barker meets you with a certain rugged youthfulness which is indicative of the fact that he has no formal ideas to adhere to, no collegiate training to make him precise. As far as the theater is concerned, Barker had

AN ATHENIAN PALACE IN SILVER, BLACK AND ROSE

At the wedding festival when Bottom and his crew play "Pyramus and Thisbe" the stage audience is curiously disposed on the apron stage, close to the real audience, on whom they turn their backs. The rich costumes of the wedded couples, the fantastic ones of the players, and the brilliant setting against which they are seen make the picture as rich as it is novel

GRANVILLE BARKER

"He meets you with a sort of rugged youthfulness. Barker is impulsive; he speaks from the heat of the moment, yet with conviction"

much the start of Winthrop Ames, because he was born of a theatrical family. Ames's New England forebears would turn in their graves at the thought that one of their line would be associated with "painted people." But his determined interest in the drama from his college days widened as the years advanced, and tho Ames devoted a great part of his time to architecture, even entering the publishing business, the theater was uppermost in his mind. On the other side of the water, Barker was receiving a different education; he went into the theater just at the moment when London was being stirred by independent movements for the betterment of the English stage, when Ibsen was being taken up by the less conservative managers, when certain actors were clamoring for intellectual freedom. He entered the profession on the side of acting, playing with Ben Greet in Shakespeare, with the Stage Society in Elizabethan drama, and with various English actors of note. And at the same time he was likewise coming into intellectual contact with Bernard Shaw and Sidney Webb and the Fabian School of Socialists, who were intellectualists as well as agitators.

If Harvard was Ames's *Alma Mater*, G. B. S. has proven to be Barker's intellectual father. Without his friendship for Shaw and his conversion to socialism, I doubt whether we would have had such plays from his pen as "The Voysey Inheritance," "Waste" or "The Madras House." On the other hand, I would not in any way describe Barker as an imitator, in the sense that the Irish playwrights imitate Synge. Those of us

points because, as a theatrical manager, I believe that Mr. Ames is more of a phenomenon than Mr. Barker, since his theatrical initiative has come from himself rather than from any environment of an intellectual nature immediately around him.

In 1904 both men entered definitely into the field of theatrical management. With means at his disposal, Winthrop Ames took over the Castle Square Theater in Boston, a house that had been thru diverse financial experiences, and there he established a stock company which did as much to educate him in the game of practical theatricals as it did to amuse the Boston public.

Barker, at this juncture, former his partnership with Mr. Vedrenne, a London theater man, and together they started that distinctive career of the Court Theater which has meant so much to the dramatic renaissance of London. They produced such plays as Shaw's "Candida," "Major Barbara" and "Man and Superman," and to the wonderment of the theatergoing

who have read Barker's printed plays cannot but feel that, in comparison with the dramas by Shaw, they have an individual style of their own, a closer technique.

All of this radicalism to which Barker was subjected in his formative period was stranger to the environment of Ames. The former has always been liberal in his political tenets, but I doubt whether Ames could break away from the Republican party any more than he could depart from his New England traditions. I

emphasize these

public they made Euripides, thru the poetic translations of Gilbert Murray, a popular dramatist. And when the partnership dissolved, then Charles Frohman was ready with his London repertory theater experiment and Barker was able to watch what that American manager did. For one of the dominant desires in the mind of Granville Barker is to establish a Repertory Theater; it is his firm conviction that only such a theater will be able to nurture plays that have no wide popular appeal, yet that contain in them intellectual strength and poetic beauty.

Mr. Ames ended his Castle Square venture and Mr. Barker his Court Theater experience at the same time. It was now that their paths were to cross, theatrically, for the first time. A group of rich men decided to erect

WINTHROP AMES

"When you meet him you are confronted by a certain formal finesse which is readily accounted for by the dominance of his Puritan ideas, his Boston traditions and his Harvard training"

ONE OF THE SYMBOLIC DROPS FOR "A MIDSUMMER NIGHT'S DREAM"

A moonlit sky in deep blue and purple and green, with the fairy king and scarlet-clad Puck in the center and three ill-assorted lovers at the sides

in New York a theater devoted to the real art of the drama and supported by generous subsidy. Ground was bought for the experiment and an artistic head was selected. The history of Heinrich Conried's connection with the New Theater is well known. With the operatic bee in his bonnet—for he was then director of the Metropolitan Opera House—he had architects draw plans of a place that is suited only to song and dance, and the directors had the foundations built. Then Mr. Conried died, and the hunt for a new Director began. Barker was sent for from England; Ames was sent for from Boston. With the exuberance of a man who has argued it all out to himself, Barker looked at the foundations and with an impulsive sweep of the hand declined to give the post consideration. Upon the shoulders of Winthrop Ames the ungrateful task fell. So Barker sailed away to London to do further interesting things at the St. James's Theater.

We have been told too often about the struggles which beset Ames at every corner, and there were many corners in that huge building. But this much we can say for him—with physical difficulties in his way, while the gallery audience needed binoculars to view the stage, while everywhere there were needed sounding boards to magnify the voices of the actors—in spite of all that, Mr. Ames gave us a repertory which was interesting, which was well done, which, in artistic worth, was better than anything we were getting thru the regular theatrical channels. The fail-

ure of the New Theater was due more to forces outside than to the actual administration within the theater itself. It was doomed because the backers were expecting too much of the investment, and because the idea was not ready for support among the theater-going people of the country. With Little Theaters stretching from coast to coast, the Drama League for the organizing of audiences, with the municipal theaters such as we have in Northampton, Massachusetts, there is much more preparedness in the minds of the public for a New Theater now than there was when Winthrop Ames, with all the ardor of a man truly fond of the theater, assumed Directorship.

Barker had had experience with the Court Theater. He knew exactly what sort of a stage he wanted for the type of play he wanted to give; he knew that the dramas of Shaw and Galsworthy

needed the intimate auditorium for their proper appreciation. That is why he waved aside the New Theater. Ames, nevertheless, made the best of a bad bargain. His productions of Galsworthy's "Strife," of Pinero's "The Thunderbolt," were the high-water mark of his stage management. He gave Shakespeare with an apron stage, he produced Maeterlinck's "The Blue Bird" with sets which, if they did not rival Stanislavsky in Russia, at least accorded with the imaginative delicacy of the play itself. Then came the discontinuance of the New Theater.

One would have thought that Ames had had enough of the drama by this time. Yet such was not the case. He set about building a Little Theater, containing only two hundred and ninety-nine seats. He went to the opposite extreme, for such a small theater could never appeal to the masses, would necessarily have to appeal to the classes in order to make expenses. And let it be emphasized that except for the balancing of accounts, Winthrop Ames has never been in the theater business for what he could make out of it. He is independent of that. The result was, therefore, that he gave New York one of its most artistic playhouses, one which it is a pleasure to go into, one that affords opportunity for the exploiting of that drama which can only be nurtured under the condition of intimacy.

Since Mr. Ames launched the Little Theater he has had the opportunity of cooperating with Granville Barker

THE FOREST OF ANDROCLES' LION

The lion is frankly and genially realistic; the forest is just as frankly impressionistic with its variegated strips of swaying fabric

in many productions, and the latter has sent over companies—not always the best companies—for the exploiting of Shaw. They have both produced Shaw, they have both given "Prunella" charmingly, they were both interested in the Norwegian play produced in England and America under the title of "The Witch." They both have likewise been devotees of Galsworthy.

Mr. Barker has made a hasty tour of the theaters in Europe; so has Mr. Ames. Barker has seen for himself the theories of Reinhardt given concrete expression, he has come under the sway of Stanislavsky, and he has returned to London to find Norman Wilkinson developing, undoubtedly under the spell of the foreign stage, a theory of his own regarding the production of Shakespeare. These ideas of his were rife about the time that Mr. Ames brought from Berlin to New York a Reinhardt company in that wordless play which was known as "Sumurun"—barbaric in motive, eccentric in design and brilliant in color. If Mr. Barker was striving, thru Norman Wilkinson, to develop a stage technique which would be unconventional, Ames, thru "Sumurun," was trying to see whether such an exotic would grow in American soil. Unfortunately for us the war prevented Reinhardt this year from coming over to America with several of his productions. Instead of which Mr. Barker brought to us one of the examples of the new theory regarding Shakespearean production, in his eccentric "A Midsum-

mer Night's Dream," with its gilt fairies, its symbolic scenery, and its Germanic Puck.

Since his arrival in America a few months ago, many things have happened to make Mr. Barker significant in American theatricals. First and foremost there was some talk of re-establishing the New Theater, not in the old building but in one in accord with Mr. Barker's ideas. But New York society, ever eager for a fad, soon dropt off from Barker as it

ANDROCLES AND THE LION

dropt off from Ames, until, at Wallack's Theater, we found the English manager turning to the public rather than to subsidy for support. Fortunately his Shaw repertory was sufficiently attractive to draw, and all of his productions have been marked by that same show of taste and personal interest which mark the plays given at the Little Theater. Not only that, but Mr. Barker has brought

over with him the popular works of Euripides, and at the present writing he is preparing Murray's translations of "The Trojan Women" and "Iphigenia in Tauris" for production in the stadiums of Harvard, Yale, Princeton, the University of Pennsylvania, and the College of the City of New York. Would it not be well if these two managers could come together in managerial association? They are both experimentalists. Ames has just sacrificed ten thousand dollars in a prize contest for a play, won by Miss Alice Brown with "Children of Earth." Barker has just produced a skit, "The Man Who Married a Dumb Wife," the distinctive scenery painted by a young American never before heard of in the theater. They are both in accord regarding the social sway of the theater.

Barker is impulsive, he speaks from the heat of the moment, yet with conviction; he has no pose about the theater, but he has deep interest in the theater. Ames is deliberate, he knows what he wishes to say and he has something to say out of his observation. He is a man of the theater by choice, he has remained one by natural selection, fighting his way out of the commercial requirements, with a disinterestedness toward gain which has enabled him to follow his own course. From his gold-tipped cigarette to his correct form of dress, Ames shows polish. Barker wears the Shavian soft hat. Yet despite their traditions they both stand for the same fine things in the theater.

*New York City*

## EVENSONG BY WINIFRED WELLES

Lay aside your tools of labor, for the day is at its ending,

Mind and soul and body all are clamoring to be free.

Put away today's misfortune and tomorrow's fresh intending,

Turn your footsteps thru the city home to me.

Far beyond the noisome pavements where the lights gleam gold and gay,

Like swollen bubbles bobbing down the canyons of the street,

I await your weary spirit as it wings its eager way  
On the pinions of your longing strong and fleet.

There my arms that ache with tenderness shall hold you to my breast—

Old loves have been, new loves may be, but never love like this—

There the heart of me shall keep you for its deepest and its best,

And your griefs shall be forgotten in my kiss.

Shall it matter if the trysts we hold are ever in our dreaming?

Shall we yearn in vain for things we know can never, never be?

Sweeter far than worlds that are, the secret world of only seeming,

When at dusk I feel you coming home to me.

# THE WORLD OVER

## The First Flyless City

In the anti-fly campaign of the last nine years the stereotyped slogan, "swat the fly," has been overworked. Swatting the fly in practise never got further than reducing the total number of flies by the small number killed. The fly-swatting crusades did serve a purpose, however, and that was to educate the people as to its danger and secure their coöperation in applying the only means for the fly's elimination—the elimination of its breeding places.

The achievement of making a large city in the United States the first "flyless town" was accomplished thru the initiative of Dr. Jean Dawson, instructor of biology in the Cleveland Normal Training School for Girls. In the beginning of the season she employed the swat-the-fly tactics of other years, paying ten cents per hundred for all flies killed by Cleveland's school children, who were paid for a half million delivered flies. This was merely to attract their attention and arouse their enthusiasm.

"Fly Week" in Cleveland last year, May 11 to 18, marked the opening of the sanitary campaign. Dr. Dawson organized most of the 125,000 school children of the city into sanitary forces. The boys were organized into the Junior Sanitary Police and the girls as Sanitary Aides. More than 2000 Boy Scouts coöperated with these organizations.

In their several school districts the boys, working in trios, thru the sections or blocks allotted them, inspected every nook and cranny. Wherever unsanitary conditions were found—and they were pretty general in the beginning—a report of the exact conditions was entered on printed forms which were turned in daily to headquarters, from which notices to "clean up" were sent to each delinquent.

On the next inspection tour, made a few days later, if it was found that the

notice had been disregarded, the boys voluntarily turned to and made a clean up of the premises on their own account, placing the fly-breeding refuse in piles for removal by the city wagons. That was in the early days of the inspection work. The newspapers were given and printed a list of the places, giving street address, name of owner or tenant and nature of business, where fly-breeding material was found, with a detailed description of the unsanitary conditions found. It was not desirable publicity. Merchants and householders alike got busy with rake and shovel. In only the isolated instance was a second warning needed.

To check up the sanitary conditions of each district the girls as Sanitary Aides, working in pairs, went into the stores, markets, restaurants and other public places and counted all the flies they could see within three minutes of time. If the number was above the allowed limit for that class of place a black mark was noted on the printed slip on which they reported their finds to headquarters, and such places were generally found among those mentioned as having an excessive number of flies. Many merchants advertised a "flyless store," and the girls saw to it that they made good.

The reports of the Aides early showed many flyless stores and restaurants. Later Dr. Dawson, together with several city officials, made an inspection of the market places. But two flies were found: one in a bakery at Central Market and one on a lunch counter at the Sheriff street market. Toward the close of the season Mayor Baker issued a statement in which he said that Dr. Dawson had made Cleveland a practically flyless city.

Dr. Dawson succeeded in getting a new sanitary code enacted last year that provides for the removal of all fly-breeding refuse every seventy-two

hours, and which shall be stored pending removal in brick, concrete or metal receptacles having a water-tight bottom and insect-proof covers. A heavy penalty is provided for each violation.

## Better Light in the Shop

Manufacturers all over the country are awakening to the fact that eye fatigue of workmen is uneconomical: it decreases their efficiency and increases their liability of accident. Men who have made a study of accident statistics estimate that twenty-five per cent of the 500,000 preventable accidents which occur each year in the United States are caused by bad lighting conditions. Statistics clearly show that there is a notable increase in industrial accidents during the months of November, December and January, when there is a minimum of daylight.

In a certain steel plant, moreover, where an efficient lighting system was installed, the output at night was increased over ten per cent. In order to determine whether this increase was due wholly to the introduction of a better lighting system the new one was taken out and the work done at night dropt off ten per cent, increasing ten per cent when the new one was again installed.

Seventy-five per cent of our factories have no adequate provision for artificial light. In response to a growing demand for some standard of shop lighting the Industrial Commission of Wisconsin has issued a handbook for superintendents and electricians. Written in simple, non-technical language, this booklet is, nevertheless, so complete that any superintendent or electrician can use it as a guide in equipping any department or machine with electric lights. It gives specific information in

FROM ALLEYS LIKE THESE FLY-BREEDING REFUSE WAS CLEANED

If the owner of such premises failed to clean up at the first notice boys working by threes cleaned up for him and dirty places were publicly listed

regard to the type of lamps to be used, the best reflectors, the location of the lamp and the amount of light necessary, for different kinds of work under different conditions.

Already the Wisconsin bulletin is being used as a text-book in other states and is being distributed by the National Council for Industrial Safety and by many manufacturers' associations.

Rear Admiral John R. Edwards of the United States Navy gave the handbook an added authority when he wrote for fifty copies to be distributed to naval stations and begged for an additional hundred for use on naval vessels, the efficiency of which he declared was materially affected by the quality of artificial light used.

Give a Job

"Give a Job" is now the slogan of the Boston Women's Publicity Club, a group of women who organized four years ago for the purpose of bringing about clean and honest advertising and reliable methods of selling merchandise. This year the unemployment problem has demanded a large share of their attention and they have put all of their proverbial women's ingenuity to work in an effort to relieve it.

A thousand eight-sheet posters have been printed and put up in conspicuous places in and around Boston, and the public conscience has been stimulated by clever and widespread publicity to help the unemployed find work. From the standpoint of either critics or advocates of women's active participation in the problems of the business world the work of this club is of special interest.

Are We a Vanishing Race?

For some time it has been apparent that the fecundity of the native population of this country is on the decrease. Several methods have been followed to detect and measure this change. The most common has been to study the number of marriages and births reported by those states keeping good vital statistics. Mr. F. S. Crum in a recent issue of the *Quarterly Publications of*

THE AVERAGE NUMBER OF CHILDREN PER MARRIAGE

BOSTON WOMEN'S WORK FOR THE UNEMPLOYED

the *American Statistical Association* has given the results of a careful study of 12,722 wives whose records appeared in twenty-two genealogical records. All of these families came from pioneer stock which settled in New England or the Middle Atlantic states. The following table gives a brief summary of the result of these investigations:

Marriage Periods.	Number of Wives.	Number of Children.	Average Number of Children per Marriage.
Previous to 1700..	276	2,034	7.37
1700-1749 .....	802	5,478	6.83
1750-1799 .....	1,966	12,649	6.43
1800-1849 .....	5,530	27,320	4.94
1850-1869 .....	3,062	10,630	3.47
1870-1879 .....	1,086	3,004	2.77
Totals .....	12,722	61,115	4.80

We see that before 1700 the average number of children per marriage was 7.37 and that from 1870 to 1879 this number had been reduced to 2.77 children. This change was steady, but since 1800 has been accelerated.

Before 1700 less than two per cent of the wives were childless, while from 1870 to 1879 over eight per cent were childless. Before 1700 about one-fourth of the wives bore ten or more children, while from 1870 to 1879 less than one wife in 250 became the mother of ten or more children. Before 1700 over half of the wives were the mothers of from six to nine children, while from 1870 to 1879 only 8.6 per cent of the wives were similarly blessed. Before 1700 the average age of the wives at marriage was 21.4 years. From 1870 to 1879 it was 23.1 years. We thus get a higher age at marriage, a larger number of

childless marriages, and a very much smaller proportion of large families.

Two studies have been made of the number of children born to Yale graduates. The first study covers men who graduated from 1701 to 1791. For this period the average number of children born per married man was 5.7. A similar study covering graduates from 1850 to 1866, inclusive, gives the number of children born per married man as 3.2. It is apparent that wherever we turn in this country we are confronted with the same evidence of smaller families. It is doubtful if at the present time the descendants of pioneer stock in this country are holding their own as far as numbers are concerned. And this is the real meaning of "race suicide." It is not that there is any danger that the population of this country will decrease, but that too small a proportion of the increase will come from native stock.

Rags for Soldiers

"Rags! Any Rags!" has acquired a new significance in these war times when it is being used as the plea of the Surgical Dressings Committee for material to carry on its work. At the committee headquarters at 41 West Thirty-eighth street, New York City, thousands of women who have volunteered their services are making surgical dressings from old household and personal linen, flannel and cotton which has been given by people from all over the country. Every sort of old rag, no matter what its previous condition of servitude, can be used by this efficient committee, which since November, 1914, has sent over 2,000,000 sterilized dressings to needy hospitals in France, Serbia, Montenegro and Austria with which the Surgical Dressings Committee has established some personal connection. Blankets, bed and table linen, and underclothing have also been collected and shipped.

Auxiliary committees in other parts of the country are being formed to supplement the work of the New York committee. The work is unique in that no call for financial assistance has been issued. Rags and workers are the only essentials.

# THE FUTURE OF MEXICO

BY VICTORIANO HUERTA

SINCE I have been in America I have constantly been asked about the future of Mexico and the prospects of peace in my unhappy country.

I believe peace will soon be at hand. The people of Mexico are tired of revolutions that have brought them nothing but four and a half years of useless bloodshed. They are disillusioned of the false promises held out to them by bandit chiefs without power to redeem them. They are impatient of mines closed, railroads destroyed, plantations burned, all to no purpose.

Mexico is ready for peace. The crisis always brings forth the man, and the time is very near at hand when the Mexican people under the leadership of a new patriot will turn upon these bandit gangs masquerading under the name of armies which have terrorized the country so that there is no safety for life or property. Under this forthcoming leader peace will be restored, and he will be ranked with Juarez and Diaz as one of Mexico's greatest heroes.

Who this strong man will be, or where he will come from, is still obscure. He will be a patriot endowed with great singleness of purpose, rugged strength and unswerving perseverance. Within ninety days, with the loyal support of the best elements of my countrymen, he will be able to stamp out anarchy, put an end to disorder, and bring peace and prosperity to our afflicted land.

There is no such patriot, needless to say, among the factions now fighting each other in Mexico. There is not one man or one party among them, as the events of the past eight months have shown, with qualities to dominate the situation and inspire the trust of the people. They are only destroyers; their lust is to tear down and kill, not to rebuild Mexico.

After peace has been established must come the working out of the reform which started the revolution of 1910. The condition of the lower classes must be improved thru education and the ballot, and the land question taken up and solved.

The outside world, and

*General Huerta is now in New York, ostensibly for personal reasons alone. He made in an interview with a staff correspondent of The Independent this statement of his views as to Mexico's present and future.—THE EDITOR.*

you in America particularly, because you do not understand our conditions, do not understand our troubles. That has been one of the failures of the men who are trying to solve Mexico's difficulties. They have sought the backing and the sympathy of democratic nations with false promises of liberty and pledges of freedom that at present are impossible in Mexico. They have represented us to the world as we are not, and as we can be only after years of education.

I have always had and have proved my great admiration and respect for the American nation. I have always tried to be fair in my judgment. It has been a great regret to me to see how the newspapers and public opinion in the United States with regard to Mexico during the last few years have been diverted from the truth.

The heads of your Government have not been fair to Mexico. I believe they have been misled by false statements. They have held certain theories as to the kind of government

we in Mexico should have. But as even they are beginning to find out at last, there is a vast difference between theory and facts. How erroneous their ideas have been they would see for themselves, I believe, could they visit Mexico for a little while.

It has been said that I was responsible for the conditions of my country; that I was the cause of anarchy and prevented peace. No charge is more unworthy of belief. It was to restore peace that I became Provisional President of Mexico, and when I accepted the office that was my pledge to my countrymen—to bring peace at any cost.

When I took charge after the looting that had been done in the Madero administration, our treasury was empty. We had no money and no soldiers. There were scarcely 17,000 men, badly demoralized, to combat the disorders of the republic. Yet not a single business house shut its doors, not a bank failed during my administration. In a short time I had organized an army of 180,000, but owing to the embargo on the exportation of arms from this country to my Government, they were ill-equipped. Had it been possible to supply them with arms, we could have raised 300,000 men.

But under the circumstances which then came about, which are well known to the American people, I was hindered in securing the peace I was pledged to restore. I did all in my power, but with the influences against me it was unavailing. At last I decided to see if my elimination, continually suggested in certain quarters as the only course, would serve my country any better.

I left the presidency voluntarily; no one took it away or forced me out of it. I resigned because by so doing I sought to benefit my country. And were it not for that same love of country, I would still occupy that office, as no power ever existed that could fight and win against right and justice and drive me from my post.

It is not considered courtesy to criticize the heads of a state of which one is a guest, but I

Medem Photo Service

GENERAL HUERTA

should like to call the attention of the American people to the conditions that have prevailed in my country during the past eight months. Instead of peace, they have gone from bad to worse, until today no semblance of law or order exists in the republic.

I left Mexico hoping, as you Americans had been assured, that my departure would bring about peace. I left a land where up to the very last moment of my command there had been government; the lives and property of all law-abiding citizens, foreigners as well as Mexicans, had been protected. And to substantiate this I appeal to the testimony of Spanish, German, French, English, and particularly the American residents in Mexico. They will and do confirm what I say.

But it was not peace but anarchy that followed my departure. Indeed that is too soft a word to describe all that followed. Thousands, tens of thousands of peaceful inhabitants have been killed; there is scarcely a mill, a mine, or an oil well in operation; business has dried up, farms burned and cattle destroyed. To possess a watch, or a piece of gold, or money other than the worthless currency issued by each bandit chief, is a warrant for execution. The whole country and its capital itself is in the grasp of these "liberators" who under the fancy names of Constitutionalists and Fighters for the Peoples' Liberties, rob and plunder as they choose.

But I am confident that Mexico will yet be saved, and she will be saved by a Mexican. She is strong and she is young. She has gone thru a great sickness, and the dead parts of her national body have still to be amputated. While that is being done, and it will begin very soon, we shall need the sympathy of the great American people in order that we may the sooner come into the strength which is ours.

New York City

#### LIBRARIES AND LIBRARIANS

*New York Libraries* in its recent issue contains a list of books on the war in Europe "most desirable for a public library at the present time."

In a recent issue of *The Dartmouth* a plea was made for the opening of college libraries on Sunday. It maintains that with "classes arranged from eight o'clock Monday morning until one in the afternoon, a Sunday free from study is chimerical."

In its January number, the *Journal of the American Institute of Architects* began the publication of a Current Index of Architectural Journals, which is prepared monthly by Michel M. Konarski, Assistant Librarian of the Avery Library, Columbia University.

It is estimated that there are now 14,000 persons engaged in library work in the United States. Of these over 1500 are in New York City. The membership of the American Library Association, which is the national organization of librarians, numbers 3000. Its thirty-seventh annual conference will be held at Berkeley, California, June 3 to 9, 1915.

## STEINWAY

THE purchase of a Steinway for the home means the selection of the ideal piano, tone and workmanship being of first importance.

It is the price of the Steinway which makes possible its supreme musical qualities, but you will find that the Steinway costs only a trifle more than many so-called "good" pianos.

Style V, the new Upright, and Style M, the smallest Steinway Grand, offer a special advantage in price. They embody all the distinct Steinway features, but, being of reduced size to meet the requirements of the modern home or apartment, are offered at very moderate prices.

*We shall be glad to send you, free, illustrated literature, with the name of the Steinway dealer nearest you.*

STEINWAY & SONS, STEINWAY HALL  
107-109 East Fourteenth Street, New York

## BAGS FOR VACATION TRIPS

AUSTIN SHOPS, 104 Court St., Binghamton, N. Y.

# ROYAL BAKING POWDER

You know this trade-mark through National Periodical Advertising

THE Manufacturer who brands his goods and advertises them nationally is so sure of their quality that he is willing to stand the full force of possible complaints.

He is making something for which he is proud to be responsible. His trade-mark secures for him the increased sales that result from *satisfaction* and *identification*. At the same time it secures to the public, the certainty of quality which the *known* manufacturer must maintain if he is to continue to be successful.

When you buy, buy goods that are trade-marked and advertised. The manufacturers of such goods stand behind them. Your satisfaction is vital to the continued success of the trade-marked, advertised article.

Trade-marks and national advertising are the two greatest public servants in business today. Their whole tendency is to raise qualities and standardize them, while reducing prices and stabilizing them.

## EFFICIENCY QUESTION BOX

CONDUCTED BY  
EDWARD EARLE PURINTON  
DIRECTOR OF THE  
INDEPENDENT EFFICIENCY SERVICE

Questions on health, work, business, home and everyday life will be answered by Mr. Purinton, in so far as may be possible, thru the Question Box or by personal letter. Please confine questions to one sheet. When books, institutions, manufactures, and other aids to efficiency are mentioned, they are not necessarily endorsed. The Service, being a clearing-house of information, assumes no responsibility for others.

65. Mrs. N. J. B., Maryland. "Is dancing wholesome exercise? Our daughter of 18 years has caught the craze which recently swept the country, and tho I am opposed to what I consider its physical and moral dangers, I do not want to forbid an amusement which may offer possible benefits."

The dance of the Greeks was a joyous, individual, spontaneous expression of health in the body, music in the heart and poetry in the soul. Instead of forbidding your daughter to dance, could you not join with other perplexed mothers and organize a class in rhythmic, esthetic dancing, properly taught and supervised? Such a movement has recently been started in New York, with evident satisfaction to both mothers and daughters.

66. Prof. B. H., Louisiana. "What is the scientific method of punishing a child for misdemeanors such as theft, falsehood, and disobedience? Is there no sane middle course between the old-fashioned whipping and the new-fangled spineless idea of non-punishment that makes of the typical American child either a mollycoddle or a bully, according to his temperament?"

Correction, or discipline, is a better term than punishment. Most of the misdeeds of children are blunders of ignorance or carelessness—not willful cases of wrongdoing. The word "punishment" implies unchristian revenge for inherent evil—a double error of judgment.

The right way to correct a child is by the automatic, reflex method of nature. Every violation of natural law carries with it a natural penalty, which thru pain, disgust or deprivation teaches the wrongdoer not to repeat his mistake; the proverb "a singed cat dreads the fire" sums up this process. Each parental or pedagogical rule should be based on some natural law, and the natural penalty for transgression be discovered and applied.

Illustration. Suppose you tell your boy not to eat between meals. He does, and he gets a violent case of cramps. The way to enforce obedience is not by administering a pain-killer inside and a switch outside—the usual, inefficient method; but by allowing his young lordship to suffer amply, without relief, but with constant reminders during his pains that this is what a disobedient child deserves, and must expect. If you can add a specially bitter, harmless medicine, to increase the lad's disgust, you will be intensifying the natural method of discipline. No coddling, no chastising, but the immediate linking of cause and effect in the mind of the child, and the natural revulsion from a deed that produces physical or mental pain; this describes in brief the efficiency plan of juvenile correction.

67. Miss A. L. T., New York City. "I have trouble in making myself go to bed before 12 or 1 o'clock, and my work and state of health are both suffering in consequence. I don't seem to

## Made to Measure Shirts for Men

I guarantee to fit you or refund your money.  
You choose from the Season's newest designs, comprising 200 of the handsomest weaves and patterns.

### Learn what real shirt comfort is

Just the right arm and body length, ample chest room and correct neck size.

I take all the risks.

Send for free package of samples and self measuring chart. I prepay charges to all points in the United States and will refund the money if the goods are not satisfactory.

C. G. CLEMINSHAW

171 RIVER STREET

TROY, N. Y.

get thoroly awake for the day till about 10 o'clock at night, when I should be growing sleepy. Others, I find, are affected in the same way. Can you explain the cause, and suggest a remedy?"

The abnormal condition is probably due (a) to the artificial excitements of city life, which are most varied and attractive in the evening; (b) to lack of bodily work or exercise during the day, sufficient to make you thoroly tired and ready for sleep at night; (c) to a mental or spiritual indolence, which prevents your becoming absorbed in your daily occupation, and thus leaves a surplus of energy and emotion to be worked off at night.

Do a lot of hard mental work in the morning—something you love, and that stirs your ambition or satisfies your artistic nature; then take a regular period of hard physical work in the afternoon, either at a gymnasium or about the house at some useful labor such as sweeping and scrubbing (if you are the average American young lady, we would by all means recommend the latter form of gymnastics, there being magic in a broom-handle for an idle girl who can't sleep o' nights). If you are robust, you might break your night-owl habits by staying up all night, then forcing yourself not to sleep at all the next day; by the second evening you will want sleep at nine o'clock.

68. Mrs. E. F. M., New Jersey. "(a) Are meat extracts and bouillon cubes desirable as a base for soups and broths? (b) Is cheese wholesome? (c) Do you consider a vegetarian diet practical for a brain-worker living in the city and dependent largely on restaurant food?"

(a) The most satisfactory meat base for soups is the old-fashioned stock-pot, into which are thrown all clean scraps of good meat not consumed at the table, the afore-said meat having been bought from a thoroly reliable butcher. Soups and bouillons listed in the *Westfield Pure Food Book* are chemically pure. A new form of vegetable bouillon cubes is now on the market—ask your grocer.

(b) The best form of cheese is cottage cheese, otherwise called pot cheese, Dutch cheese, or smear-kase. A moderate amount of a simple store-cheese, taken at the close of dinner, usually aids digestion.

(c) In my opinion, the only way for a city brain-worker to be a vegetarian is to do it at home, as the choice, combination and preparation of restaurant foods, except in an occasional vegetarian or health culture restaurant, aim to satisfy the meat-eater only. A vegetarian series of menus can be served in almost any home.

69. Mr. J. R. S., Illinois. "A good deal of the family shopping falls on me, as I go to the city every day. Would a system of memory training help me to remember the errands which I am prone to forget and thus to inconvenience the household? Excellent ideas and plans for my own work often come to me, and these also I am apt to forget before they are utilized. Can I not gain a better memory in these two particulars?"

You probably can. But I doubt if the time and labor involved would be justified, as most memory systems are so arduous and complicated that a busy man with horse sense will have none of them. Keep your hat in a regular place, and put your errand-reminders in it, as the errands are suggested; with a pad and pencil beside the hat for jotting down particulars. Buy a loose-leaf pocket memorandum book, or even an ordinary pocket pad; when ideas for improving your work come to you, make a note of them; instruct your secretary or clerk at your place of business to remind you daily to transfer the pocket notes to an office file properly labeled;—and then take the worry about forgetting right off your mind. Such methods are absurdly and undignifiedly simple; but they work, as I know from experience.

70. Mrs. G. O. H., Rhode Island. "Is candy good for children? Our young folks never seem to get enough, but I fear for their teeth and digestion."

The best sweets for children come in the form of simple, natural foods, such as

Make your  
**KODAK**

*Autographic*

THE most important photographic development in two decades, is the Autographic Kodak. It makes the record authentic; answers the questions: *When did I make this? Where was this taken?* Every negative worth taking is worth such date and title. With the Autographic Kodak you make the record, almost instantly, on the film.

It's very simple. Open the door in the back of Kodak, write the desired data on the red paper, expose for a second or so, close the door. When the film is developed, the records appear on the intersections between the negatives.

This autographic feature having now been incorporated in the most important Kodak models, we have arranged to take care of our old customers by supplying Autographic Backs for Kodaks of these models.

The old Kodak can be brought up to date at small cost, and there is no extra charge for autographic film. Make your Kodak Autographic.

*Delicious*

honey, maple sugar, dates, figs, and raisins. Cane sugar products are more likely to cause fermentation and thus impair teeth and stomach. However, a guaranteed confection having as a base a real food, such as chocolate, nuts, coconut or molasses, may well be given children two or three times a week, at the close of luncheon or dinner. Candy should never be eaten between meals, by children or adults.

71. Miss R. Y., New York City. "Where can a young woman earning a small salary and living alone in New York find a place to live that is comfortable, hygienic and morally safe?"

Ask an official of the Young Women's Christian Association. Inquire also at the Junior League House, 42 West Thirty-ninth street, and at Varick House, 11 Dominick street.

72. Mrs. B. L. D., New York. "Can you help me to outline a program of six subjects for club study along the line of Efficiency?"

Why not take as your foundation the articles that have appeared in *The Independent*, having one of your club meetings devoted to Work and Efficiency, another to Home and Efficiency, another to Study and Efficiency, and so on? As a general introduction, you might obtain the Efficiency booklet containing a symposium of articles from *The Independent*, and give a copy to each club member for a preliminary reading. Then you might obtain books from your local library on each particular theme, assigning collateral reading or the preparation of a paper to one or more club members for each meeting. The articles from *The Independent* might be read entire, one at the meeting on Work, another at the meeting on Home, and so forth; or a digest might be made in advance, and extracts read. General discussion should follow. Queries or problems, collective or individual, may be referred to the Service for reply, whether your club members are subscribers or not; subject of course to delay in answer, as questions received first demand prior attention. The *Independent* articles, December to May inclusive, will give you six of the most important branches in personal efficiency; and the May article will be out by the time your program nears completion.

73. Mrs. E. Z. F. "How is a woman going to help her husband escape from alcoholism?"

Alcoholism is a disease of the will, the nerves, the stomach, and the emotions. The victim of intemperance must be treated as an invalid—not a criminal, or outcast. Work with him—not for him, against him, or in spite of him. Make his battle your battle; let him feel your sympathy, confidence and strength in every moment of struggle; give him the joy of knowing that some one understands—and you are on the way to happiness for you both.

The first element in temperance reform is dietetic. If home cooking were palatable, hygienic and attractive as it should be, no man could bear the taste of liquor. Foods that are soggy, greasy, rich with excess of meat and condiments, literally drive a man to the saloon by force of artificial irritation. A well-balanced menu of simple foods has been known of itself to cure the liquor-appetite.

The second factor is rejuvenation of the nerves. This requires distinct mental, moral and spiritual help. Ordinarily, specific treatment is required, such as may be had at any of the several institutes for the relief of alcoholism.

The next move is to reform the home. Men seek the saloon because it meets a vital want. There they can relax, forget their worries, find sympathy, goodfellowship. Let the home fill every need of a man's nature, and the "night with the boys" will be forgotten.

Lastly, praise him for what he is; appeal to the manhood in him, stir his pride to show himself a hero in your eyes. Let him once taste the joy of battling for an ideal—your ideal—and this will be elixir enough.

## 5 Minutes Deep Breathing

is of more real benefit than an hour devoted to vigorous physical exercise.

DEEP BREATHING directly revitalizes the blood, and reaches every muscle and nerve cell of the body. A few minutes practice will throw off fatigue, depression and brain fag.

I employ Deep Breathing in a far wider scope than has been done heretofore by any scientist. The results I have attained in over

50,000 pupils are incredible. The curative power of Oxygen is unlimited.

Send for my Book, "Deep Breathing." It's free. The facts presented therein are of vital import to you.

## Independent Opinions

### WAR BRIDES

The question of the marriage of recruits continues both here and abroad to excite discussion, and quite rightly, for it is the most important of all the issues of the war. Its fundamental and far-reaching significance is the reason why the views expressed are so diverse and the opinions so conflicting. Those who discuss it are talking about very different things though they use the same words and it is no wonder they cannot come together.

We quote parts of a few of the letters we have received:

That such a play as *War Brides* could be written, and published in the *Century*, and that great talent should lend itself to the presentation to the public are facts of momentous significance.

Dare I say that The Independent misses the point in that editorial of February 22, which point is this: That we realize that in the most vital point of our existence we have been insulted. All of the finer sentiments which enwrap motherhood to glorify it are brutally ignored in this call to "breed before your men die."

Never since Napoleon's brutal "France needs mothers"—i.e., to breed soldiers for a Napoleon to dispose of, have rulers so baldly summoned women to breeding—do not say to motherhood. Also that a Napoleon and the present ruler of Germany and Mr. Asquith should thus be united in this call is deeply significant, for the position of each relative to the right of women to sit in the councils of the state is well known. Passive obedience is the part assigned mothers, and this play is indicative of an exalted consciousness of what is due motherhood. It is democracy speaking in a new voice—the voice of women, revolting against autocracy—even sex autocracy—arrogating the right to dispose of the fruit of our lives.

Our sons shall not be "food for powder" at the behest of a state which refuses mothers their share in counsels.

KATHERINE W. POWELL  
Congregational Church, Spearfish,  
South Dakota

The Independent was advocating the admission of women to the councils of the nation long before the Rev. Katherine W. Powell was born and it has not been backward in the peace movement. It was, as we explained in our issue of March 22, because *War Brides* seemed to us an attack upon motherhood in the disguise of a peace play that we felt that it merited the severest condemnation.

To say that the lesson of *War Brides* is altogether "false and immoral" seems to us altogether unjust. No article on the present war has left so strong a moral impression in three particulars as did this picture of life on the writer:

1. In revealing the awful consequence of war on womanhood and home.
2. In upholding the sacredness of marriage.
3. In showing the wrong of autocratic government.

FREDERICA BEARD

Somerville, Massachusetts

As for our correspondent's third point, that of the autocratic government, we must remember that in the

He whose paint lasts, paints best. Your painter should know, and you should let him know that you know, that the ingredient which makes paint last longer and look better while it lasts is
